Running: High Jump—Entries: J G Lathrop, Boston; F B Foote, Jr., New York Athletic Club; H Ficken, New York Athletic Club; O L Richard, New York Athletic Club; J J Franke, Columbia College. Won by Ficken, who cleared 5ft 2in. Foote was second with 4ft 10in.

Putting the Sixteen-pound Shot—Entries: J G Lathrop, Boston; H E Buermeyer, New York Athletic Club; J D Parmley, Princeton College; C B Cory, Harvard College. Won by Buermeyer, who reached 33ft 9in. Parmley second with 32ft 6in.

Three-mile Walk—Entries: J H Armstrong, New York; H G Marquand, New York; C Oelrichs, New York; and James Frazier, New York. Won by Armstrong in 28m 3½s. Frazier was second in 28m 34s; Oelrichs third.

Half-mile Run—Entries: G Agassiz, Boston; G M Hammond, New York; R A Greene, Princeton College; R O Franke, Columbia College; W T Hutchins, New York. Hammond, 2m 41½s; Greene, 2m 43½s; Agassiz, 2m 50½s.

Throwing the Hammer—Entries: George A Parmley, William B Curtis. Parmley threw 84ft 58in; Curtis, 79ft.

Running High Jump—J G Lathrop, 16ft 11½in; W B Curtis, 16ft 3in.

Hurdle Race—Entries: G G Gordon, Newport; E B Foote, Jr., N Y A C; H Edwards Ficken, N Y A C; A H Latham, Harvard College; A L Rivas, Boston; W S Hutchins, New York. The race was in two heats. In the first Foote won in 10½s. The second heat won by Ficken in 20½s. Final heat Ficken came in in 10½s, but Foote claiming foul the heat was run over again, Foote winning in 10½s.

The sack race of 100 yards was won by J Lyons.

Three-legged Race—Entries: Harry and C Oelrichs, W T Hutchins and J G Lathrop, C N Scott and F P Abbott. Hutchins and Lathrop won in 14½s. The Oelrichs were second and Scott and Abbott third.

Two Hundred and Twenty Yards—Entries: T A Saporita, New York; Edward Merritt, New York Athletic Club; Isaac B Potter, Cornell University. Saporita won in 24½s, two and a half feet ahead of Merritt. Potter was third.

Tug of War—The teams were: Yellow—Messrs. Buermeyer, Curtis, Whipple, Fraser, Bliss—Messrs. C Oelrichs, Harry Oelrichs, G D Parmley, A W Montgomery. Won by the Blues in 1m 35s. The successful competitors were presented with gold, silver and bronze prizes.

NEW YORK CALEDONIAN GAMES.—The New York Caledonian Club held their twenty-first annual games at Jones' Wood Colliseum, Thursday, Sept. 6. The popular favor in which these sports are held may be inferred from the very large attendance of spectators, who poured in by thousands despite the very unpleasant weather. A comparison of these games with those of the Providence Club, recorded in our last, will show a goodly amount of muscle among the Scottish New Yorkers. There was a collation at the Club's rooms in Mulberry street, after which prizes were distributed to the following successful competitors:

Throwing the Heavy Hammer—1 D C Ross, 92ft 6in; 2 Charles Kelly, 91ft 6in.

Throwing the Light Hammer—1 D C Ross, 111ft 6in; 2 Charles Kelly, 108ft.

Standing Jump—1 E W Johnstone, 9ft 7in; 2 W Robinson, 8ft 11½in.

Running Long Jump—1 Robert Mitchell, 18ft 4in; 2 W Robinson, 18ft 2½in.

Putting the Heavy Stone—1 D C Ross, 35ft 9½in; 2 E W Johnstone, 31ft 5½in.

Standing High Jump—1 E W Johnstone, 4ft 5in; 2 Charles Kelly, 4ft 6in.

Broadword Dance—1 James Kennedy; 2 W Somers.

Race, One Hundred Yards—1 A O Reid; 2 B Hindle.

Tossing the Caber—1 E W Johnstone, 41ft 6in; 2 D C Ross, 40ft 9in.

Three Legged Race—1 W Forsyth and A C Reid.

Boys' Race, One-eighth Mile—1 W Williamson; 2 A Baxter.

Vaulting with a Pole—1 W Robertson, 9ft 6in; 2 Frank Duke and John McLaran, 8ft 7in.

Tug of War—Hudson County Caledonian Club. Old Men's Race—1 Peter Bowman; 2 David Thorn.

Hitch and Kick—1 E W Johnstone, 9ft; 2 A O Reid and John West, 8ft 9in.

Walking Match, One Mile—1 John Anderson; 2 W Forsyth.

Throwing Light Stone—1 D C Ross, 42ft 9in; 2 E W Johnstone, 41ft 7½in.

Race, One-quarter Mile—1 R Hindle; 2 A O Reid.

Highland Fling—1 James Aitchison; 2 John West.

Hop, Step and Jump—E W Johnstone, 41ft; G G Addison, 40ft 6in.

Mile Race—1 R Hindle; 2 T B Irvine.

Running High Leap—1 E W Johnstone, 5ft 3in; 2 John West, 5ft 2in.

Sack Race—1 D B Fleming; 2 W Forsyth.

Boys' Hurdle Race—1 W Williamson; 2 W Warnock.

Men's Hurdle Race—1 R Hindle; 2 A O Reid.

Quoit Throwing—1 Alexander McGregor; 2 James McLaran.

NEW YORK ATHLETIC CLUB.—The eighth annual fall meeting of this club was held last Satur-

day on their club grounds at Mott Haven. The events were:

One Hundred Yards Run—First Series—First Heat—1 H Lee, University of Pennsylvania, 1; I B Potter, W B C, West Troy, N Y, 2. Both men under the rules were in the second trial heats, they therefore took their time. Lee finishing one foot in advance. Time, 11½s.

Second Heat—C O Melvor, Montreal, Canada, 1; W B Curtis, N Y A C, 2. These also finished in the second trial, too things easy, finishing with Melvor ten inches in front. Time, 12½s.

Third Heat—H K Wilson, S A A C, 2; F C Saporita, H A C, 2; F Henshaw, H A C, 3. Won by a yard; double that distance between second and third. Time, 11s.

Fourth Heat—H Lauterbach, New York, 1; D Iardie, Hartford, Conn, 2; J F Dunfield, P C A C, 3; W J Murphy, Brooklyn, L I, 4. A fair heat. Won by eighteen inches, a foot dividing second and third. Time, 11s.

Second series—First Heat—H I Lee, 1; I B Potter, 2; W B Curtis, 3; C O Melvor, 0. Won by five yards; one yard separating second and third. Time, 10½ seconds.

Final Heat—C O Melvor, 1; F C Saporita, 2; H H Lee, 3; I B Potter, 0; H K Wilson, 0. Melvor won by two feet. Saporita led Lee by nine inches, the latter beating Potter by a foot and a half, with Latham nearly two yards astern. Time, 10½s.

High Jump—H Edward Ficken, N Y A C, 5ft 5in; 1; A H Oakes, Y M O Ass'n, 4ft 7in.

Four Hundred and Forty Yards—E Merritt, N Y A C, 1; W G Gasper, New York, 2; J H Ferguson, Y A C, 3; F Reeves, S A A C, 0; J M Burch, New York, 0. Merritt led by ten yards; three yards between second and third. Time, 55½s.

One Mile Run—B Morgan, H A C, 1; C Vought, Y C, 2; W H Robertson, Brooklyn, L I, 3; B C Williams, N Y A C, 0; William Childs, N B C, 0. Morgan won by fifty yards, three yards between second and third, the others beaten off. Time, 4m 49½s.

Seven Mile Walk—F H Armstrong, Jr., H A C, 1; T Backley, S A A C, 2; F J Mott, H A C, 3. Time—Armstrong, first mile, 7m 22½s; two miles, 15m 38½s; three miles, 23m 15½s; four miles, 31m 54½s; five miles, 40m; six miles, 48m 40s; seven miles, 56m 59 2-5s. Backley, 60m; Mott, 60m 55½s. Armstrong cut down the record in the seven miles 2m 33s, and in the four miles 7½s better than ever before done for that distance in this country.

Putting the Shot—H E Buermeyer, N Y A C, 37ft 2in, 1; A W Adams, S A A C, 36ft 5in, 2; G D Parmly, 32ft 1in, 3.

Running Broad Jump—W T Livingston, H A C, 18ft 9½in, 1; P Johnson, U A C, Boston, 18ft 3in, 2; J G Lathrop, U A C, Boston, 17ft 11in, 3.

Throwing the Hammer—G D Parmly, P Col A C, 84ft, 1; W B Curtis, N Y A C, 76ft 6in, 2; P Johnson, U A C, Boston, 65ft 6in, 3; H E Buermeyer, N Y A C, 63ft 1in, 0.

One Mile Walk—C O Holske, H A C, 1; J V Wolcott, S A A C, 2; C J Noel, Plainfield, N J, 3. Holske won in 7m 11 4-5s.

Two Hundred and Twenty Yards—First Heat—C O Melvor, Montreal A C, 1; F O Saporita, H A C, 2; F Reeves, S A A C, 3. Under the rules, first and second were in the final; the third was 25½s, Melvor finishing four yards in front, one yard separating second and third.

Second Heat—Ed Merritt, N Y A C, 1; H H Lee, University of Pennsylvania, 2. Both were in the final, and they finished in 36s.

Final Heat—E Merritt, 1; F C Saporita, H A C, 2; C O Melvor, 3; H H Lee, 0. Merritt finished two feet in front of Saporita, and was twice victor this season. Saporita second, Lee three inches behind Melvor.

Tug of War—First Heat—Scottish American Athletic Club team—M E Moore (captain), A W Adams, A C Thompson, E Arnold, vs Turnverein Vorwaerts team, Elizabeth, N J—Michael Remig (captain), Emil Plasberg, Philip Keller, Albert Morhart. The Scotch club won the trial in just 12½s.

Second Heat—New York Athletic Club team—H E Buermeyer (captain), W B Curtis, Anstin Flint, Jr., F F Hyman, vs Turnverein Vorwaerts team, above. New York club won in 1m 57s.

Final Heat—New York Athletic Club team vs Scottish American Athletic Club team. New York won in 40s.

One Hundred and Twenty Yards Hurdle Race—H Edward Ficken, N Y A C, 1; E B Foote, Jr., N Y A C, 2; J D Cheever, N Y A C, 3. Ficken in the run to the finish beat his man by four feet. Time, 18½s, the best on record in this country by a quarter of a second. The 18½ seconds being a quarter of a second, of Yale College, at Glen Mitchell, Saratoga, July 15, 1875, England's record for the event is 16 seconds, made by O N Jackson, Oxford, November 14, 1865.

Three Mile Walk—C O Holske, H A C, 1; J V Walcott, S A A C, 2; B W Anderson, S A A C, 3; C O Wolcott, U A C, Boston, 0. Time—Holske, 23m 9 2-5s; Walcott, 24m 6½s; Anderson, 25m 13½s. Wolcott, first mile, 7m 49½s; two miles, 17m 24s (dropped out).

Stole Lead—Alfred Ing, New York, 9ft 5in; George McNichol, S A A C, 9ft 5in; Lud Frenz, New York Turnverein, 8ft 9in; Carl Lindenthal, New York Turnverein, 8ft 1in. Ing and McNichol both failed at 9ft 5in. When the referee ordered the bar down to 9ft 5in to decide the matter, but before the trials took place darkness came on, and a "draw" was ordered entered on the record.

Half Mile Run—R R Colgate, N Y A C, 1; F Bannan, H A C, 2; Walter H Griffen, S A A C, 3; W J Duffy, H A C, 0; B W Anderson, S A A C, 0. Colgate won by eight yards; one foot between second and third.

Referee, George Moore Smith; Starter, John H Stead; Judge of walking, William E McCredy; Time-keepers, Charles H Pierce, Edward Plummer, Alfred H Curtis.

NEW JERSEY.—The Amateur Athletic Club of Morris-town contests resulted in the following victories:

One hundred yards dash won by George Randolph in 11s; the running high jump by Robert Webb; putting the shot (16 pounds, distance 28ft 3in) Paul Brown; quarter-mile run won by Fred Merrill in 5½s; standing long jump by Paul Revere; running long jump by Walter Wood; half-mile run by H Davis in 2m 20½s; standing high jump by Walter Wood; vaulting by H O

Pitney, Jr.; one-legged race by F Merrill; hurdle race by F Merrill in 13s.

CRICKET SCORES.—The St. George's Club of this city lead among local clubs, they having played fourteen games, of which only four were lost. Of ten games Staten Island have won five. The Manhattan score five victories out of seven games. Other scores are:

CAPTAIN SCOTT.—Over the initials, E. J. H., which are familiar to readers of FORREST AND STREAM, we find, in the *Pacific Life*, some readable gossip about this famous shot.

This gentleman, from his being so famous a shot, was the hero of the con story, which is so well known that it need not be here related. The gist of the matter was, of course, this, viz.: "Are you Captain Martin Scott?" said the con. "The same," was the answer. "Then," said the con, "you need not shoot; I'll come down." His reputation for accurate and wonderful rifle and pistol-shooting was richly deserved, and we are sure that he was ever excelled—if, indeed, he was ever equaled—by any of his contemporaries. One of his performances with the pistol, which has been fully vouched for as perfectly true by his fellow army-officers who witnessed it, and which strikes us as requiring more skill than almost any other feat we have heard of, was in taking two potatoes, throwing them into the air successively, and putting a pistol-ball through both of them as they crossed, one going up and the other coming down.

Some of his performances in rifle shooting were very extraordinary. Upon one occasion he and another officer took an old-fashioned United States Yager that he had, and it was determined which could load and fire three shots in the shortest space of time, and make the best target. Accordingly, a playing-card, with a spot or a bull's-eye in the centre about the size of a dime, was attached to a log of wood, and placed at seventy-five yards from where they proposed to stand. Captain Scott then took the rifle, uncharged it with the powder-flask at hand, and the ball and patches in his mouth, and made the three shots, "off hand," in one minute and twenty seconds. The other officer then went to the target, and found one round hole directly through the centre of the bull's eye. His companion was surprised at the precision of the shot, but observed to the captain that the other two had entirely missed the target. The captain shook his head and called for an axe, when he split the log and found the three balls in one mass, all having passed through the same round aperture directly in the centre of the card.

Captain Scott was at one time stationed at Prairie du Chien, and in possession of a wonderfully sagacious dog—a cross between the setter and pointer. This animal performed some astonishing feats. The captain would, for example, while sitting in his quarters at the fort, with the dog at his feet, say to him, "Mark, I want you to go over to the island and ascertain if there are any woodcock there, and come back and tell me." The dog would instantly go to the river, swim to the island, and after having hunted it over, return, and if he had found birds, run up to his master, then to the gun, wag his tail, and make other demonstrations of joy, which made it perfectly apparent that he had been successful. Scott would then tell the dog to get the canoe in readiness, and, strange as it may appear, he would take the cushion in his mouth, carry it to the river bank where the canoe was moored, place it upon the seat, return for the paddle, carry that to the canoe, then go back to Scott, and look up in his face with an expression which indicated that all was ready.

All those who are not familiar with the history of Captain Scott—so astonishing, and almost alone for the accuracy of his shots with rifle, shot-gun and pistol—may have some desire to know what became of him. We will add for their information that he was killed while gallantly leading forward his command in that most sanguinary battle of the Mexican war, "Molino del Rey."

A "RETIRED" FIRE-HORSE'S FRANK.—On Friday, "Buck," a veteran fire-horse, formerly attached to No. 6 company, but which is now used in the buggy of the lineman of the police and fire alarm telegraph, created much merriment by his persistent determination to run to a fire. Buck was standing in front of the city hall in charge of a boy when the fire-bells rang. The animal saw No. 4 engine rushing down Calvert street, and the excitement was too much for him to stand. He started at a rattling pace after the engine, to the terror of the boy in the buggy, who, finding he could not check the horse, occupied himself by calling out to the pedestrians and drivers to clear the track. The horse continued on until the engine stopped at the scene of the alarm, when he halted alongside of the machine, as he had often done when in active service. It is stated that Buck, when pulling the buggy on ordinary occasions, requires to be considerably persuaded before he will get up a trot.—*Baltimore Sun*.

AN ENGLISH SURGEON'S VACATION.—Sir Henry Thompson, the famous English surgeon, has had constructed a house-boat, charmingly fitted and furnished, and in it, accompanied by his accomplished daughter, he is about to start on a sketching tour on the Thames.

SUBARIN HARVEST FEAST.—This annual festival of the Subarins was opened at Schutzen Park, Union Hill, N. J., Sept. 2d. The New York *World* has this to say of its origin and of the rabbit hunt, which forms a prominent feature of the amusements: When in 1819 the King of Wurtemberg gave to his people a constitution, they, by general impulse, set apart three days at the end of the harvest season for rejoicing and thanksgiving.

It was held at Cronstadt, near Stuttgart, and a column composed of the fruits of the harvest was erected and processions and games with music and dancing indulged in. Of this the present festival is a lineal representative. The queer sport of the rabbit hunt is said to have originated two or three hundred years ago, in this wise: Seven villagers, anxious to imitate their lords in the chase held a council to decide where and what they should hunt. While busily engaged in the discussion a rabbit chanced to enter the room through an open door, and the assemblage, filled with the terror inspired by accounts of encounters with wild feres, boars and wolves, fainted, and fell from their chairs. Recovering, one of the number encouraged the others to make an escape, and in their rush to pass through the narrow doorway one of the number was thrown down and trampled upon. He fell upon the innocent cause of their alarm—the rabbit—which had been leaping in and about the doorway. Missing him, the villagers got together a small army and returned to rescue him. They found him lying senseless upon the dead body of the rabbit. Their comrade they bore home on a litter, and the rabbit they carried in triumph by a spear through his ears.

## THE SONG OF THE OYSTER.

Oh! a jolly old bird is the oyster fish,  
As he sits in his pearl shell,  
A thinking how many a delicate dish  
He can make when cooked well—  
Broiled or roast,  
Served on toast,  
Or raw on a dainty platter;  
Escallop or stew,  
Either will do,  
Or fried in crumbs or batter.  
And a knowing old fish is the oyster bird,  
As he sits in his shell to doze;  
For he drops not a hint, he speaks not a word  
Of all the secrets he knows—  
Blissful hours,  
Shady bowers,  
Whispering low and sweet;  
Boozy delights,  
Merry old nights,  
When jolly old cronies meet.  
—*Boston Commercial Bulletin*.

## THE MOCKING BIRD.

Superb and sole, upon a plumed spray  
That o'er the general leafage boldly grew,  
He sum'd'd the woods with song; or type drew  
The swoop of hungry hawks, the lone dismay  
Of langud doves when long their lovers stray,  
And all birds' passion-plays that sprinkle dew  
At morn in brake or bosky avenue,  
What e'er birds did or dreamed, this bird could say.  
Then down he shot, bounced alirly along  
The sward, twitched in a grasshopper, made song  
Midnight, perched, primped and to his art again,  
Sweet Science, this large riddle read me plain:  
How may the death of that dull insect be  
The life of yon trim Shakespeare on the tree?  
—*Sidney Lanier, in the Galaxy for August*.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York,

# NEW YORK SHOOTING COAT.

A first-class Coat. No shooting outfit complete without it. Pleasant to wear, durable, and in the end the cheapest. Full suit of same material if desired.

**MADE OF BROWN VELVETEEN.**

Pockets and lining made to take out, so that it may be worn for early fall or winter shooting. (Horace Smith, Esq., says it is just his idea of a shooting coat.) For sale by

**H. C. SQUIRES, 1 Cortlandt St., N. Y.,**

Or F. L. SHELDON, Rahway, N. J.

Rules for measurement and samples sent upon application. Prices ranging from \$15 to \$30. Ag30 ft

## A VICTORIOUS INVENTION The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game. The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation. It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

No. 1.—For fishing and all kinds of small game and animals, sent by mail. . . . .35 cents.  
No. 2.—For catching Mink, Muskrats, Raccoons, large Game, Fish, etc. . . . .75 cents.  
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. \$10.  
All goods sent, charges paid, to any address on receipt of price. Address

**Stent & Co., Gen'l Agents,**  
132 Nassau St.,  
P. O. Box 2997. NEW YORK.

## Sportsmen's Routes.

### TO SPORTSMEN:

### THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the Superior Facilities

afforded by their lines for reaching most of the FISHING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of transshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury. The lines of

Pennsylvania Railroad Company also reach the best localities for GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, GREENSBORO, RAYMOND, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting. Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent, feb17-1t FRANK THOMSON, Gen'l Manager.

### STONINGTON LINE, FOR BOSTON AND ALL PORTS EAST.

### THE "FISHING LINE."

### Brook Trout, Grayling and Black Bass Fisheries OF NORTHERN MICHIGAN, VIA

### Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line) Sportsmen who have cast a fly or trailed a spoon in the waters of the Grand Traverse River will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein The fish named above, as also Muscoulunge, Pike and Pickerel, abound.

In no other streams east of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout Season opens June 1st.

Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in country new enough to afford the finest of homes.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, Mackinaw and Lake Superior Excursion Ticket.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cares for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the Fishing Grounds, send to FARMER and STREAM office, or address

J. H. PAGE, G. P. & T. A., Grand Rapids, Mich.

A. HOPPE, Eastern Passenger Agent, 116 Market Street, Philadelphia.

### NEW YORK AND PHILADELPHIA NEW LINE, Bound Brook route for Trenton and Philadelphia.

## GENERAL GUIDE.

WITH MAPS AND ILLUSTRATIONS,

900 pp., Price, \$3.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM," AUTHOR OF THE  
"FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST AND STREAM" PUBLISHING COMPANY.

The book is a complete manual for sportsmen: it gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.

It describes 197 varieties of edible fish alone, that may be taken with the hook; 30 varieties of ducks; 20 varieties of snipe or waders, and the different methods of shooting each.

His instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 74 prescriptions and recipes given under the revision of the best modern canine therapists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

It contains very useful recipes and remedies for wounds, bites, poisons, lacerations, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

## Bound Volumes

OR

## Forest and Stream.

SEVENTH VOLUME, NOW READY.

First Four Volumes, \$4 each, Others, \$3.50.

A complete set of the FOREST AND STREAM—seven volumes, bound handsomely in cloth—a valuable library for the sportsman—can now be obtained on application to this office.

## EDWIN HACKETT,

## Warren Powder Mills,

MANUFACTURERS OF

BLASTING AND MINING, SHIPPING AND SPORTING GUNPOWDER.

SPORTING BRANDS—Boreka, Continental, "Border Rifle," Snap-Shot, and Warren Sporting Cannon and Musket, U. S. Standard. The above can be had of the dealers, or at wholesale at the office, 27 Beane street, Boston, Mass., and of the agents, JOHN P. LOVELL & SONS, corner of Washington, Cornhill and Wattle street, Boston, Mass. J19

THE

## HAZARD POWDER CO.

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For sea, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6½ lbs, and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF WHICH WE REQUIRE EXAMINATION OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office, 38 WALL STREET, NEW YORK.

THE

## New Dittmar Powder.

THE CHAMPION POWDER OF THE WORLD

For all off-hand shooting at short and long ranges. Unsurpassed for Cleanliness. Pleasant to shoot on account of little recoil and report. Desirable for hunting on account of little or no smoke. Unequalled for rapid firing, as it does not foul and heat up the barrel as black powder. Great accuracy, penetration and good pattern. Safer than black powder. Address

Also manufacturer of Patent Reels for Salmon and Trout fishing. The lightest, strongest, and jandomest Reels ever made.

Full line of FISHING TACKLE always on hand.

Send for circular and price list.

J67

## BOSTON

## SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON,

BOSTON.

Each article—coat, trousers, vest and hat—have the name and manufacturer's address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We make but one quality, and that is the very best. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest, and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are riveted, and nothing is neglected to make the whole suit complete in every way.

## OUR PATENT DECOYS

have entirely superseded the old-fashioned cumbersome, wooden decoys. The birds are hollow, and six of them occupy about the space of one wooden decoy. The Duck Decoys of all kinds are \$12 per dozen; geese, \$3 each; yellow leg, \$4.25 per dozen; black breast plover, \$3.75 per dozen; red breast plover, \$3.75 per dozen; golden plover, \$3.75 per dozen; turnstone, chicken plover, etc., \$3.75 per dozen; sandpipers, \$3.50 per dozen. We are now making standing geese for field shooting.

## THE HUNTER'S TENT

is made of tan-colored duck; light, easily transported. Size, 7 ft. by 8 ft. Price, \$10 complete, made on the umbrella principle, folding into a neat roll 3 feet long.

In the judges' report at Philadelphia they were commended for excellence in every part. Very novel and practicable; adapted to all out-of-door purposes where lawn, beach, hunters and camp tents are used; quick folding; all sides strongly fortified; enables them to stand against wind and rain. Rev. F. B. Savage, of Albany, N. Y., who camps out in Florida in winter, and the Adirondacks in summer, writes this about the tents:

ALBANY, July 31, 1877.

SIR—I have just returned from a three-weeks' camping expedition in the Adirondacks, and have had the three tents bought of you put to the severest tests of exposure both as to wind and storm, and I do most unhesitatingly say they are the most complete thing of the kind I ever used.

1st. They are easily put up or taken down.  
2d. They are perfectly waterproof.  
3d. They are a good height, and all the room is available.

Our party asked for no better. They were admired by all who saw them, and one party insisted on buying one of ours that was to spare. Rev. Dr. Duryea, of Brooklyn, and the Rev. Dr. Irwin, of Troy, both indorse what I say about your tent. With kind regards, yours truly, F. B. SAVAGE.

## Tan-Colored Leather Pliable Waterproof Suits.

in Shooting Coats, Jackets, Breeches, Vests and Hats at following prices: Coats, \$22; Breeches, \$15; Jackets, \$18; Vests, \$12. These form the most elegant shooting equipment known. They are indestructible.

A recent notice in the FOREST AND STREAM, from a correspondent, says:

Whenever a sportsman, or even one who does not claim the distinction, finds a really good and useful article, it is no more than fair that he should let others have the benefit of his knowledge. For this reason we would call attention to the Tan-colored Leather Shooting or Fishing Suits, made by G. W. SIMMONS & SON, of Boston, Mass., the manufacture of the famous "Boston Shooting Suit."

I saw these goods advertised in your paper, and wrote to the parties for samples. I found the material as soft and pliable as a piece of kid. I tested it by soaking in water twelve hours, and found it as nearly waterproof as one could desire, and after drying was happily surprised to find it had not stiffened in the least. I have since then received a full suit—coat, vest and breeches—ordered by letter from measure taken by myself.

The goods are splendidly made, well lined with tannin; in fact I do not see how they can be improved.

My friends are unanimous in their verdict that G. W. Simmons & Son's leather goods cannot be excelled in quality or beaten in price.

For every kind of sportsmen's goods address

G. W. SIMMONS & SON,

Oak Hall, Boston, Mass.

## W. W. Greener's

## CHOKE-BORE GUNS,

Tried on Game in America.

Supplied by H. C. Squires, 1 Cortlandt St.,  
NEW YORK.

See the Following Testimonials:

SIR—It is a pleasure for me to inform you of my high appreciation of the 10-lb. Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling-pieces since the introduction of the percussion cap. It gives the maker complete control of the pattern, and greatly increases penetration. To prove this, I will give you the performance of this gun. The 32-inch 10-gauge barrels, charged with 4½ drachms of powder and 1¼ oz. No. 6 English chilled shot, give patterns ranging from 385 to 390 pellets in 3½-inch circle at 40 yards. The same charge of powder and 1¼ oz. No. 4 American shot gives 160 to 175 pattern, with penetration which kills ducks at 50 to 75 yards like a stroke of lightning. It is a characteristic of the choke-bore to show its greatest superiority in the large sized shot. What I am about to say will perhaps surprise you as much as the performance surprised me. On trial of the 32-gauge 28-inch modified choke-bore barrels, with 3½ drachms of powder and 1¼ oz. of shot, I got about the same pattern and spread of shot at 25 yards as with the full choke 10-gauge barrels at 40 yards, with tremendous penetration. This is just the performance required of a gun of this class, in which you generally find ruffed grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 25 yards.

COL. JOHN BODINE.

DEAR SIR—The guns arrived all right. We think these last guns you have sent us will place the Greener guns ahead of any other in this country, as guns of other makers don't compare in shooting quality with them. We unhesitatingly recommend the Greener as far superior to any gun of foreign or domestic manufacture that we have seen. We say this after seeing and using guns of all the most celebrated makers.

CARLISLE JONES & CO.

SELMA, Ala.  
The Greener gun presented by Mr. Squires for the best pointer, and awarded to me, is a close, clean hard hitter, killing its game at very long distances. It is the second Greener that I have owned and they cannot be beaten. I can win with them at the trap or in the field.

LAKE CITY, Minn.  
SIR—I have a pair of W. W. Greener's breech-loaders (bought of H. C. Squires, of New York), modified choke-bore. I have had an opportunity to test these weapons on birds heavily feathered, and where great penetration was essential to success. I have repeatedly made long shots, always killing the game clean. At a target both guns made a very even distribution of the shot, with extreme penetration.

P. C. FIELD.  
SIR—The Greener breech-loader I purchased of you is very fine indeed, and gives great satisfaction.  
WARREN, Pa. ROBERT DENNISTON.  
W. W. GREENER, St. Mary's Works, Birmingham, England.

## Highest Honors

CENTENNIAL WORLD'S AIR, 1876.

## SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE  
Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The B. SHONINGER ORGAN CO.'S exhibit was the best Instruments at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Belts, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, capable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." THE ONLY ORGANS AWARDED THIS HONOR.

This Medal and Award was granted after the most severe competition of the best makers, before one of the most competent juries ever assembled.

New styles and prices just issued, which are in accordance with our rule, the BEST ORGANS for the least money.

We are prepared to appoint a few new Agents.

Illustrated Catalogues mailed, postpaid, upon application to  
B. SHONINGER ORGAN CO.,  
97 to 123 Chestnut Street,

TRIPLEX.

marked the PREMIER QUALITY

(Extract from FOREST AND STREAM, New York, December 26, 1876. Contributed by one of the Judges of Awards of Guns at the Centennial.)

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

**COMPENSATING LUMP.** Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about \$10 extra. Choke-bored, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

## Paper and Metallic Shells

FOR

## Breech-Loading Shot Guns,

Manufactured by the

UNION-METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

## "St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2½, and 3 inches; No. 12—2½, 2½, and 2½ inches. Longer and shorter sizes made to order.

Shells will be made at extra cost. They are not mailable. Sample, 100 sent by express on receipt of \$1.15 for No. 12; \$1.30 for No. 10.

Factory and office, No. 2, 239 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

## Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL.—The only Ball that will break sure when hit by shot. Use none but the best. Every ball marked. Patented April 10, 1877; Traps, March 13, 1877.

Geo. E. Hart &amp; Co.,

NEWARK, N. J.

TRADE SUPPLIED.

## HUBER &amp; MERWIN'S CHAMPION BALL TRAP.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP, for durability and perfection of its operation, superior to them all, and take pleasure in recommending the "Champion" to sporting clubs and my friends. (Signed) Aug 9 ly

We call the attention of the fraternity to the above trap, claiming to be the *ne plus ultra*. It combines compactness with durability, and is arranged, by a swivel on the bed-plate, to throw a ball in any direction or at any elevation unknown to the shooter, a screen preventing his seeing the direction in which the trap is set.

The spring, as the cut will show, is made of a steel rod or wire, bent spirally at the point of attachment, thus receiving the concussion its entire length, and preventing breakage.

PRICE \$10.

FOR SALE BY

BARTON &amp; CO., Sole Agents,

337 BROADWAY, NEW YORK.

THE CHAMPION GLASS BALL TRAP,

I RA A. FAINE.

THE GREEN GUN has the simplest and strongest snap-action made. The proportions and finish, the shooting qualities for penetration and pattern, are not excelled. Can bore to make any pattern ordered, from a cylinder to a full choke.

Muzzle-loaders altered to breech-loaders, with same action as new guns. Barrels bored to shoot close and strong.

Price \$45. Re-boring and repairing breech-loading shot-guns done promptly and in the very best manner. Send for new price list to CHARLES GREEN, 3 West Main St., Rochester, N. Y. Aug 20 ly

## Sportsmen's Goods.

W. H. HOLABIRD,

Manufacturer of

## Specialties in Clothing FOR SPORTSMEN.

Valparaiso, Ind.

Shooting Suits complete, consisting of Coat, Vest, Pants and Cap. \$10. No. 1 Shooting Coats, waterproof and first-class in every particular, sent by mail, post-paid, \$6.

Holabird's New Game Bag; weighs 13 ounces. The most convenient and coolest garment ever offered to Sportsmen. Can be used in place of a coat; room for 50 shells and 75 snipe or quail; by mail for \$2.

Holabird's New Cartridge Vest, capacity for fifty shells; stable and admirable for boat shooting; \$2.50. Fine Linen, Corduroy and Fustian suits made to order in the neatest and most desirable style. Send 25 cents for my book on Dog Breaking and catalogue of goods. Money refunded if not satisfied.

W. H. HOLABIRD, Valparaiso, Ind.

Ask your gun dealer for Holabird's goods. Jy 12 ly

## NO MORE BROKEN GLASS!

Paine & Holberton's composition balls can be used in any trap. Patent applied for.

Price per 100.....\$3

This ball is perfectly harmless, and is a benefit to have rather than an injury. Many accidents have occurred from the broken glass balls, and every day it is becoming more difficult to find places to practice with the glass balls. These balls come packed 500 in a barrel.

W. HOLBERTON, Sole Agent,

P. O. Box 5,109, 162 Nassau Street, N. Y.

Aug 23

## SOLA HAT.

This Hat is made of waterproof duck, dead grass color, and in the same style as East India Hats; is the coolest and best yet offered to sportsmen.

Absolute Guarantee against Sunstroke.

For sale by all dealers in sportsmen's goods, or sent by mail, securely packed, postage prepaid, price \$3 a barrel.

Address,

THOMSON &amp; SON,

301 Broadway, New York.

P. O. box 1,016.

Send stamp for illustrated catalogue of sportsmen's goods. Ag 2 ly

ANY GENTLEMAN who has

not received a circular containing

this cut, should write for one

with new price list.

### THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.  
Ten Cents a Copy.

NEW YORK, THURSDAY, SEPTEMBER 20, 1877.

Volume 9.—No. 7.  
[No. 111 Fulton St., N. Y.]

#### OUR EVENING CAMP FIRE.

Selected.

Pile high the fagots! See the bright flames play!  
Come forward, doughty fishermen,  
And while our camp fire glids the glea,  
Relate the chief adventures of the day;  
Discouraging thus of piscatorial fray,  
We'll "fight our battles o'er again."

Mark how the leafy branches in the air,  
Responsive to the rising heat,  
Form many a waving banner, meet  
For regal bivouac, as though aware  
That underneath their folds proud victors share  
The honors of King Trout's defeat!

Be modest, O ye braves of mimic war,  
For though a fisher tells a tale  
Himself believes, his friend might fall,  
In telling him to find belief therefor!  
"Fish stories" all true fishermen abhor;  
Let naked truth alone prevail.

The longest hours of winter eve were fleet  
If graced by narratives like these;  
Yet tales thus told are but the lees  
Of wine fresh drawn and drank in such retreat  
As this, with Nature's beauties all replete,  
Beside our camp fire 'neath the trees.

The fire burns low and we are prone to drowse.  
The songs all sung, the tales all told,  
The back-log to its place is rolled;  
Then, each to each renewing friendship's vows,  
We seek our springy, fragrant beds of boughs,  
And sleep our childhood's sleep of old.

M. A. KINGSFORD.

#### South American Reminiscences.

IN 186—I joined the U. S. S. Sloop, X—awaiting orders in Hampton Roads, off Fortress Monroe, near the Rip Raps. We were delayed a week or more although ready for sea, but the time was well employed in drilling and "breaking in the traces" a new crew. It was not long before every one had found his proper place, for the navy is a great leveler, and the "equal rights of man" that Jack Easy sought, are found, as in his case, on board a man of war—that is each one has an equal right to do as he pleases, providing he pleases the captain.

Sailing orders received, the anchor was withdrawn from the sands of the "Roads," and we stood out to sea. The crew were mustered, the customary speech by the commanding officer spoken, the flag saluted and ship cheered; the pilot left us with the mail bag, and we were fairly outside the Capes of Chesapeake. For seven days the wind was strong from the southward, next it shifted suddenly to NNE, making a heavy, wallowing sea, and then hauling to the westward, blew with such violence as to make the ship uncomfortable; she fairly staggered under the force of the gale, and her lee guns swept the billows, forcing us to take in 't' gallant sails, and sails and courses. Our ship, however, sustained the high opinions we had of her good qualities, behaving admirably, and averaging eight and a half knots without steam. On the third day this blow came to an end, the weather cleared, and our hearts were gladdened with a gentle breeze to waft us on our way.

Much as I had heard and read of the Gulf Stream, I was nevertheless astonished at its magnitude; its volume being a thousand times greater than that of the Mississippi or Amazon, and its banks of cold water more clearly defined than those of either of these rivers at flood. So clear is the line of demarcation between the warm waters of this oceanic river and its cool, liquid banks, that a ship sailing along may be half in the stream and half out, and a bucket of water dipped from one side will be twenty degrees cooler than one drawn from the other.

The thirteenth day out from the capes of "Old Dominion" our trade wind left us, and steam was employed for the first time. Four days later and our anchor was dropped in the harbor of St. Pierre, island of Martinique, where we remained but forty-eight hours. Even this short stay enabled us to ramble through some of the groves and gardens, among which the Empress Josephine passed her girlhood. By the way the celebrated Madame de Maintenon—the concubine, or morganatic wife of Louis XIV., who wielded a greater power than

e'er a queen over the destinies of the French—was also for a time a resident of this isle. A third resident of Martinique was Aimee Le —, who, with Josephine, forms one of the graceful traditions of the island, and one who none the less graced a throne, though by becoming the mistress of the harem of a Turkish Sultan. The story of the wierd, unearthly, aged negress and her prophecies, to which the biographers of Josephine give credence, and in which Aimee, her friend, was also included, has a basis of probability; for not only do African superstitions prevail, but Obi rites are still indulged in secretly, and in them many Creoles as well as blacks have implicit faith.

Leaving this beautiful isle—all the Windward isles are beautiful, we pass within view of the Barbadoes with their windmill crowned hills, and slowly force our way through the blue water toward the great tropical river, the Amazon. We first encounter the flood of the stupendous stream as a broad, yellow belt, cleaving the blue waters of the ocean for a hundred or more miles from land. We enter the delta at a fortunate juncture, witnessing the phenomena of a conflict between the ascending tide and the descending flood of the river just ahead. This is the *pororoca* which frequently causes a wave fifteen feet in height where the stream is shallowest. At this time, however, it did not exceed five feet, possibly less. This gives character to the navigation of the Amazon for some hundreds of miles, and such is the force of the ascending tide that sailing craft can make no headway against it, but are forced to anchor until the turn; hence the navigation is measured by tides. This perturbation of the waters is more violent on the northern side of the island of Marajo, where the river is wider and much more shallow.

Belem, or Para, is the principal city of the Amazon, and with the exception of Quito, the only town of considerable size situated upon the equatorial, its latitude being 1 deg. 28 min. South. Its site occupies an elevated point of land on the right bank of the Para, as this most important mouth of the Amazon is called, eighty miles from the ocean. The roadstead is good, being formed by an abrupt curve of the stream, and admitting vessels of the deepest draught. The opposite bank is formed by the great island of Marajo, twenty miles away, though entirely obscured by intervening and smaller isles.

One is struck with the first view of Para, not only with the appearance of the town, but its inhabitants, Indian blood seeming to predominate. The Brazilian aborigine may here be seen, both in pure blood and every possible admixture with white and black. The mixed breeds which now form probably the greater part of the population, have each a distinguishing name. Mameluco denotes the offspring of white with Indian; Mulatto, that of white with Negro; Cafuzo, the mixture of the Indian and Negro; Curiboco, the cross between the Cafuzo and the Indian; Xibaro, that between the Cafuzo and Negro. These are seldom, however, well demarcated, and all shades of color exist; the names are generally applied only approximately. The term Creole is confined to negroes born in the country, and not to all indigenous races as in the West Indies. The civilized Indian is called Tapuyo or Caboclo. Such occupy every station in society, being merchants, sailors, priests and slaves. Probably no city in the world possesses a greater number of foreign residents in proportion to its population than Para. English, Norwegian, Danes, Swedes, Gauls, Italians, Germans, Greeks, North Americans, Spaniards, Hebrews, Chinese, Malays and Japanese, all have representatives here. The foreign population, however, is not a stable one, the majority of them being but adventurers, who come merely for the purpose of making fortunes, after which, if successful, they return, or seek the more brilliant metropolis. Still the monte and roulette tables or the "wheel of fortune" forces many to become fixtures, though the gambling hells have nothing in the way of attraction other than the excitement of gaming. There are no luxuriously furnished, brilliantly lighted palaces, as in North American cities; on the contrary, they are usually the vilest hovels, but nevertheless are well patronized.

The buildings present an array of white walls and red tiled roofs, these used as dwellings being particularly well adapted to the climate. A wide veranda is an essential portion of every habitation, often extending quite around the building, while a similar construction prevails on at least three sides of the spacious courtyard within. A part of the inner veranda, or a room connected with it, serves as the dining room, and is always airy and pleasant. Latticed windows are more com-

mon than glass, but some residents possess both, the preference always being given to the rooms that possess the former during pleasant weather. Then, too, instead of the dark and unventilated rooms or alcoves with sweltering beds for sleeping, so common with us at the North, they have hooks for the suspension of hammocks across the corners of the large rooms, and transversely along the entire sweep of the verandas, so that each dwelling is capable of accommodating fifty or sixty guests each night with the least possible inconvenience.

The plan on which the city is laid out possesses both regularity and taste. It has a number of public squares and gardens, and the streets are all macadamized. There is a marked proportion of commodious and substantial houses, which are built in the Italian style of architecture, although many of the dwellings upon the less important streets are diminutive in size and inferior in construction. The Custom House was formerly a church of the Jesuits, and still retains its ecclesiastical aspect in spite of its secular employment. One of our officers remarked that, to be in keeping, all documents emanating from the customs should be written in Latin, to which a Brazilian gentleman replied: "Such is very nearly the case, Portuguese being the half sister of that language." The officials all speak English and French with fluency, which put our bungling attempts at Portuguese to shame; furthermore they are universally polite, an accomplishment decidedly in bad odor among similar personages in our own country. The rule seems to be in Brazil to appoint only gentlemen to office, but with us, if it is not a rule, it seems to be a fact that bores and knaves have the preference.

The convent of San Antonio is another prominent ecclesiastical building put to secular uses, being occupied by the Amazon Steam Navigation Co. The hospital was once the Convent of San Jose, and the barracks of the standing army the residence of the Carmelite order. Yet the city has numerous churches as well as an elegant and substantial cathedral, with high bell towers, constructed of stone which was brought from Europe for the purpose. The educated Brazilian is eminently more progressive than his Portuguese ancestor, and totally devoid of the foolish and superstitious reverence the latter possesses for religious objects. It is said that the Pope appointed and sent a legate to the Imperial Court at one time, with the expectation that his salary, fees, etc., would be paid by the empire. The Senate decided that his Holiness should pay his own servants, as Brazil had no use for them, and so informed him.

Trade at Para is brisk, a prominent feature being the snake merchant, who perambulates the streets soliciting purchasers, the box or barrel upon his head containing his merchandise. These serpents are of the boa species, and much esteemed by the Paranees as exterminators of vermin, and are held in much the same estimation as a good mouser would be at home. Every house is the possessor of at least one, many having three or four. It is unnecessary to say that they are harmless, and they are admirable for the purposes for which they are sold. Every square also has its parrot and monkey merchant, who undoubtedly drives a good trade among the sailors, Jack's fondness for pets being proverbial the world over. There was hardly a ship in the harbor that did not possess at least half a dozen of each. Howling monkeys, monkeys with non-prehensile tails, fox-tailed monkeys and squirrel monkeys, all were to be had at prices within the reach of all, even a cabin boy. Being seized with the *Simian* mania, I purchased a pair of graceful and handsome little animals known as oisitis or marmosets. These are favorite pets with the Brazilian ladies, and are rarely seen outside of the limits of the empire, even in the best zoological collections. They are not wanting in beauty, and are exceedingly nimble and acute. In size they are somewhat smaller than a gray squirrel, and possess thrice the intelligence of the latter. The skin is like Chin-chilla fur, and their wise little faces present none of the repulsive features of other monkeys. In action they are most graceful and rapid, and it is a treat to see the little fellows pursue and capture flies and insects, or see them devour a mouse. When one of the latter was caught, its captor began at his snout, carefully pushing back the skin, eating bones and all until the tail was reached which was all that was left inside of the pelt. They would scamper up the rigging with ten times the rapidity of the nimblest seaman, and if a bird chanced to light, pursued it from rope to rope until it settled upon a spar, when one would quickly pass along the under

side and pounce upon its victim with unerring certainty. I lost these interesting pets later in the cruise, while in the Straits of Magellan, probably from the cold, to which they were extremely sensitive.

The evening and morning scenes that may be enjoyed at Para are indescribably beautiful. At night all is still, save the occasional rustling of a balmy breeze, and the imagination must be vivid that can picture to itself more loveliness than is exhibited when the moon appears in all her splendor. The dark, luxuriant foliage crowning hundreds of spreading trees is furnished with a mellow lustre too exquisite for words to portray; while the waving plumes of numerous palm trees, glancing their reflections downward upon the beholders, add to the charm of the scenery, and the opening blossoms of many fruit trees and humbler flowers, load the air with a fragrance none the less grateful for not being mingled with offensive effluvia. The blanchness of the evening air is in delightful contrast to the rays of the noonday sun, and an occasional breeze invigorates the system after either the confinement or exposure of the day. Although in the course of the night there falls a copious dew, yet so balmy and healthful is the atmosphere that there is no dread of exposing to it the most delicate constitution. This is the climate of all others I would seek as a relief for enfeebled health, particularly *pector affections*, although so near the equator, it is not excessively hot. The temperature rarely reaches 95 degrees of Fahrenheit, the greatest heat of the day, about 2 p. m., ranging generally from 89 to 94; but on the other hand, the air is never cooler than 73, so that a uniformly high temperature exists. Americans say the heat is not so oppressive as in New York or Philadelphia. The humidity is, of course, excessive, particularly in the rainy season, yet there is no danger from exposure to the night air or residence in low swampy districts. The English and American residents who had been here twenty or thirty years look as fresh in color as if they had never left their native country, and the natives themselves, particularly the women, seemed to preserve their good looks and plump condition until late in life. The Paranees rise with the dawn, drink a cup of coffee, and devote the cool of the morning to business. Early in the day the sky is invariably cloudless; the heavy dew of the previous night's rain which lies on the moist foliage is quickly dissipated by the glowing sun, which, rising straight out of the east, mounts rapidly toward the zenith. All nature is fresh, new leaf and flower buds expand rapidly. Some mornings a single tree will appear in flower amidst what was the preceding evening a uniform mass of green forest—a dome of blossom suddenly created as if by magic. The birds are all active; from the trees may be heard the chattering of parrots whose bright colors add to the charm of the foliage. The heat increases rapidly, until toward two o'clock, by which time every voice of bird or beast is hushed; only in the trees is heard at intervals the harsh whirr of the cicade. The leaves, which were so moist and fresh in the early morning, now become lax and drooping, and the flowers shed their petals. Even the streets and shops are deserted, the inhabitants being either asleep in their hammocks or seated on mats in the shade, too languid even to talk. A little later and perhaps a shower will fall, producing a welcome coolness. First, the cool sea breeze which commenced to blow about ten o'clock, and which increased in force with the increased power of the sun, will flag and finally die away altogether. Now the heat and electric tension of the atmosphere becomes almost insupportable. But soon white clouds begin to gather in the east, growing gradually blacker along their lower borders. Suddenly the whole eastern horizon becomes black, and spreads upward until old Sol is at length obscured. Then the rush of a mighty wind is heard swaying the tree tops, a vivid flash of lightning bursts forth, then a crash of thunder and down streams the deluging rain. The storm soon ceases, leaving bluish-black motionless clouds in the sky until night. Meantime all nature is refreshed, but heaps of flower petals and fallen leaves are seen under the trees. Toward evening life revives again, and every bush and tree teems with life. The following morning the sun again rises in a cloudless sky, and so the cycle is completed—spring, summer and autumn, as it were, in one tropical day. The days are more or less like this throughout the year, though a little difference is observable between the wet and dry seasons—the one is varied with showers, the other with sunny days. It is never spring, summer or autumn, but each day is a combination of all three. With the day and night always of equal length, the atmospheric disturbances of each day neutralize themselves before each succeeding morn; with the sun in its course proceeding midway across the sky, and the daily temperature the same within the two or three degrees throughout the year—how grand in its perfect equilibrium and simplicity is the march of nature under the equator!

Few objects attract the attention of the stranger more than the *canoes*, which seem to have incorporated all the diversities of naval architecture since the days of Noah; and they are to be found of all sizes. The largest resemble more the Chinese junk than anything else, and to the eye of a sailor, are anything but conducive to safety; but they are considered excellent for Amazonian navigation. The lading is no less diverse than the styles. One is laden with sarsaparilla and cinchona; a second with nuts, palm hats, tapoca, parrots and monkeys; while a third has a cargo of dried fish, cocoa, vanilla, copiba balsam, annatto, caoutchouc, guarana, cotton, coffee and rubber shoes.

The use of caoutchouc is said to have been taught through the employment of it by the Omaguas Indians for bottles and syringes; hence the local names "*seringa*," syringe, and "*bor-racha*," leathern bottle. The aboriginal designation is "*cahu-chu*," from which doubtless arises the name caoutchouc. The trees which furnish the gum grow erect to a height of eighty or ninety feet, half the distance from the ground being totally devoid of branches; but the top is spreading, and ornamented with a thick, glossy foliage. On the slightest incision the gum exudes, having at first the appearance of thick, yellow cream. From this the shoes are made by pouring it over wooden lasts previously coated with clay. This is repeated until the desired thickness is obtained, when they are subjected to the action of smoke from the burning fruit of the *season* palm, which serves the double purpose of drying and imparting a darker color.

Another tree not uncommon in the region of Para is the Massaranduba, or Cow-tree, and is certainly most remarkable. We had heard a great deal about this tree, and about its producing from its bark a copious supply of milk as pleasant to drink as that furnished by the cow. We had eaten its fruit in Para, where it is sold in the streets by the negro market women; and heard a good deal of the durability of its timber in resisting the action of water. A trip of a few miles into the interior allowed us the much admired view of this wonderful tree growing in its native wilds, and we found it one of the largest of forest monarchs, very peculiar in appearance on ac-

count of its deeply scored, reddish and ragged bark. A decoction of the bark, we were told, furnished an excellent reddish dye for cloth. On trying the milk, it was found quite pleasant with coffee, but possessed a slight rankness when drunk pure; it soon coagulates into a species of glue, which is exceedingly tenacious, and is often used to cement broken crockery; it also forms a species of plaster, which is held in high repute by the natives. This tree, so well known on the Amazon, yields its fluid in great profusion, but it is not considered safe to drink much of it. Its botanical character seems never to have been properly investigated, though doubtless it belongs to the same family—*Euphorbiacæ*—as the Caoutchouc. It is said that the juice of the latter is sometimes used as milk, and that the Negroes and Indians who work in its preparation are fond of drinking it; be this as it may, several deaths are recorded from it—through, perhaps, too free use.

After a stay of two weeks we bid adieu to Para and again put out to sea. We push well out to avoid the head winds so prevalent near the coast, getting no glimpse of land from the time we leave the Amazon until the eighth day, when the island of Fernando de Noronha is seen as a dim blue streak off to the west. This rocky and almost sterile isle serves as a sort of Brazilian Botany Bay. The convicts are not allowed to eat the bread of idleness, raising their own food from the soil, the settlement being in every way self-sustaining. Escape is almost an impossibility, no vessels being allowed to touch at the island without a permit, and the nearest main land—Cape St. Roque—is fully three hundred miles away. We had hoped that our ship would touch at either Bahia or Pernambuco, but such was not our lot. The latter is seldom visited by men-of-war, as the bar does not allow heavy draught vessels to enter, and there is, moreover, a disagreeable port regulation, forcing all ships to store their powder at the fort while lying in harbor. But perhaps the most powerful objection is that its harbor cannot be relied upon for quietness or safety, as the powerful winds and rolling seas are frequently sufficient to part the strongest cables.

After leaving Para "bibles" and "prayer-books" were in requisition, and the ship holystoned from stem to stern, which had been done but once since leaving Hampton Roads. This converts a ship into a floating Babel, and any one between decks need have no very vivid imagination to fancy himself under a railroad bridge with a full train crossing. But we have compensation for all this hubbub in decks almost as white as driven snow, and so clean that a handkerchief might be swept over them anywhere without interfering with its immaculateness. Nothing requires more unremitting attention on a man-of-war than cleanliness. Without it a ship would become intolerable and endanger the health of its crowded occupants. We number nearly three hundred souls all told, besides having coals, water, provisions, clothing, and also spare sails and spars for emergencies. How such a mass of life and material can be brought within the capacity of a single sloop of war, and yet leave scope and verge enough for action, is a mystery understood only by a sailor. Some one has said: "The housewife who grumbles over the intrusion of an additional piece of furniture should look into a sloop of war, and she will go home with the conviction that she can sleep quite comfortably in the cradle with her infant."

After the cleaning, painting is next in order, and the odor of turpentine, benzine and tar salutes the olfactory nerves whichever way one turns. Our batteries are given a coat of black varnish, ropes are re-tarred, spars scraped down and slushed, hammock nettings scrubbed, bright worked polished, tarpaulins varnished, and everything given as new an aspect as is possible, that we may appear well at the Brazilian metropolis.

As we sail toward the southward, hooks and harpoons are gotten out and furnished up, for we have reached the region of dolphins, porpoises and sharks. Jack holds a deep rooted antipathy for the latter, who can hope for no mercy at his hands. "There, d—n you," muttered an old quartermaster, as he gave the final quietus, by means of an axe, to the tail of a monster which had been hauled in; "I guess you won't hunt honest folks no more." Next to the capture is the fun of cutting open the shark; for queer things are often found in their stomach, such as shot, tobacco, boxes and buttons, in fact anything that may chance to fall overboard from a passing vessel. We were disappointed in this fellow, however, he having stowed his locker with nothing but an empty condensed milk can.

Soon after passing Brazil's convict colony we encountered head winds, but the end of the fifteenth day out from Para the welcome cry of "Land ho!" was heard from the foretop, which tells the listeners that Cape Rio is ahead, and we confidently expect to see Rio in the morning. Soon a long line of coast comes to view, and we who have never been on the South Atlantic station, anxiously scan every indentation for the opening into the famous bay of the "River of January;" but all in vain. At last the officers of the watch puts an end to speculation by informing us that we have yet many a mile to sail, and on a different tack. Soon after the sun has set, for there is no twilight in the tropics, the silvery moon rises in all her splendor, and the sea shows ripples of phosphorescent light under our counter. The beautiful evening is soon to lose its charms, for the executive officer remarks, "The barometer is falling!" This causes us to peer anxiously to the Southwest, where a dark cloud bank is seen rising. But a little streak at first, it slowly increases in volume and gradually shuts out all signs of the coast, from which we are "clawing off" as fast as circumstances will allow. The horizon becomes darker and darker, the wind comes in great "soughs" through the rigging, while forked lightnings, almost overpowering in their brilliancy, illumine the blackness. As our ship heels to the port under a fiercer blast, a clap of thunder, like the explosion of hundreds—nay, thousands of parks of artillery, startles and causes a peculiar, breathless, creeping sensation indescribable. When the rain came it seemed as if Heaven's flood gates had been thrown down, for the drops of "pattering rain" at home, in the tropics become fierce, drenching streams, or heavy drops, which, stinging and pain with all the intensity of a bullet. So great was the flood that the scuppers were unable to carry off the amount that fell upon the deck where it was quickly ankle deep, every roll of the ship causing bucketfuls to swash over the combings of the hatches, deluging the decks below. Our marine lieutenant, who was from New England, remarked: "When I was home last they were praying for rain, and had been for more'n two weeks. I hope they may get their share of this!" Just then a roll took him off his legs, and he slid gracefully into the scuppers, which caused him to hasten below with all the attributes of Sandy McGregor, who was "as wet as he could be; he could be no wetter." Although the rain soon ceased the wind did not, and the sea so impeded our progress that it was the evening of the following day when we approached the frowning fortress of Santa Cruz.

On either side of the narrow entrance to the Bay of Rio, as

far as the eye can reach, stretch the mountains and hills which remind one forcibly of Alpine peaks. The first object that commands attention is the rocky isle rising abruptly from the sea, crowned by a light that sheds its beams thirty miles seaward, guiding the mariner to this beautiful haven. To the left is seen the Tres Imas, or Three Brothers, the Gavia, Corcovado and Tijuca. On the right another range begins near the fortress and stretches away to that bold promontory known as Cape Frio. Far away, through the opening of the bay and towering above the coast line, we see in the bright moonlight the faint outlines of the Organ Mountains defined against the clear sky. As we pass under the guns of Santa Cruz, a trumpet is protruded from the lantern, and we receive and respond to the customary hail that greets the incoming vessel. A little later and we are in smooth water, and our anchors bring us up, and we swing upon the bosom of Niterhoil, at what is known as the "Man-o-war anchorage."

The unrivaled splendor of the moon; the southern constellations, with their queen, the Southern cross, which spangled the heavens; the myriads of lights in the city and on the numerous ships in the harbor; the phosphorescent glow of the water and reflection of Luna's sheen—all combined with the gentle land breeze, laden with the odors of perfumed flowers, causes the grandeur of that evening to linger in my memory as a beautiful dream. We kept the deck until the "we sma" hours, smoking and chatting—it seeming almost a sacrilege to retire.

Called at an early hour, I hastened to the deck to witness the rising of the sun, and to determine how far the magnificent picture of the night before was borne out by the realities of the day. As far up the bay as the eye could reach, lovely little verdant and palm-clad isles were to be seen rising out of the blue water; while the hills and lofty mountains which surrounded us on all sides were given a richness and beauty of coloring unsurpassable. Purple, gold, rose color and ethereal blue, all the varied tints imparted by a rising sun, were seen in tenfold splendor and unrivaled beauty, far surpassing the most imaginative sketch of fairy land ever portrayed by artist's hand. Since then I have viewed the beautiful bay of Panama; witnessed the glories of the Golden Horn; scaled Vesuvius and St. Elmo's height to drink in the beauties of the Bay of Naples, but none can equal the Bay of Rio for beauty or splendor. Naples is beautiful; the Golden Horn gaudy in surroundings, and Panama is glorious. But the River of January surpasses them all. It is simply *magnificently grand*.

## INTRODUCTION AND SUCCESSION OF VERTEBRATE LIFE IN AMERICA.\*

By O. O. MARSH.

PRESIDENT OF THE BIOLOGICAL SECTION OF THE AMERICAN ASSOCIATION.

### THIRD PAPER.

IT remains now to consider the highest group of the Animal Kingdom, the class *Mammalia*, which includes Man. Of the existence of this class before the Trias we have no evidence, either in this country or in the Old World, and it is a significant fact that at essentially the same horizon in each hemisphere, similar low forms of Mammals make their appearance. Although only a few incomplete specimens have been discovered, they are characteristic and well preserved, and are apparently Marsupials, the lowest Mammalian group which we know in this country, living or fossil. The American Triassic Mammals are known at present only from two small lower jaws, on which is based the genus *Dromotherium*, supposed to be related to the insect-eating *Myrmecobius*, now living in Australia.

Although the Jura of Europe has yielded other similar Mammals, we have as yet none of this class from that formation; while, from rocks of Cretaceous age, no Mammals are known in any part of the world. This is especially to be regretted, as it is evidently to the Cretaceous that we must look for the first representatives of many of our present groups of Mammals, as well as for indications of their more ancient lineage. That some discovery of this nature from the Cretaceous is near at hand, I cannot doubt, when I consider what the last few years have brought to light in the Eocene.

In the lowest Tertiary beds of this country, a rich Mammalian fauna suddenly makes its appearance, and from that time through the Age of Mammals to the present, America has been constantly occupied by this type of life in the greatest diversity of form. Fortunately, a nearly continuous record of this life, as preserved, is now accessible to us, and ensures great additions to our knowledge of the genealogy of Mammals, and perhaps the solution of more profound problems. Before proceeding to discuss in detail American fossil *Mammalia*, it is important to define the divisions of time indicated in our Tertiary and Post-Tertiary deposits, as these in many cases mark successive stages in the development of the mammals.

The boundary line between the Cretaceous and Tertiary, in the region of the Rocky Mountains has been much in dispute during the last few years, mainly in consequence of the uncertain geological bearings of the fossil plants found near this horizon. The accompanying invertebrate fossils have thrown little light on the question, which is essentially, whether the great Lignite series of the West is uppermost Cretaceous or lowest Eocene. The evidence of the numerous vertebrate remains is, in my judgment, decisive and in favor of the former view.

This brings up an important point in Palaeontology, to which my attention was drawn several years since, namely, the comparative value of different groups of fossils in bearing geological time. In examining the subject with special care, I found that for this purpose Plants, as their nature dictates, are most unsatisfactory witnesses; that invertebrate animals are much better; and that vertebrates afford the most reliable evidence of climatic and other geological changes. The sub-divisions of the latter group, moreover, and in fact all forms of animal life are of value in this respect, mainly according to the perfection of their organization in zoological rank. Fishes, for example, are but slightly affected by changes that would destroy Reptiles or Birds, and higher Mammals succumb under influences that the lower forms pass through in safety. The more special applica-

\* Delivered before the American Association for the Advancement of Science, at Nashville, Tenn., Aug. 31, 1877.

of this general law, and its value in geology, will readily suggest themselves.

The evidence offered by fossil remains is, in the light of this law, conclusive, that the line, if line there be, separating our Cretaceous from the Tertiary, must at present be drawn where the Dinosaurs and other Mesozoic vertebrates disappear, and are replaced by the Mammals, henceforth the dominant type.

The Tertiary of Western America comprises the most extensive series of deposits of this age known to geologists, and important breaks in both the rocks and the fossils separate it into three well-marked divisions. These natural divisions are not the exact equivalents of the Eocene, Miocene and Pliocene of Europe, although usually so considered, and known by the same names; but, in general, the fauna of each appears to be older than that of its corresponding representative in the other hemisphere; an important fact not hitherto recognized. This partial resemblance of our extinct faunas to others in regions widely separated, where the formations are doubtless somewhat different in geological age, is precisely what we might expect, if, as was probable, the main migrations took place from this Continent. It is better at once to recognize this principle, rather than attempt to bring into exact parallelism, formations that were not strictly contemporaneous.

The fresh-water Eocene deposits of our Western Territories, which are in the same region at least two miles in vertical thickness, may be separated into three distinct subdivisions. The lowest of these, resting unconformably on the Cretaceous, has been termed the Vermilion Creek or Wahsatch Group. It contains a well-marked mammalian fauna, the largest and most characteristic genus of which is the ungulate *Coryphodon*, and hence I have called these deposits the Coryphodon Beds. The middle Eocene strata, which have been termed the Green River and Bridger Series, may be designated as the Dinoceras Beds, as the gigantic animals of this order are only found here. The uppermost Eocene, or the Uintah Group, is especially well characterized by large mammals of the genus *Diplocodon*, and hence may be termed the Diplocodon Beds. The fauna of each of these three subdivisions was essentially distinct, and the fossil remains of each were entombed in different and successive ancient lakes. It is important to remember that these Eocene lake-basins all lie between the Rocky Mountains on the east and the Wahsatch Range on the west, or along the high central plateau of the Continent. As these mountain chains were elevated, the enclosed Cretaceous sea, cut off from the ocean, gradually freshened, and formed these extensive lakes, while the surrounding land was covered with a luxuriant tropical vegetation, and with many strange forms of animal life. As the upward movement of this region continued, these lake-basins, which for ages had been filling up, preserving in their sediments a faithful record of Eocene life history, were slowly drained by the constant deepening of the outflowing rivers, and have since remained dry land.

The Miocene lake-basins are on the flanks of this region, where only land had been since the close of the Cretaceous. These basins contain three faunas, nearly or quite distinct. The lowest Miocene, which is only found east of the Rocky Mountains, alone contains the peculiar mammals known as the *Brontotheriidae*, and these deposits may be called the Brontotherium Beds. The strata next above, which represent the middle Miocene, have as their most characteristic fossil the genus *Oreodon*, and are known as the Oreodon Beds. The upper Miocene, which occurs in Oregon, is of great thickness, and from one of its most important fossils, *Miohippus*, may be designated as the Miohippus Series. The climate here during this period was warm temperate.

Above the Miocene, east of the Rocky Mountains and on the Pacific Coast, the Pliocene is well developed, and is rich in vertebrate remains. The strata rest unconformably on the Miocene, and there is a well-marked faunal change at this point, modern types now first making their appearance. For these reasons we are justified in separating the Miocene from the Pliocene at this break; although in Europe, where no marked break exists, the line seems to have been drawn at a somewhat higher horizon. Our Pliocene forms essentially a continuous series, although the upper beds may be distinguished from the lower by the presence of a true *Equus*, and some other existing genera. The Pliocene climate was similar to that of the Miocene. The Post-Pliocene beds contain many extinct mammals, and may thus be separated from recent deposits.

Returning now to our subject from this geological digression—which will hardly be deemed unprofitable, since I have given you in few words the results of a great deal of hard mountain work—let us consider the Tertiary Mammals, as we know them from the remains already discovered, and attempt to trace the history of each order down to the present time. We have seen that a single small Marsupial, from the Trias, is the only mammal found in all the American rocks below the Eocene; and yet in beds of this age, immediately over the Chalk, fossil mammals of many different kinds abound.

The Marsupials, strange to say, are here few in number, and diminutive in size; and have as yet been identified only by fragmentary specimens, and most of them too imperfect for accurate description. In the higher Eocene deposits, this group is more abundant, but still represented by small animals, most of them insectivorous or carnivorous in habit, like the existing *Opussum*. From the Miocene and Pliocene, no remains of Marsupials have been described. From the Post-Tertiary, only specimens nearly allied to those now living are known, and most of these were found in the caves of South America.

The Edentate Mammals are evidently an American type, and on this continent attained a great development in numbers and size. No Eocene Edentates have been found here, and although their discovery in this formation has been announced, the identification proves to have been erroneous. In the Miocene of the Pacific Coast, a few fossils have been discovered which belong to animals of this group, and to the genus *Moropus*. There are two species, one about as large as a Tapir, and the other nearly twice that size. This genus is the type of a distinct family, the *Moropodidae*. In the lower Pliocene above, well preserved remains of Edentates of very large size have been found at several widely separated localities in Idaho and California. These belong to the genus *Morotherium*, of which two species are known. East of the Rocky Mountains, in the lower Pliocene of Nebraska, a large species apparently of the genus *Moropus* has been discovered. The horizon of these later fossils corresponds nearly with beds in Europe that have been called Miocene. In the Post-Pliocene of North America, gigantic Edentates were very numerous and widely distributed, but all disappeared with the close of that period. These forms were essentially huge Sloths, and the more important genera were *Megatherium*, *Myodon*

and *Megalonyx*. The genera *Megalocnus* and *Myomorphus* have been found only in Cuba.

In South America during the Pliocene or Post-Pliocene, enormous Edentates were still more abundant, and their remains are usually in such perfect preservation as to suggest a very recent period for their extinction. The Sloth tribe is represented by the huge *Myodon*, *Megatherium*, *Megalonyx*, *Celodon*, *Ochotherium*, *Gnathopsis*, *Leiodon*, *Scoliodon*, and *Sphenodon*; and among the Armadilloes were *Chimomyodonthium*, *Eurydon*, *Glyptodon*, *Heterodon*, *Pachytherium* and *Scleropleurum*. *Glossotherium*, another extinct genus, is supposed to be allied to the Ant-eaters.

It is frequently asserted, and very generally believed, that the large number of huge Edentates which lived in North America during the Post-Pliocene, were the results of an extensive migration from South America soon after the elevation of the Isthmus of Panama, near the close of the Tertiary. No conclusive proof of such migration has been offered, and the evidence, it seems to me, so far as we now have it, is directly opposed to this view. No undoubted Tertiary Edentates have yet been discovered in South America, while we have at least two species in our Miocene, and during the deposition of our lower Pliocene, large individuals of this group were not uncommon as far north as the forty-third parallel of latitude, on both sides of the Rocky Mountains. In view of these facts, and others which I shall lay before you, it seems more natural to conclude from our present knowledge, that the migration, which no doubt took place, was from north to south. The Edentates finding thus in South America a congenial home flourished greatly for a time, and although the larger forms are now all extinct, diminutive representatives of the group still inhabit the same region.

The *Cetecea* first appear in the Eocene, as in Europe, and are comparatively abundant in deposits of this age on the Atlantic Coast. The most interesting remains of this order, yet found, belong to the *Zeuglodonitidae*, which are carnivorous whales, and the only animals of the order with teeth implanted by two roots. The principal genera of this family are *Zeuglodon* and *Squalodon*, the former genus being represented by gigantic forms, some of which were seventy feet in length. The genus *Saurocetes*, which includes some small animals of this group, has been found in South America. The Dolphin family (*Delphinidae*) are well represented in the Miocene, both on the Atlantic and Pacific Coast. The best known genus is *Priscodelphinus*, of which several species have been described. Several other generic names which have been applied to fragments need not here be enumerated. In none of the Tertiary species of this family were the cervical vertebrae ankylosed. The Sperm Whales (*Caetodontidae*) were also abundant throughout the Tertiary, and with them in the earlier beds, various Ziphioid forms have been found. The toothless *Balenidae* are only known with certainty as fossils from the later Tertiary and more recent deposits.

The Sirenia, which appear first in the Eocene of the Old World, occur in the Miocene of our Eastern Coast, and throughout the later Tertiary. The specimens described have all been referred to the genus *Manatus*, and seem closely related to our living species. In the Tertiary of Jamaica, a skull has been found which indicates a new genus, *Prorastomus*, also allied to the existing *Manatee*. The genus *Rhytina*, once abundant on our Northwest Coast, has recently become extinct.

(To be continued.)

## THE RAINY SEASON IN SOUTH FLORIDA.

MANY, I doubt not, in looking at this caption will bring to mind impressions of tropical rainy seasons received from a perusal in the happy days of childhood, of that standard work, "Robinson Crusoe," or in later years, perhaps, from a like story by Charles Reade, though more romantic, by reason of a lady, under the title of "Foul Play," picturing to themselves a dreary succession of rainy days when the leaden skies drip dreary drops incessantly, and never a ray of sunshine brightens and warms the sodden earth. To such I would say: We have a better way of doing these things in Florida, and though we get the water, deluges, oceans, floods of it, it comes in such a happy sort of a fashion as never to cast the gloom consequent upon a rainy day over our mercurial temperaments, but with such dashes of sunshine and shade as to make the rainy season a pleasant one to the Floridian. From the middle of June to the last of August or possibly September 15, the greater half and often three quarters of the entire annual rain fall is precipitated on this part of the State, making of that term, literally, a rainy season. At its commencement the thrifty farmer begins putting his potato-patch in order for planting his new crop, and the unthrifty planter begins to inquire: "Who's got potato vines to spare?" To all it is the potato planting season, for to the sweet potato or "Hity yam" patch our cracker friend looks for the quarter part of his daily bread. "Hity," you understand, represents in cracker parlance, Hayti. Cuttings from the old sweet potato vines from twelve to eighteen inches long are at this season carelessly stuck into the loosely prepared earth, where they quickly root and grow, so thoroughly saturated is the ground with moisture and warmth.

Days, and sometimes weeks, before the regular rains reach the Gulf Coast, their presence is indicated miles east and inland by heavy banks of cumulus clouds whose lower edge is apparently cut square away parallel with the horizon, while beneath this straight edge down the tops of the pines that everywhere mark that horizon is a filling of that deep dark blue shade that is sometimes assumed by the Atlantic under a stormy sky; the back country is flooded, and the rivers that during the winter months are mere brooks in their beds, now come seething, boiling and surging along down to the bays which are discolored by this rain water often out to the Gulf. With this fresh water comes down occasionally an alligator seeking pastures new, only to return later in the season when the freshest has run out. Mr. Gator makes up his mind he will not live in brine; brackish water might do—but brine, never! "He will be pickled, first." So packing his trunk

with mullet, pine knots, etc. (the latter as aids to digestion), he takes the back track, drifting up with the flood tides.

The average annual rain fall in this part of the State is fifty-three inches, and as has been before remarked, about three fourths of it tumbles during three months. The astonishing part of the business is the small part of this period actually occupied with this fall. After having seen one of the rain squalls, however, the wonder is that more than one is needed to accomplish it, for really it seems that the entire bottom must have dropped out of the Celestial water tanks, and that they were immense. These heavy showers are not uncommonly accompanied with fierce winds, that to the yachtsman are a source of pleasure or vexation according to the course he or they may be voyaging. It is not wise for him to leave much canvas set upon the chance of catching fair wind, for nothing on earth can be more uncertain in direction and velocity than these squall winds. Coming sometimes with a force that tempts the sailor to set everything, they increase in a minute to the irresistible strength and velocity of the hurricane, covering the water with a sheet of foam and sweeping everything, thus woe to the boat that is carrying sail. The cautious navigator seeing the black line of the squall wind approaching on the water, lowers everything, stops up his sail, and upon getting the full force of the breeze, again sets such sail as his craft can carry. Years ago while laboring under the mistaken impression that it paid to "drag sail," we took several of these "teasers" running under the jib. Once our boat went "hatches to," and a parting jib sheet saved her from a capsize, and again with a light jib stripped clean out of the bolt rope, we concluded that it wasn't wise to take any chances in these squalls. Seventeen days of terrible suffering from hunger and thirst in an open boat would have been avoided by the captain and crew of a lumber-loaded bark last summer had the captain come to that same conclusion in time. Caught by the squall with everything set, the good vessel rolled over and was found months after in the Gulf Stream keel up, while the crew with part of a barrel of water that washed off the deck, and nothing to eat, worked for the shore in the yawl boat.

Late in the afternoon, or "evening," as it is more generally termed down South here, is the time usually chosen by the showers, and they are so soon over that the sunsets are almost always clear and bright. Up to this time the sunshine is as bright and hot as it seems to be nowhere else, roasting the toiler in the field, while under the shade of the live oak or in the breezy corner of the porch the fortunate individual who has nothing to do may be as "cool as a cucumber." The breezy corner is always to be found, for in the ever changing and varying temperature of our sandy land and sunny sea is found a famous bellows, now sucking in the cool air from the Gulf, and *vice versa*, "to restore the equilibrium," as somebody's Natural Philosophy used to tell us when we went to school.

To the artist who desires studies of gorgeous sunsets we would say, that in America's Italy at this season, above a setting sun, he may see all that nature can produce in the way of cloud painting in the western sky; and to the lover of nature who would realize in its full force the majesty of the gods, might watch one night squall from the deck of some vessel in the bay, when the lightning silvers the rushing "white caps," and the drifting sheets of rain with its constant flashes and heaven's artillery, the whole park unites in grand discharges that shake everything to the centre. Language is inadequate to the description of such a scene.

To the new settler from the northland whose orange trees (in the grove he is hopefully calculating will some day secure his fortune) have perhaps been wilting and dying under the hot suns and drying winds of the months that precede these rains, this season is one of encouragement. Stimulated by the abundant moisture in earth and air, all vegetation springs into surprising activity. The young orange tree doubles its size in the season, and weeds—well, the place is yet to be heard from where they don't grow pretty well. If perchance the above-mentioned settler has brought with him his fine Scott or Tolley gun, he speedily finds that to keep that gun clean and free from rust is to assume a task that will make his life a burden to him. The stock will gather mold in two days, and rust will gather in about the same number of hours. Well, all this wetness disappears by the middle of September, and leaves us a climate that is as near perfection for the hunter, fisherman, camper, or indeed any who would enjoy out-door life, as could be desired. For the rest of the year a blanket and shelter-tent afford ample protection from the weather, and even these can on occasion be dispensed with without much discomfort. For years we have known an old hermit hunter to whom shelter or blankets are unknown luxuries. Absolutely refusing the proffered hospitalities of old acquaintances, with the beach sand for a mattress the old fellow lies down at night in his rags, with his dogs beside him, and "sleeps the sleep of the just." Seventy years old, with an iron constitution, he has led this life for a score of years on this coast, and promises to hunt a score more. Many a winter night has the writer, tired with fire hunting miles up the wind from the camp on the beach, laid down in the pine straw, beside the deer in some instances that had stopped at the request of his good Winchester, and slept comfortably without even a coat to keep off the dew, confident no rain would fall to disturb the good sleep one earns by a dark tramp in the woods, for don't you see it all fell during the "rainy season."

Manatee, Fla., Aug. 27, 1877.

W. S. WARNER.

—A time ball is dropped from the flag pole on the Western Union building, New York City, at noon by signal from the National Observatory.

## Natural History.

### ABOUT MOTHS.

THE butterflies furnish a very excellent illustration of the order of insects to which they belong. These insects are known as *Lepidoptera* (scaly winged), from one of their leading characteristics, viz., the possession of four filmy wings thickly covered with minute scales, to which the beautiful coloring of the butterfly's wing is due. This, however, is not the only common character by which these creatures are at once united among themselves and distinguished from other insects; the great completeness of the metamorphosis they undergo, from a crawling caterpillar to a creature whose life is spent almost entirely on the wing, with an intervening state of perfect repose, is another distinction, which, although by no means peculiar to the *Lepidoptera*, yet serves to separate them from several other orders of insects, in which the difference between the form of the creature on emerging from the egg and that which it is destined to acquire is much less. A more important character than the scaly covering of the wings is presented by the peculiar structure of the mouth, which in this order consists of a long tongue rolled up in a spiral form between a pair of hairy organs known as *palpi*, or feelers. Different as these delicate organs appear at first sight, from the powerful jaws by which the caterpillar gnaws his destructive path through the foliage of field and forest, the same parts, modified indeed in form, may yet be recognized in the perfect insect that existed in its crawling, worm-like, preparatory state. The strong biting jaws have become very small, although in most cases they are to be found concealed under the other organs of the mouth. But the second pair of jaws, with which the caterpillar masticates his food, have undergone a wonderful transformation—it is from these that the long spiral trunk has been formed. These, in the perfect insect, as in the caterpillar, are jointed organs; but in the former the terminal portion of each is drawn out into a long filament, furnished on its inner surface with two narrow ridges, which, fitting exactly to those of the other filament, form by their union a long slender tube, piercing the trunk through its entire length. The lower lip of the caterpillar also shares in the changes undergone by all the neighboring organs; for in the preparatory state it is furnished with a pair of minute feelers, and with a fine tube, the orifice of the silk apparatus, by means of which when ready to pass into the chrysalis condition it attaches itself to some point of support, or encloses itself in a silken bag in obedience to the instincts implanted by nature. This tube, being of course useless to the insect in its last condition, is then no longer to be found; but the little *palpi* or feelers acquire an enormous development, and form the hairy bed in which the trunk is nearly concealed when coiled up in repose. The antennæ also, which in the caterpillar are very small, are converted in the perfect insect into long organs of very various forms; and the organs of vision, instead of consisting of a few little black points on each side of the head, are developed into those beautiful globular structures which may be seen to constitute the great bulk of the head in any of the common butterflies.

The most striking general difference between the two great groups of *Lepidoptera*, butterflies and moths, is to be found in the form of the antennæ, which in the former are always clubbed at the tip, while in the latter they are thread-shaped or tapering, or sometimes thickened toward the end, but afterward tapering to a fine point. Another distinction which is of still more importance in a scientific point of view, is that in the moths the wings of each side are united during their flight by a small bristle attached to the anterior margin of the hind wing, which passes through a little loop formed on the hinder margin of the fore-wing; this arrangement is wanting in the butterflies.

In the sphinxes, which from their great power of flight are generally known as *Hawk-moths*, the antennæ are always thickened beyond the middle, but taper afterward to a fine point. Some of these have trunks of great length, by means of which they extract the nectar of flowers while hovering over them in the manner of a humming-bird. From this habit and its size and general bird-like appearance when on the wing, one of the commonest of sphinxes has received the name of "Humming-bird Hawk-moth" (*Macroglossa stellatarum*). A nearly allied and very beautiful species is the Drone-bee Hawk-moth (*Macroglossa fuciformis*), an insect very common to the continent of Europe. The general color of the body is a bright olive green, yellowish at the hinder extremity, where there is also a black tuft of hair on each side; across the middle there is a dark brown band, while the wings are transparent with a dark brown border, the anterior pair possessing also an olive-green patch close to the body. In the Humming-bird Hawk moth the wings are covered with scales throughout, but in form and habits the two insects very closely agree.

In the Death's-head moth (*Acherontia atropos*), which also belongs to the group of Hawk-moths, the trunk, instead of being very long as in the preceding insects, is reduced to comparatively small dimensions, being scarcely longer than the head of the moth, while in the Humming-bird variety it exceeds the whole body in length. The Death's-head is the largest of European moths, frequently measuring upward of five inches in expanse of wing. In general color it is blackish brown, the anterior wings irregularly clouded with dull orange with a white spot near their middle; the posterior are dull and have two brown bands. The body is banded with

orange and black, and the appearance of the insect is rendered exceedingly remarkable by the very singular marking of the thorax. This bears a large dull orange patch, within which are smaller blackish spots, giving a by no means indistinct representation of a "death's head." This peculiar mark, coupled with the generally funereal character of the coloration of the insect, has obtained for it an unenviable position in the vulgar mind, as its appearance in larger numbers than usual has been regarded, in some localities, as portentous of an approaching pestilence. Singularly enough, in the year 1733 it appeared in great numbers in Brittany, simultaneously with a very fatal epidemic, and so completely did the weaker and more ignorant of the peasantry consider the moth as the cause of the disease, that the sight of one was sufficient to produce the greatest fear in the beholder, who regarded it as the harbinger of approaching death. This moth possesses another curious faculty, which no doubt conspired with the symbols of death with which it is ornamented to raise a feeling of superstitious dread in the minds of those whose attention was called to it for the first time, as when irritated or handled it emits a plaintive cry or squeak. This circumstance has long been known, and though several eminent naturalists have endeavored to explain the mode in which the sound is produced, they have not as yet arrived at any satisfactory conclusion. The faculty of emitting sound is by some believed to be connected with the singular habit of this insect, which renders its multiplication in unusual numbers an object of real and well-founded dread to keepers of bees. The moth has a most gluttonous taste for honey, and is one of the most inveterate plunderers of bee-hives. The bees on its entrance into their domicile generally disperse immediately, as though in dread of the gigantic intruder, who is thus left to surfeit himself at his ease upon the sweets which these industrious creatures had laid up for their winter store. It is certainly singular that a creature, with only the advantage of size, should dare, without sting or shield, singly, to plunder in their stronghold these well armed and numerous insects; and more singular, that it should always contend with them victoriously. Many believe that the thick fur with which the moth is covered prevents the stings of the bees from reaching its body; but it is far more probable that it has the means of spreading terror among their ranks. The caterpillar of this moth is, as might be expected, of great size, measuring oftentimes as much as four inches and a half in length, and two thirds of an inch in diameter. Like all other caterpillars of the Hawk-moths, it has a somewhat lengthened horn attached to the back of the eleventh segment; and it has in common with most of the allied species the habit of raising the anterior segment of the body, supporting itself by adhering to the branch on which it rests by the membranous feet of the hinder segments. In this attitude these caterpillars present to a fanciful mind a slight resemblance to the Egyptian sphinx, which induced Linnaeus to apply the word *sphinx* as a generic name to these moths. The caterpillar of the Death's-head moth lives principally upon the plants of the tomato or vines of the potato, and the chrysalis are frequently turned up in digging the tubers of the latter in Autumn. The moth generally appears in October, but is rarely seen by day, preferring twilight or darkness for its aerial flights.

Another beautiful species is the Lime Hawk-moth (*Smerinthus Tilia*), so called from its caterpillar feeding mostly upon the foliage of the lime tree. This moth has the fore wings much notched at the tips, and it varies greatly in color; but in the variety most generally met with, the wings are of a fawn color, with a broad band at the tip, and two olive green spots at about the middle of the anterior wings; the trunk, too, is even shorter than with the *Acherontia atropos*.

The antennæ of the hawk-moths are generally more or less serrated, or toothed like a comb on the inner surface; but this character is by no means so striking as in some other species in which they are, particularly with the males, toothed or pectinated on both sides, the little filaments forming the combs being frequently of such length as to give the entire antennæ the appearance of a delicate feather. An instance of this is presented in the male of the Gipsy moth (*Hypogynna dispar*). In appearance the two sexes of this moth differ considerably from each other, the male being much the smaller, and of grayish color, with some blackish lines and spots on the anterior wings; the female, however, is white with dusky lines, describing much the same pattern as the male. The caterpillar feeds on fruit trees.

A common and beautiful insect, common to the British Isles, and closely allied to the last, is the Tiger moth (*Arctia caja*), which is produced from a large, hairy, bear-like caterpillar often seen feeding upon nettles. The *Chelonia pudica* is another beautiful species, nearly allied to the two preceding. The ground color of the wings is flesh-like, or pinkish white, the hinder wings especially in the female presenting a very delicate shade. The fore wings are nearly covered with a number of black spots, but the hind wings have but two or three spots of variable size; the body too is spotted and banded, but with rose-color and black.

The feathered structure of the antennæ is also observable in the male of the Lappet moth (*Gastropacha gueraufolia*), the caterpillar of which feeds on various trees. This and some allied species have received the name of Lappets on account of the curious fleshy appendages attached to the sides of the body of the caterpillar and which completely conceal the feet. These caterpillars are very hairy, and when they are handled the hairs penetrate the skin and produce considerable inflammation and itching. The moths are also called eggworms, from the chrysalis being enclosed in a very smooth, fine, egg-like cocoon. The *G. gueraufolia* is rendered further remarkable by

the curious position assumed by the hinder wings during repose, which, instead of being concealed by the upper wings, as is the case in other moths, project on each side in the form of rounded notched leaves, giving the insect a very singular appearance. The general color is deep reddish brown marked with blackish lines. The silk worm, with the manufactured produce of whose beautiful cocoon we are all familiar, is the caterpillar of the *Bombyx mori*, belonging to the same group as the Lappet moth; and many of our common moths also weave cocoons in which to pass their season of repose in the chrysalis state. But the most singular application of this power of silk spinning is exhibited in the history of some moths, also nearly allied to the preceding, whose caterpillars live together in numerous societies, retiring, after feeding, to a spacious nest of tolerably firm texture, woven by themselves from the materials afforded by their own bodies. Some of these, as the Processionary caterpillar (*Cnethocampa processionaria*), quit their nest, which is usually attached to oak trees, in a regular and well-ordered procession; one takes the lead, and is followed by others in single file generally for a space of about two feet; they then come in pairs for a time, then three, four, or five abreast, and so on until they sometimes march ten or even twenty in a row. All the movements of the leader are faithfully copied by those who follow.

Another species, the *Cnethocampa pityocampa*, or Pine processionary, as its name indicates, attaches its nest to pine trees. The principal enemy of these moths is the larvae of a large and very voracious beetle, the *Calosoma hydropuncta*, which breaks into their nests and commits vast havoc upon the defenseless inhabitants. Occasionally, however, the tyrant pays dearly for his feast, for when gorged he is no match for more active and hungry members of his own species, who, disappointed perhaps by the vacant nest of their expected prey, feel no scruples about taking it at second hand by an act of cannibalism. Nearly allied to these, and especially to the silk worm moth, is the gigantic atlas (*Saturnia atlas*), which inhabits the East Indies and China. It measures between eight and nine inches in expanse of wing; and other species nearly as large are found in several tropical countries. Many of these insects—some of which furnish a silk which is used in manufactures—have singular transparent spots in the centre of the wings, looking as though pieces had been cut out and replaced by fragments of talc.

Of the remaining groups our space will not allow us to say much; and we can only refer to the most interesting and numerous of them—the family of *Geometres*—the caterpillars of which are known to entomologists by the name of *Loopers*. Both these names are derived from the singular mode of locomotion adopted. Possessing only a single pair—and that the hindmost—of the membranous feet on which other caterpillars support the greater part of the body, they are unable to crawl like their more fortunate brethren. Accordingly in walking they stretch the body out to its full length, when they attach themselves by their anterior feet, and then, drawing up the body in the form of a loop bring the hinder feet up close to the others, attach them and repeat the process until the desired distance is traversed. Hence they appear to be constantly measuring the distance over which they travel, and from this circumstance the name of geometric caterpillars has long been applied to them. They have also a singular habit of adhering to a branch by their hinder feet and stretching out the rest of the body in such a manner as to present a very close resemblance to a dead twig; and thus no doubt often elude the vigilance of their enemies. The moths produced from these caterpillars are of a much slighter make than those already described; their bodies are slender, their wings soft and weak and their flight irregular and fluttering. They are most truly nocturnal insects, very few of them ever being seen in the day time.

Space forbids our entering upon the history of the vast numbers of smaller moths which form the concluding groups of the *Lepidoptera*, but their economy presents much to attract the attention even of the most careless observer; and the singular habits of the leaf-rolling and leaf-mining caterpillars will afford a never-fading source of interest to any one who will take the trouble to study them.

A USEFUL GULL.—Having had a sea gull (which we found with a broken wing) in our garden for about five years, I can, from experience, state that they are most valuable exterminators of those garden pests, slugs, etc. "Bill," as we called him, was a very clever forager, and the gardener greatly regretted him when some mischievous boys "cooked his goose." I would strongly recommend any of your readers, who can, to at once procure one.—*English Mechanic*.

THE WONDERS OF A FLEA.—When a flea is made to appear as large as an elephant we can see all the wonderful parts of its formation, and are astonished to find that it has a coat of armor much more complete than ever warrior wore, and composed of strong polished plates, fitted over each other, each plate covered like a tortoise shell, and where they meet hundreds of strong quills project, like those on the back of the porcupine and hedge-hog. There is the arched neck, the bright eye, the transparent cases, the piercers to puncture the skin, a sucker to draw away the blood, six long-jointed legs, four of which are folded on the breast, all ready at any moment to be thrown out with tremendous force for that jump which bothers one when they want to catch him, and at the end of each leg hooked claws to enable him to cling to whatever he lights upon. A flea can jump 100 times its own length, which is the same as if a man jumped 600 feet, and he can draw a load of 200 times his own weight.

## WOLVES IN RUSSIA.

RUSSIA is still a good deal behind the rest of Europe in dealing with vermin. Wolves, whose heads were formerly a source of income to the borderers of Wales, and of which the last were slain in Scotland by Cameron of Lochiel, make no small figure in the agricultural returns of the Russian Empire. According to a pamphlet edited by M. Lazarevsky, the depredations of the wolves in 1875 alone equaled in damage an old fashioned Tartar invasion. They killed 179,000 cattle, and were the death of 562,000 smaller domestic animals in the forty-five provinces of European Russia alone. Of these, 1,000 head of horned cattle were lost to the Baltic provinces, and to Polish Russia, 2,700 oxen and 8,600 sheep, pigs and goats. If a cow be reckoned at the average price for these animals, thirty roubles, and a sheep at four roubles, the gross sum of the tribute levied by the wolves in European Russia reaches 7,700,000 roubles, or \$5,990,600. This is a sum which would seem worth while looking after, even in so vast an empire as the Muscovite, and must represent quite a number of wolves, which must be dangerous even to human life. In the forests of the Pyrenees and Southern France these animals not unfrequently attack the shepherds, and oftentimes venture within the walls of lonely chateaus and farm houses, yet their numbers are not to be compared with the enormous hosts of savage beasts of Russia, of which we may have some faint idea when we think of the number requisite to carry off a single able-bodied ox. Those authors of Sunday school works, of the Jacob Bliven's and kindred stripes, who invariably illustrate the virtue of self-sacrifice by the story of Eric, the faithful serf who rescued his master's family by throwing himself as food to the fierce and hungry wolves, will be pleased to know that opportunities of practicing devotion in the best style will long continue to be found in Russia.

**SHORT-TAILED CATS.**—In *FOREST AND STREAM* of the 6th inst., I notice an article as to the supposed hybrids, in which you state that it is physiologically impossible for them to be a cross between the cat and rabbit. In this you are undoubtedly correct, and the cat sent you may have had its tail cut off. But if it is not a fact familiar to you, I desire to communicate the information that there is a breed of house cats that by nature have short-tails, no longer than rabbits (indeed many of them have no tails at all). Of this breed I suppose fifty illustrations might be found in the town of Huntingdon, Tenn. *Huntingdon, Tenn., Sept. 11, 1877.*

Manx cats (from the Isle of Man), are always short-tailed. The one mentioned, however, had been injured.

**THE OLD JERSEY MOSQUITO.**—*Hadrosaurus Foulkii* is the euphonious name of the great lizard whose skeleton stands on its hind legs in one of the aisles, looking as if about to take a kangaroo-leap of about half a mile. Sidney Smith once said it was so hot that, to promote breezy circulation, he would like to strip off his flesh and sit in his bones; and so this lizard skeleton always looked most provokingly cool and breezy in the hottest of the dog-days. It was dug from a marl-bed in New Jersey. If New Jersey antediluvian lizards were of that enormous size, what must the old New Jersey mosquitoes have been? One of them would have spit a fat man through with his stiletto-bill as easily as a modern cook would a lark, flown with him to the top of some umbrageous tree, and after stripping him of his flesh, would have picked his teeth with the poor—or rather the fat—man's bones. They say the South Sea Islanders always have a choice tid-bit of cold missionary lying on their sideboards; but think of one's body being kept as a relish for a New Jersey mosquito as big as an ostrich, and as inevitable and relentless as the undertaker or the tax-collector.—*Ex.*

**PEARLS BREEDING.**—"Traveller," in the *London Field* says: "Once on board a Peninsular and Oriental Company's boat a lady asked me if I had ever seen 'breeding pearls.' Of course I laughed at the idea, but she produced a two-ounce vial, in which were a number of globular bodies of various sizes, apparently pearls, and some grains of rice. She informed me that the large pearls had been given to her by some Malayan potentate, who told her if she kept them well supplied with rice that they would breed; she assured me that they had done so, and that the 'seed' pearls in the bottle were the produce of the larger ones. She would not let me handle them, so I cannot say what they really were, but I have every suspicion that they were grains of rice which constant attrition one against the other had rounded, as barley is made into 'pearl barley.' My friend was fully persuaded that her pearls produced young ones, and consumed the rice, and nothing could convince her to the contrary."

**HEN AND PARTRIDGE NESTING IN COMMON.**—Some time ago a farmer near Beaumaris in the Island of Anglesea, North Wales, told me that one of his hens always would lay out in the fields, and that on one occasion he found her nest with ten of her own and six partridge eggs in. He carried all off and hatched out the partridges under another hen. No doubt had the nest been allowed to remain undisturbed, both mother birds would have shared the duties of sitting between them.—*H. W. in London Field.*

—Headquarters New York State Association for the Protection of Fish and Game, Syracuse, N. Y., June 23, 1877. To Colwell Lead Co., 6 Centre street, New York. Gents: We have carefully examined your shot here on exhibition, and have also received the unanimous report from all the clubs on the grounds of the State shoot in favor of your shot. We cheerfully pronounce it a very perfect article, and recommend it to the sportsmen generally throughout the country.

GREENE SMITH, Pres.  
JOHN A. NICHOLS, Vice-Pres.  
CHAS. R. WRIGHT, Sec'y.

—Old Fuller, the eloquent preacher, says: "If thou wouldst please thy ladies, endeavor to make them pleased with themselves." You can do this by recommending them to use that superb toilet article, "Bobbitt's Toilet Soap." Nothing can equal its excellencies, for its odors are artistically and scientifically treated, so that a delicate perfume is the result, without the use of artificial scenting.—[Ado.]

## Woodland, Farm and Garden.

**THE EGYPTIAN GUM ARABIC TREE** (*Acacia vera L.*)—This semi-tropical tree, or, more properly, shrub, rarely exceeds fifteen feet in height, and is remarkable for its peculiar crook-necked trunk. Its foliage is of a pale green color, and may be said to be the most beautiful of the acacia family. It puts forth its flowers in March, and its seeds, which grow in a hard coriaceous pod, somewhat resembling the acacia jambaia, and its seed those of the lupine, which yields a reddish dye, used by tanners in the preparation of leather. This tree, which affords the finest gum arabic of commerce, is a native of the sandy deserts of Arabia, Egypt and the western parts of Asia; it also grows abundantly in Barbary and other parts of Africa, particularly on the Atlas Mountains. In Cairo and Alexandria, in Egypt, many streets are adorned with this tree, which are set on either side. In Morocco, where this tree is called "Attelep," large quantities of this gum are collected for export. The trunk of this tree is covered with a smooth, gray bark, while that of the branches is of a yellowish green or purple tinge. At the base of the leaves there are two opposite awl-shaped spines, growing nearly erect, and having a slight glandular swelling below. The wood is hard, and takes a good polish. The gum exudes spontaneously from the bark of the trunk and branches of the tree in a soft or nearly fluid state, and hardens by exposure to the air or to the heat of the sun. The more sickly the tree the more gum it yields, and the hotter the weather the more prolific it is. A wet winter and a cool or mild summer are unfavorable to the crop. The gum begins to flow in Egypt in December, in Florida in March, immediately after or near the time of the flowering of the tree. Afterward, as the weather becomes hotter, incisions are generally made through the bark to assist the exudation of the gum. The gum, when new, emits a faint smell, and when stowed in the warehouse it may be heard to crack spontaneously for several weeks, and this cracking is the surest criterion of new gum, as it never does so when old. Several kinds of gum, yielded by different trees, are occasionally to be met with, but that which is commonly substituted for it is brought from the Island of Senegal on the coast of Africa, and is called "Gum Senegal." This tree is remarkably sensitive to sudden changes of weather, and its leaflets are open only to the rays of the sun. There are several trees growing successfully on Indian River, and appear to be adapted to this soil and climate. This tree is possessed of much merit, and is worthy of culture, both for ornament and profit.—*B. HALL, East Indian River, Fla.*

**GERMINATIVE FORCE OF SEED.**—Some very interesting experiments were made during the course of this past year by the French scientist Mons. Haberlandt to define the lowest temperature in which seeds would sprout. The seeds of most of the agricultural plants, such as wheat, oats, barley, lucerne, etc., were placed in an ice chest whose temperature is 32 degrees, or slightly above it. The seeds were periodically examined in a temperature that was even below 32 degrees. In forty-five days there were signs of sprouting in eight species, whilst fourteen did not show any signs at all. But here the great fact of life, the want of warmth, was powerfully exhibited, for only a majority of the sprouts showed progress in four months; germination beyond mere incipency had ceased in the others. Another fact was illustrated, viz: that long continued exposure to a temperature no lower than 32 degrees will kill vitality altogether in most species of seeds, for all those which had remained in the ice-box for the four months of the experiments only a few were found capable of germinating in a temperature of 60 degrees. From this fact it may be reasonably deduced that farmers should guard their seed grain from too low a temperature during our long winters.

**THE EDUCATIONAL VALUE OF FLOWER SNOWS.**—On this subject the *Gardener's Magazine*, England, remarks: "The value of the poor man's flower show is to himself great, but to his children greater. The educational system that prevails is altogether too subjective, and there is but little attempted in the way of teaching the young to observe and reason on their observations. The three R's are of primary importance, but they require to be supplemented by systematic teaching in the open air on open air subjects, and we look forward hopefully to a recognition of the necessity by school boards, not only in towns where the field of observation is contracted, but in the county where it is practically unlimited. We are advised by the powers that be to prepare the children everywhere for catching and killing the Colorado beetle, but their imperfect training in the faculty of observing compels us to fear that in their zeal to exterminate the doryphora they may war with coccinella, that is to say, the potato beetle being much talked of, but as yet unseen, the lads of the village may find consolation in the wholesale destruction of lady bugs, which are among the very best friends of man in the kingdom of insects. The window flower show may be made immensely useful as an aid in the education of the young, and we once more remind the guardians of the youthful poor that a habit of observing, and a taste for a knowledge of nature's ways and means, are of immense importance in the development of manliness, and independence, and intelligence, and morality, and usefulness. The book of nature is worthier to be read than a majority of the books in common use, and it is one of our duties to encourage the young, whether of rich or poor, in learning to read it with a view to the acquisition of useful knowledge, and the cherishing of sentiments of reverence and love for the beneficence that warms the world, and renders capable of happiness every creature."

**LARGE PUMPKINS.**—A pumpkin that measures over six feet in circumference, and weighs above 200 pounds, is still growing on a farm in California.

We know this to be a fact, for we have seen the same statement every season for twelve years.

**SQUIRRELS AS GARDENERS.**—A gentleman writes to *Land and Water*: "The strawberries in my garden, although covered with nets, were vanishing very fast. I therefore set a gin at each corner of the bed. The first morning after this was done the servant reported that a squirrel had been caught, which I thought must have been a mere accident. The next morning, however, a second squirrel was all but captured under the net. The felony was therefore proven, but this last thief is still at large."

—Twenty-five thousand watermelons arrived in Boston on Monday. Comment is not so necessary as a little tincture of rhubarb.

**WEEDS.**—Weeds are usually considered some of the worst enemies with which the farmer has to contend. And there is no doubt that the general opinion of them is correct. Still they are, in one sense, very useful. They offer a strong inducement for the thorough cultivation of the soil. In many cases, if it were not for the weeds no such culture as the crop requires would be given. Many a farmer would not enter his corn field from planting time until harvest if they would keep clean without his help. But such neglect of culture would prevent the growth of productive crops, and consequently the weeds which compel cultivation, where but for them it would not be given, may be said to be of some benefit to the farmer. This, however, is on the supposition that he fights them resolutely during the whole growing season. If he yields to them and allows them to come in and possess the land they will prove the worst of foes. Not only will they injure, and perhaps destroy his crops the present season, but they will also fill his land with their foul seeds, and thus propagate the evil year after year. To the farmer who would be too lazy to cultivate his crops, if it were not for their presence, they are friends and helpers. But to the thorough, energetic farmer they are constant enemies. He would cultivate his crops if there were no weeds, and their presence only makes his work much more difficult than it otherwise would be. To him they are evils with which he must contend. They are in the land, and he must either fight them out or allow his crops to be despoiled. The latter, a truly good farmer, never does. He resolutely undertakes to say what shall and what shall not grow upon his land. And the wise farmer will not only attempt to drive out the weeds, but he will begin early in the season. He knows that it is not half as hard to kill out weeds when they first get through the ground as it is after they have grown two or three weeks and got firmly rooted. He has his cultivators or horse-hoes going as soon as his crops are large enough to make the rows distinctly visible, and he keeps them in the fields so constantly that the weeds never have a chance to grow. This is the easiest and best method of keeping the land clean. Neglect in the early part of the season cannot be fully atoned for by any amount of careful application after the first few weeks are gone. This suggestion is of special importance to those who grow onions for the market or any kind of root crops. Weeding should be done early and often. It is less work, and takes less time to weed a patch of onions four times, if it is done when it should be, than it is to go over it three times after the weed have got a fair start. And the same principle applies just as fully to other crops.—*Working Farmer, N. Y.*

**TEXAN HERDERS.**—A Texan herder's outfit consists of two donkeys for carrying supplies, a tent, cooking utensils, blankets, a canteen made of tin and holding five gallons of water, a small Mexican pony, two or three dogs, and tobacco. Shepherds receive from \$10 to \$15 per month and board, and overseers from \$25 to \$30. Two men and three dogs can readily take care of 5,000 sheep. Thousands of sheep roam at will over the vast plains, feeding as they go, never sleeping two nights in the same place, except at the home stations. At night these immense herds gather closely around the camp of the shepherd and sleep peacefully, guarded by well-trained Scotch dogs, who exhibit wonderful sagacity and prowess in their midnight vigils, holding at bay the fiercest wolf until by their furious barking they awaken their masters. An area of from ten to twenty miles will be grazed by an ordinary herd in a single day.—*Ex.*

**SAVE YOUR TEA-LEAVES.**—Tea-leaves steeped, not boiled, for half-an-hour in a tin pan, and strained through a sieve, will give a liquid useful to wash all varnished paint. It removes spots, and gives a fresher, newer appearance than when soap and water are used. For white paint, take up a small quantity of whitening on a damp piece of old white flannel, and rub over the surface lightly, and it will leave the paint remarkably bright and new.

**STINGS AND THEIR REMEDY.**—I am quite certain, from personal experience, that the juice of an onion will give relief in some of the instances quoted from the *Cultivateur de la Region Lyonnaise*. Therefore I can easily believe that the leek is of equal use, since both vegetables belong to the same genus, are of like antiquity, and were in former days highly valued for their various properties, though I believe modern times only have brought their sting antidote virtues to light. There is but one objection to the application of an onion—the odor is absolutely dreadful, not so much so when first put on, as it is the following day. I was stung by a wasp on the head and did not get the smell of the onion out of my hair for a week, but it was a perfect cure.—*H. HERBERT.*

## GAME PROTECTION.

**MASSACHUSETTS—Northampton, Sept. 12, 1877.**—The Nonotuck Game Club have elected the following officers for ensuing year: President, A. Perry Peck; Secretary, Dr. G. W. Crittenden; Treasurer, John Metcalf; Vice-Pres'ts, C. N. Grabb, Luther Warren.

**PENNSYLVANIA—Shakopee Farm, Milford.**—Pike County, Pennsylvania, is to have an association for the preservation of fish and game, and this time it is believed that the right sort of men—such as Capt. John C. and Moses Westbrook, Hon. D. A. Wells, C. P. Mott, W. K. Ridgway, John Williamson, John Biddis and other true sportsmen—will have control of the organization and make the "wire cartridge" pot-hunter and market shooters take a back seat. This section should be a hunter's paradise, but it will not be that until the shooting of game and catching of fish in close seasons are prohibited, or until those who snare pheasants and net fish have been taught a wholesome lesson. Perhaps the man who supplies Milford with strychnine to poison sporting dogs will take a hint.

ANATRUU.

**THE CONNECTICUT FISH LAW.**—*New York, Sept. 12, 1877.*—Commenting on "Scales" correspondence in last week's number, you state the law in Connecticut as against taking "any bass, etc." A week's abortive effort (off and on) places me in a position to add my sad endorsement about the poor bass fishing, and, if the law reads as you state, I think I know those who would join a crusade against the pond fishers in Niantic Bay. Some such attempt, I believe, was made over a year ago, but failed through lack of the sinews of war.

J. S. OAKES.

NEW YORK, Sept. 18, 1877.

## EDITOR FOREST AND STREAM:

Allow me to call attention, through the columns of your valuable paper, to the fact that during the past week there have been sent to Fulton Market, from Newcastle, N. B., large quantities of young salmon (grilse), weighing from two to three pounds each.

Now I believe that this is in violation of the law of the Dominion, and I think that it is only necessary to call the attention of the Hon. W. F. Whitclier to the facts, in order that this wholesale destruction of young salmon should be stopped.

SALMO.

## Sea and River Fishing.

## FISH IN SEASON IN SEPTEMBER.

| FRESH WATER.                                 | SALT WATER.                                      |

**FISH IN MARKET.**—We noticed in Fulton Market this week two fine specimens of the dolphin, one weighing 21 pounds, taken near Sandy Hook. An unusual capture was that of a thirty-three pounds branded corvina, which was caught near Nonak, a point much farther north than usually found. Will Mr. Ferguson, the able fish commissioner of Maryland, tell us why it is that no pompanos have been taken in the Chesapeake this season? They were so numerous last year that they were sent to this market and sold as low as ten cents per pound. Our quotations for the week are as follows:

Striped bass, 18 to 25 cents per pound; green smelts, 25 cents; bluefish, 10 to 12 cents; salmon, frozen, 30 cents; green-do, 35 cents; mackerel, 15 cents; white perch, 15 cents; weakfish, 15 cents; Spanish mackerel, 35 cents; green turtle, 15 cents; terrapin, \$15; halibut, 15 cents; haddock, 8 cents; king-fish, 25 cents; codfish, 8 cents; black-fish, 15 cents; native herrings, 7 cents; flounders, 8 to 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; scollops, \$1.50 per gal.; soft clams, 80 to 60 cents per 100; Salmon trout, 18 cents; sheepshead, 28 cents; whitefish, 16 cents; pickerel, 18 cents; yellow perch, 10 cents; hard shell crabs, \$3.50 per 100; soft crabs, \$1.00 per dozen; frogs, 45 cents per pound.

## TROUTING AMONG THE NEW HAMPSHIRE HILLS.

WATERVILLE, Aug. 13, 1877.

Many and varied are the pursuits in a town situated as is this, among the high hills and mountains of New Hampshire, but especially prominent among them is that of trouting. Waterville is at the end of the road which, entered upon at Plymouth, winds for nineteen miles through wood and dale. Mountains stretch their lofty peaks and shoulders high above you on either side, while a sonorous bubbling river rushes through the narrow valley. Mad River is of considerable size, and takes its origin from streams flowing from the mountain slopes back of Waterville. Many brooks constantly communicate with this "main" from the neighboring mountain sides, so that in point of size it presents quite a formidable appearance. This river you follow the whole journey to Waterville. Here one finds a circular level tract, at the farther end of which on a slight rise in land is situated "Greely's Mountain House," one or two stray houses and a farm or two make up the town. It seldom happens that one finds a good house situated at a convenient distance from his fishing ground, from which he can sail forth in the morning and return at evening, having had ample time for a good mess, and none of the discomforts of a wearisome tramp. This river which empties itself finally into the Pemigewasset contains the largest trout, and naturally, for here are the most sizable pools. At this point, fifty five miles from its source, its appearance is such as to please the angler; for trees or shrubs do not hang over it in such an irritating way as do those upon some streams, but landing places are plenty. Many handsome messes have been taken here during this and previous seasons, but still sufficient fish remain to entice the angler, and perhaps worry him some. This being near at hand is fished more than its tributaries, and late in the season is not so attractive. Trout are much quicker of course early in the season, when they first put in an appearance down stream after their winter's rest, so that by the end of July they become very shy, especially the larger ones. One must pass now to the smaller streams, but experts often are unwilling to trampa whole day after a large string of small or even average sized trout; they prefer in many cases to select their pools, fish diligently for large ones, and return with them or with none at all. Not every one can take the large ones; it requires a great experience with regard to the nature of the fish, as to flies and the way of throwing them; but especially must one have patience. Only yesterday I heard of a gentleman who has been for two years to the same pool, in order to capture a large one which he knew to be there, getting him this his third season, and feeling amply repaid for his trouble by finding it to weigh one pound. A fish of this size may not seem above the average to one accustomed to lake trout, but a brook trout of a pound is rather uncommon. A number of messes of eighty or ninety have been taken from this river lately, very good for this time of year. The west branch taking its rise in the top of the ravine, which separates the slopes of Oscocla from those of Tecumseh, and flowing eastward, is the largest of the branches. It is three or four miles long, is filled with deep pools, roaring cascades, and is fishable over its whole extent. The upper portion is of course the best for our purposes, for the reason that seldom any one cares to travel the distance. A very pretty path leads through the woods along the banks of the stream for nearly two miles. This saves that walk over the stones in the brook, which is so uncomfortable when one is not

fishing, but whose disagreeableness vanishes so soon with the beginning of the sport. Where the path ends good fishing begins and one can be sure of it here, if those who have tried it are to be believed. No one, as far as I can find, has fished on this stream more than three-quarters of a mile at a time, and all have brought in good messes. Too great care cannot be taken to distinguish the place well, when any doubt is occasioned by a fork in the stream; for oftentimes persons are misled by their recollections, and taken out of their way. Greely's Pond, some four miles distant from the house, is another fine spot. The pond is filled with large trout, but is very little fished. One can hardly get there before ten in the morning, if he wishes to take breakfast in the house, and the best fishing in the day begins just as he is compelled to leave. The only way to secure anything at all is to remain over night, fishing late in the evening and early in the morning. The spot is in a hollow among mountains, whose sides rise perpendicularly round about it, making fishing rather hard without boat or raft. Some fine fish have been brought from this pond, and I have no doubt that finer fish are in it than have ever been drawn from it. No other kind of fish has ever been seen here, and this alone is sufficient to convince one that large trout must be in it. The brook leading from this pond, together with that from the "Flume," forms the Mad River, though, of course, they are by no means its only tributaries. The Flume, similar to the great flume in the Franconias, though, of course, not so remarkable, is a very interesting spot. High cliffs of solid rock raise themselves to a height of one hundred and fifty feet, between which, over shelving rocks and forming itself into beautiful cascades, runs the brook. In length it is fully two hundred feet, the perpendicular height of the walls gradually diminishing toward the farther end. This picturesque spot is little visited except by old "tramps," because of the difficulty in reaching it. The path, in many places, through neglect, has become overgrown; trunks of trees and dead leaves have covered it, and the blazes are often very indistinct; with little trouble, however, it could be made as fine as any of those nearer home. The stream, sinking abruptly and rapidly at first, soon takes a gradual descent, and here the fishing begins. The convenient landing places so much sought are missed upon this brook. Trees, in many places, grow close to the edge of the water, and numerous are the logs and sticks scattered throughout its whole extent. In many cases pools could not be more successfully blocked to the angler. A good temper is not a bad companion on this stream, but the chances are that it will be spoiled. Nothing is more irritating than to catch your fish and lose him, not through any fault of your own, but because of overhanging trees. Often the fish is of secondary importance, your tangled line engaging your attention, especially is it so if one is short of tackle or hooks. Two messes—of two hundred and twenty-six and one hundred and fifty—were taken here last week, and no one knows how many have fished it before this season. The slide brook is another one of the many excellent streams about here. The bed of this stream was greatly widened eight years ago by a torrent which swept down the valley from the side of the mountains, whence it takes its rise. During a thunder-storm a rain cloud is said to have burst upon the mountains, filling the stream to overflowing, and forcing boulders and other obstacles to its progress into a wild, confused mass before its roaring torrent. Great gulches were hollowed from solid rock, so immense was the force of the water; stones of large size were carried for miles, and every opposing thing was torn up and swept before it. The stream's bed was widened to four times its original size, rocks heaped together and scattered in it and along its banks, many of them forming splendid hiding places for the fish. The trees being carried away on both sides, the angler has exceptionally fine standing and landing places. This and the Cascade brook below it being the nearest to the house, are the most fished, but I doubt if one ever had easier trout fishing than is obtained here early in the season. Many streams back in the mountains are very seldom fished—once a year, perhaps—only few anglers taking the trouble to worry through the dense and untraveled woods. Sawyer's River, rising back of Greely's Pond, is the least visited. Its course is through a country covered with dense forests, where there are no habitations and where man is seldom seen. In this stream there is fine fishing, but few relish the trouble of getting there and back when good messes can be caught about the house. It would be impossible to return the same day, and indeed one would not wish to, if he found himself repaid for his tramp. Other streams flowing in different directions take their rise near it, all of them nearly as good as Sawyer's River. A good deal of trouble is often experienced by green hands at the sport in such forests as there are about here. At times the path is excellent, but more often it comes abruptly to an end, three or four blazes suddenly appear in different sections, confusing one badly. It is by no means a pleasant thing to be left in a dense and trackless wood when night is coming on; for one is certain to miss the way home, and might go farther from it. A short time ago, a gentleman fishing in this region wandered from his brook to one on the other side of the mountain, appearing after a day or so in some out of the way place far from Waterville. Easy indeed is it when you are interested in your sport, to slip from one side of a ridge to another, and continue down, supposing you are nearing home. It is a good plan to make some mark of your own when you leave a stream, or wish to find again a particular spot on it, not trusting to your memory; for often two or even three places on the same stream resemble one another so closely that it is mere chance if you choose the right one. These streams which I have mentioned are by no means the only ones in the region. Swift River and many others whose names I know not, are quite celebrated for their trout, not to speak of the very small brooks. Little brooks from one to two feet wide are often prolific in trout. Many persons in search of fishing pass them by in contempt, laughing when you suggest that trout might be caught in them; but before they become good fishermen that notion must depart. A little streamlet, not a foot wide, running in front of our boarding house, which every one has passed again and again, yielded the best mess in point of size and numbers for the time of fishing that has been seen here this season. Six fish weighing about a quarter of a pound each were taken from what seemed to be a small mud hole. These fish had undoubtedly been there for years, no outlet with the river affording them a chance to swim down. No larger fish are taken from these streams than others in the mountains, but one can be sure of getting always a fair string of average sized ones. To see the wholesale way in which they are caught is discouraging to a fisherman who really loves the sport, for it seems almost impossible that any should remain in the course of a few years if the slaughter is continued. Some bring in fish two inches long and under, instead of throwing them back into the stream and giving them a chance to attain some size. A peculiar personage has been about here fishing for the past two weeks in the shape of a one-armed man. His object is to catch as many as he can to sell, and for this reason all here are

down on him. Large or small serve equally well his purpose, for every one helps tip the scale. He is an exceptionally fine fisherman, and always manages to bring in a good mess. It has become quite a standing joke among us fishermen when the fish do not take hold well to lay it to the one armed man's having been ahead of us. Worms I find on the whole to be much more acceptable as bait than the fly, though the latter is perhaps fully as good to secure the older ones. I have seldom seen a place more comfortable as a resort coupled with a region more full of fish than this. The presence of such good fishing is undoubtedly due to the distance of the place from Campton and other surrounding towns. The eleven miles from Campton are done away with by the position of Greely's, and reduced to the three or four which we have to tramp from here in order to secure an excellent catch. Many persons also hesitate to come here thinking it too far from the stores and other requirements of a comfortable town, and very fortunately, for the longer the pleasant points of the place are hidden to them the better will be the fishing. One of course can find plenty of fishing away from civilization, in the Adirondacks or in the woods of Maine, but a pleasant summer resort with trout fishing near at hand is an uncommon thing. Even if one does not care to fish a full round of amusements can be found here. Many beautiful paths lead through the woods to cascades and waterfalls of uncommon brilliancy. There is plenty of fine and picturesque scenery, and many of the choicest views in this region are obtained from clearings on the mountain streams. The place is an uncommon one in many particulars, the views from some of the mountains round about are considered remarkably fine. ANGLER.

**MOVEMENTS OF THE FISHING FLEET.**—The receipts of Bank fish the past week have been the largest of any week during the season, 24 arrivals having been reported, with an aggregate of 345,000 lbs. halibut and a trifle over 2,000,000 lbs. of codfish. 24 arrivals have been reported from Georges, with about 280,000 lbs. codfish and 5,000 lbs. halibut. Only two vessels arrived from the Bay St. Lawrence, each with 150 bbls. mackerel, and there is no news that is very encouraging from that quarter. Some of the shore fleet have met with a little better success, and the 20 vessels arriving the past week have landed about 1,000 bbls. Total number of fishing arrivals for the past week, 70.—*Cape Ann Advertiser, Sept. 14.*

CONNECTICUT—New London, Sept. 13.—We have had fine blue fishing of late; parties going to the Race returning with large catches. One party caught 90 in two hours, the largest weighing 14 pounds. MISSAL.

KINSEY'S Ashley House, Barnegat Inlet, Sept. 15.—Bluefish since the storm have been scarce. Blackfish only middling. Sea bass plenty and running good size. Bart bite slow. A party of ten ladies and gentlemen from the yacht Sans Soucie took some 50 odd sea bass in one slack water off the stone piles in front of the house. The venerable enthusiastic sportsman, Col. E. P. N. Y., took 17 sea bass and bart, averaging 13 lbs. one slack water, from this place. As I am writing I can see his rod bend reeling them in; and from his actions his score to-day will be heavy. B.

OHIO—Sandusky, Sep. 11.—This is an excellent place for black bass fishing, spring and fall, and the lovers of that sport may be benefited to know where, at no very great expense, they can have any amount. Kelley's and Put-in-Bay Islands distant 12 and 20 miles respectively from the city, are the best points to operate from, as they are well provided with hotel accommodations, boats, minnows, etc.; besides, the fishing in their immediate vicinity is superior. The past spring has far exceeded any previous season, and the catches during favorable weather have been astounding. The fishing season at the Islands has just opened, and we hear of several good hauls. In about ten days it will be in full blast and continue until the last of October. NIMROD.

CANADA—Ontario, Muskoka, Sept. 13.—Fishing improving this month. During August but few muskellongs were caught, and bass fishing not tempting. Nevertheless, the many small lakes and rivers have been visited during almost the entire summer by numerous camping parties. This district is becoming a provincial pleasure ground.

**ANCIENT ATHLETICISM.**—In Macmillan's Magazine, Professor Mahady gives an account of Greek athletics, which might be read with pleasure by a fighting publican. At least, most men of that kind would be rather interested to know that the Greeks, with their wonderful forms and their devotion to the arena, missed the secret of training, as they missed to a great degree the secret of medicine. They fancied, being a Southern people, with the habit of feeding temperately, that they could train best on huge meals of meat.—"The discovery of Dromaeus was adopted by Greek athletes ever after, and we hear of their compulsory meals of large quantities of meat, and their consequent sleepiness and sluggishness in ordinary life in such a way as to make us believe that the Greeks had missed the real secret of training, and actually thought that the more strong nutriment a man could absorb the stronger he would become. The quantity eaten by athletes is universally spoken of as far exceeding the quantity eaten by ordinary men, not considering its heavier quality." It follows, of course, that Greek athletes did not perform very wonderful feats, as feats are considered in modern times. It is probable that their running was very bad, for they made the course only 125 yards long, and were accustomed to cover that distance with their arms going like the sails of a windmill, and shouting as they ran—two actions which a modern trainer would pronounce fatal to speed. Their wrestling was rather fighting, for it was allowable in the wrestler to break his opponent's fingers, and one man made a practice of it, while their jumping was probably "standing jumping," and they carried dumb-bells in their hands. The most extraordinary stories are related of these jumps, but they are probably exaggerations, and one, the celebrated jump of Phayllus of Kroton, certainly is. He is said to have jumped fifty feet on level ground, double the longest leap ever recorded of a horse, and absolutely impossible. The boxing was really fighting with knuckle-dusters, or with weights carried in the hand, and it seems certain that the blows were given downward or round from the shoulder, as little boys give them, for "a boxer was not known as a man with his nose broken, but as a man with his ears crushed." The violent probability is that Tom Sayers would have thrashed any Greek boxer in five minutes, that Captain Webb would have drowned him in an hour or two, and that O'Leary would have beaten him in any walk or run, though the specialty of the Greek runner was endurance. The human frame has not degenerated, but improved; and scientific medicine has taught us how to train, though it has not yet taught us all the secrets of endurance known to the lower races. A Turkish lamal lifts weights that would kill an English porter, and a Peruvian would, we imagine, win out training, but with cocoa, outwalk Weston or O'Leary

## The Kennel.

To CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

## THE CARE, TRAINING AND MANAGEMENT OF DOGS.

AS the taste for field sports increases, we hear from every quarter the inquiry: "How shall I obtain a good dog?" This is a question that must be answered largely by the common sense of the propounder. While believing that every one in need of an animal should take the same pains to inform himself as to the characteristics and points of the race, in the same manner as he would if a horse were desired, we are aware that many have not the time, or lack the inclination for such study. Such we would advise to put themselves in communication with some dealer of known character and reliability, with the determination to abide by the result. Some men never are, and never can be satisfied; for the reason that few have the honesty to acknowledge that they do not know how to break or handle a dog, and such usually ruin the animals that they purchase. Hence from overweening self-sufficiency and superficial information on the one hand, opposed to practical knowledge on the other, arise most difficulties between the purchaser and the dealer. We are convinced that if the most skillful of breakers should sell twenty of the best dogs ever whelped to the same number of purchasers, allowing them the privilege of trying them and then returning if they failed to suit, at least one-half the animals would be thrown back upon the breaker's hands, and he himself slandered. And this difficulty will continue, for the reason that almost every man who shoots well believes that he must necessarily be fully competent to undertake the management of dogs. To be able to shoot well is to be desired; though there is no great difficulty in acquiring the art; there are plenty of men with but a mere modicum of intellect who are proficient; but to be able to handle a dog skillfully is a very rare and much to be desired accomplishment—one well worthy the close attention of every sportsman, particularly if compelled to purchase dogs broken by other hands. A skillful handler has no difficulty in purchasing a good animal, because he knows what to expect from a strange dog, and how to work to gain his confidence; on the other hand, there are many purchasers who never give an animal a chance to show his education, and saddle their own ignorance upon the dog and his breaker.

While it is frequently argued that each one should break his own dog, and while allowing that there is much to be said in favor of so doing, it cannot be denied that the number of those who are capable of the complete self-government necessary to the successful education of the animal is extremely limited. As proof of this, look at the numbers of children, and the training they receive! If we cannot successfully control them, how much less can we hope to succeed with an animal to whom speech is denied, and in which the power of understanding is but limited.

It is not within our province to point out the choice of breeds, distinctions of color, etc.; these being matters in which the purchaser must please himself. But a few hints of a general character may not be amiss.

First satisfy yourself as to the antecedents of the animal in question. Purchase no dog whose pedigree is entirely unknown, at the same time avoiding all suspicious taint whether of form, character, or disease. See him in the field (if broken), and under the gun; note well his mode of ranging, and that he does not rake. See that he possesses a good nose, is staunch on point and charge, heels properly, is not gun shy, is a tender-mouthed retriever, and quick to respond to command. Study his trainer's mode of delivering his commands, and if he be a foul-mouthed, loud shouting individual, shun both him and his dogs; for you may be assured that he who uses expletives in abundance, and bellows at his dogs at the top of his voice, is not possessed of the temperament requisite for their proper training. Even if they appear well broken, it is not seemly to purchase animals, in the working of which it becomes necessary to transform yourself into an animated fog-horn, alarming both the neighborhood and the game. Better than all is the dog who works by the silent method, obeying the movements of the hand.

Not only see the dog in the field and note the breaker's method of working, but try your hand under his supervision. Nothing is more detrimental than to attempt to work a dog whose ways you do not know, and who likewise does not understand yours; the result is always disastrous; you lose your own self-command as well as the animal's respect for you, and in sheer self-defense he becomes sulky; the crack of the whip with an accompaniment of oaths does not mend the matter, but probably irretrievably ruins the animal.

Having satisfied yourself as to physical attributes and obtained your dog, do not at once turn him over to another to feed and care for, but let this duty devolve upon yourself alone. When a dog changes masters he will attach himself to the first person who treats him kindly; consequently it is important that you be the one to whom the affections of the animal are transferred. Take full charge of him then, and feed with your own hand until he has learned to know your person, your voice, and to look with pleasure for your coming. As soon as safe, let him loose from the chain, take him to walk, and attempt to gain his confidence by gentle coercion and kindness, showing him meantime that you are his master and that he must obey. A few days' attention, with the exercise of reasonable skill and patience, will accomplish all this, when he may be taken to the field.

Let it be remembered that no dog can be so perfectly broken that when he goes into the hands of a stranger he will at once work and obey him with the same readiness that he exhibited toward his former breaker and master. Also take

him out alone, as no dog will or can work well in a new place and among strangers; to demand such would be to ask more of the animal than could be expected of yourself. Working a dog alone for a single day, or even half a day, will have the effect to start him right, and save trouble and vexation afterward. You may have to use the whip, but in such a case apply it judiciously, without anger, pointing out to the animal his fault. By no means lose your self-control, for the result will inevitably be disastrous, both to the animal and yourself.

As before, if gentlemen who purchase broken dogs to shoot over could be impressed with the necessity of exercising good judgment in their management, there would be no difficulty in purchasing good, staunch, well-broken dogs. In consequence of mismanagement many breakers will not sell a dog to any one, unless they know to a certainty that the purchasers possess skill and will exercise it. Many trainers refuse to break dogs for strangers at any price, for fear the animals will pass into the hands of bunglers and thus be condemned.

It is important that your animal be provided with a proper habitation. It is true, a dog can be kept in a barn or a stable, but those who keep them there can best inform you whether their dogs are capable of answering the purposes designated. The sense of smell is acute in the dog, and as every odor that salutes the nostrils owes its flavor to the motile particles held in suspension in the air coming in contact with the sensitive membrane with which the olfactory are lined, we cannot but suppose that the stench of the effete material, decaying vegetable matter, and ammoniacal gases, which constantly originate in and around such buildings, are more or less detrimental to the nose of the animal.

"The merciful man is merciful to his beast." Exercise that mercy and build your dog a house in the open air, away from the barnyard, and so far distant from other buildings that they may not interfere with either the sunlight or circulation of pure fresh air. Give him a large yard to run in, and plenty of grass under foot; above all see that quitch or dog-grass (*Trifolium repens*) is planted therein, for it will not only be eagerly sought and eaten by the animal, but goes far toward preserving his health. If more than one dog is kept, a building of two rooms may be erected, each opening into separate yards, that one may be occupied while the other is cleaned, or for convenience of separating the sexes. Doors and windows are essential to admit of free entrance; and a free circulation of air. The bench on which they lie should be fronted that the dogs may not crawl underneath, and provided with plenty of bedding in the shape of straw, shavings or beach sand; if none of these are available, spruce cuttings may be substituted with advantage. An excellent plan is to have the bench movable on rollers, that it may be trundled about freely, and even run out doors. Let the bedding be shaken up and aired in the sun each day, and at least once a week replaced by fresh material, the benches and room having first undergone a thorough scrubbing. The yards also should be cleaned and raked frequently, every attention being paid to neatness and cleanliness, as dogs are liable to many diseases to which poverty and nastiness will very much contribute. Turpentine or strong whitewash will be found to aid in the prevention or eradication of vermin. If the floor be of wood, see that it is thoroughly wiped and dried after cleaning, and before the dogs are allowed to enter the house, as damp is prejudicial to canine health.

House your dogs every night, but turn them out on going to feed them in the morning. At such times a little attention to their coats will not be amiss, such as combing and brushing; when the hide is very greasy a little chalk rubbed in before brushing is advantageous. Water should be supplied in abundance, that the animals may drink when thirsty. If a pure stream be led through the yard, all the better; but if this be impossible, supply them freely with queensware drinking pans, which must be kept in the shade, and emptied and replenished twice each day, being thoroughly washed at each alternate refilling. If a piece of roll brimstone is kept in the water pan, it will aid materially in keeping the dogs in condition. Iron dishes, even when porcelain lined, are not to be used, the metal itself oxidizing, and its porcelain lining containing lead and arsenic in dangerous quantities.

If but one animal is possessed, a small dog house will suffice; but let the roof be not only water tight, but see that it projects sufficiently beyond the ends and sides to protect them from the driving rain. The top may be made movable for convenience in shaking up the bedding, and sunning and airing the interior. The house should moreover be raised sufficiently to avoid the dampness of the ground underneath, and provided with a door hung from above in such a manner as to easily swing in or out. Avoid the general fault of too small a kennel, many of them not allowing sufficient room for the occupant to turn round comfortably, and see that no projecting and uncleaned nails remain which may injure the eyes.—*Hallock's Sportsman's Gazetteer*.

—Dr. Strachan has just received from Mr. Smith of Strathroy, a Leicester Peers puppy, four months old, lemon and white, which he names Lady Leicester. She is to be added to the N. Y. Kennel Club kennels.

NAME CLAIMED.—I claim the name of Ross for my liver colored setter dog pup, out of Lakin's Ned and Dunham's Jessie, born June 23, 1877.

—I claim for my Dan—Petrel field trial setter dog pup, whelped July 23, 1876, the name Thor; and for my Ranger, Minnesota pointer dog pup, whelped July 7, 1877, the name Robin Hood. W. H. DRANE.

## SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

—[Adv.] CONROY, BISSETT & MALLESON, Manufacturers, 65 Fulton Street, N. Y.

THE NEW YORK SHOOTING COAT.—Mr. H. C. Squires, No. 1 Cortlandt street, is the inventor and manufacturer of a brown velvet shooting coat which leaves nothing to be desired. The pockets and lining are made to take out, so that it may be worn for early fall or winter shooting. Not the least among its many excellencies is the game bag attachment. Call and examine and you will no longer be without one.

## Game Bag and Gun.

### GAME IN SEASON FOR SEPTEMBER.

Moose, *Alces maculis*. Black-bellied plover, or ox-eye, *Squatarola hircetica*. Caribou, *Tarandus rangifer*. Ring plover, *Spizella semipalmatus*. Elk or wapiti, *Cervus canadensis*. Red or Va. deer, *Cervus virginianus*. Squirrels, red, black and gray. Hares, brown and gray. Woodcock, *Philohela minor*. Red or rice bird, *Dendrocygna erythrorhynchos*. Wild turkey, *Meleagris gallopavo*. Flinthead grouse or prairie chicken, *Cypripedium capio*. Ruffed grouse or pheasant, *Bonasa umbellus*. Quail or partridge, *Ortyx virginianus*. Black-breasted snipe or dowitcher, *Macrorhamphus griseus*. Red-backed sandpiper, or ox-bird, *Tringa americana*. Great marbled godwit or marlin, *Limosa fedoa*. Willot, *Totanus semipalmatus*. Pintail, *Totanus melanocoryphus*. Yellow-shanks, *Totanus flavipes*.

"Bay birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolor* or Shore Birds.

§3 The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

| States     | Pinnated Grouse. | Ruffed Grouse.   | Quail.           | Woodcock.        |
|------------|------------------|------------------|------------------|------------------|
| Ill. ....  | Sept 1 to Jan 15 | Oct 1 to Feb 1   | Nov 1 to Feb 1   | Sept 1 to Jan 15 |
| Ind. ....  | Oct 1 to Feb 1   | Nov 1 to Jan 1   | Nov 1 to Jan 1   | July 1 to Jan 1  |
| Iowa. .... | Aug 15 to Dec 1  | Sept 1 to Dec 1  | Oct 1 to Jan 1   | July 1 to Jan 1  |
| Minn. .... | Aug 15 to Dec 1  | Sept 1 to Dec 1  | Oct 1 to Dec 1   | July 3 to Nov 1  |
| Mis. ....  | Aug 15 to Nov 1  | Sept 15 to Jan 1 | Sept 15 to Jan 1 | July 4 to Nov 15 |
| Nebr. .... | No Shooting      | No Shooting      | No Shooting      | No Restriction   |
| Kans. .... | Aug 1 to Feb 1   | "                | Oct 1 to Jan 1   | "                |

CONNECTICUT—A black bear is reported in the woods of Orange.

MASSACHUSETTS—Northampton, Sept. 12.—The Nonotuck Club propose to sow several bushels of wild rice seed about ponds and streams of this vicinity, for the purpose of attracting ducks this way. M.

Boston, Sept. 13.—I am just returned from a four weeks' trip to the wilds of New Brunswick, camping on the Kilburn and Shogomoc. Have had glorious sport, my last day's bag consisting of seven grouse, three ducks, one crane and two bears. LOT WARFIELD.

New Bedford, Sept. 15.—Woodcock are very scarce in this vicinity. Shore birds mostly all gone, except mosquitoes, which are "orful." Large covies of partridge and quail give token of first-rate fall shooting. CONCHA.

Salem, Sept. 17.—Gunning has been, owing to dry, hot weather; rather scarce of late. Some coots have been seen off Emerson's Rocks, Ipswich Bay, the past week, and the first, a cripple, was seen in Salem Harbor last week. Geo. Stone killed 8 out of 11 blue wing teal in Mill Pond, this morning. Pitman & Brother, of Swampscott, lately shot 12 black breast plover with some other birds on Lynn marshes. TEAL.

NEW YORK—Canandaigua, Sept. 12.—Sportsmen are making fine bags of ducks now on Canandaigua Lake.

Barneget Inlet, Kinsey's Ashly House, Sept. 8.—Your correspondent killed yesterday seventy-six mud hens (king rail). Black ducks are abundant.

Sept. 15.—Black ducks can be seen morning and evenings in large flocks moving about our sedges or islands. Some sprig-tails reported, and a large sprinkle of teal. Our season commences Oct. 15th. Bay birds not very plentiful. B.

PENNSYLVANIA—Brush's Mills, Sept. 17, 1877.—Deer are quite plenty south of here, at Blue Mountain and along the St. Regis River. Several bears have been killed on the 16 Mile Lake and vicinity. Ruffed grouse are numerous also. I saw in August several flocks, one of 15 nearly grown. They are not much hunted. Mr. Merrill, formerly of the Blue Mountain House, when looking for deer on the river the other day, close by the house, shot at and wounded a large panther as it was crossing; he followed it until dark, but did not overtake it, though he saw two places where it had torn up the ground in its pain and rage, and found considerable blood in the tracks.

Ontio—Sandusky, Sept. 11.—As yet the duck shooting in this locality is rather slim, but when the open water du ks come it will live up. Mallard and blue-winged teal breed quite extensively in our marshes, but they have been shot at so much since the 1st of Sept., that they have sought quater feeding grounds. Quail will be unusually plenty all through this part of the State, more so than ever before; but as the law is not off until the 15th of Nov., and closes the 1st of Jan., it will make the season very short, but from all appearances it will be lively while it lasts. NIMROD.

FLORIDA—Maitland P. O., Orange Co.—Deer are very plenty near here.

TEXAS—Galveston, Sept. 12.—Bay birds are arriving in large numbers. Plover are in fine condition, but scarce. Teal ducks are reported in Harris Co. I shot the first on the island, yesterday. There is good prospects of sport for fall shooting. B. R. B.

WISCONSIN—Oakfield, Sept. 18.—The duck season opened Sept. 1, since which time we have had some fine shooting on Horican Marsh. Bags have been made, ranging from one to forty in one day, according to ability of sportsman, and some have been reported as large as seventy-five. Your correspondent bagged sixty-three mallard and blue-winged teal in two mornings' shooting. HORMON.

KANSAS—Chillicothe, Sept. 17.—The quail crop is simply enormous this year.

NEVADA—Deer are unusually plenty at Lake Tahoe, and many hunting parties have started out for the sport.

CALIFORNIA—Santa Monica.—Deer, water fowls, quail and rabbit shooting offers rare inducements to gunners this season.

CANADA—Ont., Toronto, Sept. 13.—Ducks at Long Point and the St. Clair flats promise this season to be averagely plenty, and knowing ones anticipate heavy bags.

—The Marquis of Lorne, it is said, will visit Nova Scotia next month to hunt moose.

## DUCK SHOOTING AT LEWISTON.

Did you ever shoot ducks at the Lewiston (Logan county, Ohio), reservoir? Ten years ago you would have thought it a perfect "wilderness of sin." I well remember the first time I stood on the dyke, and the feeling of awe with which I beheld the seemingly limitless extent of blanched tree-trunks standing out of the water like white sepulchres, grotesque tomb-stones, or a veritable City-of-the-Dead peopled with the bleached and mutilated forms of a vast army of the "Monarchs of the Forest," struck with death, erect and in disorder. The cause? Men dammed a stream which flooded 11,000 acres of forest, swamp and prairie. In this case forest and stream disgraced; the forest was drowned. Wind and weather soon stripped the trees of smaller branches and bark, and in their bleached state they seem (until we become familiar with them) actually ghastly. Many, of course, were fallen, making boating of very circuitous wake. Standing trunks were so numerous that a few rods from the shore it was impossible to see out; and to go without a guide was to be lost in broad daylight, only the practice eye recognizing the different channels where (to the new comer) everything looked alike. To be out after dark was avoided by the oldest guides, and many stories—some laughable, some serious—are told of the lost. After ten or twelve visits (ducking of a week each, and "padding our own canoe," we learn the "channels" and landmarks. There are about 3,000 acres of green islands, *i. e.*, live timber. The observant man will learn the outline of the tree-tops, also of the more grotesque or noticeable trees, etc., where he may find his way on a bright night. To those who have been there, pleasant memories may be awakened by mention of some of the local names—the Mill Pond, Buckwheat Patch, Mud Branch, Orchard, Wolf, Otter, Lake and Buzzard Islands, William's Swamp, Indian, Otter, Sinking and Black Lakes, the Willows, Cranetown, Steinmetz Prairie, the different sloughs, etc. The reservoir is used as a canal feeder, and the water varies about ten feet in its height. At a low stage of water boating is very laborious, as logs must be crossed that stand out of water. At the high stages it is easier, but the ducks are more scattered and we have further to pull. Black bass abound, but seem capricious in their tastes, some seasons biting well, and at other times not at all. Small striped bass may be caught by the boat load, but being no place (fish rod) and something of a Nimrod, can speak more adventurously of the shooting. The reservoir has been a famous place for ducks, and some good bags may still be made. About three years ago Geo. Ayer killed 123 woodduck in part of a day, most of them early in the morning. Standing knee-deep in water, his gun was kept cool by repeated dippings. Good mallard shooting may be often had, together with teal, widgeon, pintail and other shoal-water fowl. Later in the season geese are plentiful. This brings to memory a lucky capture by Frank C. His boat was secured in a natural "blind" made by the upturned roots of a great tree, together with a bunch of willows. A drove or "team" of geese—long heralded by their honking—passed directly over his head, not over twenty yards high; so near that No. 5 shot instantly killed the leader, who was singled out with the first barrel. The other barrel severely crippled a second, which settled in the water ten or fifteen rods away, and was followed by half a dozen that left the main flock. These stuck up their heads uneasily for a moment, giving Frank just enough time to replace his shells, when they flew back directly over again, giving another easy right and left shot. All four geese were retrieved, which, with thirteen mallards, made a heavy and very satisfactory afternoon's bag. It is quite different from marsh shooting, and I have never known decoys to be used with any success. Single duck, high flyers and long-range is the rule late in the season, except at the mallard holes or feeding grounds where the shooting is comparatively easy. The satisfaction derived from ducking is not so much in the making of large bags from easy-going flocks. In our day-dreams we revert to the occasional cutting down of the green-winged teal. He comes on us unawares, flying down wind; the gun comes to the shoulder involuntarily; there is no time for gauging; the first thing we realize is that the game rolls end over end, carried many yards by inertia. And here suppose we insert a problem: A teal, weighing one pound, is killed instantly, twenty-four feet from the water. He strikes forty feet (measured on the water) from a point perpendicular beneath where the shot struck him. How fast was he flying?

MEASURABLE.

## PIGEON MATCHES.

CONNECTICUT, *West Meriden*, Sept. 7.—A glass ball tournament took place on Sept. 7; six balls each; Bogardus rules.

|              |   |               |   |
|--------------|---|---------------|---|
| Perry.....   | 6 | Tucker.....   | 6 |
| Cutler.....  | 3 | Haughton..... | 2 |
| Brogden..... | 3 |               |   |

Second sweep, two balls each.

|                 |    |               |    |
|-----------------|----|---------------|----|
| Perry.....      | 10 | Tucker.....   | 11 |
| Brogden.....    | 9  | Haughton..... | 7  |
| Waterhouse..... | 4  | Wilson.....   | 4  |

Third sweep, twelve balls each.

|                 |    |                 |    |
|-----------------|----|-----------------|----|
| Perry.....      | 11 | E. L. Post..... | 10 |

| Merrick.....   | 1 | 0 | 1 | 1 | 1 | 5 | Woodbridge..... | 1 | 0 | 0 | 1 | 0 | 1 | 3 |
| A. Eddy.....   | 1 | 0 | 0 | 1 | 1 | 4 | Hudson.....     | 1 | 1 | 0 | 0 | 0 | 0 | 3 |
| Stevenson..... | 0 | 0 | 1 | 1 | 1 | 3 | Skinner.....    | 0 | 1 | 0 | 0 | 0 | 0 | 1 |
| Emery.....     | 0 | 0 | 1 | 0 | 1 | 3 | Gaines.....     | 1 | 0 | 0 | 1 | 0 | 1 | 3 |

Ties on three won by Woodbridge.

Fifth sweep, twelve balls each, first class.

|                 |    |             |   |
|-----------------|----|-------------|---|
| E. L. Post..... | 12 | Tucker..... | 8 |
| Perry.....      | 9  | Wilson..... | 6 |
| Brogden.....    | 8  |             |   |

Brogden and Tucker divided third money.

Second class.—In this class Merrick and Emery tied on seven balls, and divided first money; Woodbridge and Haughton tied on six balls, and divided second money; third money divided.

Following the sweeps a race of fifteen balls each took place between Messrs. Tucker and Perry.

|             |    |            |    |
|-------------|----|------------|----|
| Tucker..... | 12 | Perry..... | 10 |
|-------------|----|------------|----|

The sport closed with a shoot between Messrs. Tucker and Gaines, the former 10 and the latter 11 out of 12.

Great credit is due to Capt. Wilson for his management.

VON G.

WIBLES' HOTEL, ROCKAWAY BEACH, N. Y.—Pigeon shooting took place Sept. 11. Mr. King undertaking to kill 25 pigeons out of thirty, viz.: 15 double shots, two let fly together, 18 yards rise, 80 yards boundary.

Score.—11 11 11 11 11 11 11 11 01 11 11 11.

Sweepstakes, single birds—1st, 2d and 3d prizes, \$50, \$30 and 20 per cent. Entrance money, \$2; 30 yards rise.

|                |   |                   |   |
|----------------|---|-------------------|---|
| Mr. Hams.....  | 3 | King.....         | 4 |
| Ream.....      | 1 | Smith.....        | 4 |
| Vanweikin..... | 1 | Gildersleeve..... | 4 |

Gildersleeve, 1st money; King, 2d money.

Second sweepstakes:

|                   |   |                |   |
|-------------------|---|----------------|---|
| King.....         | 4 | Woods.....     | 3 |
| Smelt.....        | 5 | Hams.....      | 4 |
| Ream.....         | 5 | Vanweikin..... | 5 |
| Gildersleeve..... | 4 |                |   |

Shooting off Smelt, 1st money; King and Gildersleeve, 2d and 3d divided.

LONG ISLAND—*Brooklyn Driving Park, Parkville*, Sept. 13.—Monthly contest of the Kings County Shooting Club, champion gold badge, 10 birds each, 25 yards rise, 80 yards fall, 1 1/2 oz. shot, H and T traps; ties shot off with 3 birds each.

Charles Meyer, 14; J. M. Moller, 13; J. W. Miller, 8; W. Pickard, 7; John Meyer, 7; P. Miller, 6; John Moller, 6; J. W. Dick, 6; J. Jarger, 6; C. F. Francis, 6; C. G. Moller, 5; George Francis, 5; Cornelius Moller, 4.

—The Long Island Gun Club had their monthly shooting Sept. 14. In the match Mr. Thomas Broadway was the winner, while Messrs. Turner, Wynn, Blankley and Brower tied. They shot off and Messrs. Turner and Wynn again tied. The next match had three entries, Messrs. Broadway, Landge and Wynn. They tied at three birds, killing all. Broadway won in the shooting off of ties.

NEW JERSEY—*Mountain View*, Sept. 18.—The Lafin & Rand Powder Co. Gun Club held their regular trap shot for the club medal and badge to-day as follows: Smith, 9; Boies, 8; Jo. McClelland, 6; Porter, 6; Ed. Hamilton, 5. Mr. H. J. Smith took the badge.

H. J. Smith, 9; A. H. Boies, 10; F. J. Porter, 8; A. Van Houten, 3, withdrew; G. Contant, 1, withdrew; F. Jones, 1, withdrew; P. Simkins, 1, withdrew. Mr. Boies was declared the victor, winning the medal for the second time.

Meriden Trotting Park, *West Meriden*, Sept. 1.—The second meeting of the trap shots of Connecticut took place to-day, a large delegation of shooters being present. The principal match of the day was for a beautiful cup, presented for competition by Simpson, Hall, Miller & Co., of Wallingford, Conn. The cup is silver and gold lined, 18 inches high. The base is of a diamond shape, on which stand two gilt figures of hunters clad in ancient costume. From the base arises a pillar, on which rests the bowl, the pillar being ornamented with wreaths rosettes, etc. Around the lower part of the bowl is a border chased in Grecian style, above which is engraved a picture of the celebrated setter, Dick, belonging to Mr. Jarvis.

For the the cup there were 18 entries; 25 balls each; Bogardus rules.

|                               |    |                               |    |
|-------------------------------|----|-------------------------------|----|
| E. L. Post (Wallingford)..... | 20 | Capt. Wilson (Meriden).....   | 14 |
| Perry (Worcester, Mass.)..... | 17 | Morgan Pierson (Clinton)..... | 15 |
| J. Brogden (Wallingford)..... | 12 | Taylor (Meriden).....         | 14 |
| G. Strong (Meriden).....      | 14 | Pease (Meriden).....          | 8  |
| Seymour (Meriden).....        | 9  | Thorpe (N. Haven).....        | 5  |
| Robt Penn (N. Haven).....     | 15 | L. Lewis (Rockville).....     | 5  |
| W. King (Meriden).....        | 6  | F. Stevenson (Meriden).....   | 5  |
| Boies (South Meriden).....    | 8  | G. Gaines (Meriden).....      | 5  |
| Foster (Meriden).....         | 6  | Bradford (Meriden).....       | 1  |

The cup becomes the property of Mr. E. L. Post.

Next was a sweep at 10 balls each, \$5 entry.

|              |   |             |   |
|--------------|---|-------------|---|
| Perry.....   | 6 | Post.....   | 7 |
| Brogden..... | 6 | Wilson..... | 6 |

Mr. Post taking the money.

Second Sweep—Ten balls each, \$1 entry.

|              |   |            |   |
|--------------|---|------------|---|
| Post.....    | 7 | Penn.....  | 6 |
| Brogden..... | 5 | Perry..... | 4 |
| Wilson.....  | 5 |            |   |

Mr. Post wins first.

Third Sweep—Ten balls, \$1 entry.

|              |   |              |   |
|--------------|---|--------------|---|
| Post.....    | 6 | Brogden..... | 7 |
| Pierson..... | 6 | Penn.....    | 5 |
| Thorpe.....  | 5 | Wilson.....  | 2 |
| Lewis.....   | 4 |              |   |

Mr. Brogden wins first.

Fourth Sweep—Ten balls each, \$1 entry, above rules.

|              |   |              |   |
|--------------|---|--------------|---|
| Post.....    | 5 | Wilson.....  | 7 |
| Brogden..... | 5 | Pierson..... | 5 |
| Thorpe.....  | 5 | Lewis.....   | 4 |

Brogden and Wilson divided first; Penn, second; ties on third won by Post.

Fifth Sweep—Five balls.

|                   |   |             |   |
|-------------------|---|-------------|---|
| F. Stevenson..... | 9 | Taylor..... | 1 |
| Lewis.....        | 1 |             |   |

Sixth Sweep—Five balls.

|                |   |            |   |
|----------------|---|------------|---|
| Stevenson..... | 2 | Lewis..... | 1 |
| Taylor.....    | 1 |            |   |

Seventh Sweep—Five balls.

|                |   |              |   |
|----------------|---|--------------|---|
| Brogden.....   | 2 | Pierson..... | 2 |
| Stevenson..... | 2 | Lewis.....   | 0 |

VON G.

PENNSYLVANIA—*Milford*, Sept. 14.—A match at Bogardus' balls was shot on the 8th inst., on the banks of the Delaware near this place. Ten balls each, 18 yards rise.

|                  |   |                      |   |
|------------------|---|----------------------|---|
| D. A. Wells..... | 7 | F. Quick.....        | 4 |
| A. Eddy.....     | 6 | J. C. Westbrook..... | 4 |
| C. P. Mott.....  | 7 | J. J. Rymal.....     | 5 |
| N. Revoyre.....  | 6 | W. K. Ridgway.....   | 9 |
| S. W. Drake..... | 7 | M. W. Van Auker..... | 4 |

Many of the contestants had never shot at a glass ball before.

KANSAS—*Rosedale*.—The Rosedale Sporting Club held its regular monthly match for the club medal Sept. 8th. The following is the score, 7 birds each:

|                  |   |                    |   |
|------------------|---|--------------------|---|
| T. D. Jones..... | 3 | D. S. Mathias..... | 5 |
| Benj. Rees.....  | 4 | J. Hines.....      | 3 |
| J. H. White..... | 6 | W. Bowen.....      | 3 |

J. H. WHITE, Sec.

THE FOREST AND STREAM.—The following is just received from Galveston, Texas:

"Your paper must be complimented on as a first-class medium. In only one issue of my advertisement I have had twelve inquiries to purchase of me second-hand muzzle and breach-loading guns. Yours, truly, Jos. LARADIE."

—For the small sum of twenty-five cents you can hire at almost any seaside resort a bathing-suit that will make the sad-eyed little fishes stand on their hind heads and weep.

## BOATS AND YACHT-BUILDING.

5th Paper.

THE planking for bottom of boat may be cedar or pine, one-half inch thick. The planks on each side of the keel (technically called the "garboard strakes"), are the only ones that will give much trouble in fitting to place. The ends of planking will require to be steamed, ten minutes will be all sufficient. A steam-box is made by nailing four planks together

No 12.

in the form of a box. The planks to be one and one-half inches thick, and as long as the articles to be steamed; one end of the box is permanently closed, and the joints all caulked steam tight. This box is placed on benches high enough to allow the boiler to be set under it. (The boiler is made by fastening a heavy wooden lid on the top of a strong iron kettle or pot, with iron clamps, and is connected to the box by a pipe or tube; a second opening is also made in the cover of boiler for the water supply. The mode of using is as follows: The boiler is filled half full of water, and a fire started under it; when the steam begins to rise freely place the boards or other articles in the steam-box and close the end with wet hay. To fit the planking on the boat the builder requires the use of a dozen or more iron screw-clamps, which may be had at any hardware store. For nailing on planking use copper or galvanized boat nails with countersunk heads. Copper nails are the best and most expensive; galvanized iron will answer, especially in fresh water. When a nail is driven into a rib or other light timber, the head of an ax, or a piece of heavy iron of any kind, should be held on the rib or timber opposite the point of the nail. The knees, where they project above the side boards, are cut off at an angle of forty-five degrees. Two strips of oak, one and one-quarter inches wide and one inch thick, are bent around the gunwale on the inside of the side boards; notches are cut in the rails to fit the tops of the knees, and the strips are nailed through the side boards. Knees are placed in the angles between the stern board and rails, and a knee between the ends of the rails at stem. The ends of rails at stem are tapered down to one-half an inch in width. An oak moulding, one-half inch wide, is nailed around the outside of gunwale as a finish, and a seat rail or "rising," one-half inch thick by two inches wide, is nailed on the knees at the proper height for the seats to rest on. The seats are fastened to the sides of boat by small knees.

A "SHIP-JACK" CANOE.

Side boards fourteen feet long, seven and one-half inches wide at middle, and three inches wide at ends; mould board twenty-nine inches long, beveled three inches to a foot; keel one inch thick and two inches wide. The stems are cut to correspond with the size of keel. If a light boat is wanted, make the side boards and bottom of boat of cedar, one-fourth of an inch thick, with ribs one-fourth of an inch thick and three-eighths of an inch wide. Place the ribs four inches apart. If a stronger boat is desired, use planking three-eighths of an inch thick, ribs three-eighths of an inch thick and one-half inch wide, placed six inches apart. When using light ribs and planking it may be necessary to use several mould boards to keep everything in shape. Rail or gunwale three-fourths of an inch thick and one inch wide. Deck beams should be of pine, one-half inch thick, one inch wide at the ends, and two inches wide at middle. The ends of deck beams are notched into the gunwale in such a manner that the top of deck beams are flush with the upper side of gunwale. The ends of deck beams are fastened to the side boards with knees. The "rise" of deck may be two or three inches. The opening for cockpit is left four feet eight inches long, and about twenty inches wide. Deck planks one-fourth inch thick, cedar or pine. Combing around cockpit rises two inches above deck. The deck may be covered with canvas or not. If to be covered with canvas it is first given a heavy coat of lead paint. Heavy, unbleached muslin is a better covering than canvas. Stretch it over the deck before the paint is dry, and nail with small tacks three-fourths of an inch apart. A small, half-round moulding around gunwale covers the tack heads and protects the edge of boat. A small con-

cave or hollow moulding is also nailed around the combing. A deck so made and well-painted will always be tight. A light floor or ceiling is fitted in the cockpit. No thwart or cross seats are used. A paddle to use with this boat should be eight feet long. If oars are to be used rowlocks can be placed as before directed, outrigger them six to nine inches. A movable bench is used for rowing; oars seven or eight feet long, spoon oars being preferable. A square sail can be used to run before the wind; step the mast four inches ahead of forward end of cockpit. Sail of twilled muslin, forty-five square feet area. This boat is steered with an oar or paddle. Bulk-heads may be fitted in the ends or not as the builder fancies.

NAUTICS.

MASSACHUSETTS—BOSTON YACHT CLUB, Sept. 12.—Third annual regatta for second and third-class yachts. The course for the former was from point off the Club House, down West Way, leaving Thompson and Rainsford Islands on the starboard, long and George's Islands and buoy No. 7 on the port; back through the Narrows, leaving George's and Gallop's Islands, Nix's Mate buoy, and buoy No. 7, off Fort Independence, on the port, thence to Cow Pasture or Dorchester buoy No. 6, leaving it on the port, thence to the point of starting.

For the third-class the course was from starting point as above, to Cow Pasture buoy, No. 6, leaving it on the port, thence to buoy No. 7, off Fort Independence, leaving it on the starboard, thence to Sculpin Ledge buoy, leaving it on the port, thence to buoy No. 6, on Lower Middle, leaving it on the port, thence to the point of starting.

Following is a summary:

## SECOND CLASS RACE.

| Name.         | Owner.     | Length. | Act. time. | Cor. time. |
|---------------|------------|---------|------------|------------|
| Shadow, c. b. | J. Bryant  | 34 7    | 2 18 53    | 1 47 53    |
| Violet, c. b. | F. Peabody | 34 0    | 2 23 47    | 1 52 43    |

## THIRD CLASS.

| Name.           | Owner.          | Length. | Act. time. | Cor. time. |
|-----------------|-----------------|---------|------------|------------|
| Robie, c. b.    | J. P. Phinney   | 23 00   | 1 53 46    | 1 22 49    |
| Pessey, c. b.   | F. C. Hershey   | 23 01   | 1 55 45    | 1 23 48    |
| Wanderer, c. b. | C. E. Huss      | 23 09   | 1 52 49    | 1 22 34    |
| Sunbeam, keel.  | F. W. Nickerson | 25 03   | 1 57 44    | 1 29 07    |

The third-class was started immediately after the second, and the following is the result:

NEW YORK—*Empire Navy*.—The first annual regatta of the Empire Navy was rowed Thursday afternoon at Yonkers. The races were over the Palisade course, two miles straightaway. The prizes were gold medals, and for the first race the club's championship colors. The events were:

Four-Oared Shells—No. 1 Palisade Crew: H. H. Thayer, G. de F. Underhill, Isaiah Frazier and C. H. Harriott; 10m. 32s. No. 2 Hiland Crew: J. C. Seymour, S. F. Allen, H. P. Dain and T. N. Seymour; 10m. 27s. No. 3 Harlem Rowing Crew: Howard Conkling, Henry W. J. Telfair, Alvah G. Scranton and Thomas R. Keator; 10m. 42½s.

Junior Single Sculls—C. O. Shaw, of the Palisades, 14m. 7½s.; S. S. Leo, of the Palisades, 16m.; S. F. Allen, of the Highlands, 16m. 1s., and I. Frazier of the Palisades.

Pair-Oared Gigs.—The Palisade crew not appearing, the Resolutes rowed over the course and won the race.

Senior Single Scull Race—A. Moffat, 17m. 9½s.; H. P. Dain, 17m. 25½s.; I. Frazier.

Double Sculls—E. B. Pinckney and A. B. Hoehner of the Harlem Rowing Club, T. N. and J. C. Seymour of the Highlands. The Harlem boat foundered, the Hiland crew pulling over the course winning the race.

Six and Eight-Oared Barges—Palisades, 1st; Resolutes, 2d.; Harlem, 3d.

YACHTING IN FLUSHING BAY.—Thirty-five to forty yachts entered for the annual contest at Flushing Sept. 14, but only a few arrived in time to start. The race for the \$100 cup was therefore postponed to the 25th, and a special one was made up for those present. The course was from a stakeboat off the Hoffman House, at the head of Flushing bay, to and around Throg's Neck Buoy and return. The yachts crossed the line as follows: Second-class—Emma D., 3:44:40; Mamie, 3:45. First-class—Thomas Paine, 3:45:50; Barthenia, 3:46:05; Pluck and Luck, 3:46:35. The Pluck and Luck turned Throg's Neck Buoy first in her class, and the Emma D. led in hers. Returning, it was a dead heat to windward, and the Pluck and Luck gained a long lead, passing the finish at 5:47:30. The Thomas Paine arrived at 6; Emma D., 6:05:02; Mamie, 6:12; Barthenia, 6:12:05.

GRAMERCY BOAT CLUB REGATTA, Sept. 12.—The eight annual regatta of this club was rowed at Harlem. There was a fair attendance of spectators and the various events were well contested. Following is a summary: Single scull championship, three miles, prizes a challenge belt and presentation medal.—Geo. Gaisel was first in 22m. 39½s., but the race was awarded to H. R. Mills, on a foul.

Pair-oared gigs, one mile.—Entries: J. Rieffel and W. C. Taggard; J. Williamson and C. Earwick; G. Norton and G. Gaisel; M. L. Sutton and H. W. Smith. Won by Rieffel and Taggard in 8m. 35½s.

Junior Single sculls, one mile.—H. F. Spitzka, 7m. 17½s.; G. R. Krapp, 7m. 25½s.; H. Mills, 7m. 40½s.

Four-oared shells, one mile.—J. Rieffel, M. L. Sutton, W. E. Pearl and W. C. Taggard, 6m. 45s.; H. Mills, C. Earwick, T. Williams and H. R. Mills, 7m. 9½s.; C. F. Neathing, H. Brown, G. Norton and G. Gaisel, 7m. 14½s.

Eight-oar barges.—D. Cunningham, J. M. Connell, W. H. Neathing, O. Kundahl, H. F. Spitzka, W. E. Pearl, H. Brown and C. F. Neathing, 8m. 53½s.; J. Mahr, W. M. Dean, W. H. Duhy, H. J. Mahr, C. Hazleton, J. Loomis, George Norton and George Gaisel, 9m. 8½s.

ROCHESTER, Sept. 13.—Annual single-sculls race for the Riverside Rowing Club badge; course a mile and one-half with a turn. F. B. Durand won in 12m. 27½s. J. Kelly, his only contestant crossed the line in 13m. 17s.

SAILING A TWENTY-MILE RACE.—The Sophia Emma of the Manhattan Yacht Club and the Coquette of Tarrytown sailed a twenty-mile race Sept. 14, \$350, from North Brother Island to and around Gangway buoy and return. The Sophia Emma rounded the buoy at 4:00; the Coquette following six minutes later. The wind being dead ahead on the return, the sailing of the yachts was tested, and the Sophia Emma soon left her competitor nearly three miles astern. The Sophia Emma rounded the home stakeboat at 6:00, making the race in exactly five hours. The Coquette arrived twenty-five minutes later.

NEW JERSEY—Triton Regatta, Newark, Sept. 14.—The third annual regatta of this popular club was rowed over a course of a little over a mile and an eighth. The events were as follows:

Junior Single Sculls—Entries: A. W. Conklin, N. C. Rommel, C. N. F. Gray. Won by Rommel in 8m. 25s.; Conklin second in 9m. 2s.

Senior Single Sculls—George W. Lee, 7m. 17s.; George D. Small, 7m. 20s.; Frank L. Phillips, 8m. 8s.

Pair-Oared Gig Race—H. C. Rommel and J. W. Van Ness, 9m. 10s.; F. A. Marsh and L. G. Dawson, 9m. 20s.

Four-Oared Shell Race—Shell Old Maid: F. E. Townley, Frank Phillips, Charles Bowles, George W. Lee; 7m. 20s. Shell Bachelor—F. R. Fortmeyer, H. C. Rommel, G. D. Small, E. L. Phillips; 7m. 15s.

The regatta closed with a mirth-producing tug race.

PAVONIA YACHT CLUB, Sept. 14.—The Pavonia Yacht Club, of Jersey City, held their annual regatta Thursday. The course for the first and second-class yachts was from a stakeboat off the club house, foot of Pavonia avenue, to and around Fort Lafayette, turning the same from west to east, passing to the westward of the can buoy off Robbins' Reef, both going and returning, thence to the home stakeboat, passing the same to the westward. The course for the third class was from a stakeboat off the club house to and around Robbins' Reef, turning the same from west to east, thence to the home stakeboat, passing the same to the westward.

The entries and time were as follows:

| St. Elmo        | Corrected Time. | H. M. S. |
|-----------------|-----------------|----------|
| Irene           | 4               | 32 09    |
| Shaughraun      | 3               | 28 31    |
| Nellie          | 4               | 29 55½   |
| Nellie Shaw     | 3               | 26 04    |
| Gussie          | 3               | 28 04    |
| Front Row       | 3               | 22 30    |
| Addie Taylor    | 4               | 26 11    |
| Henry H. Holmes | 4               | 24 25    |
|                 | 4               | 15 41    |

## Answers to Correspondents.

## No Notice Taken of Anonymous Communications.

W. E. L., Stamford, Conn.—Will you kindly inform me if chilled shot hurts a gun? Ans. No.

W. A. C., Cincinnati.—Examine your dog carefully and see if he has not a fistula, or sinns in the claw.

W. T. S., Worcester, Mass.—What is the gauge of my shot barrel? It is 55-100 of an inch in diameter. Ans. 20.

M. and M., Chillicothe, Ohio.—The Dittmar powder is all right, but demands to be handled in a certain way to secure good results.

ENQUIRER, N. Y.—Will you please inform me as to the fastest time made with or without record on the track? Ans. Goldsmith's Maid 2:14.

B. D. W., Boston.—Would you please inform me of the proper address to have my setter pup recorded? Ans. Arnold Burges, Hillsdale, Mich.

H. W. M., Manistee.—Is Blydenburgh of the American Team now using a Sharps Rifle? Ans. No—he used a Remington in the International Match.

O. B., Shakopee, Minn.—How near is Lakin's "Ned" related in blood to Dunham's "Jesse" both having Barley "Shot" for sire. Ans. Half brother and sister.

T. G. M., N. Y. City.—Has there been a law passed prohibiting shooting on Staten Island for three years? Ans. We have not heard of such a law being enacted.

J. W. B., Newport, R. I.—Is there any cure for trembling of hands and arms? Do tea and coffee effect the nerves? Ans. Yes, if the cause is known. 2. Yes, if abused in their use.

C. M. S., Lawndale, Logan Co., Ill.—Please tell me through your paper what hunting I will find along the Galveston, Harrisburg and San Antonio R. R., Texas? Ans. Wild fowl, plover, chickens, etc.

F. W. K., Milburn, N. J.—Will you kindly inform me of a way of riding my pigeons of the lice which trouble them very much. Ans. Strew tobacco dust in their nests and smoke their feathers well with tobacco smoke.

S. H. P., Bridgeport, Conn.—Can you tell me anything about the fishing in Cayuga Lake, N. Y.? How is the black bass fishing, and do they take during October? Ans. We have heard no reports of late. Early reports were not very favorable.

L., Mansfield, Pa.—Is it possible to make a true cylinder bore, 12 gauge gun, 30 inch barrel, that will give a pattern of 174 average out of 5 shots, at 40 yards, 3 drs. powder, 1½ oz. No. 7 Tatham shot? Ans. It may be possible, but not probable.

W. H. B., Fishersville, N. H.—Your dog has epilepsy. Take care of his general health, paying great attention to cleanliness. Give teaspoonful of Boudault's wine of peppermint (Fouger's) three times a day, and place on low diet. Give plenty of air and exercise.

C. C. M., Philadelphia.—Will you please inform a subscriber of your journal where good trout fishing can be had in the mountainous regions of West Virginia? Ans. The "Hoy Wilderness" will probably suit you best. Write to Thos. Basley, Oakland, Garro Co., Maryland.

W. J. H., New Bedford, Mass.—I wish very much for convenience in traveling to take two inches from the barrels of my twelve gauge thirty inch breech-loader. Will it make any difference in its shooting? Ans. Yes, it will make difference, though it might not be positively injurious.

E. W., Brookline, Mass.—Can you inform me where, during the month of October, I can find good woodcock and partridge shooting in the vicinity of some lake or stream where duck and snipe can be found? Ans. You require a great deal from one locality. Try Lake Farmachine, N. H.

BACK ACTION, Noroton, Ct.—1. Can I get a rifle for \$25 that will shoot a 38 short C. P. cartridge? 2. Is it against the law to shoot pigeon matches in this state? 3. What is the best size of shot to shoot loons with, want to get them for their oil. 4. My gun is a Remington 12 bore, could I get a 10 gauge barrel to fit the same stock? Ans. 1. We do not know of any in the market at that price, but any of the leading makers will doubtless furnish one. 2. Not that we know of, except so far as it may be brought under the statute of cruelty to animals. 3. No. 6 shot. 4. Yes, by sending your gun to the makers.

SNIPES, Montreal.—My dog is now 6 months old. About two months ago he was run over, but did not appear to have received any injuries from the accident, walking home all right. Some time after he seemed to be unable to retain his water, and now it is very disagreeable whenever he is stroked; or, if frightened, will dribble away for ten or twelve seconds; he appears very lively and eats well, in fact is in perfect health excepting the loss of his water without, apparently, any exertion on his part. Ans. Your dog is suffering from paralysis due to injury of the vertebral column. You cannot use him with safety this fall.

ALB. B., Del Norte, Cal.—Please inform me where I can get a book for training setter dogs and what the price is? 2. I have a setter of good breed nearly a year old; do you think he is too old to train? Ans. 1. "Hallow's Sportsman's Gazetteer." Price \$3.00, post paid, for sale at this office. 2. No, not if handled properly—with care.

S. N. B., Latrobe, Pa.—My red Irish setter pup, 3 months old, is setting a wart on the top of his head. It is new about as large as the end of your little finger. Please let me know what to do for it, or what will take it off. Ans. Cut it down until it begins to bleed, then apply a concentrated solution of chromic acid. It will cause a healthy ulcer which will heal readily.

LAWYER, Philadelphia.—Can you recommend to me any standard works upon training for rowing, running, etc., and physical development, with the prices, publishers, etc.? Ans. "Argonaut, or, The Arts of Rowing and Training," \$2.00. "How to Row," \$1.50. "Stonehenge's Rural Sports," \$9.00. "Westhall's Method of Training for Running, Walking, Rowing, etc., 50c. Can be had at this office.

W. E. P., Cambridge, Mass.—(1.) I have a young pointer I wish to try and train him myself. Where can I get a cheap book on the subject? (2.) What is the price of a W. & C. Scott gun? (3.) Will a pointer that has never been trained point a bird well? Ans. 1. "Hallow's Gazetteer," price \$3.00, for sale by us. 2. Guns are of different prices, from \$75 upward. 3. Yes, if of good breed, and possesses a nose.

R., Ithaca, N. Y.—For sea shooting I use a 10 bore, 9 lb. gun, with the following charge: Two No. 8 pink-edge wads over five drachms of Dupont's No. 1 ducking powder; one ounce or less of No. 4 shot, covered by one No. 10 pink-edge wad. Could I load in any other way to save ammunition; or get better results in shooting, having driven shot entirely through a goose at ten rods? Ans. We think you might be satisfied with the result if as stated.

LONEX, Stratford, Ct.—My dog three years old has an affection of the ears, evidenced by a rash on the internal flap, and at times by a shaking of the head. The annoyance is yet slight—the flapping of the ears once in two or three days apart. Ans. Apply Black wash, if does not answer, touch each pimple with weak solution carbolic acid as well. If any discharge from the ears wash them out with P. P. syringe and castile soap and tepid water. Give Internally half teaspoonful of Elix iodo bromide of calcium three times a day.

BAY RIDGE, John St., N. Y.—I and two friends have an idea of going to Pike Co. on October 1. We want plenty of game, are not very particular what it is. As we know no one in Pike Co., will you give information where a reliable party can be found? Can you give me a receipt for keeping birds from grapes? Ans. Isaac M. Brady, Eldred, Sullivan Co., N. Y., or Thos. Williamson, Lackawanna, Pa., will suit you. There is no way of keeping birds from grapes except by means of "scare crows," or by covering the vines with netting.

C. V. J., Pearl Creek, N. Y.—Will you please inform me what the prospects are for good hunting and trapping in Virginia this fall and winter? Do you think it will pay to go and make a business of it? Will you give me directions and dimensions for making the best boat for trapping to accommodate two persons and baggage? Ans. It depends entirely upon your own abilities whether you can make trapping pay or not. Virginia furnishes good ground for hunter and trapper. You will find directions for building either a skiff or scow in the back numbers of the FOREST AND STREAM, July and August.

E. F. B., Gouverneur, N. Y.—Please advise me what to do for my spaniel dog. She is stiff and lame in shoulders and neck, can walk around some, seems to be hard work. Neck stiff, cannot put her nose down to eat or drink, seems all right every other way; appetite good. The cause was being caught in a cold rain just at night after hunting two or three hours. Ans. Chloride of propylamine 32 grs. Anise seed water, 3 ozs.; Atwood's alcohol, 1 oz.; simple syrup, 1 lb. drs.; saffron, ½ dr. Dissolve chloride in the water, add alcohol and syrup, then saffron; let digest 24 to 48 hours; then filter until clear and bright. Dose, a teaspoonful three times a day.

SUNSCRIBER, Philadelphia.—Will you please give me the law for woodcock, quail and rabbits in New York State? Will I find this game abundant about Watkins, Schuylcr Co., in October? Can you advise me how to get ink stains out of light colored cloth without injury to the fabric? Ans. Woodcock may be killed from Aug. 1 to January 1. quail from November 1 to January 1; hares from November 1 to March 1. You will probably find a few woodcock and hares. As to quail we cannot say. A concentrated solution of pyrophosphate of sodium will remove ink stains without injuring the fabric; but the moment the ink has disappeared the fabric must be quickly and thoroughly washed with cold water.

F. M. W., Waterville, Me.—By a recent number of your paper I noticed that Hartman Talbot, of Port Huron Commercial, is, or was, cruising on Great Lakes in a catamaran. Do you mean by that simply two boats decked over? or such a craft as the "Flying Proa" described in Aug. number of *Harper's* and can I learn through you whether there are in existence one or more such crafts as that just alluded to? Ans. The catamaran J. D. Buchtel which made the trip from Detroit to Chicago is simply two boats decked over. They each have thirty feet keel and 6 feet breadth of beam, and are 12 feet apart. The deck is arch-shaped to a point forward of their stems 10 feet, so the full size of the deck is 24x10 feet. A solid arch four feet high extends from side to side and into the spar is stepped. When running at a rate of 12 or 14 miles an hour the catamaran leaves a rolling swell behind such as is made by the paddle wheels of a steamer. This would indicate a resistance it might be well to avoid in building another. We do not know of any catamaran on the lakes of the build described in *Harper's Monthly*. Capt. James Dean, of Detroit, first built a smaller one than the Buchtel and owns her still; she is nearly the same style. The Buchtel was sold to a resident of Green Bay, Wisconsin.

JERSEY, Newark, N. J.—A friend having a very fine setter pup about 7 months old, that was somewhat out of sorts, asked me to look at him, I, upon careful inquiry, elicited the following symptoms:—Perfectly quiet or lying down, nothing was discernible of an unusual nature; an attempt to walk a few feet would cause the dog to suddenly crouch, a distance of several feet, in one whiff, a quantity of green, slimy liquid, after which simply a listless disposition was apparent, a very slight fever and pulse very little higher than usual. No appetite, but always ready to drink; had no passage for several days previous to my first seeing him, and (if being now several days since I saw him) none that the owner can discover since. Not wishing to advise a friend what I would try or do in my own dog, he gave him the second and third doses of castor oil and an enema of Castile soap twice, neither of which had the desired effect; since then an enema of sweet oil, as well as a dose, inwardly, and last evening a report came in, still vomiting occasionally but no evacuation, and no pain apparently. Upon further inquiry I learned that the children had been eating peaches and threw him the stones, one or more of which he swallowed whole. Is it possible that these stones have lodged in the intestines and have caused this trouble? And, if so, what can be done for him? Ans. It would be impossible to determine correctly from your description. It is a fair guess, however, though we should not like to prescribe on the strength of it. If such is the case, the dog will probably be dead before you read this answer.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

### THE RIFLE MATCH.

"PEACE hath her victories no less renowned than war," says old John Milton, and certainly the success of the American riflemen against the chosen experts of the world during the past week completely fills the bill as a victory of peace. It is a triumph, too, which brings no pang and no bitterness to the vanquished. They love that thrill of exultation, that joy of superiority which it is the luck of the American riflemen at this time to enjoy, but in chronicling and appending this great victory, Americans and fair-minded men generally will not omit to recognize fully and freely the rare quality of excellence and manly bearing of the defeated team. Before the battle, in the modest way in which they spoke of their own abilities during the struggle, in the all-absorbing manner in which they entered into the task before them, and in the moment of their final overthrow, when they were the first, in the person of that model gentleman sportsman who has so efficiently filled the post of team captain, to frankly acknowledge before the assembled people, "We are defeated, and I congratulate you upon the magnificent team you brought into the field." The British riflemen were not beaten because of their weakness. They were not an inferior team, else they could not have climbed to the proud distinction of surpassing all previous record. In nothing of experience or honorable effort were they inferior to our own men, and our numerical lead is but the formulation of certain recognized advantages we possess, and which the British riflemen fail to grasp. The victory is a noble one, in its inception, its preparation and its completion. Hard work and patient toil of body and hand, guided and governed by an intelligent grasp of points of advantage, have been crowned by their legitimate result in an overwhelmingly high score. It is somewhat gratifying to cast our minds back a few years to the months preceding the first Irish-American match of 1874. How our prominent rifle companies, without a single long-range weapon in their stock, sent in all haste to England for specimens of the best English and Irish match rifles. They were brought over, and with them, as a base of operation, our American companies set at work to bring out the magnificent arms of which the world to-day can show no superiors, and this merit on the part of the American breech-loading small-

bore rifle to acknowledge in the purchases which the foreign team men are making of the line of "Old Reliabilities."

But with such magnificent opponents, men of such varied experience, of thoroughly ripe judgment on matters of rifle shooting minute, and by record of work, by preliminary care and by present form should be ranked with the first, how comes it that they suffer so emphatic a defeat as that of the 13th and 14th, when they were left ninety-two points in the rear. There is, of course, some allowance to be made for the Americans in that they were fighting on familiar ground; but too much must not be placed upon that, as the conditions must have been most favorable to the British team to enable them to foot up a score surpassing all previous match records on any range. One percentage of preponderance represents, rather than anything else, our advantage in weapons, in position, and also in that organization, discipline and harmony without which no team, no matter what the task set it, can be successful in its endeavors. Not even the smooth-working, mutually helpful, and compactly organized band of six riflemen who so well and manfully upheld the interests and glories of American marksmanship on the Dollymount sand-bar two years ago, showed better working form than did the team of eight men, under Gen. Dakin, during the battle just passed. There were losses through individual omissions or commissions. Bruce fixed his wind-gauge on the wrong side, and got the only outer of the match for his party. Four misses are recorded "droppers," every one of them, and in this connection the rifle companies are to be congratulated upon the elimination of those "unaccountables" which up to this time have been the thorns in the side of the American riflemen. They are gone, and our experts need no longer fear that their best efforts will be checked or set at naught by the weakness of their chosen weapons.

The story of the match, the tale of the conflict is recited at length in our news columns. It is well worth a careful reading, and through the figures the careful reader should see the motives, incitements and obstacles which filled the path of the experts at the firing points. The days were exceptionally favorable ones for high scores, but it required in addition men of exceptional judgment and ability to secure the phenomenal totals found in the figure record. There were some misgivings expressed in certain quarters before the match as to whether our representatives could be depended upon to uphold the credit of American marksmanship against the world and particularly against the formidable challengers we have had the honor of defeating. It is especially gratifying to note that these doubts have proved groundless; that the principle of "natural selection" has given us a triumph hitherto unparalleled in the annals of rifle shooting. For the first time, we believe, a programme of team selection has been carried through from announcement to its consummation in victory without tinkering or altering, not that we are yet willing to admit that a proper discretionary power should not be reserved in conservative, trustworthy hands. To Bruce and Blydenburgh sufficient honor cannot be awarded. Their success shows that there is no monopoly of honor at rifle shooting, as there is no royal road to proficiency. Any young man willing to keep himself in that perfect form of nerve, skill and pluck may gain similar triumphs in this healthful and fascinating sport.

Some see in these repeated—we can hardly call them monotonous—victories of the Americans a repressive influence which will leave us soon without ere a competitor; but this view of the case is not borne out by any direct or implied admission of the foreign riflemen. The Scots will come again. Australia has bespoken a future engagement, and certain it is that our British visitors, with their famous record of perseverance and pluck, will be moved by this first repulse to try again. Gen. Dakin, in his speech at the end of the match, gave them a neat little thrust in hoping that they would bring a team able to beat the record of the Americans, that the home squad might be forced to win its way into the slight margin left below perfection.

There are many phases of the past match which deserve comment and special chronicle, and from the study of which valuable lessons may be drawn. The methods of gaining victory pursued by our team are known and open. We place no selfish, restrictive patent upon these things; our hope is rather that our fraternal competitors may avail themselves of any advantage known to us, until the contest between us shall be narrowed down to one of sheer personal skill, and in the opening vista of the future let us hope to see many more of these peaceful invasions and good-natured conflicts, and that, no matter whence it may come, the best team may always win, and its defeated competitor be the first to acclaim its honorable victory.

### STRAY NOTES FROM THE EDITOR.

BAYFIELD, Wis., Sept. 6, 1877.

I AM just off for Duluth by the Atlantic. I am kept moving so fast that I can scarcely snatch time to drop even a flying note. I have had a most enjoyable trip here and at Ashland, closing the trouting season in proper form by taking from the fantastic roads that border Lake Superior some beautiful trout with fly, a performance that Eugene Prince declares has never been witnessed before at this season of the year. Friend Pratt's Chequamegon House is constantly filled with guests, and so is the Island House at Bayfield. Sam Fifield, X. M. C., is the tutelary saint of this region, and when you get into Northern Michigan you are in his dominion. From Steven's Point, north, the Wisconsin Central Railroad runs

through the tangle-est wilderness I ever saw, and if any one wants bear or deer in quantity he can drop off at any station beyond Phillips. At Butternut Creek, Messrs. Cook and Campbell of the Chicago and Northwestern Railroad had a private car, and were catching 80-pound maskelongs by the dozen; they had ladies with them, and were comfortable. When once you emerge from the wilderness into the delectable land on the shores of Lake Superior, you realize the entire fulfillment of your dreams. It is a beautiful and pious country, and there are twenty-two Apostles scattered all around. As you arrive, through the glancing waters in Capt. Patrick's little steam yacht, island succeeds island so rapidly that the doctrine of the Apostolic succession becomes a fixed and infallible fact, whatever may be said of the Duluth, which lies just beyond, and the aphorisms of Proctor Knott. By the way, Col. Hull, the proprietor of the Clark House at Duluth has a pet owl named Tommy, which knows more about the price of lots all around Duluth than any other man, except the Colonel; only he keeps his own counsel, like a wise man, and doesn't tell all he knows.

I've just time to post this and "skin out."

St. Paul's, Minn., Sep. 12.

By courtesy of Northern Pacific, the St. Paul & Duluth and the Sioux City Railroads, I have been enabled to visit many of the chicken grounds in the State of Minnesota. The best shooting is beyond Brainerd on N. P., and all along the western line of the Sioux City R. R., where the birds are very abundant. Last week, Capt. Chas. A. Messiter and Fitz Mathew, late of the British Army, and well known to sportsmen on both sides of the Atlantic, bagged 400 birds in a few days' shooting. They went west on Sep. 10th via Northern Pacific R. R., to Fays & Bismarck, where there is good shooting all along the line. At Brainerd they joined the shooting party of Mr. Jerome Marble, of Worcester, who were fitted out with the business car of the company, and a special car for baggage and dogs. The Englishmen will return about Nov. 1st. The readers of FOREST AND STREAM may expect to hear from them betimes. These Minnesota Railroads appreciate the patronage of sportsmen, who are generally the pioneers of emigration and settlement, and cater for them to the best of their ability. They take good care of men and dogs, and charge reasonably for reasonable service. It is well worth the while of Eastern sportsmen to go West and spend the months of September and October. They will get enlarged ideas of sport, and find something still to learn. The pin-tails are in prime order now, and those who can spare the time had better set their feet on the prairie now. The distances seem nothing when you get used to them. Some time I shall have something to say of my chicken shoot with Tom Cantwell and Joe Hicks, of Brainerd, over the true blues, Yank and Sullivan, and the orange and white setter, Tasso. We set out at a spanking gait behind Col. Weed's splendid cross-match (black and white) team, streaked it over a hundred miles of prairie, and returned at 2:40 speed through a rain storm that filled up the creeks and sloughs and set things afloat generally. Joe Hicks says, "If that wasn't the wettest rain I ever saw, then my name is Wa-wa-walker."

HALLOCK.

MADEIRA, Minn., September 14.

Have just got in from the toughest day's shooting imaginable, with thirty-four chickens shot near here on the line of the Sioux City R. R.; thermometer 92° in the shade and a red hot gale blowing; all over the prairie birds are driving down wind and across field at 2:40 gait, all shot outside of twenty-five yards. Dogs suffering badly. Shot in company with "Doc" Warner, Superintendent American Express Co. here, and John Swainson, Esq., joint author with Richardson of the *Fauna Borealis*, a hale Swede of sixty years, whose legs never tire and whose ardor does not flag in hot or cold weather. Warner sent his dog-cart ahead on a platform car—and a most remarkable vehicle it is—carried men and dogs all under canvas; the dog house astern and separate from the rest of the wagon; refrigerator and camp kit amidships; water butt in front and storage room all over for miscellaneous traps; a large basket for the game. I have an idea that one of us will write up this trip.

BLAKELY, Sept. 14.

Dropped off here this morning, en route for St. Paul, and tried our hand on the ruffed grouse on the Minnesota River bottom and the ridges back of it. Bagged eight, and walked back to depot in the heaviest rain that has fallen here since June 23. This Sioux City railroad route runs through a famous bird country, which has only been hunted in places. I have seen the prairie fowl sitting on the barn yard fences, quite tame. Many of the sloughs are already filled with mallard ducks, and teal are beginning to arrive in quantity. The cool weather which shall follow this rain will bring them in. I shall reserve my duck shooting for my canoe trip down the Mississippi next Monday, when we expect also to get some woodcock, snipe, bass and maskelongs. It is delightful to the sportsman to travel over this road; he and his dogs are well taken care of. It is gratifying to me to be able to find out these choice hunting grounds in person. More anon. I am keeping the cream of my notes for future use. HALLOCK.

—We are forced to devote the major portion of our columns to the great international contest. It being the event of the year, no apology seems necessary. Those who have no taste for rifle matches will certainly excuse, as the probabilities are that the like will not occur again for some years, and their own particular vanity often has to be catered to.

## The Rifle.

## THE INTERNATIONAL MATCH.

Victory has again rested with the American marksmen, and for the second time the International Centennial Trophy is presented to the home team. Against what should be by all rules of logic the best team in the world, as comprising the selected champions from the three foremost rifle shooting countries of the earth, the American marksmen have shown themselves more than a match. The struggle of the 13th and 14th of September, 1877, is memorable in many respects. In it the sides were made up of the very best long-range marksmen at present known. Fine weather permitted the men to shoot up to the very top notch of their ability; and while the victors have run up the figures very far toward the marvelous, the score of the losing group is noteworthy as leaving all previous recorded scores very far in the shade. As an exhibition merely of what wonderful accuracy may be gained by intelligent, persistent drill in the use of a weapon, which in turn commands our admiration for itself and its makers, the match is an event of which too much notice cannot be taken, while as a competition our feelings of patriotic pride have been aroused and fully gratified. It was a noble victory; broadly conceived, ably conducted and magnificently consummated. Looked at from any standpoint, this battle before the butts at Creedmoor carries with it suggestive lessons, and points out lines of effort which we doubt not will be properly carried out. That a team of men, not one of whom five years ago would have been able to do other than the wildest sort of luck shooting at the long ranges, should meet and defeat a team of old and tried veterans, who for nearly four times that period have been working zealously in efforts looking to the improvement of the small-bore match-rifle, and necessarily of all classes of small-bore ordnance, demands an explanation. To say it is luck will not do. God helps those who help themselves, and if Fortune has seemed to incline most graciously to the stars and stripes, it is because our representatives have been most persistent workers of the coy damsel, and have carried on their advances through the channels of hard work and hard study. The difficulties which have been strewn through the path of the would-be long-range champions have been many and severe, but one by one they have given way; have melted away before the combined zeal and fervor of shooters and gunmakers, all determined and united in the solution of the problem of how best to construct and operate a long-range rifle. It would seem when such scores as 219 in the possible 225 are made, some little allowance should be made for personal aberration, and the record be looked upon as closed; but it is not the spirit of the rifleman to let well enough alone, and now with such a score before him it is the ambition of many a long-range shooter to "go one better" and trench nearer still on perfection. But of the match: On both sides of the field the rival squads did their very best. There were no complimentary misses or toning down of the score, that their "friends, the enemy," might not be left so far in the distance, but in the preparation for the contest and in the precautions taken or insisted upon, neither of the teams bated a single jot or tittle. Everything which might lead to success was secured, and, conversely, nothing which might help in the slightest degree to get an increased score was omitted.

Had the men been shooting for their very lives they could not have fought a more gallant and careful battle, or made a more determined resistance. The result was not a surprise. We have pointed out, not recently, but years since, wherein the American riflemen had grasped the secret of success in several points—in their team system, in the discarding of the old deer-stalking position for either of the many varieties of the back posture; in the rifles, possessing as they do all the merits of the muzzle-loading system with the additional advantage of the open-breech action, and in the disregard of all precedent of old standard scores by which the capacity of a rifleman or the capabilities of his rifle were gauged. With the American shooters nothing short of the highest

possible attainments was thought satisfactory. The American riflemen, in the first few years of the movement in this country, deserve full credit for the sacrificing spirit in which they have performed an enormous amount of drudgery, and in a labor of love have upheld the American honor and name in critical moments. Mug-hunting has been almost unknown on our ranges. Emulation runs high, and goads the most backward to at least some study and effort, but the bulk of the shooting is for honor alone. The California team, within a few days past at Creedmoor, have enjoyed no personal gain from their visit. The Crescent City experts have visited this national range after months of patient drill, simply to enjoy the honor and satisfaction of victory should it fall to their lot, or in their defeat to cheer their superiors. Among the British marksmen, though the amount of general effort among the masses of the English people in the way of rifle practice is incomparably greater than in this country, the practice is carried on in an independent sort of way, and when a marksman at the longer ranges has reached a certain easy average he contents himself with believing that he is an expert rifleman, and rests on his record. The rifleman is never lost in his team, and the merit of united effort to which personality is merged in the struggle of the squad never seems to have been accepted as a part of the English rifle shooter's code. He does his best, but does not—because he has never learned to do so—give a really helping hand to his brother-in-arms. He may try to do so—may give advice and proffer assistance—but without understanding precisely what sort and degree of assistance is needed. It is more than likely his off-hand judgment to "put on a bit more wind," or "come down a point in elevation," may do more harm than good. This difference of method, of material and of metal explains the gap which exists between the home and foreign teams. Until the visiting riflemen recognize some of these points, they will continue to be so clearly traced, they will go on butting their heads and misdirecting their efforts against the solid front which the American compactly organized teams can present. A "flake" may throw a match into the hands of a "duffer" team, or a bit of carelessness may put a really strong team into a nominal position as vanquished; but with the two teams shooting at the very top of their bent the Americans must win, simply because they do not omit certain precautions which are helpful to success. The match proves this, though it is not impossible that in the ups and downs of various matches, a slip, to which all are liable, or bad luck, that indefinite something which is so convenient in explaining, may bring an acknowledged inferior team to the lead. It will still be undeniable, in view of their performance in this and other matches, that the Americans possess a knack at rifle shooting which all may acquire if they but pursue the same mode of obtaining it.

In return for their care in preparation, for the time and effort and study they have put forth in training for this great battle of the butts, the American marksmen have the satisfaction of knowing that they stand to-day champion riflemen of the world, with the champion score, representing a real and not a mere nominal victory. They have not only beaten their immediate antagonists, but they have surpassed the record and put a white stone in the history of modern rifle practice. They have met the English small-bore expert at his own favorite game, and have "gone a great many better." They have furnished a high measuring notch for the riflemen of the future to gauge their efforts by. They have decided by the most emphatic of demonstrations that American breech-loaders are capable of the very finest class of work, and that were the riflemen perfect in judgment and in holding, the rifle would meet all his demands in the way of scores. The riflemen have furnished a subject for talk, and have drawn the attention of the public to a sport at once healthful, pleasant and untouched by any debasing or annoying surroundings or tendencies. The victory has been gained by fair, open shooting. There was no trick, not a single accidental advantage to help the Americans to the place of honor. It was sheer hard work, close watching and system which enabled the comparatively new made, though terribly earnest, American marksmen to gain the fight against the more experienced shooters from the British Isles. To those who paid Creedmoor a visit during the struggle was given an opportunity of witnessing the greatest rifle match yet fought. It did not possess the nip-and-tuck interest which a fight waging now this way and now the other would have, but in the magnificent manner in which the one squad forged ahead the contest was of intense interest. The eager way in which the crowd, or a portion of it, would watch a bulletin board and speculate on the chances of this or that marksman adding to a string of perhaps a dozen bull's-eyes already his, showed that it was really a match against perfection; and a centre, excellent though the marksmanship might be which brought it, was looked upon with regret, while a miss rose to the dignity of a calamity. It was recognized as a match against the record, and every point was jealously watched for and scrupulously guarded. But the victory went where every competent and unbiased judge supposed it would go—to the team which, in its make up and its methods, followed the rules which should, *a priori*, lead to the most satisfactory results. And there was no disappointment. Free to accept anything which promised to lift them a single point in the group for high scores, the American riflemen and rifle-makers have tried many devices, many twists and turns and little odd expedients which promised to help them on, and from the mass of experiments have settled down gradually to a mode of procedure which the more it is worked the more wonderful the recorded results become. Again and again the home team has measured its skill against the experts from abroad—and at their own ranges—and as the secret of their success was not applicable to one range alone, the Americans steadily held the first place. In the match of the past few days they have met and whipped the best team which the world, outside of their own area of selection, can produce. Sir Henry Halford made no apologies for his team before the match, nor does he to-day. He said it was the best team he could call together, and freely acknowledged that in beating it the Americans would place themselves really and beyond dispute the champion riflemen of the world. The British fought hard, struggled with nerve and vigor, and showed many points of merit. But they were self-condemned to defeat, in that they had failed to accept certain fixed and definite rules which govern the American team selection and practice, and which, to judge from the results, most certainly possess merit. Matches may be won or lost by a "flake," but no such accidents operated in the match of this week. There were accidents; a few unaccountable misses were placed upon the score; but in fully 99 per cent. of the failures to find the bull's-eye the omission can be distinctly traced to some error of judgment, some change of wind or some material cause and reason. The majority of ninety-two points merely indicated the amount of intelligent extra care which the one team had taken and the other team had omitted.

## THE FIRST DAY.

The morning of the 13th opened upon a busy range. By daybreak the dwellers in the tents at Creedmoor were up and stirring. The sky and its appearance were most earnestly discussed, and many were the surmises ventured upon the nature of the day. During the early morning hours a heavy fog rested over the range. But the preparations went on. Rain or shine the match was to come off. Once the day is fixed nothing short of a downright pour can compel an adjournment of the work. By 8 o'clock the crowds began to fill the range. The trains from Hunter's Point went down with full loads. The team men of the American party, arrived at the range ground by 9:30, and soon after the British team men came down the line from their Garden City rendezvous. The general public, too, came in liberal numbers. High and low alike were there, from the laboring man to the man of abundant leisure and wealth, who had allowed his patriotic feelings to carry him to an investment of thousands on the event. Ladies were present in large numbers, and they certainly displayed a great amount of persistency and pluck in sitting through the heat of the day watching the uprising and downgoing of the marking-disks, and with pencil and memorandum pad keeping tally of the progress of the match. The range looked as gay as a great ninety-acre lot, as flat as a billiard table, and with nothing more picturesque about it than rows and groups of tents, gayly decorated with bunting and streamers, could look. But while the ordinary spectator was taken by the general outwardness of things, the shooters and those posted on the ins and outs of rifle practice watched the wind, or, not to be so keen-sighted, watched the flags as they flapped lazily from their poles, and guessed as best they could of the probable vagaries the fickle element might choose to play during the day. "As the wind goes, so goes the match," was acknowledged by friend and foe alike. A fish-tail was the burden of the Americans' prayer, not that they particularly loved the bother of a wiggling, cross-centre wind of that sort, but they knew such a breeze would perplex the foreigners the more and increase their own chances of success. Another cruel wish was for a day of good, fervent heat. Under such a visitation they knew the Irishmen and Englishmen would wilt, and a shooter who feels thoroughly used up by the weather surroundings can do little in the effort of a rifle match.

The day, in a rifle-shooting sense, was nearly perfect. It was hot, terribly so, for the champions confined to their work on the great sun-burned lawn of Creedmoor, but the wind did not try to do its worst, and the light, while glistening, was bright enough to give a clear view of the target. Under these conditions, and with the tremendous spur of patriotism and emulation under which the two teams fought, it is not at all surprising that the day's record shows a score which has never yet been equalled on any range, or in any match, or practice or general competition.

Captain Sir Henry Halford, of the British team, announced that Colonel Chas. Lennox Peel would act as his referee, while on the American side this honor was confided to Colonel H. A. Gildersleeve. These gentlemen met, and, tossing for places, the flip was won by Colonel Gildersleeve, with the understanding that the American targets of the first day should be the British ones on the following, and *vice versa*.

Four targets were in position toward the centre of the grounds, in two groups of a pair each. K and W were the designations, starting out in white emphasis from the butts over one pair of slabs, while with a blank target inter X and I were the names of the other targets. Colonel Gildersleeve chose the first named group to the left, and when it was remembered what slight wind there was came from the 9 o'clock quarter, the very proper policy of giving the enemy your smoke was carefully followed by the shrewd American referee. Colonel Peel and Gildersleeve also decided upon an umpire, and this post of dignity, but little work, was offered to and accepted by General Joseph R. Hawley, ex-President of the Centennial Commission, and himself a thorough rifeman.

The targets once assigned, the riflemen and their aids busied themselves shaking down into working order, and it certainly is no small degree of good tacking to get the telescopes, miniature targets, scorers' post, coaches' position, and the teams so grouped about the firing point that no one shall be more than is necessary in the way of others, and none shall be cut off in view either from the teams or the targets. The shooters must sit as near as possible to the firing rug or spot where they drop to twist up for the shot, and must also have plenty of room in which to wield their cleaning rods, lay out their ammunition cases, and not find themselves at all crowded by inquisitive onlookers or by each other. The spotters must have their miniature targets plainly in view of all the team men, that no craning of necks or undue twisting of bodies should be necessary in seeing the graphic record of their doings. The official scorer must see the shooter and the result of his effort, that the work may be properly noted down. Then there are the coaches, old tried riflemen, who sit where they can see all and offer now and then a little word of advice. By watching the flags, vane, smoke and other indications of change of wind, the coaches are often of value in giving an early report of some new twist or sudden quirk of a fraction of a point. The coach must be one who can

## Distinguish and divide

A puff 'twixt south and southwest side—

and a good deal closer, too, to be of any service to a squad of riflemen, to whom the merest touch of a gust means a slip off the bull's-eye.

At target K on the American side, Dakin, Jackson, Hyde and Allen were stationed; at target W, next to the right, Weber, Blydenburgh, Jewell and Bruce fired. Over on the British post the assignments were: Kibby, Ferguson, Evans and Milner to target X; and on target I, Sir Henry Halford, Lieut.-Col. Fenton, Humphry and G. Fenton. The privilege of stationary check-scorers at the opposing targets was taken, and Mr. V. K. Armitage on target K, and Captain Bowby on target W, represented the British interest, while Major Fulton on X and Colonel Hitchcock on I were the delegates from the American side. In the butts, too, it was necessary to secure perfect impartiality and accuracy in marking and have a responsible representative from each of the teams at each of the targets. On W, B. Doughty and C. G. Peterkin represented the home and foreign interests; on K, J. McGlenney and A. M. Fraser acted; on X, M. E. L. Wells, of Waverly, N. Y., and Sergeant W. H. Gilder, of the foreign party; while on I, Leon Backer, of the Twenty-second Regiment, and E. V. Thompson acted. Colonel E. H. Sanford acted as general superintendent of the butts, and from that end of the field good work was the rule. To secure ready communication with the men half a mile off in the sunken pits, a telephone had been carried along, though very few were aware that the little box posted on a bit of board to the right of the range was really a mouth-piece and an ear-trumpet to the men in the butts. The official scorers were Sergeant Rankin, of the Twenty-third, at target X; Corporal Story, of the same regi-

other American target every opener was a bull's-eye. On the British side, when they began shooting some time after with their usual slowness, six of the openers were bulls, but two inners by Col Fenton and Humphry brought the two rounds equal, and the teams still stood on their scores of the day before. The men on both flanks were shooting with the greatest care; and when, as it not unfrequently happened, three white disks were up along the line of targets, blotting out three bull's-eyes, a cheer greeted the happy coincidence. At the second round an additional point of lead was added to the score of the Americans, and at the next round three points. The home squad made a pair of perfect rounds of forty points each, while the Britishers made but one.

By 11:35 the wind had dropped down to 7 o'clock on the dial, and it was evident that the day was to be a duplicate of the one preceding. It differed, however, in the light. That peculiar glistening light which seemed to hold over the range during the first day was succeeded by an ordinary sun-glare, and the mirage from the surface of the range was very great. To lie down and look at the targets, as the riflemen did, close along the ground's surface, was to see a dancing bull's-eye and a generally shaken target, as the heat currents set upward. This peculiar appearance the majority of the spectators failed to catch, looking as they did over the range at a higher elevation. As the 800-yard stage progressed the wind edged around until it blew directly from the 6 o'clock point, and then the Americans watched it and kept in the centre, while the Britons did not do so as closely and suffered with inners. Of the shooting at this range its superb excellence may be judged in the fact that of the 120 shots fired by the American squad, all but one were within a four-foot six-inch circle. The British riflemen were not so fortunate, and allowed eight of their shots to wander out of the centre circle. The result was that the Americans gained a further lead of 16 points, and the gap on the aggregate widened from twenty-six points at the close of the first day, to forty-two points, and then the teams went off to lunch, or rather the American team had gone off to an easy rest at 12:30 p. m., leaving the wind at the 4 o'clock point. But it was not until 1:15 that the last Irish slow coach, as Rigby was called, had fired his last 800-yard shot. In fact, the slow marksmanship of Rigby was something out of the common, and on one shot by watch he consumed fourteen minutes between the firing of the preceding shot and the discharge of his own.

At 1:45 p. m., the gun sounded the assembly for the mid-range firing, and at 2 promptly the signal to recommence the fusillade was given. The shooting here was much more rapid, by the Americans, particularly, and at 3:10 the last shot from the right wing of the field was fired. The day previous 647 points had been the very excellent effort of the home team, but it finished yesterday on 554 in the possible 600. The majority of the shots were bull's-eyes, of course, but Jewell got a miss plump in the centre of his score, the bullet dropping about four inches below the centre of the target and entering the wooden sill. It was unaccountable, unless Major Jewell is willing to own up to a "pull-off." Allen played with the feelings of the great crowd, which now filled the space back of the score black-boards, by getting up a run of twelve bull's-eyes, and then, when everybody expected to see the rarity of a perfect 900 yards total, dropping to a nipping centre outside of Jewell's miss. Five inners were the total of the American fallings from the true centre. On the British target things were getting rather down, Lieutenant Fenton got two outers, actually surprising himself and his squad by wandering several inches off into the barren places of the outer darkness, and conjuring up the black disk. He kept up his reputation of never getting off the target in a match, but committed what some think the more egregious error of getting off beyond the inner lines. Eleven inners tell also the story of the poor shooting here. It was simply wild compared with the American work, but still most excellent. Milner wound up with a miss, a square, fair hit somewhere else than on the target. None upon the field were more surprised at the lapse than Milner himself, but he was too good a rifleman to rant about it. The markers came out, but failed to detect the bullet mark, and were compelled to do nothing and allow the miss to go on the record, and instead of the 71 he had a right to expect at this range Milner got but 66 points; 554 to 536 told the lead upon which the Americans were gathering. Eighteen points more secured a grand total of 60 in advance, and it was little wonder that the Britishers fell back in almost sullen determination to finish up the match at the 1,000 yards range. The Americans some time before had found time to retire to a few moments rest and coolness under a tent. Of course they were out at gun-fire, while the other team had barely time to fall back and recommence work without the resting spell. The crowd grown now among the tens of thousands was unanimously of opinion that the chances of a British victory were entirely gone, and this opinion of the non-shooting spectators was shared by the riflemen present.

The opening on target K by the extra-careful Rigby secured a ricochet miss. This was due to false coaching. The history of this target and of the British team during the 1,000 yards range was a tale of demoralization, and the visitors split, too, upon the same rock where the Scotch team wrecked its chances a year before. Relying upon a single scorer and spotter and coach combined, when that pro became shaky, the rallying-post of the squad was gone and they scattered into medium scores. Milner was getting flurried, and a miss was again credited to him. Fergusson on the same target followed suit in another miss. Halford also put in one of the unaccountable variety between bull's-eyes, and Humphry followed a bull's-eye with a miss in an unwarranted manner. The misses were not accidents, but were merely the result of having the loose team system, or rather no system at all, under which the squad shot. The moment they lost step, as it were, and began to scatter in their style, there were no means, no rule, no order by which they could be brought again into line and their confusion checked. Probably not a single member of the British team was sanguine enough to suppose that the match could be secured against such shooters as the Americans were showing themselves to be. The thing was possible, but most remotely probable. But even this feeling should not be used to explain so bad a drop as from a 1,000 yards total of 534 on the first day to 518 on the second, the Americans meantime gaining 10 points on their first day's record, and that, too, with an unaccountable miss on the part of General Dakin. The remainder of the team, however, shot most uniformly. Jewell fired the closing shot for the Americans at 5:36, adding another bull's-eye to the list, and at 5:45 the match was over with the closing bull of Evans, and with the totals of 8,334 against 3,243, the great match was over.

"Ninety-two ahead" was shouted from end to end of the field as soon as the firing ceased. All barriers were broken down, the two teams were surrounded by a frantic mob just outside the ropes and cheered to the echo. Judge Stanton,

President of the National Rifle Association, mounted a chair and formally announced the victory of the Americans, and proposed three cheers for the British team. These were given and repeated, and then Sir Henry Halford, in response to loud calls, took the Judge's place and said: "It is no disgrace for the British team to have been beaten. Such shooting has never before been known in the history of the world. If I were to say that I do not regret the result I would be telling a lie. I do regret it, and very bitterly, and I will strive another year to avenge our defeat. [Cheers.] I congratulate you on the team you have brought into the field against us, and I thank you heartily for this reception. [Cheers, and calls for Dakin.]

Gen. Dakin, in response, spoke as follows: Gentlemen: I thank you for this expression of your good will toward me, but I never was a hand at speech-making, and it would be improper for me to detain you when so much remains to engage the two teams of handshaking and feasting in the President's quarters. I can only say that when we came into this contest we came in to win. [Cheers.] We knew we had to contend against the best metal the Old World could produce. [Cheers.] When Sir Henry Halford started from England he meant business. [Cheers.] The good and splendid result of the shooting of both teams is, as has been said, a subject of congratulation. Our competitors are to be congratulated on the scores they have made on these grounds. When they have come back to us again, however, we hope they will come a little stronger, so that we may have an inducement to strengthen ourselves. [Cheers and laughter.]

Calls were next made for Blydenburgh. He said: After the work of the past two days I have not much nerve left for speaking.

Bruce was the next speaker. He said that everybody knew he was not a speech-maker. He had done his speaking, and told his story at the target. [Laughter and applause.]

The two teams hurried over to the President's tent. When all were assembled Judge Stanton said: Sir Henry Halford and Gen. Dakin, captains of the respective teams who have been engaged during the past two days in the great international contest, I congratulate you both on its successful termination. We of the Rifle Association have endeavored from the first to conduct it so that at its conclusion each party would feel as though they had had fair play. I have been assured on behalf of the separate teams by their Captains, and especially by the British team, that they feel that such has been given them. Now, as we have but a very few moments to remain, I will be brief, and simply thank you for meeting here to take a social farewell and a glass of wine with us. [Applause.]

Sir Henry Halford here stepped forward and said: I can thoroughly indorse every word that has been said about the treatment of the teams and the conditions of the match. We, at any rate, must acknowledge that we have been beaten honestly and thoroughly. [Applause.] It is not singular that such should be the case, however, under the circumstances. We have been treated throughout with the greatest kindness, and every facility has been extended to us that lay in the power of the National Association to grant. [Applause.] I can only say that although we were beaten and we regret it, we will return home with feelings of enjoyment of our trip and our treatment. I, for one, will be happy to come back again to this country, and will ever be pleased to call those whom I have met here my friends. [Great applause.]

Gen. Dakin was the next speaker. He said: I am not a speech-maker, and will confine myself to a few words. I am quite in accord with all that has been said about the incidents of this year's match. I am satisfied, and I believe our late competitors are, that everything was conducted as it should be. I have yet to hear the first word to the contrary. [Applause.] I may say that my rifle shooting in public is at an end, and that my appearance in matches is finished. [Cries of no, no.] In the future I will shoot only for my own amusement, and I wish that to be distinctly understood. I have been successful in my scores thus far, but to-day after seeing what our younger men can do, I think it about time to back out while I have a record left. [Laughter and applause.]

Three rousing cheers were then given for Sir Henry Halford and the British team. Col. Fenton called for three cheers for the American team, and the Englishmen responded with a will, and the party scattered. The team work was over, and until the experts shall once more be drawn up in fighting array the team men were lost in their several private personalities, ready for extra exertions when an 18-inch carton shall enable finer marksmanship to be properly appreciated.

## THE SECOND DAYS' SCORE.

| Average per man.....   |          |          |            | 203 1/2 |                         |          |          |            |        |

Since the introduction of the present target with its round three feet bull's-eye, there have been six important matches fought between international teams of eight men per side. These were the Elcho Shield matches of 1874 to 1877 inclusive, and the competitions for the Centennial trophy, including that of the present week. This included in all a record of twenty-eight team scores by as expert a body of rifle shots as the world can produce. The matches were fought under various conditions of weather, with various arms, on the grounds of Creedmoor or Wimbledon. A glance down the columns of range totals presented will show that the American score of Friday was not only in the aggregate far above anything which has been heretofore accomplished, the score of the same team on the day previous being the only one approaching it, but on the range totals as well the scores of the memorable September 14, outranked anything on record. The fact was, that having beaten everything on the books in their score of the day before, the American team set to work shooting against their own record. Nor can the British team complain if comparison be made with the work of previous shooters. The totals which the British team, under Sir Henry Halford, have shown at Creedmoor are in excess of anything on this champion list, excepting, of course, the American total of the same two days. The Scotch total of 1,586, of which Colonel MacDonald felt so proud in the midst of his defeat last year, has been left far behind by the British score of last Thursday and Friday. At the ranges the totals of the Halford team on Thursday held place next to the Americans, while the score of 534 at 1,000 yards falls but a point behind the spurt score of the Irish at 1,000 yards on the closing day of the Centennial match last year.

Out of a possible 600 at each range, or an aggregate of 1,800, the figures show:

|                              | 800 yds. | 900 yds. | 1,000 yds. | Total. |
|------------------------------|----------|----------|------------|--------|
| Elcho, 1874.....             | 504      | 458      | 445        | 1,407  |
| English.....                 | 462      | 460      | 440        | 1,402  |
| Irish.....                   | 465      | 473      | 440        | 1,378  |
| Elcho, 1875.....             | 462      | 437      | 477        | 1,506  |
| Scotch.....                  | 493      | 511      | 494        | 1,503  |
| English.....                 | 489      | 490      | 494        | 1,502  |
| Elcho, 1876.....             | 489      | 503      | 451        | 1,463  |
| Scotch.....                  | 474      | 499      | 454        | 1,427  |
| Irish.....                   | 479      | 499      | 454        | 1,432  |
| Centennial Trophy, 1876..... | 535      | 528      | 523        | 1,586  |
| Irish.....                   | 535      | 521      | 523        | 1,582  |
| American.....                | 550      | 518      | 509        | 1,57   |

the part of the Americans. Certainly at each range finish a larger total lead is shown:

| 90..... | 3,600 | 37 | 3,344 | 39 | 3,242 | 92 | — |

Monday last found the long range men again at the range, busy in teams of four for the Inter-State long range trophy. Six teams entered for the trophy—two from New York State and one each from Massachusetts, Louisiana, New Jersey and District of Columbia. It was the especial purpose of the Crescent City Club to carry off this trophy, and from its records made on Frogmore range its chance of success was considered good. The Amateur Club of New York of course entered, and has once more shown itself to be the best long range club in this country, if not in the world. The Hudson, Columbia and the Boston teams represent small hard-working clubs in their respective localities. The Hackensack Club seemed to have been made up to fill an odd corner in the entry list; one of this quartet claimed Jersey connection through having been once bitten by a Jersey skeeter, two of them had tasted Jersey lightning, while the fourth remembered a youthful visit to Hoboken, and was thereupon declared a Jerseyman; otherwise it is strange that a Jamaica man, a Flushing man and a Brooklynite should do battle for Jersey.

In drawing for places the Walnut Hill team, from Boston, got target V, on the extreme right; next them were the Partians of Hudson. On the next, target V, were the Amateur team—Dakin, Weber, Jewell and Allen—clad in the sombre American team uniform. On target O were the Washington squad, with the Hackensacks next on H, and the New Orleans men at the extreme left on target L. The teams were carefully squared, and when each had fixed upon a referee to sit at one of the other firing points, the match opened. It was a regular Creedmoor day, with a rear quartering 5 o'clock wind well known to the regular range men, but very much of a bother and trouble to the new comers. At 800 yards, all the squads did well, though the Amateur Club team secured here a good lead. Upon the Crescent City men Captain Buckley, of the team, kept watch. The Hackensack groups fired under the direction of Capt. Perry, while the Columbia Rifle Club were counselled and advised by Rigby and G. Fenton, of the British team. It is noteworthy that not a single man in the field fired in the old prone position.

At 900 yards Jackson led with 73 points, and the whole Massachusetts delegation shot so well as to cut down the margin between themselves and the Amateurs to 8 points. The Crescent City men were going from bad to worse, and gener-

ally loose scoring was the order on their target, though they were admirably watched by a flock of lady friends.

The nip and tuck was now between the Amateur and Boston teams. Jackson of the recent American team was leading his men well, and but for the marked defection of the lowest man on the down-East team they would have made a good bid for first place. There was an almost general tumbling at 1,000 yards. The Crescent City men did badly, and scored but 228 points in the possible 300, while the Amateurs piled up 270. The Columbias, too, fell off, and with their low scores at the previous ranges brought themselves into last place. The full scores stood:

## THE AMATEUR RIFLE CLUB, NEW YORK.

## TO SPORTSMEN IN GENERAL!

Headquarters Bohemian Glass Works,  
214 PEARL STREET, NEW YORK.

MAKE THE FEATHERS FLY WITHOUT KILLING THE BIRD—SOMETHING MUCH  
NEEDED.

The Bohemian Glass Works having made a specialty of the manufacture of Glass Balls for Trap Shooting for the past year, and having facilities for manufacturing cheaper and better than other establishments, have secured the service of that well-known Sportsman,

**IRA A. PAINE,**

to take entire charge of the production of his new patent Feather Filled Ball, which we hold the exclusive right to make and sell.

In offering this new ball to the public it will require very little introduction, as in no instance where it has been exhibited has it failed to take the place of all others, and is to-day the only perfect substitute for a bird in use.

The following is from the New York Herald, Sept. 1:

THE BRITISH VISITORS RECREATING AT ELM PARK—A TRIAL AT GLASS BALL SHOOTING.—The visiting riflemen, accompanied by Judge Gildersleeve, Col. John Bodine and Mr. L. M. Ballard, all of the American Team of 1875, arrived at the Park a little before eleven o'clock, and practice shooting was at once commenced. The shooting at glass balls sprung from a steel trap, instead of live pigeons as in Europe, was a novelty for the Englishmen. Mr. Ira Paine, who has invented the "feather balls," furnished them for the occasion as a compliment to Judge Gildersleeve and his friends. This style of balls gave during the afternoon such satisfaction that after the shooting was over the West Side Gun Club held a special meeting to adopt them, ordering 1,000 of them forthwith.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300 or boxes of 500. Send for price list. We intend offering special inducements to the trade.

## A VICTORIOUS INVENTION The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game. The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

No. 1.—For fishing and all kinds of small game and animals, sent by mail.....35 cents.  
No. 2.—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.  
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. With bait, breeds \$15.00. All goods sent, charges paid, to any address on receipt of price. Address

**Stent & Co., Gen'l Agents,**  
132 Nassau St.,  
NEW YORK.  
P. O. BOX 2997.

## AGENTS WANTED

### SMALL STEAM ENGINES.

With Copper Boiler, to drive light Lathes, Scroll Saws, etc. Also all sizes from 2 1/2 up to a horse power. They are plain castings, partly finished, or complete, ready for use.

The "Scientific American" of June 19, 1875, says of the above, in an extended Editorial, introducing our manufactures to the public: "It can turn wringers, churns, washing machines, office cream freezers, run coffee mills, pump water through a house, actuate foot lathes, scroll saws or light boring machinery, run knitting or sewing machines, turn a griststone or emery wheel, work venting or hand thrashing machinery, or their light draft of

Small Steam Engine

ters, meat of feed choppers, or sausage machines, drive small blowers for pneumatic dispatch tubes in a building, or for a blacksmith's forge, or compress air or work an air pump on a small scale in a laboratory. These are a few only of the purposes to which it can be applied.

Also Engines and Boilers capable of propelling 25 to 100 inches. The boats have keel, stern, with rudder and tiller, row locks and cars. These wishing a pleasure boat will find

water for exploring expeditions and surveying parties. The Engine and Boiler can be easily detached from the boat, and is then available for Agricultural, Mechanical, Commercial or Domestic requirements or for the use of Amateurs, when power is needed for running light machinery.

Price of 20 foot boat, complete, \$425.00

Price of Engine and Boiler, without boat, including driving pulley, \$75.00

Illustrated Catalogue containing One Hundred Small Work Designs mailed to any address free on receipt of Stamp.

**GEORGE FARR, BUFFALO, N. Y., U. S. A.**

H. P. BALDWIN, Gen. Pass. Agent. 1912 11m

## TROUT FISHING!

## The Wisconsin Central Railroad

THROUGH TO

## LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for \$9.00 are sold for Chicago, St. Paul, or the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipment taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha (Doy Island) for bass fishing; Butternut Creek and Lake for muscalonge; the many branches and lakes of the Flambeau and Chippewa which team with bass, pike and pickerel; never till this season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ashland or Bayfield, while rock fishing and trolling in the Bay affords excellent sport.

The new hotel at Ashland, the "Chequamegon," will be opened in July. Meantime there is accommodation at the smaller houses.

Steamers from Ashland to all Lake Ports.

HENRY PRATT,

General Ticket Agent,

1912 11m Milwaukee, Wis.

## THE "FISHING LINE."

## Brook Trout Grayling and

## Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

## Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cleveland Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the Great Lakes are very beautiful. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also Muscalonge, Pike and Pickerel, abound.

In no other streams of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Ticket Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the Fishing Grounds, send to FORESTER and STREAM office, or address

J. H. PAIGE, G. P. & T. A., Grand Rapids, Mich.

A. HOPPE, Eastern Passenger Agent, 110 Market Street, Philadelphia.

## NEW YORK AND PHILADELPHIA NEW LINE.

Bound Brook route for Trenton and Philadelphia.

Leave New York for Trenton and Philadelphia at 6:30, 8:30, 11:30 A. M., 1:30, 3:30, 5:30, 12 P. M., and at 1 P. M. for Trenton.

Leave Philadelphia from station North Pennsylvania Railroad, Third and Berks streets, at 7:30, 9:30, 11:30 A. M., 1:30, 4:15, 5:30, 12 P. M.

Leave Trenton for New York at 1:20, 6:15, 8:05, 10:15 A. M., 12:15, 2:10, 5:55, 6:05 P. M.

Pullman Drawing Room Cars are attached to the 9:30 A. M., 1:30, 5:30 P. M. trains from N. Y. to Trenton; to the 7:30, 9:30 A. M., 1:30 P. M. trains from Philadelphia, and Sleeping Cars to the 12 o'clock midnight trains from both New York and Philadelphia.

SUNDAY TRAINS—Leave New York and Philadelphia at 9:30 A. M., 5:30, 12 P. M. Leave Trenton at 10:20 A. M., 8:10 P. M.

Tickets for sale for a day of Liberty street, Nos. 529 and 944 Broadway, at the principal hotels, all offices of the Erie Railway in New York and Brooklyn, and at No. 4 Court street, Brooklyn. Baggage checked from residence to destination.

LOVELL & SONS, corner of Washington, Cornhill and Wattle street, Boston, Mass. 1919

## THE

## HAZARD POWDER CO.

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 3 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting." Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/4 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/4 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard BB powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

## "THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarer of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

Terms—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

## HENRY C. SQUIRES,

No. 1 CORTLANDT STREET,

THIRD DOOR FROM

BROADWAY.

Winner of the Minnie Silver Cup  
1876, presented by Mr. Purdy,  
bending all best London makers.

AGENT FOR THE  
Celebrated Prize Guns  
OF  
W. W. GREENER.

These guns have been winners in every trial during the last three years, competing with all the first-class makers in England. The shooting of every gun is guaranteed, and prices as low as consistent with the good work. Guns built to exact order of sportsmen. I keep the best selected stock of guns by all the other makers to be found in this city, including Scott, Webley, Remington, Parker and Fox, Marshall's new Glass Ball Trap, \$5; three traps, \$12. English chilled shot, all sizes and in any quantities. Agent for Dittmar powder. Complete outfits for hunting and camping. Best Breech-Loader ever offered in the United States for \$35. Wholesale Agent for Holbird's Shooting Suits, and Camp Lounge Company.

## LYMAN'S

## PATENT BOW-FACING ROWING GEAR.

This invention enables an Oarsman to see where he is going. He sits with his face to the bow. Every Rower knows how awkward it is when pulling single, or as bow-oar in a crew, to have to turn and watch the course. By using this arrangement the Rower is brought into his proper position, and he can row as he would drive. There is NO LOSS OF POWER. Send for circular, directions and opinions of the press to the Patentee,

WILLIAM LYMAN, Middlefield, Conn.

OFFICE IN NEW YORK, 32 CORTLANDT STREET.

Manufacturers and Importers of

Breech-Loading Shot-Guns,

With all recent improvements.  
N. B.—Pin are made central. Fitted with English ground locks, self-lifting strikers, pistol-grip hands. Guns bored to shoot close. Cleaning, repairing, brownings, etc. Orders from dealers promptly attended to.

104 WILLIAM STREET,  
Sept 13 3m New York.

## PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner that any ordinary stable or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight in certain sized orders.

Any gentleman wishing to paint up his buildings at small expense had better write, and have sent free our book.

Address 260 Front street,  
INGERSOLL PAINT WORKS.

## SHONINGER ORGANS.

PRONOUNCED UNANIMOUSLY AS THE

## Best Instruments.

Their comparative excellence is recognized by the  
Judges in their Report, from which the following  
is an extract:

"THE SHONINGER ORGAN CO.'S exhibit  
as the best Instruments at a price rendering them  
possible to a large class of purchasers, having a com-  
bination of Reeds and Bal's, producing novel and  
pleasing effects, containing many desirable improve-  
ments, will stand longer in dry or damp climate, less  
liable to get out of order, all the boards being made  
three-ply, put together so it is impossible for them  
to either 'break, swell or split.' THE ONLY  
ORGANS AWARDED THE HONORABLE MENTION.

This Medal and Award was granted after the most  
severe competition of the best makers, before one of  
the most competent Juries ever assembled.

New styles and prices just issued, which are in ac-  
cordance with our rule, the BEST ORGANS for  
the least money.

We are prepared to appoint a few new Agents.  
Illustrated Catalogues mailed, postpaid, upon ap-  
plication to

[Extract from FOREST AND STREAM, New York, December 26, 1876. Contributed by one of the Judges of  
Awards of Guns at the Centennial.]"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must  
rapidly secure the favor of all who test its merits.COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on  
every gun. Costs about \$10 extra. Choke-bore, medium or full. Our guns to be had of the principal  
dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

## Paper and Metallic Shells

FOR

## Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded.  
Do not have to unnerve the head nor use an awl to remove  
the exploded caps. THE PATENT MOVABLE ANVILS,  
made of steel wire, will not bend or break.THE BERDAN PATENT SHELLS, new model, with  
Hobbs' patent waterproof primers, never miss fire, and are  
highly prized by all that have used them.PAPER SHELLS.—By repeated experiments and great  
outlay for improved materials, and machinery made ex-  
pressly for the purpose, we can now warrant our BROWN  
PAPER SHELLS equal to any imported. They are sure  
fire, and will not burst in the gun.Inquire of any of the dealers in sporting materials for  
the U. M. C. Co.'s Shells.  
Not sold at retail by the manufacturers.

## "St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we  
can safely recommend them as equal, if not superior, in  
quality to any Paper Shell manufactured in this country or  
in Europe.Among the advantages claimed for these Shells, are: A  
saying of 25 per cent. in the use of powder; also the great  
decrease in recoil. The sizes made are No. 10—2½, 2%,  
and 3 inches; No. 12—2½, 2%, and 2½ inches. Longer  
and 3 inches; No. 12—2½, 2%, and 2½ inches. LongerShells will be made at extra cost. They are not mallable. Sample, 100, sent by express on receipt of \$1.15  
for No. 12; \$1.80 for No. 10.  
Factory and office, No. 2,239 De Kalb street, St. Louis, Mo.

NEWARK, N. J.

TRADE SUPPLIED.

## HUBER &amp; MERWIN'S CHAMPION BALL TRAP.

We call the attention of the fraternity  
to the above trap, claiming to be the ne  
plus ultra. It combines compactness  
with durability, and is arranged, by  
a swivel on the bed-plate, to throw a ball  
in any direction or at any elevation un-  
known to the shooter, a screen prevent-  
ing his seeing the direction in which the  
trap is set.The spring, as the cut will show, is  
made of a steel rod or wire, bent spirally  
at the point of attachment, thus receiving  
the concussion its entire length, and pre-  
venting breakage.PRICE \$10.  
FOR SALE BY

BARTON &amp; CO., Sole Agents,

337 BROADWAY, NEW YORK.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP,  
for durability and perfection of its operation, superior to them all, and take pleasure in recommending  
the "Champion" to sporting clubs and my friends. (Signed)  
Aug 9 1y IRA A. PAINE.THE GREEN GUN  
has the simplest and  
strongest snap-action  
made. The proportions  
and finish, the shooting  
qualities for penetration  
and pattern, are not ex-  
celled. Can bore to  
make any pattern order-  
ed, from a cylinder to a  
full choke.Muzzle-loaders altered  
to breech-loaders, with  
same action as new  
guns. Barrels bored to  
shoot close and strong.  
In the very best man-  
ner. Send for new price list to CHARLES GREEN, 3 West Main St., Rochester, N. Y.Price \$45. Re-boring and repairing breech-loading shot-guns done promptly and  
cheaply. Send for new price list to CHARLES GREEN, 3 West Main St., Rochester, N. Y.

### INDIAN SUMMER.

Selected.

DEAR Maud, I hear across the morn  
The bluejay calling in the corn.  
Oh, in my heart I tread, to-day,  
Along our old, cool, woodland way  
And hear within the shadows still  
The acorns dropping on the hill.

A hawk sails by on silent wings;  
The far, low whirr of partridge wings  
Comes a faint ripple on the air;  
'Tis restful silence every where;  
So still, that from the maple's crown  
I hear the red leaves eddying down.

A gleam of silver far away  
The river lies asleep to-day;  
The single shallop loitering by  
Seems poised between the wave and sky  
All haste is rounded into calm,  
And earth and sky are swathed in balm.

### South American Reminiscences.

#### Second Paper.

THE beautiful cit of San Sebastian is better known as "Rio," or Rio de Janeiro, obtaining the latter name from the beautiful bay on which it is situated; this, in turn, received its appellation from De Louza, who entered it for the first time on New Year's Day, 1531. Erroneously supposing the beautiful sheet of water in which he had anchored to be the debouchment of a river, he bestowed upon it the name which it now bears: "River of January." The aboriginal title of the estuary of the Atlantic is *Nitherhoi*—Concealed Water—which is so appropriate that it seems almost a sacrilege to have allowed the former to usurp it.

Besides its extreme beauty of location, Rio possesses a climate incomparable for salubrity. It is unsurpassed; even in the hottest months the thermometer rarely rises above 90° F., I am told, and it is tempered by the cool sea breeze that sets in at 11 A. M., followed by the delicious zephyrs that fan the earth from early night-fall until dawn. Neither does it present any resemblance to our northern cities with their even sites; there are no compact brick walls, dingy roofs and tall chimneys, but it is diversified by hills of irregular but picturesque shape, which shoot up in different directions, leaving between them flat intervals of greater or less extent. Along their bases and up their sides stand rows of buildings whose whitened walls and green-tiled roofs are in happy contrast with the deep green foliage that always surrounds and frequently embowers them.

The morning following our advent upon the bosom of the beautiful Nitherhoi, as many as can obtain the desired permission crowd into the stern sheets of the cutter for the shore. At the landing we are surprised at the progressiveness of our South American brethren, for we land upon a quay of heavy granite, built to endure for ages, which effectually takes the conceit from the New Yorker, who would fain believe that Gotham embodies all things desirable; we can but think of the meanness and squalor of our own wharves, and our eyes become opened to the disgust so often expressed by foreigners for its marine environment. Here our ears are saluted by a confusion of tongues that certainly rivals if it does not surpass the disturbance supposed to have been made one morning 4,174 years—I like to be exact, you see—precious in Assyria. Portuguese, German, French and English all salute our ears, spoken in the highest possible key, with accompaniments of choice oaths and intermingling of, I should judge, a dozen or more African dialects.

As we look around the Largo de Paço we see not only a marked diversity of costumes but of race as well, though the African seems to predominate. Numbers of them are grouped around the fountain for the purpose of obtaining the water flowing from a dozen pipes, which they bear off in tubs or barrels upon their heads; for the residences of Rio are not supplied—except, it may be, in rare instances—with water from the mains.

Others sit upon the benches beside their baskets and stands of merchandise, while around them stand a chattering group of little slaves, who seem to have no thought or care but for

the moment. Moving to and fro are numerous blacks, their heads burdened with various pieces of merchandise, such as at home would demand a dray, and whose weight seems to preclude the possibility of their being otherwise moved. A quartette of stalwart fellows move off at a trot with a grand piano, while a train of nearly naked coffee-carriers rush by in full song with sacks of the succulent berry which would cause a stalwart man to stagger under if borne upon the back or in the arms. The habit of bearing burdens upon the head appears to have strengthened the muscles of the neck and shoulders, and imparted the erect grace and dignity of attitude and movement for which the Mina blacks are so celebrated. Here, too, we see the old palace which gives to the square its name, exhibiting a long forgotten and heavy style of architecture, with balustraded windows and stuccoed walls. Though used as a residence for the viceroys in the days of Portuguese supremacy, it is now abandoned to more public uses, being occupied by various public offices. Close by is the Royal Chapel, and adjoining, the Chapel of "Our Lady of Mount Carmel," now metamorphosed into a Cathedral.

One of the finest streets of the city is the Rua Direita opening out of the Largo de Paço. It is wide and well paved with square stone blocks, said to have been brought from Great Britain. With its busy throngs, the numerous omnibuses and carriages, negro water-carriers and express wagons, the Rua Direita presents as lively a scene—though more diverse in character, as our own Broadway. It is in marked contrast to many of the streets, which are mere thoroughfares, the carriage-way being but six feet in width, with the gutter in the middle and full two feet below the curb, thus precluding the possibility of two vehicles passing each other. To the stranger this difficulty seems insurmountable, but it does not present so great an interference to travel as imagined. Vehicles are allowed to traverse these streets only in one direction, which is indicated on the corners with great distinctness under the name of the street itself, obliging the driver of a vehicle, if he desires to retrace his steps, to drive around a square. A violation of the direction would subject the offender to a heavy penalty, as the police regulations are very strict and rigidly enforced. These guardians of the public are soldiers of the National Guard and under military subordination, hence Rio enjoys a greater immunity from burglaries, incendiarism and street bravas than any other city of the Western hemisphere. Here the policeman is not an ornamental appendage, but a useful officer. It is certainly odd to northern eyes to see a National Guardsman in full uniform, with sabre and pistols, standing on the street corners or superintending the proceedings of a crowd of jabbering blacks congregated around a fountain, and to know that he is enacting the role of a policeman.

The Rua de Ouvidor, just mentioned, is probably the best known to foreigners of all the streets in Rio, for here the jewelry trade centres, and here are the shops where are sold the most wonderful trinkets, bracelets, necklaces, flowers made from sea shells, and large fish scales that rival pearls in lustre; flowers made from the wings of insects, and pins, earrings and studs that are but the gorgeous beetles, common to the Empire, deftly set in gold. A pair of sleeve buttons I purchased were green beetles, whose backs presented a metallic lustre, and feeling so much so that I would not believe in their genuineness until the obliging jeweler removed one from its setting, showing the legs carefully folded and glued underneath.

Here, too, are displayed the wonderful insect and feather flowers which have a world wide celebrity, and whose imitation of natural growths are so marvelously faithful and correct as to defy inspection. The colors of the feathers employed are not natural, but are said to be produced by a device of the Indians, who pluck out the feathers of live birds and infuse into the various vacancies colors which are reproduced in the plumage when they grow again. The bouquets made from the throats and breasts of humming-birds, of which there are numerous varieties in Brazil, present many variations of color, are unsurpassed in their splendor. The humming-bird, known to naturalists as the *Trochilus polytmus*, is called by Mr. Gosse "the gem of American ornithology," and it well deserves the title, for the eye is dazzled with the resplendent golden green, purplish black, deep blue gloss and gorgeous emerald green that it exhibits as it hovers over the flower, seeking its food.

The omnibus is an "institution" in Brazil, and although made after the model of those of North American cities, the majority of these vehicles go by the name of gondolas. Why a title that seems to our ears inseparable from Venetian canals and Adriatic scenery should be applied to a "bus," seemed a mystery. We were informed that the Government having granted a monopoly to an omnibus company, which became obnoxious, followed with a concession to a "gondola company," thus plastering over the Gordian knot rather than cutting, and so effectually as to almost obliterate it.

Every bus has painted upon the side in large characters "14 pessoas," which is the number they can carry comfortably. In the Brazilian omnibus or gondola there is never "room for one more," for when the number is complete, the conductor bangs the door, shouting "*¡vamos embora!*"—equal in the Yankee vernacular to "git," the driver flourishes his whip, the four mules attached to the vehicle make a plunge, the gondola gives a lurch, and away you go at a keen gallop, skipping over rocks and gutters at a regular breakneck speed. It seems a wonder that some one is not frequently killed or maimed by being run over, but we could not hear of a single instance of such a mishap. The darkies do not scurry out of the way as the vehicle approaches until the last moment, and it seems a miracle that they should escape, particularly when their heads are laden with heavy water jars. A gondola ride is exciting, and as we became used to it, we waged cigars on how near we would come to the next darkey without touching him. Another peculiar feature of Rio is that no one enters or leaves a public vehicle without removing his hat and saluting the inmates. How the Gothamites or those self-complacent spokes of the "Hub" would stare at such a bit of gentility occurring in their own cities. Then, too, if a vehicle become stuck in some slough, our Brazilian brethren do not jump out to stand around and encourage Jehu with expletives regarding the duties of the city fathers, or with valuable hints as to what might or should have been done. No, they keep their seats, take a pinch of snuff all round, settle back as if reaching their journey's end was the least of all their cares and could comfortably be dispensed with for several years to come, and thus complacently await the end of the bargain which the driver is making with the assembled blacks. After the assurance of sundry pieces of the coin of the realm, or promise of something *para malar o bicho*—in order to kill the beast, the darkies place their shoulders to the wheel, and the four mules with recovered temper gallop on.

It is astonishing what an amount of Spiritus Frumenti and kindred beverages it takes to kill a "beast," the typical nine lives ascribed to the feline race seems as nothing to the frequent resuscitations this animal undergoes. The only thing that corresponds in our country is "that pain in the stomach," that can only be assuaged with three fingers of "suthin' straight," and even then the remedy seems to lack in effect unless others assist in the imbibition; then, too, the recurrence of the colic seems to be as frequent as the recurrence of vital force to the "beast."

On many streets the first floors of buildings are devoted to trade, while the upper ones are occupied by the merchants as dwellings. This was once the universal custom, but of late it has been growing in disfavor, and now tradesmen and clerks form a large proportion of the inhabitants of the suburban towns of Praia, Grande or Nitherhoi, or San Domingo, across the bay, at Botafogo to the south of the city, and Eugenio Velho and San Christover to the west. At evening the full omnibuses and crowded steamers present an animated spectacle only equaled by the return of the same crowd in the morning. In general, the residences with the profuse foliage surrounding, possess all the elements of beauty and luxury, but now and then one sees a building of the olden time, with its heavy fortress-like walls of cement and stone, hipped roof and dormers, and the front of the first story occupied by an enormous door or archway to allow the passage of the family vehicle, which is here housed; and here, too, are the stables, while the apartments above are reserved for domestic uses. The only entrance is by this same carriage way. These old-fashioned houses are mostly two stories, some three, no two of which are precisely alike. They have not what would be called a handsome front, nor anything approaching to one; nor could there be, since all entrances are on the pavement level, and in olden times no porticoes nor steps were allowed. The walls are of rough stone like our foundation walls at

home, stuccoed with lime and loam which makes them appear as if whitewashed. Some of the more aristocratic of these old dwellings have their stucco colored in panels of light blue and pink, and gilt scrolls and rosettes, much the worse through lapse of time, are seen running below the cornice. Such buildings, too, are commonly provided with balconies at the upper windows, and in rare instances they may be seen extending across the entire front of the house, and inclosed with lattice work. In the old days the females were confined within these *gelosias* as if in Moslem countries, where females are not permitted to go out, except under strong guard, nor to show themselves at the windows. The tiled roofs are more or less concave, the result of large cornices projecting out of the line of the general pitch. This gives a Moorish cut to the building, the more marked when, as is often the case, birds or other figures terminate the overhanging angles. The ribbed appearance of the tiles, their waving edges at the eaves, and the contrast of their color with that of the walls, convey a pleasing effect to the eye of the stranger.

Take a view of a North American city from an elevation, and it appears as if made up of chimneys, which appear as thick as forest trees, but in Rio they are few and far between and only seen upon more modern villas, and even then seem to be confined to the suburbs. Another peculiarity is the disposal of rain water, which instead of being brought down, as with us, to the pavement, shoots out of spouts at the eaves. This is the universal practice, the water being poured into the middle of the street. Smaller pipes project from the bottom of the balconies, which are as numerous as the windows, and discharge upon the walks, causing the foot passenger in wet weather to perform numerous gymnastic feats and constant dodging to and fro to avoid the miniature cataracts. What a comfort this is to one passing through the more narrow thoroughfares, may be readily imagined. Doors are seldom provided with either knockers or bells, the caller rapping at the entrance with his cane, or draws the end smartly across the slats that commonly fill the upper panel to admit the free circulation of air. When, as before noted, a family resides upon the upper floors, the visitor, on entering the passage below, announces his presence by clapping his hands, when a servant instantly appears on the landing above.

Every house possesses a piano, and the Brazilians of both sexes are usually masterly performers. We were often stopped in our rambles by hearing the voice of some lady whose execution on the piano would not have disgraced a Rubinstein, and whose voice equaled in power, compass and purity the Nilsson. Many of the Brazilian ladies excel in beauty when young, but as they verge upon middle life develop too much *embonpoint* for the critical American eye. Before a Brazilian lady becomes thus developed she can walk, and even obesity does not develop the awkward gait familiar to our eyes. A French woman can dance, an English woman ride, and American women can do both; but none but a Spanish or Portuguese can walk. We Americans pride ourselves on the beauty of our women: we say they combine all the graces of other nations; but be that as it may, they cannot walk.

The great mass of the laboring classes subsist mainly on flour made from the root of Manihot or Jatropha plant. This bread root yields two forms of flour, and a liquor called "Tucupi," or "Aguardiente de beiju." There are four species: first, the *Manihot utilissima*, or Manihot proper, of which there are many varieties—among them the matuca, the lowest, being only four feet high, but producing the largest and best roots—Itoque, Tambaqui, ariana and mercuru. Second, *Ayri* (*Maripi*) or sweet mandioca, called "Yuca Dulce" on the Maranon, possessing oblong, juicy roots, which become sweet after they are gathered. The chicha made from it is called "Masato." Third, *Macachera*, or *Macasheira*, (Yuca of Peru), whose root is used as a potato, roasted or boiled. Fourth: *Manicueira*, a sweet Manihot, different from *Ayri*, having a long, large root. Mandioca, or Manihot, will produce in six months after planting without cultivation. The root is deprived of its poisonous juice in a curious strainer. A long tube of woven fibre, containing the macerated root, is hung up, with a stone at the lower end, by which means the diameter is diminished, and the juice squeezed out.

The Farina is the only farinaceous production of Brazil. The mandioca or cassava (*manihot utilissima*) from which it is made, is supposed to be indigenous, though it is not found wild. It does not grow at a higher altitude than 2,000 feet, and life and death are blended in the same plant, yet every part is useful. The cattle eat the leaves and stalks, while the roots are ground into pulp, which, when pressed and baked, form farina, the bread of all classes. The juice is deadly poison; thirty-five drops were sufficient to kill, in six minutes, a negro convicted of murder; but it deposits a fine sediment of pure starch that is the well-known tapioca, and the juice when fermented and boiled, forms a favorite drink. The Manihot flour is eaten by the lower classes without preparation, and they exhibit no small amount of dexterity in their mode of eating, which is to grab a handful and throw at the open mouth. One of our lieutenants essayed the feat, much to the amusement of his comrades, for the effort to dispose of the farina *a la Brasileira*, powdered not only his own face, but a fair share found its way down between his collar and neck, beside impairing the spruceness of his uniform. To our shouts he responded, "Laugh away, greenies, try it yourselves, and you won't find so much fun." I only tried for the purpose of giving you some sport, for since you have eaten lizards you have all had a bilious look about the gills." This was a rub on the whole party, for the day before we had been the guests of an English naval officer, who gave a dinner out at Bennett's in honor of his birth-day, and among other dishes was a salad of iguana, of which we all partook beautifully without knowing that it was one of the reptiles of the lizard variety, which we had often seen hawked through the streets. When the nature of the dish became known it took several bumpers of *Uguayot* to remove the effect, much to the amusement of the Brazilian officers, who were at the table, and our host who was no novice in Brazilian dishes and customs. To be just, I must say the dish was excellent until its nature was revealed, partaking so much of the flavor of chicken as to lead us to suppose it to be of that fowl.

Bennett's! How many memories cluster around the name! Every American or Englishman considers it a duty to visit here. Eight miles from the Praça de Commercio, by the street of Eugenio Velho, bordered with beautiful villas, each surrounded with groves of orange trees, palms and mangui-ras, up the Tijuca getting a glimpse of the Bay of Nieherioi and its surroundings, down the opposite slope, and you are at Bennett's.

Mr. Bennett is an Englishman, long resident in Brazil. Imagine a rosy, benevolent Saxon face, crowned with snow white hair, a rotund and portly presence, and a general air of

gentleness, authority and roast beef, and you have a faint idea of Senhor Bennett, the mountain patriarch, who has rescued from a wilderness a mountain dell through which flows a silvery brook, and established a hotel which is sought by all lovers of the beautiful and those who would escape from the heat, dust and turmoil of the busy city. When I think of Bennett's and the kindly host, the grasp of whose hand is a complete welcome of itself, it causes a train of recollections of beautiful mountain scenery, sparkling cascades, tropical verdure, azure blue sky, delicious breezes, exhilarating rides and last, but not least, the comical combats between a wild duck reduced to domestication and the attendant negroes whose bare legs it nips at every opportunity.

One of the celebrities of Rio is the aqueduct that supplies the city with water, and is a rival of the famous Alcantara of Lisbon, after which it was designed. It is a vaulted channel of mason work, sometimes elevated on lofty arches far above the earth, and again disappearing beneath the surface, always pursuing the same gradual descent that compels a gentle flow. At stated distances are openings that provide for the proper aeration of the pure and limpid stream it brings from the basins on the summit of the Corcovado. The water works are of nature's own handiwork, man only supplying the receiving basins and the conduit. It is obtained by the condensation of the moisture of the surrounding atmosphere by the cool trees which crown the summit of the mountain, and from whose broad leaves the aqueous fluid flows into the artificial lakes provided for its reception. What is Croton or Cochituate compared to this? Even the tunnel out into Lake Michigan that supplies the "Garden City" is inferior, and hardly worthy of mention in the same breath.

One morning while enjoying a visit from my *confre*, the surgeon of the Z—, which had arrived but the day before from the "Plata," and anchored a cable's length away,—I was surprised by a visit from Dr. Paulo C—, whose acquaintance I had made at the dinner at Bennett's. Introducing him to my fellow medico, he invited us both to visit the hospitals with him the following day.

Under the *chaperone* of this accomplished gentleman we the next morning boarded the little *Constancia*, which steamed swiftly around the harbor from ship to steamer—passing by the men-of-war only—receiving those who demanded hospital attendance, after which we headed up the little bay of Jurujuba on the southern shore of which stands the hospital of the same name, in the midst of perpetual verdure, and where it receives the full benefit of the cool breezes of the ocean and perfume-laden zephyrs of the land uncontaminated with the impurities incident to the city.

The interior was clean and neat, and all that human ingenuity can devise for the unfortunates who filled the wards seemed to be put in force. Here were patients from almost every clime and of varied nationalities, whose wants were carefully administered to by attendant physicians and careful nurses. The latter were far better than usually found in like institutions, and I am told are compelled to pass a rigid examination as to qualifications; in consequence of which these offices are filled by intelligent persons, irrespective of political bias of favoritism, and furnish marked contrast to the awkward beings that fill similar positions in our metropolitan charities. Another marked difference was in the attendance of the students from the Imperial Academy of Medicine, whose behavior, attention and quietness I have never seen equaled, or even approached by any similar body. Doubtless this is largely due to the fact that the Brazilian is not so boisterous or demonstrative as the Yankee, but the fact that an educational qualification is demanded and rigidly enforced upon the applicant who desires to enter upon the study of medicine must have weight, the coarser elements being largely rejected.

The inspection of the hospital was truly a treat, for the surroundings are unequalled, and the clean couches, quiet and respectful nurses, all combine to heighten the pleasing contrast when the poor mariner is transferred from the dark, dirty, stinking, foul-smelling "fo'c'sle" of a merchant ship to the airy halls of the Jurujuba.

On our return we were landed at the "Misrecordio," located at the southern side of the city upon the shores of the bay, and under the brow of Castillo Hill. Although not so cleanly or perfect in its appointments as the Jurujuba, it is nevertheless a grand charity that it would be well for our own cities to emulate. The best of assistance is here rendered to all, male or female, white or black, at any hour of the day or night; none being refused, even the most wretched. No recommendation is needed for admittance. Its doors are open to all the suffering.

The records of this charity show that eight thousand patients are admitted annually to its wards, with a death rate of nearly 12 per cent. Although this seems like an enormous percentage, a glance at the beds, and an examination of the records for causes show us that it is extremely light, as a large share of the applicants are afflicted with diseases of a malignant type, or, when admitted, are in the advanced stages of disease that can scarcely admit of a favorable prognosis.

Another extensive hospital visited was that of the Brotherhood of San Francisco de Paula. This is located in an airy position, and built in the most substantial manner. Being a private hospital, the inmates are of an entirely different character to those previously visited, and in consequence is more elegant and has greater comforts. To each patient is assigned an alcove, where he may receive any of the resident physicians who may be preferred to the regular attendants. Parlors are provided for the convalescent, on whose tables are to be found the journals of the city; and large airy corridors are used as promenades for those whose condition will permit, and over which they can view some of the most elegant scenery of the metropolis.

The day following these visits, we were again the guests of the Doctor, who took us in his carriage out to the Hospital dos Lazeros, several miles from the city. This, as its name indicates, is devoted to those afflicted with incurable skin diseases of a leprous type, of which that termed *Elephantiasis graecorum* seems predominant in and about Rio. It is not only common, but extremely prevalent among the lower classes, particularly those of mixed blood, and it was not uncommon to see the sufferers plying the vocation of mendicants upon the streets, exposing the enormously swollen and deformed limbs, which give rise to the term elephant-like. It is rare that such solicitation of alms is refused, and the bestower hurries by in needless fear of contagion.

The Doctor related an incident which transpired in the hospital under the observation of himself and many colleagues, besides several of the laity and priesthood. A medical mountebank claimed to have discovered that the virus of the *Crotalus horridus*—rattlesnake—insinuated into the circulatory system of a leper would establish a cure, and so persistent was he in promulgating this idea both by word of mouth and through the public press, that the experiment was decided upon, and received Imperial sanction. But the question was,

"who would bell the cat." Now the idea was not a new one, being almost as old as the deluge, and like that famous introduction of hydropathy, liable to kill more than it cured. The ancient Greeks had held the same idea, but it, so far as known, lacked confirmation or negation by experiment. At last a leper of some fifty years of age, and who had been afflicted half a score of years, offered himself as a sacrifice, doubtless feeling that death had no pangs greater than the mental and bodily sufferings entailed by his malady. The serpent being procured, the patient thrust his hand into the cage in which it was confined, but it shrank from the outstretched member, and when cornered would only lick the hand, refusing to strike. At last the patient grasped the reptile, squeezing it forcibly, when its poisonous fangs were imbedded at the base of the finger. So quickly was it done, and so little sensation was there in the diseased member that the victim was unconscious of the act until his attention was called to the tiny drops of blood that marked the insertion of the serpent's fangs.

Slowly the toxic effects of the poison made themselves manifest, though seemingly retarded by the disease; before twenty-four hours had elapsed the relief predicted by the charlatan had been received, the victim was—dead.

## INTRODUCTION AND SUCCESSION OF VERTEBRATE LIFE IN AMERICA.\*

By O. C. MARSH.

PRESIDENT OF THE BIOLOGICAL SECTION OF THE AMERICAN ASSOCIATION.

FOURTH PAPER.

THE Ungulates are the most abundant Mammals in the Tertiary, and the most important, since they include a great variety of types, some of which we can trace through their various changes down to the modified forms that represent them to day. Of the various divisions in this comprehensive group, the Perissodactyle, or odd-toed Ungulates, are evidently the oldest, and throughout the Eocene are the prevailing forms. Although all of the Perissodactyles of the earlier Tertiary are more or less generalized, they are still quite distinct from the Artiodactyles, even at the base of the Eocene. One family, however, the *Coryphodontidae*, which is well represented at this horizon, both in America and Europe, although essentially *Perissodactyle*, possesses some characters which point to a primitive Ungulate type from which the present orders have been evolved. Among these characters are the diminutive brain, which in size and form approaches that of the Reptiles, and also the five-toed feet from which all the various forms of the mammalian foot have been derived. Of this family, only a single genus, *Coryphodon* (*Bathmodon*), is known, but there were several distinct species. They were the largest mammals of the lower Eocene, some exceeding in size the existing Tapirs.

In the middle Eocene, West of the Rocky Mountains, a remarkable group of ungulates makes its appearance. These animals nearly equaled the Elephant in size, but had shorter limbs. The skull was armed with two or three pairs of horns, and with enormous canine tusks. The brain was proportionally smaller than in any other land mammal. The feet had five toes, and resembled in their general structure those of *Coryphodon*, thus indicating some affinity with that genus. These mammals resemble in some respects the Perissodactyles, and in others the Proboscideans, yet differ widely from any known Ungulates, recent or fossil, that they must be regarded as forming a distinct order, the *Diacrocera*. Only three genera are known, *Dioceros*, *Tioceros* and *Uintatherium*, but quite a number of species have been described. During the later part of the middle Eocene, these animals were very abundant for a short time, and then became extinct, leaving apparently no successors, unless possibly we have in the Proboscideans their much modified descendants. Their genetic connection with the *Coryphodonts* is much more probable, in view of what we now know of the two groups.

Besides these peculiar Mammals, which are extinct, and mainly of interest to the Biologist, there were others in the early Tertiary which remind us of those at present living around us. When a student in Germany some twelve years ago, I heard a world-renowned Professor of Zoology gravely inform his pupils that the Horse was a gift of the Old World to the New, and was entirely unknown in America until introduced by the Spaniards. After the lecture, I asked him whether no earlier remains of horses had been found on this Continent, and was told in reply that the reports to that effect were too unsatisfactory to be presented as facts in science. This remark led me, on my return, to examine the subject myself, and I have since unearthed, with my own hands, not less than thirty distinct species of the horse tribe, in the Tertiary deposits of the West alone; and it is now, I think, generally admitted that America is, after all, the true home of the Horse.

I can offer you no better illustration than this of the advance vertebrate paleontology has made during the last decade, or of the important contributions to this progress which our Rocky Mountain region has supplied.

The oldest representative of the horse, at present known, is the diminutive *Eohippus* from the lower Eocene. Several species have been found, all about the size of a fox. Like most of the early mammals, these Ungulates had forty-four teeth, the molars with short crowns, and quite distinct in form from the premolars. The ulna and the fibula were entire and distinct, and there were four well developed toes and a rudiment of another on the fore feet, and three toes behind. In the structure of the feet, and in the teeth, the *Eohippus* indicates unmistakably that the direct ancestral line to the modern horse has already separated from the other Perissodactyles. In the next higher division of the Eocene, another genus (*Orohippus*) makes its appearance, replacing *Eohippus*, and showing a greater, although still distant, resemblance to the Equine type. The rudimentary first digit of the fore foot has disappeared, and the last premolar has gone over to the molar series. *Orohippus* was but little larger than *Eohippus*, and in most other respects very similar. Several species have been found in the same hori-

\* Delivered before the American Association for the Advancement of Science, at Nashville, Tenn., Aug 31, 1877.

with *Dinoceras*, and others lived during the upper Eocene with *Diplocodon*, but none later.

Near the base of the Miocene, in the Brontotherium beds, we find a third closely allied genus, *Mesolippus*, which is about as large as a sheep, and one stage nearer the horse. There are only three toes and a rudimentary splint bone on the fore feet, and three toes behind. Two of the premolar teeth are quite like the molars. The ulna is no longer distinct, or the fibula entire, and other characters show clearly that the transition is advancing. In the upper Miocene, *Mesolippus* is not found, but in its place a fourth form, *Miolippus*, continues the line. This genus is near the *Anchitherium* of Europe, but presents several important differences. The three toes in each foot are more nearly of a size, and a rudiment of the fifth metacarpal bone is retained. All the known species of this genus are larger than those of *Mesolippus*, and none pass above the Miocene.

The genus *Protophippus* of the lower Pliocene, is yet more equine, and in some of its species equaled the ass in size. There are still three toes on each foot, but only the middle one, corresponding to the single toe of the horse, comes to the ground. This genus resembles most nearly the *Hipparion* of Europe. In the Pliocene, we have the last stage of the series before reaching the horse, in the genus *Plihippus*, which has lost the small hooflets, and in other respects is very equine. Only in the upper Pliocene, does the true *Equus* appear, and complete the genealogy of the horse, which in the Post-Tertiary roamed over the whole of North and South America, and soon after became extinct. This occurred long before the discovery of the Continent by Europeans, and no satisfactory reason for the extinction has yet been given. Besides the characters I have mentioned, there are many others, in the skeleton, skull, teeth, and brain of the forty or more intermediate species, which show that the transition from the Eocene *Eolippus* to the modern *Equus*, has taken place in the order indicated, and I believe the specimens now at New Haven will demonstrate the fact to any anatomist. They certainly carried prompt conviction to the first of anatomists, who was the honored guest of the Association a year ago, whose genius had already indicated the later genealogy of the horse in Europe, and whose own researches so well qualified him to appreciate the evidence here laid before him. Did time permit, I might give you at least a probable explanation of this marvelous change, but justice to the comrades of the horse in his long struggle for existence demands that some notice of their efforts should be placed on record.

Besides the Horse and his congeners, the only existing Perissodactyles are the Rhinoceros and the Tapir. The last is the oldest type, but the Rhinoceros had near allies throughout the Tertiary; and, in view of the continuity of the equine line, it is well worth while to attempt to trace his pedigree. At the bottom of the Eocene, in our Western lake-basins, the tapirid genus *Helalestes* is found, represented by numerous small mammals hardly larger than the diminutive horses of that day. In the following epoch of the Eocene, the closely allied *Hyraculus* was one of the most abundant animals. This genus was nearly related to the *Lophiodon* of Europe, and in its teeth and skeleton strongly resembled the living Tapir; whose ancestry, to this point, seems to coincide with that of the Rhinoceros we are considering. Strangely enough, the Rhinoceros line, before it becomes distinct, separates into two branches. In the upper part of the Dinoceras Beds, we have the genus *Colono-ceras*, which is really a *Hyraculus* with a transverse pair of very rudimentary horn-cores on the nasal bones. In the lower Miocene west of the Rocky Mountains, this line seems to pass on through the genus *Diceratherium*, and in the higher Miocene this genus is well represented. Some of the species nearly equaled in size the existing Rhinoceros, which *Diceratherium* strongly resembled. The main difference between them is a most interesting one. The rudimentary horn-cores on the nasals, seen in *Colono-ceras*, are in *Diceratherium* developed into strong bony supports for horns, which were placed transversely, as in the Ruminants, and not on the median line, as in all existing forms of Rhinoceros. In the Pliocene of the Pacific Coast, a large Rhinoceros has been discovered, which may be a descendant of *Diceratherium*, but as the nasal bones have not been found, we must wait for further evidence on this point. Returning now to the other branch of the Rhinoceros group, which left their remains mainly East of the Rocky Mountains, we find that all the known forms are hornless. The upper Eocene genus *Amyndodon* is the oldest known Rhinoceros, and by far the most generalized of the family. The premolars are all unlike the molars, the four canines are of large size, but the inner incisor in each jaw is lost in the fully adult animal. The nasals were without horns. There were four toes in front, and three behind. The genus *Hyracodon*, of the Miocene, which is essentially a Rhinoceros, has a full set of incisor and canine teeth; and the molars are so nearly like those of its predecessor *Hyraculus*, that no one will question the transformation of the older into the newer type. *Hyracodon*, however, appears to be off the true line, for it has but three toes in front. In the higher Miocene beds, and possibly with *Hyracodon*, occurs a larger Rhinoceros, which has been referred to the genus *Aceratherium*. This form has lost the canine and one incisor above, and two incisors below. In the Pliocene are several species closely related, and of large size. Above the Pliocene in America, no vestiges of the Rhinoceros have been found, and our American forms doubtless became extinct at the close of this period.

The Tapir is clearly an old American type, and we have seen that, in the Eocene, the genera *Helalestes* and *Hyraculus* were so strongly tapirid in their principal characters, that the main line of descent probably passed through them. It is remarkable that the Miocene of the West, so greatly developed as it is on both sides of the Rocky Mountains, should have yielded but a few fragments of tapirid mammals, and the same is true of the Pliocene of that region. In the Miocene of the Atlantic Coast, too, only a few imperfect specimens have been found. These forms all apparently belong to the genus *Tapirurus*, although most of them have been referred to *Lophiodon*, a lower Eocene type. In the Post-Tertiary, a true *Tapirus* was abundant, and its remains have been found in various parts of North America. The line of descent, although indistinct through the middle and upper Tertiary, was doubtless continuous in America, and several species exist at present, from Mexico southward. It is worthy of notice that the species North of the Isthmus of Panama appear all to be generically distinct from those of South America.

In addition to these three Perissodactyle types which, as the fittest, have alone survived, and whose lineage I have endeavored to trace, there were many others in early Tertiary times. Some of these disappeared with the close of the Eocene, while others continued, and assumed strange specialized shapes in the Miocene, before their decline and extinction. One series of the latter deserves especial mention, as it includes one of the most interesting families of our extinct animals. Among the large mammals in the lower Eocene is *Limmohysus*, a true

Perissodactyle, but only known here from fragments of the skeleton. In the next higher beds, this genus is well represented, and with it is found a nearly allied form, *Palaeosops*. In the upper Eocene, both have left the field, and the genus *Diplocodon*, a very near relative, holds the supremacy. The line seems clear through these three genera, but on crossing the break into the Miocene, we have, apparently, as next of kin, the huge *Brontotheridae*. These strange beasts show in their dentition and some other characters the same transition steps beyond *Diplocodon*, which that genus had made beyond *Palaeosops*. The *Brontotheridae* were nearly as large as the Elephant, but had much shorter limbs. The skull was elongated, and had a transverse pair of large horn-cores on the maxillaries, in front of the orbits, like the middle pair in *Dinoceros*. There were four toes in front, and three behind, and the feet were similar to those of the Rhinoceros. There are four genera in this group, *Brontotherium*; *Diconodon*; *Menodus* (*Titanotherium*); and *Megaceros*, which have been found only in the lowest Miocene, east of the Rocky Mountains.

In the higher Miocene beds of Oregon, an allied genus, *Chalicotherium*, makes its appearance. It is one stage further on in the transition, and perhaps a descendant of the *Brontotheridae*; but here, so far as now known, the line disappears.

It is a suggestive fact, that this genus has now been found in Western America, China, India, Greece, Germany and France, indicating thus, as I believe, the path by which many of our ancient mammals helped to people the so-called Old World.

(To be continued.)

## SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,  
Manufacturers, 65 Fulton Street, N. Y.

## Fish Culture.

### FISH CULTURE IN MINNESOTA.

SINCE the \$5,000 appropriation by the Legislature, a step forward has been taken in this State. A most judicious selection of capable men was made in choosing Dr. Robt. O. Sweeney and Wm. Golcher, Esq., as Fish Commissioners. The first named gentleman is a scientist of no mean attainments, and a close student in all departments of natural history. Mr. Golcher is well known in England and America as a gun maker whose mechanical abilities have been inherited through many generations. But his proclivities are also fishwise, and having retired from a life of active and profitable business, he enters into his new labors with ardor. Just at present they are utilizing a portion of the State appropriation in constructing hatching houses and ponds near St. Paul. A few days ago Mr. Hallock, the editor of this journal, who was then in Minnesota, took occasion to inspect the works in their rudimentary state, and expressed himself gratified with the choice of location and the plan of the works, in which much progress has already been made. The water is of a temperature of 50 degrees, issuing in dozens of little rivulets from the base of a bluff of sand at least 70 feet high, pure and thoroughly filtered. These little rivulets are gathered into a stone reservoir already constructed, and their aggregate makes a head of water sufficient for mill purposes. The works occupy a terrace at the foot of the bluff, and the natural formation of the adjacent ground makes the work of constructing ponds and races very easy and inexpensive. The outlook is over a broad meadow flanked by wooded hills, while the contiguous country is broken and rocky. The commissioners are now laying out drives through the premises so as to make the hatching house grounds attractive as a park, the principal features of which will be a defile, a cave, and some curious rocks shaped like toadstools overhanging the road.

The hatching house is forty feet square; the overseer's house 40x18, two stories, rustic, with verandas, etc., both nearly completed. Altogether the establishment is one of the most romantic we have seen, and promises to blossom out in a useful and satisfactory work. Minnesota is a natural fish producing country, but its trout, bass and pike are disappearing rapidly, and need to be replenished at once. To do this we look toward the hatching house and the competent State Fish Commissioners.

MASSACHUSETTS.—The Chairman of the Lynn Board of Fish Commissioners has received a communication from the Fish Commissioners of the town of Wakefield stating that the stocking of Saugus River with alewives was now an assured success, and that the young fish were at present rapidly working down from the pond in Wakefield to the sea.

NEW YORK.—Catskill is to have a fish hatchery. The necessary grounds and springs have been leased of John Goodwin, and a house 20x25 ft. is to be erected.

✓ SALMON IN THE RICHELIEU.—*Halifax, Nova Scotia, Aug. 27.*—Editor *Forest and Stream*.—I subjoin copy of a letter just received from the Fisheries Department, at Ottawa, Canada, which will be interesting, as showing the amount of success in the direction of the labors of the U. S. Fish Commission in stocking Lake Champlain and its tributaries with salmon.

Yours truly,

SPENCER F. BAIRD.

Canada, Ottawa, Aug. 22.—Dear Sir.—It having come to the knowledge of this department that salmon had been

caught in the Richelieu River, I immediately instituted inquiries into the matter, and succeeded in eliciting the following information: Twelve young salmon were caught this summer in set traps opposite the town of St. John. Eight of these were liberated alive, the other four were wounded. They weighed about a half a pound each. At the same time and at the same place a young salmon two years old was caught in a seine and liberated. No salmon were seen in the neighborhood after the 18th of July. Trusting the above might prove of interest, I have directed our fishery officer to keep a sharp lookout and let us know any further information they might ascertain. These fish, I presume, are the fry placed in Lake Champlain by the Vermont Fish Commissioners. Yours very truly,

PROF. S. F. BAIRD.

### HABITS OF THE RUFFED GROUSE.

I READ, doubtless in common with thousands of your readers, Mr. Whitehead's article on Grouse, in *Scribner's*, and noticed the inaccuracy of his statement that they strut up and down a log and beat it with their wings. But it strikes me that Mr. Murdock, in his strictures on the article, commits far greater errors than those he seeks to correct. It is true that the bird does not always select a hollow log, but that he frequently does so I can testify. I have found them on pines four feet in diameter, and as hollow as a barrel. I have also seen them drum on the roof of a standing tree, and once shot one off a huge granite boulder. But these are exceptions. Ninety-nine out of every hundred select a fallen tree, and almost always a pine, even where hemlock and other down trees are more numerous. As for the statement that the grouse will drum "wherever he happens to be," nothing could well be more at variance with the facts. When wholly undisturbed in his native woods, the grouse returns to the same log year after year; and in the wilds of Maine, where brood after brood is reared without ever seeing the face of man, I have seen drumming logs which bore the appearance of having been used for that purpose for a quarter of a century. But the bird has a wonderful faculty of adapting itself to the changes which are necessary for self-preservation in the vicinity of civilization; and near villages, where scarcely a day passed without their being hunted by troops of boys, I have known one of these birds to have half a dozen drumming logs, running or flying from one to the other, and never drumming twice successively on the same log. This very precaution might prove its destruction, as it would only be necessary to wait at one of the logs till he visited it in turn; but, fortunately for the bird's preservation, the average American boy is not a very close observer in natural history, and does not discover the trick. In regard to its drumming not being a love call, I have only to say that in more than a score of instances I have seen the female fly directly to the log to join the male, besides witnessing two desperate fights between the drummer and an intruder, the female, meanwhile, sitting placidly by within twenty feet of the combatants. I also have shot two females while drumming. From one of these logs I had shot the male two mornings before, and from the other the same thing had been done by a companion, as I afterward learned. Although I have repeatedly known them to do the same thing since, I never repeated the blunder, as I speedily learned to distinguish their drumming from that of the male, it being performed with much less precision; rather a sort of fluttering several times repeated. As for this autumn drumming, I have shot scores—I might almost say hundreds—of them while thus engaged, and have always found the birds shot to be young males. The explanation has always seemed to me very simple: The bird has reached maturity, its sexual instincts are awakened, and it drums, before leaving the proper season, which goes to prove it a "love note" instead of operating against it, else they would drum at all seasons. In regard to their night drumming, I have observed that it takes place either in very dark, foggy or drizzly nights, or in the brightest moonlight, as when the glorious harvest moon of October floods the forest glades with a radiance almost equal to the light of day. In the former instance I have always supposed that the bird was belated, and unable to reach its roosting ground, owing to the sudden approach of darkness, and in the latter was deceived by the brightness of the moon.

I now wish to notice a remarkable habit indulged in by certain males of this species at rare intervals, and which has never to my knowledge been noticed by any naturalist. Once while partridge hunting when a mere boy I described at some distance ahead of me, in an old "logging road," a strange looking bird, apparently without head or tail, and almost perfectly round in appearance. To shoot it was the work of an instant, and running to get it I was almost petrified with astonishment to pick up an ordinary cock partridge.

I was acquainted with an old hunter, a close observer of the habits of all kinds of game, and to him I went with my story. He informed me that what I had seen and shot was a "King Partridge" that in forty years of hunting he had only seen three or four, and that years would probably elapse before I would see another. It was quite true; it was at least ten years; and in the meantime I had grown to man's estate and had discarded my shot gun for a rifle, and was deer hunting "on the leaves" one October when I next saw the "King Partridge." This time, you may be sure, I did not fire at it, but crept cautiously as near as I thought prudent without alarming the bird. The more I looked at it the greater became my curiosity, and I determined to see what effect my appearance would have on it. I therefore stepped out in plain sight. As it paid not the slightest attention to me I walked within twenty feet of it and examined it at my leisure. Every feather was perfectly erect, pointing if anything, forward of a perpendicular. The tail was spread out to its utmost extent, and laid forward almost flat on its back. Its neck was drawn in, so that when the bird was viewed, *en profile*, its head was entirely invisible, its ruff extending far beyond it. Its wings were slightly extended and drooping, so that the points just touched the leaves, and about every half minute it made a little dart forward about two feet, exactly like an old gobbler, except that it hopped with both feet like a robin, and during

the two hours in which I chased it round I could not get it to move in any other manner. There were half a dozen more ordinary grouse, male and female, in the flock, all of which had retired to a safe distance on my approach, leaving their "king" alone. He was very loth to take wing, but by running up and actually kicking so near as to nearly touch him, I forced him to take flight several times. He would fly about ten rods, and on alighting immediately assume the same position. After following him till I was tired I shot him, and submitted him to a careful examination. His plumage was remarkably profuse and perfect, the ruff very large and glossy, showing beautifully green in the sunlight; the tail one-fourth longer than in ordinary birds, and showing reddish bars across it instead of the lighter colors usually seen; but I have frequently shot them, having the same peculiarity.

I have seen two more since then; one only two years ago, which, after following it around for nearly three hours, with exactly the same results as I have already described, I left in peace, not having the heart to kill it. I have only to add that I have given a perfectly faithful description without the slightest exaggeration, having in fact an utter contempt for any person who willfully attempts to mislead in matters pertaining to natural history.

San Francisco, Sept. 7.

PENOBSCOT.

## BATS AND BAT CAVES IN TEXAS.

NUMEROUS bat caves are in Texas, in the limestones of the silurian, carboniferous and cretaceous formations being mostly west, northwest and north of Austin. In these caves the bats stay during the day, coming forth about sunset and returning a little before or about daybreak in the morning. In the northwest part of Burnet county, about one mile from the Colorado River, at an elevation of about 1,500 feet above the sea, there is a very large bat cave in a hard, dark limestone, destitute of fossil, but probably of lower carboniferous age. During the late war the bat deposits of this cave were largely used for the manufacture of saltpetre to make powder for the Confederate army.

A Mr. Allen, living in the river bottom about two miles below the cave, told me about it and its millions of bats, saying that it probably was very extensive, but that it only had been explored for a short distance. I proposed that we should explore and measure its extent, and arrangements were soon made for that purpose. Our party of six men and boys, with candles and pine for torches, descended about 20 feet on an old ladder fastened to one of the perpendicular sides of the entrance, which ladder had been used by those making saltpetre. The opening to the cave has a diameter of about 20 feet one way and from 10 to 15 feet the other. At the bottom of the ladder the entrance to the cave is about 10 feet high and 20 wide, going nearly horizontally, and enlarging at a short distance from the entrance. We did not go very far before the strong odor peculiar to the dwellings of bats became very unpleasant. At the distance of 50 or 60 feet from the entrance we began to see large numbers of bats hanging in clusters from the rocks above and on the sides of the cave. Our lights caused some few of these to fly, but we kept on ward, measuring the distance with a tape line. Entering a large right-hand opening, the top soon became lower, and our way was up and down over large deposits of bat manure, the smell of which was very unpleasant. At the distance of about 800 feet from the main entrance the highest part of the cave was not more than 8 to 10 feet; all along were bushels of bats above and on the sides of the rocky walls. Our lights and talk aroused them, and we soon had swarms of them flying around us, extinguishing most of our lights, compelling us to make a hasty retreat and putting a stop to farther explorations. This cave is probably very extensive. We saw several openings from the main hall, and these may lead into large rooms.

Next day, toward sunset, I rode with Mr. Allen on horseback to witness the egress of the bats from the cave. The sun was about an hour high when we arrived at the cave. There we had glorious views of the mountains and plains of Burnet and Llano counties and the valley of the Colorado river. Half an hour before sunset a few bats flew to the entrance of the cave, and after circling around a moment or they returned to give notice that it was time to prepare to come out and begin work. About fifteen minutes later they began to come forth in large crowds, circling around and around until they were about 25 or 30 feet above the surface of the ground, when they darted away in every direction in a galloping flight. So thick did the circling up column of from 15 to 20 feet in diameter become as to form a dense mass of life. The rush and flapping of wings made a noise like a mighty wind. Never before had I seen such a grand exhibition of life—active life. They chatted gayly, and seemed as happy as school children at intermission, or when school is dismissed. We watched the rush of bats until nearly dark, and when we left they were coming forth as thick and fast as ever. The scene to me was more wonderful than anything I had ever before seen, for there must have been many millions of bats during the day in that cave. I was told that sometimes they did not all return home again until sunrise. The inhabitants of that region are not troubled with mosquitoes, and have but few nocturnal insects.

Some years ago I occupied a room in the old land office at Austin, which was then used for the geological collection. The ceiling above was of sheet iron; having a little attic above next the roof. To me the attic was inaccessible. It was the home of thousands of bats, whom I could sometimes hear chattering during the day. I slept in the room below, and just before and at daybreak I often heard the bats coming home jabbering in a lively way as they jumped along on the ceiling above, apparently talking of their adventures during

the night. A jolly set they were. Bats are not such sombre, dismal things as they have been represented. Like the birds they destroy our insect enemies, catching those of nocturnal habits which these birds cannot do; therefore bats are friends of the farmer and gardener, and should receive his protection. The bat caves of Texas will furnish a large amount of fertilizing material of great value to the agriculturist. At present the cheap rich lands in the vicinity of these caves seem to require little aid from fertilizers.

S. B. BUCKLEY.

Austin, Texas, Sept. 6, 1877.

## THE VINAGRONE.

1747 F STREET, N. W., WASHINGTON, D. C.  
August 31, 1877.

EDITOR FOREST AND STREAM:

In your issue of Aug. 30, I noticed an interesting paper by Dr. Pope, U. S. A., in which he refers to a curious arachnid called "Vinagrone" by the Mexicans. I wish to say that the species is quite well known to entomologists under the name *Thelyphonus giganteus* of Lucas, and is quite common in New Mexico and Arizona. In 1875 the writer received a fine specimen from the late Dr. J. F. Boughter, of Fort Craig, New Mexico, and in the accompanying letter he stated his belief that the insect was poisonous and that it was so regarded by the Mexicans, who were quite familiar with it. As corroborative of this assertion he forwarded a letter from Dr. Lewis C. Kennan, of Santa Fe, New Mexico, which reads as follows:

"In regard to the *Thelyphonus giganteus*, I have no doubt of its venomousness. While stationed at Fort Buchanan, on the border of Sonora, in 1875, I demonstrated that its sting was poisonous. I knew an Indian boy bitten in the temple who never recovered. Several horses were bitten in the lip, clamping the insect in their bay, and the tumefaction and general distress were as great as from the bite of a rattlesnake. The insect is so extremely sluggish that great violence is necessary to make them bite. I had a French servant who frequently brought them to me in his hands and pocket, and I even suspected the omnivorous Gaul of cooking and eating them as a sort of land lobster, but they never troubled him in any way. The belief in their venomousness is universal in Mexico. To my mind the fact is beyond question. If not, what is the teleology of the fangs?"

So far as the opinions of Mexicans go; their testimony is of little value, as they have the most exaggerated notions regarding the poisonous properties of different animals, notably the gila monster (*Holoderna suspectum*) of Cope, which is absolutely harmless. But the opinions of Drs. Boughter and Kennan are entitled to every respect, as they have long been residents of the Southwest and close observers of facts in natural history. I would suggest that a series of experiments with this insect in regard to its venomous properties would be extremely valuable and interesting, and I know of no one better able to inaugurate them than Dr. Pope, who will confer a great favor on the scientific community if he can be induced to do so.

Very truly yours,

H. C. YARROW.

THE VINAGRONE IN FLORIDA.—A correspondent writes: The insect called Vinagrone, described by Dr. Benjamin F. Pope, in your issue of Aug. 30, is frequently met with in Florida, it is known among the natives as the mule killer, but it is black in color.

DOMESTICATED CARIBOU.—EDITOR FOREST AND STREAM: I have long been anxious to add to the collection in my miniature park a specimen of the woodland caribou, but have not succeeded till this summer, when I heard through a Canadian acquaintance of a two-year old cow having been caught in the snow last March by a native over on the north shore of the Gulf of St. Lawrence, and that in May or first of June she dropped a male fawn, which, strange to say, lived. As the result of my exertions the mother and fawn are now in my enclosure, having come through from Murray Bay by boats and cars without a scratch, and finer specimens never were seen oven in their native wilds. The cow's horns are now in the velvet. The fawn is as large as one of my year old deer, and so fat that he can hardly travel. The mother produces a very large flow of milk, and although caught wild last March, she is tamer than any sheep. To-day my man put a halter on her and led her all about the enclosure. Next year I am in hopes to report my success in breeding them in captivity.

M. W. CLARK.

Danville Junction, Sept. 20, 1877.

—A stuffed pig, with one eye square in the forehead, constitutes the Harrisonville (Missouri) "Museum of Natural History and Fine Arts." But do not despise the day of small things. That one-eyed porcine may yet prove the inspiration of some mute, inglorious Agassiz.

THE WILLET.—In the FOREST AND STREAM of Sept. 13, your correspondent from Washington, in his interesting account of Obicoteague Island, speaks of the willet (*Synophia semipalmata*, Hartland), as breeding all along the coast from the mouth of the Mississippi to New York. He does not appear to be aware that it is also found along our entire Atlantic coast, as far, at least, as Halifax, Nova Scotia. I have found it breeding on the coast of Massachusetts, near Nantucket, and in the vicinity of Halifax, and obtained the eggs in both cases. The same writer says also: "The propensity of the bird to remain in the immediate vicinity of the coast is such that it is seldom met with inland, even along the shores of large rivers." This, though perhaps true, so far as relates to the more Eastern States, is not correct as applied to the whole country. Mr. E. W. Nelson in his admirable paper on the birds of North Eastern Illinois, speaks of it as resident in

summer in the marshes and on the West prairies. And Capt. Charles Bendire, a reliable and enterprising investigator in ornithology, in his equally admirable paper on the birds of Eastern Oregon, just published in the proceedings of the Boston Society of Natural History, speaks of this bird as "An abundant summer resident. I have taken several sets of their eggs. They are equally abundant in the higher mountain valleys at an altitude of 6,000 feet and more. In fact they are found everywhere where there are marshes."

Yours.

THOMAS M. BREWER.

EATING THE SQUID.—Some two years ago quite an interesting correspondence took place in the FOREST AND STREAM in regard to eating the squid. I find in reading Rabalais that in the Third book, chap. XIII, of this famous author, he writes: "Vous mangerez a souper non felices, no lieures, no autre chair: non poulpe qu'on nomme polype." Translated, this is: "You shall neither eat for supper peas nor hare, nor any kind of meat; not even squid, commonly called polype." This little reference to Rabalais may be interesting to Mr. Tegelmeyer of the London Field. But I am not sure whether such learned authority as the Parson of Mendon will induce our people to eat the cephalopod.

CONSTANT READER.

New York, Sept. 20, 1877.

ATLANTA RATS.—An Atlanta paper says:

Atlanta has become so thoroughly infested with rats that their destruction has become a matter of very serious importance. The ruthless invader of our store-rooms, granaries and coops is the regular wharf rat—or Norway rat, as it is called. It is an importation, and not a native production. It is said that it came with Sherman's army to Atlanta, being brought hither in the forage for the horses that was shipped out from New York. The Sherman rat, as we propose to call him during the crusade against him that is hereby inaugurated, is a perfect monster. He is as large as a small kitten, has huge thighs and forelimbs, possesses enormous strength, is combative and plucky, and his cruel, rapacious face is ornamented with a pair of flowing moustaches. He has bred with incredible rapidity since his introduction here, and has literally devoured or driven out the modest, inoffensive, old-fashioned little gray rat; that innocent, easily-satisfied vegetarian that may be termed "the rat of our fathers." A more harmless little rodent than our little rat of anti-bellum times can hardly be imagined. He was accepted without a murmur, and really taken as a sort of pleasant joke. He figures in history as a decent, gentlemanly rat that cracked an occasional grain of corn, or licked syrup once in a while from his tail, that he had dropped into some sweet jug. He figures in history in such pleasant episodes as the famous visit of the country rat to the city, and in poetry as the rat that eat the malt that lay in the house that Jack built. He did no harm, and was liked and tolerated on all hands. But this new rat, born in the throes of revolution, and growing amid the fierce turbulence of this latter day, is a bloodthirsty and abnormal scoundrel. He despises the mild and musty corn, or the tranquil jam upon which the rat of our fathers fed, and whenever he wants a lunch he rushes out into your yard, seizes a half-grown chicken, and clipping its throat-latch with his sharp teeth, throws the palpitating corpse over his shoulders and gallops back to his den to wallow in warm gore. These huge rats can be seen in great numbers galloping about the stores, along the street at night. It is almost impossible to raise poultry anywhere in the city. The rats kill young chickens and ducks with the greatest ease, and during last winter entered on one occasion a chicken coop and pulled from its roosts and destroyed a full-grown hen. They kill grown pigeons frequently. They do not confine themselves to the city, but are spreading into the country. We have seen them six miles from town.

"BIRD CULTURE."—Mr. Elizur Wright read an admirable paper on this subject before the Social Science Association the other day. Of the cat bird, one of our feathered friends not in very general favor, he has this to say:

The mimit, or *Orpheus carolinensis*, as Audubon calls him, is the very pink of propriety in dress, and most graceful in his motions. But his crowning excellence is his domestic morality. The industry of both husband and wife in building their nest, and their solicitude to have it in the best place, are something wonderful. If molested after they have begun and nearly completed a nest, they will select a new spot and build another, and the mutual discussions they will have on the subject is very amusing. As an illustration of their industry in building I once found a nest, the top of which was securely fixed in the horizontal fork of a cornel bush, and the bottom rested on the bent stalk of a blackberry brier fourteen inches below. The birds had evidently begun to pile sticks on the brier when it was two or three inches below the fork, and as it bent low with the weight, kept piling on the sticks till the unstable foundation lodging in a bush that arrested its descent, the pile finally rose above the fork and was made steady by it. If Stevenson reasoned and persevered when he carried his railroad over Chat Moss, why not Mr. and Mrs. Mimit when they build their nest?

Wilson tested the perceptive faculties of this bird by taking away its eggs and substituting those of the brown thrush. In a minute or two the male came to the nest and examined the size of the eggs, then flew off to his mate and seemed to converse with her. Then he returned, took out the eggs tenderly, one by one, and dropped them in the bushes, thirty yards away. He says, also, "From the nest of another cat-bird I took two half-fledged young, and placed them in that of another, which was sitting on five others. She soon turned them both out. The place where the nest was not being far from the ground, they were little injured, and the male observing their helpless situation, began to feed them with great assiduity and tenderness."

The habits of the beautiful bird I have been describing, and a score of others that incline to keep it company and nestle about the cottage, are the best possible text-book for the infant mind. A child may be as easily taught to respect and love the little birds as to say its prayers; and it cannot fail to have a most salutary and elevating effect, both morally and intellectually. The little tragedies that are occurring when the cottage eaves and shrubberies are tenanted by little birds are sure to interest children and give them deep instruction. For example, I cite a fact of the present summer: A pair of chip sparrows (*Fringilla socialis*) had built a nest on a grape vine trellis over my door, so insecurely that when the five young ones were grown nearly large enough to fly, one of them fell out on the gravel and was killed. A day after another toppled out, but was not much hurt. The nest, which was settled away on one side, had not room for him to be put back, but he was put back, and the old ones presently pushed him out, obviously to save the lives of the rest. So, after con-

sultation, an oriole's nest, which had been preserved in the garret, was brought down and securely suspended near the nest of the sparrows, and the little unfortunate was placed in it. The parent birds not only began at once to feed him, but the next morning it was noticed that they had removed all their other little ones into the safer nest, where their wings soon came to maturity. The *societis* usually avoids such an accident by building on the ground or a low bush. In this case, seeing the peculiar immunity of birds about the house, he was induced to get as near it as he could and take the risk of a dangerous elevation. Perhaps with time and experience he will learn, like the oriole and vireo, to build on the suspension plan. This is not altogether a fancy, for the progressive architecture of birds is a well-established fact. They, as well as we, study tactics and meteorology, and build according to circumstances. I have certain boxes which are sure to attract the first bluebirds that come with the first warm day of spring. This bird, in spite of the softest warble in the world, is so unneighborly to his own kind that you can never have but one pair near the same house. One spring a pair commenced laying in a little iron box, long before Jack Frost had finally abdicated. Knowing there were two eggs in the nest, I put in a finger one morning, expecting to find at least three, but not one could be felt. My first thought was that the cat had been making the same experiment before me, and it was well that I did not meet her just then, for the next day I found she was quite innocent. The birds had covered up their eggs with the best non-conducting substance to be found to keep them from freezing, for the night had been cold enough to congeal them, and I was too dull to discover at first what they had done.

—The enormous forest fires in Algiers caused a loss of many millions to the French Government. In fleeing from the flames, herds of prey and beasts on which they habitually preyed, ran side by side, the former without thought of molestation, and the latter without fear. An Arab said that he saw from an eminence a lion in an open space surrounded by flames. He roared, lashed his sides with his tail, and in vain sought an escape. Finally, he ran into the flames.

ARRIVALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING Sept. 22, 1877.—One Virginia deer, *Capreolus virginianus*; one robin, *Turdus migratorius*, presented by Mrs. J. Williams, N. Y. City; one pigeon hawk, *Falco tithysfalco*, presented by Mr. Chas. V. Ade, N. Y. City; one raccoon, *Procyon lotor*, presented by Mr. Campbell, N. Y. City; one African elephant, *Elephas indicus*, and five African elephants, *Elephas africanus*, placed on exhibition. This is the first time so large a number of small African elephants have been exhibited together in this city. The African elephant is one of the collection brought to England by the Prince of Wales on his return from his late trip to India. Among the many absurd notions of the elephant which obtained credence in Europe a little over three hundred years ago was the idea it had no joints and could never lie down. In 1681, however, an elephant was taken to the city of Dublin and exhibited to the public, when of course most of these erroneous ideas were removed. This animal was afterward destroyed by fire, leaving the people very much grieved at the loss. There had been an elephant in England previous to this, Louis IX. of France, being credited with having sent one to Henry III., which was placed in the tower of London. During the middle ages little was known of this animal until the Portuguese had penetrated to the interior of Africa, when it became a somewhat common object. During the time of the Roman Empire the elephant was not only for war purposes and gladiatorial shows, but also for amusement. Suetonius mentions that an elephant in the presence of the Emperor Galba climbed up an inclined rope to the roof of the theatre and descended in the same way. These animals never breed now in captivity, though Pliny says that they at one time bred in Rome. At its birth the elephant is about thirty-five inches high, growing nearly eleven inches in the first year; in the second, eight; in the third, six; in the fourth, five; in the fifth, five; in the sixth, three and a half; in the seventh, two and a half, attaining their full growth between the ages of eighteen and twenty-four. Period of gestation twenty and a half months. It is said to live one hundred years, though the Romans believed that it lived two or three hundred years, and made it the symbol of eternity. W. A. CONKLIN.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN DURING WEEK ENDING TUESDAY, Sept. 18, 1877.—Two moccasins (*A. piscivorus*), purchased; one garter snake (*E. turtalis sub. ordinata*), purchased; one *Ambystoma orthogracium*, purchased; one chicken snake (*Coluber quadricinctus*), purchased; one ground rattlesnake (*Crotalophorus milvatus*), purchased; one rabbit (*Lepus cinctus*), presented; two swift foxes (*Vulpes velox*), presented; one gray fox (*Vulpes virginianus*), presented; one horned toad (*Phrynosoma cornuta*), presented; four leopards (*Felis pardus*), born in garden. ARTHUR K. BROWN, Gen'l Supt.

## Woodland, Farm and Garden.

### ORNAMENTAL TREES.

IN planting for effect, the habit of the trees employed is of the first consideration. Next to the general design, there is nothing which so much affects the appearance of a country seat, for instance, than the form of the trees that adorn it. Perhaps no tree that has grown up naturally can be called ugly; but no one would think of comparing, for ornamental purposes at least, a shapely unbranched Beech, Sycamore, Walnut or Linden, with their far-spreading branches and symmetrical heads, with bare-limbed specimens of the same class. For planting in masses no species come amiss, but for single specimens suitable varieties are not so numerous. Much, however, depends on soil and situation. No trees will grow in a shapely form without room and light, nor will they be likely to withstand the hurricane unless they have been reared in the open exposure since their infancy. Hence, in parks, which have been extended by clearing away the timber, there is often great ruin worked among the trees which have been left, whether singly or in groups. Thinning out should therefore be performed with great care when the trees are left with an eye to effect, and the species should be considered. The Oak, Hickory and Walnut will perhaps bear isolation, after being "nursed," as well as any. So will the Tulip tree and Chestnut. The Elm, beautiful as it is, is a somewhat dangerous tree, as it is often apt to lose an important limb; but when reared in the open is one of the very best and most

reliable. The Sycamore and other Maples, though the foliage and smaller branches often suffer from the wind, present a stout front to the storm, considering its heavy mass of foliage. The Chestnut, though of lofty bearing and luxuriant leafage, is one of the best to keep its place. For planting to grow into specimen trees, the Linden is perhaps the most handsome in form. A uniform and somewhat round head is its general habit, but in some situations it forms a perfect cone, its shape being seemingly affected by the character of the soil in which it grows. It has always a very branching habit, but in finely-divided soils the branches appear to be more twiggy and subdivided, which helps to give the head a more symmetrical shape. Next to the Linden comes the Beech, which in the open park forms an even, round head, the diameter keeping pace with the height. This tree, with the Horse Chestnut and Oak, lends a distinct character to the landscape, and is generally associated with rich meadow land and an undulating country, as the Fir is with mountain slopes and Alpine ranges. How totally changed the appearance of the landscape may be by the character of the trees with which it is furnished, must be apparent to the most casual observer. A few groups or rows of Poplars, rearing their tall spires against the sky, create a distinct impression on the scene, while a skyline of distant Firs, with their motionless pyramidal forms towering one above another, completely alters its aspect. The sombre Scotch and Austrian Firs, too, almost darken the face of the landscape with their sable plumes and dark masses of foliage; they are most effective in masses, however, or in groups where a distinct effect has to be produced, single specimens being lost, unless it be on a lawn, where they are ornamental enough. The Norway Spruce and Hemlock are also noble adjuncts to a park properly planted; the latter, especially, lightens up the darker and heavier masses, and gives more character and grace to the whole. Weeping trees of most kinds must be included, but they associate best with dressed grounds, their branches often trailing on the surface of the lawn. Among these, the Weeping Ash must be reckoned as one of the most ornamental from the length of its branches and the freedom of their sweep. For grace there are none to equal the Birch, Beech and Willow. The Elm looks well on a tall stem, but when worked near the ground it has rather a stiff appearance, though such trees make excellent arbors, the branches being close and thickly covered with foliage. The Weeping Lime, Laburnum, Rosemary, leaved and Kilmarnock Willows and others, are all of them more or less ornamental, and adapted for pleasure grounds or parks.

### WHY THE PRAIRIES ARE TREELESS.

EDITOR FOREST AND STREAM:

HOUSTON, Sept. 3, 1877.

In an extract copied into the Houston *Daily Telegram* from an article written by a geologist named Whitney, he very boldly makes the assertion that the prairies are treeless because the soil is too fine, too close, too compact, to admit vegetation. He seemed to put this forth as an original idea, but it was broached long before by the distinguished Agassiz. The latter seemed to write on nature with a true inspiration; he did indeed illumine nearly all the dark and mysterious places. Yet in this particular I am compelled to dissent from him. If the prairies are treeless on account of the fineness of their soil, why is it that trees flourish so readily when planted upon them? That they do flourish, nearly all of us can bear testimony. Indeed, I know of no country in the world to which trees take more readily than they do to our Texas prairies when once given a start. All that is necessary is to stick them in the ground in winter and give them protection a few years from cattle: they will then grow like "the green bay by the waters." Perhaps for a finely comminuted soil, our Houston prairie is unsurpassed. It is so fine that when dry it may readily be converted into an almost impalpable powder; and yet all of us know that trees luxuriate in this soil when we once put them forth.

This is enough to explode the theory of Agassiz, grand as that noble name is; but there is another singular fact that I wish to call your attention to. The great prairies which come down to the Colorado River from the northwest are the most treeless of all in Texas. You may sometimes travel over them days together without seeing a sign of a tree, and yet, even in these vast, treeless expanses, if you will notice you will continually find little tender switches of mesquite struggling to get through the tall grass. Take a pick and dig where you find these switches, and you will invariably discover, just below the surface, a great network of living mesquite roots as big as a man's leg. If these prairies will support roots of such gigantic size, why couldn't they support trees? It proves at least that the finely comminuted and compacted soil has nothing to do with it.

Another thing, the Llano Estacado is the greatest prairie in Texas, and also the most treeless. The soil of that great prairie is usually exceedingly fine, without a grit in it; but it is traversed very frequently by lines or ridges of sandy soil, some of which are of great width. Now, these sandy ridges or lines, as far as I have observed them, are invariably without even the mesquite roots, and sometimes almost without grass. Not so with the rest of the prairie; elsewhere you will find the mesquite roots, sometimes a little mesquite thicket, and always a noble carpeting of grass. If the theory of Agassiz is correct, it is the sandy ridges or lines that should have the roots and other vegetation, while the rest of the prairies should not. In fact, the theory will not hold water at all, at least so far as our Texas prairies are concerned.

The article quoted also advances the idea, entertained by many, that the prairies are treeless by reason of frequent fires. The underground forests would seem to support that idea, but I am sure from my observation that it is as incorrect as the other. I have seen hundreds of beautiful groves and belts of forests far away in these vast prairies, in positions just as much exposed to destruction by fire as they could have been anywhere else. They bore no sign of fire. How did they escape if this latter theory is correct? The truth is, the cause of the prairies being treeless, or nearly so, has never been explained yet on any satisfactory ground, and probably never will be. The prairie, the Indian, the buffalo, the mustang,

the antelope and the prairie dog, are all of one family, and they are all passing away together. Perhaps the prairie was made for them, and perhaps they were made for the prairie. Nothing can be more certain than that they are marching together a grand march into death—step by step, and hand in hand. The epoch to which they belong is almost gone. Not many years hence the Indian, the buffalo and the prairie will exist only in song and history. The ways of the Great Architect are full of mystery as they are of beauty. N. A. T.

FERN CATALOGUE.—We have just received the most complete and satisfactory catalogue of ferns we have seen for many years. In calling attention to it, it is quite unnecessary to enlarge on the advantages of the study and cultivation of ferns. They are beloved by old and young, and a closer companionship with them may be considered as one of the highest and purest of pleasures, so that whether we are in winter enjoying the genial warmth of the green-house necessary to their growth, watching their development in the little Fernery or Wardian case in our room, or experiencing the delicious coolness and shade of an atmosphere adapted to the cultivation of the hardy species during the summer months, the feeling is alike delightful and pleasurable, and is only to be realized by actual experience. The cultural notes are evidently compiled with much thought and care, and those cultivators whose experience is limited, will be greatly benefited by their perusal. It is published by Messrs. Stansfield & Son, Vale Nurseries, Todmorden, England, who, we have no doubt, will gladly mail a copy to all interested in the cultivation of ferns, that apply for it. It contains a list of nearly seven hundred hardy ferns and over four hundred Exotic species. Ed.

—The New York Horticultural Society holds its fall exhibition at Gilmore's Garden, commencing Wednesday evening of next week. We are informed that the society expect to make a finer display than they have yet done, and advise our readers not to miss seeing it. The exhibition will remain open until Friday evening.

J. P.—Your ferns are: No. 1, *Pteris serrulata cristata*; No. 2, *Pteris longifolia*; No. 3, *Polypodium hexagonopterum* (a native sort); No. 4, *Nothochlena chrysophylla*. The latter is very impatient of being watered over the foliage.

W. B.—Your name is quite correct—*Fittonia* or *Gymnostachyum argyreaureum*; the best red veined variety is *G. Pearcei*.—Ed.]

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to set a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting. P. O. Box 1,234.—[Adv. ABBEY & IMBER, 33 Maiden Lane.

## Sea and River Fishing.

### FISH IN SEASON IN SEPTEMBER.

| FRESH WATER.                                 | SALT WATER.                                      |
|--|--|
| Trout, <i>Salmo fontinalis</i> .             | Sea Bass, <i>Sciaenops ocellatus</i> .           |
| Salmon, <i>Salmo salar</i> .                 | Sheepshead, <i>Archosargus probatocephalus</i> . |
| Salmon Trout, <i>Salmo confinis</i> .        | Striped Bass, <i>Morone tinnieus</i> .           |

FISH IN MARKET.—Among the many curious and notable things displayed at Blackford's in Fulton Market the past week, we noticed a catfish from the Mississippi River, weighing 149 pounds; an American angler (*Lophius americanus*), weighing 45 pounds; a dolphin, weighing 22 pounds; an angel fish; a hammerhead shark, and a loggerhead turtle weighing 410 pounds.

Fish of all kinds are in good supply, and prices are reasonable. The smelts in market are remarkable for their large size and superior quality. They come by express from Bathurst, N. B., and retain the peculiar cucumber flavor by which they are distinguished when first taken from the water. Our quotations are as follows:

Striped bass, 18 to 20 cents per pound; smelts, 20 cents; bluefish, 10 cents; salmon, frozen, 30 cents; green do., 35 cents; mackerel, 10 to 25 cents; white perch, 15 cents; weakfish, 12 cents; Spanish mackerel, 35 cents; green turtle, 15 cents; terrapin, \$12; halibut, 15 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 8 cents; black-fish, 15 cents; native herrings, 6 cents; flounders, 6 to 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; scollops, \$1 per gal.; English turbot, 40 cents; soft clams, 30 to 60 cents per 100; Salmon trout, 16 cents; sheepshead, 25 cents; whitefish, 15 cents; pickerel, 18 cents; yellow perch, 10 cents; hard shell crabs, \$3.50 per 100; soft crabs, \$1.00 per dozen; frogs, 45 cents per pound.

KA MONSTER HALIBUT.—In Faneuil Hall Market to-day, I saw the largest halibut ever brought in here. It was caught with a common-sized cod line and hook by Capt. Joshua Story, a Swampscott fisherman, six miles off Scituate, Mass. Its length was nine feet. The head, minus its gills, weighed 25 lbs, and the weight of its body alone, after being dressed,

was 325 lbs., and probably when taken from the water did not weigh less than 400 pounds. It netted the lucky fisherman \$26, and is retailing here to-day for 12½c per pound.  
Boston, Sept. 23, 1877. N. G.

**FISHING IN GREENWOOD CEMETERY.**—Two men who were caught stealing gold fish with a net from the lake in Greenwood Cemetery were sent to jail for twenty-nine days.

**KINSEY'S ASHLEY HOUSE.—Barnegat Inlet, Sept. 21.**—No fishing of note past week except sea bass and a sprinkling of striped bass. Bar too rough to bluefish. Capt. N. Crammer caught a 29-pound drum on a squid on the 19th.

**PENNSYLVANIA.—Greenville, Sept. 20.**—Black bass have been caught in quite large numbers. James Heube, a veteran in the business, has brought in some fine strings lately.

**THAT SHARK AND ITS OIL.**—In reply to our friend B. of Austin, Texas, relative to the oily subject, I would say that the liver of the shark named in my article "Red Snapper Fishing in the Gulf of Mexico," after cutting away a part of the upper portion, filled to the top an empty half-barrel from which had been used the corn beef it contained. The statement that the liver weighed about 125 pounds was simply a guess. The Captain of the vessel filled two five-gallon cans with the oil before my friend and I left, and all hands estimated there would be not less than ten gallons more. The apparent incongruity in my statement arose from my modesty in estimating the weight of the liver in the raw. B. H. P.  
Vicksburg, Sept. 19, 1877.

**A GAME FISH.**—A Detroit paper says: "The other morning while George W. Osborn, of that city, was fishing from the east end of the long crib off Stoney Island, with a hand line and float, he had occasion to leave for a few minutes and made his line secure to the crib, as he supposed. Upon his return, however, nothing was to be seen of his fishing tackle, and as no one had been near it during his absence he concluded that it had been hooked by some member of the finny tribe. Five minutes later the float was observed upon the surface of the water three or four hundred feet away from the crib, alternately appearing and working toward the middle of the river. There was no small boat in the vicinity with the aid of which to recover the tackle, and the float finally became lost in the distance. This was between eight and nine o'clock in the forenoon. Between three and four o'clock in the afternoon Mr. Osborn walked down to the end of the Canada Southern ferry-dock, and looking over the western side discovered his line and float near the dock. With considerable risk of getting into the river he climbed down to the water, some ten or twelve feet, and got hold of one end of the line, but found something lively tugging at the other end of it. The telegraph operator at the ferry station now came to his aid, and with the help of a pike-pole, a ten-pound pike was soon landed on terra firma more than six hours after it had taken the hook.

**AN ANGLER'S CATECHISM.**—Down at Sea Grove the pastor has great trouble in getting Sunday school teachers. After much inquiry he secured a long, lank fisherman, Sol Warrington. The following is a verbatim report of his first lesson:

Q. How many ways does the Old Testament teach of catching fish? A. Angling, with a seine and hooks; Isaiah xix, 8-11; Amos iv, 2.  
Q. Who were the best of the Apostles? A. The four fishermen, Peter, Andrew, James and John.  
Q. How did the Apostles like their fish cooked? A. John xxi, 9; Luke xxiv.  
Q. What was considered a fair day's luck fishing? A. St. John xxi, 11.  
Q. What was a poor day's luck? A. St. John xxi, 3.  
Q. How far from land did the Apostles fish? A. St. John xxi, 8.—*Philadelphia Bulletin.*

## The Kennel.

**TO CORRESPONDENTS.**—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

### YOUTHFUL CANINE DEPRAVITY.

**WHAT** is to be done? The sweet calm of our household, at Fern Bank, has been sadly ruffled by the advent of a setter puppy which is the source of endless trials and tribulations to my daughter and her factotum, Becky, our housekeeper, and the "mammy" of my little grandson, Freddie. This puppy, the cutest little imp that ever tried human patience, is the incarnation of perpetual motion, mischief and devilry; he has all the acquisitiveness and secretiveness of a magpie. Shoes, slippers, socks—anything left within his reach is either damaged beyond the possibility of repair, or hidden away in remote places, to be recovered, if at all, only by accident, or the most diligent search. These, however, are the natural peccadilloes of youth, the effervescence of a growing vitality, and they may and should be condoned; indeed, a sedate puppy, without the spirit to be mischievous, is rarely, if ever, worth the raising. But alas, wretched whelp! though only in his fourth month, and with a pedigree as ancient and illustrious as that of Burges' Rufus or Mohawk's ill-fated Crown Prince, he has evinced a depravity of morals and appetite grievous to all true lovers of "blue blooded" dogs, and calculated to shake our faith in the whole canine race. Alas! that I should be compelled to chronicle the fact! This beautiful puppy, of such gentle lineage, has become, even before shedding juvenile teeth, an inveterate egg sucker, and is as skillful at finding as some people are at hiding a

nest. At the very first note of the triumphant cackle of the egg-laying hen, the imp is off like a shot to look for her nest, and unless the vigilant Becky, who also has charge of the poultry department, can outfoot him in the race, or unless the nest is beyond his reach, he is sure to seize and gobble the egg. Why, sir, if this puppy, when grown to mature doghood, should find birds in the field as he does eggs in the nest, he will become the champion of all the field trials in America, and his owner might safely throw down the gauntlet to the kennels of Smith, of Strathroy; Tileston, of Paskack; Raymond, of Fox Farm; Guido, of Memphis, and even the great Warwick, who, as I write, is slaughtering the woodcock at Lake Glenside, over the peerless mother of the youthful Con.

To this possibility, however remote—to this possibility alone is the little scoundrel (Banquo by name) indebted for his life in spite of his blue blood.

Mr. Editor, I like a fresh egg for my breakfast, and that great Italian artist, Moretti, of your city, has taught me to dine on omelette au ham, and omelette au fromage, but since the coming of this egg-sucking demon I have observed that these luxuries have disappeared from our table. On complaint to Becky, she throws the responsibility on the puppy, which, I verily believe—though she is a good-hearted girl—she would gladly see consigned to that instantaneous and ignominious death which my eccentric and gallant friend, the late Emmet Howe was wont to invoke for his imaginary enemies.

So far, Tom Greene, my son-in-law, the unfortunate owner of this depraved little beast, and myself have resisted the just remonstrances of my daughter, who has the laudable housewifery ambition to have a well stocked poultry yard, telling her that such trials of temper and patience are sent to her as they were to Job, and that she has a chance of becoming the peer of that illustrious patriarch. But she retorts, with considerable force, that we men are utterly ignorant of the importance of the egg in domestic economy, and she points out the folly of sacrificing such an indispensable element in the culinary art to an untrained puppy, which may die of distemper before ever taken to the field. And then she enumerates, until my mouth fairly waters, a long list of delicious edibles and drinkables of which the egg forms a component part, and threatens us with their loss if the depredator is not sent away.

We are to have no egg-nog at Christmas and no egg-flip to tone the stomach and steady the nerves of a morning; we are to be deprived of our delicious batter cakes and omelette, and even clear coffee at breakfast; we are to have no dressing for our lettuce, or custard at dinner, and no pound-cake and jumbles for our tea. Now I confess, Mr. Editor, that I feel shaky under the substantial and, I may add, succulent eloquence of this plea, for I have reached that age at which the pleasures of the table are more attractive than those of the field. Meanwhile Tom and I are exhausting our ingenuity to convert the young sucker from his evil ways. Among other unsuccessful expedients resorted to was the famous "pepper cure," deemed infallible by the sportsmen of the south.

You, Mr. Editor, who are known to and appreciated by the culinary artists of Gotham as an enlightened and distinguished gourmet, have doubtless tasted that exquisite preparation of African pepper bearing the imprimatur of Mansel White, and so hot as to be called by the Creoles of New Orleans "*fou d'sufet*." Well, through a minute perforation in the butt of an egg we injected a teaspoonful of this liquid fire. The bait thus prepared was placed where the puppy could find it, which he speedily did, and then, incredible as it may appear, he gobbled up the egg, pepper and all, not only without the howls of agony which we hoped to hear, but with a wagging of his caudal extremity, eloquently expressive of the highest enjoyment and satisfaction!

Our patience and resources were alike exhausted. We proceeded to pass judgment on the criminal, and he was ordered to execution at the hands of our henchman, when my little grand-daughter, Belle, interceded for him. No gentleman, much less a doting old grandfather, could resist such a plea from such a source. A reprieve was granted, and now, at Belle's suggestion, we appeal to the *FOREST AND STREAM* in the hope that you or some of your numerous readers will suggest a cure for the puppy, and thus enable us to eat our eggs in peace. F. G. S.

Fern Bank, Sept. 7, 1877.

**CLAIMING OF NAMES.**—The naming of canines, as now understood, is a matter of considerable moment. If one gentleman names his dog Joe, another who may have a fancy for the same is supposed to be debared its use. There is no necessity for this whatever; it is in fact perfectly nonsensical, and a continuance of this theory will soon push nomenclature to the wall. Because one names his dog Jack, is no reason that another may not have the same designation, any more than because the first names his child Henry, a son of the second has no right to be so called. Names are plenty and more may be manufactured, yet, after all, the English alphabet contains but twenty-six letters and but six vowels, and their changes will soon be exhausted by following out the ideas of nomenclature as now promulgated. What then is to be done?

We see no reason why the name should not be prefaced by that of the owner, and thus made distinctive. When we say Morford's Joe, we certainly do not mean Smith's or any other man's Joe, though there may be a dozen of the name; and

with this system, and by the aid of a kennel register, the difficulty entirely disappears. The name Dash may not do belong to hundreds of curs of high and low degree, but Rodman's Dash is a distinctive title and no one will confound it with Dash whom the street gamin whistles around the corner. If Rodman sells his dog to Johnson the animal takes the distinctive title of his new master, and becomes Johnson's Dash, or, if we desire to be more explicit, we say Johnson's Dash, late Rodman's. This does away with the petty disputes and quibbles that are constantly arising, and also with the necessity of constantly torturing one's brain for new alphabetical combinations. Of course no one has the right to apply the distinctive name of another to his animal, any more than Jones may name his children Smith. We believe that sportsmen will not only find the new mode satisfactory, but that it will prove a welcome relief from the quarrels that are now being engendered.

Right in this connection we wish to speak of a circumstance happening in this office. Both Mr. Morris and Mr. F. R. Ryer claimed the name of Con for puppies. Mr. Morris claimed priority and appealed to us for a decision, to which we replied in our columns that the matter rested not with us but with the National Kennel Club. Mr. Ryer desired to answer Mr. Morris, but we refused to allow a controversy to appear in our columns, and referred the latter to the National Kennel Club. On looking over our columns Mr. Ryer discovered that the name of Con had been claimed for his dog by Mr. Evers previous to the claiming of the same name by Mr. Morris. We stated to him that we would gladly accord room for a simple statement of the fact in our columns. The following day we received a communication from Mr. Ryer which he desired inserted, stating that unless we would use it as it was, "*without cutting*," he desired the article returned. As Mr. Ryer is a very positive person, having no small opinion of his own merits, and moreover somewhat bellicose in nature, and his article being somewhat offensively personal to Mr. Morris, we declined to publish; whereupon the honorable gentleman takes exceptions, and rushes into print with some of the less conscientious journals, giving utterance to the falsehood that we declined to publish because he would not concede the *FOREST AND STREAM* to be the only correct authority on canine matters—an assertion that has no other foundation than his own imaginative brain. The only correct authority on canine matters is undoubtedly Mr. F. G. Ryer—in his own estimation—though "little rills" may flow elsewhere. We wish it distinctly understood, as we stated to this venacious gentleman, that the *FOREST AND STREAM* is not a medium for personal strife.

**FEEDING PUPPIES.**—No animal can be expected to attain its full size and form except it receive a full supply of wholesome food. Only those breeders who have given the matter close attention can realize how much a healthy, growing puppy will consume, consequently very many young animals are injured through want of sufficient and proper nourishment.

Some bitches will supply nourishment for nine or ten puppies until they are four or five weeks old. Others have but a small secretion of milk, and can sustain no more than four or five, but for a short time; hence it is necessary to watch closely to know what the bitch is doing for her progeny, and supply any deficiency accordingly. Even when the maternal supply is ample to keep the offspring in good condition, it is decidedly better to commence feeding the litter with other food when they are four or five weeks old, in order to avoid too sudden change of diet when they are taken from their mother. About the best food at such time, is good sweet cow's milk with the addition of a little scalding hot water, which may be added after a few days, well-cooked corn or oat meal, the latter being preferable. When seven or eight weeks of age, give them beef or mutton soup with milk and milk; substituting in turn, wholly or in part, scraps from the table as this age is doubled. Meat, bones, bread, vegetables, gravy, etc., form an excellent diet for growing puppies of the age, as well as for adult animals, when given in quantities sufficient to keep them in proper condition. One of the most important matters in the rearing of young animals is that they be kept in proper form, consequently they should be frequently fed, and receive as much food as they will eat cleanly. Feeding is allowed but twice a day they become almost emaciated, and eat so ravenously when supplied as to become "potbellied" and misshapen, and frequently out of health, consequently from that time they are weaned until they are two or three months old, they should be supplied with food at least five times per day, the two extreme meals being given at corresponding early and late hours of the day. After this months thrice daily will be found sufficient.

In regard to the rearing of pups solely upon animal food, we may say that, so far as personal experimental knowledge reveals, it is by no means the proper course to pursue. Youngsters thus fed will, if not overtaken by disease, grow to an unreasonable and undesirable size, and having been habituated to meat only, it will be found difficult to lead them to accept of sufficient vegetable food to keep them in anything like proper condition for work. Besides they are more apt to maul or maul the game they retrieve. All growing pups and adult hunting dogs require more or less meat with their food, but in the case of the former, it is better to feed the animals if it be in the form of broiled mixed with the mush.—*Hallock's Sportsman's Gazetteer.*

**Muzzling Dogs.**—The muzzle is an instrument properly belonging to the Dark Ages, and should be classed with the vise, thumbscrew and rack. Why should it be used? Veterinarians acknowledge that it answers no sanitary purpose, and incalculably injures the animal, preventing free respiration, and denying to him the privilege of drinking at the fountain of the year when water is most sought and needed? For four years the writer has collected statistics of the cases of rabies reported through the papers and medical journals, which show that at least three out of every five cases that occurred during that time occurred in the months of December, January and February, and not a single authentic case has occurred in the months of July and August. Two August, first designated as hydrophobia, but later proved

her hysteria, are reported. September shows three cases of doubtful character, one of which is traceable only to a cut, probably developing tetanus, simulating hydrophobia; of another no definite information could be obtained; and the third had been bitten fifteen months previously. With this result before us, we can but consider the muzzle as a mechanical contrivance desirable for vicious dogs, or useful only to prevent dogs from eating or destroying articles with which they may be placed in contact, and to be used at no other time. It also proves to be an excellent shuttle-cock for the Solons who constitute the law-givers of our cities.—*Hallock's Sportsman's Gazetteer.*

AGE.—To tell the age of a dog approximately, examine the upper front teeth. Until eighteen months old these are rounded on the edge; at the end of two years they begin to square off and gradually wear down and shorten, until, when the animal has entered the sixth year, they are nearly even with the gums. The lower teeth usually wear out earlier. The appearance of the eye is also an indication of age, and all dark-colored dogs show their years by the growth of white hairs about the muzzle.—*Hallock's Sportsman's Gazetteer.*

BREEDING OF DOGS.—The following principles should be observed for the proper breeding and rearing of the canine race:

1. A perfect development and sound vigorous health constitutionally, especially in the generative organs, are conditions of fertility.

2. In the maintenance and improvement of a breed the truth that "*similia similibus generantur*,"—that the reproductive germ will stamp upon the animal developed from it the characters of the parent organism, is the backbone of success.

3. We can, in a great degree, at will, produce variations and improvements in breeds, as by care a mild and salubrious climate, moderate use, education, stimulation, or selection of desirable qualities; by disuse or rejection of undesirable characters and properties; by soliciting the weight of imagination in our favor—as Jacob piously swindled his too confiding father-in-law; by allowing the breeding animals to mix only with those of the stamp desired; by crossing less improved breeds systematically with males of a better race; and by crossing animals faulty or deficient in some particular point with others in which this point is developed in excess.

4. The kenneling of pregnant high-class animals with low bred ones, and the resulting attachments between the two races, are to be especially avoided as occasionally affecting the progeny injuriously; strong impressions from a new or unusual condition of surrounding objects are to be equally guarded against.

5. If a valuable bitch be allowed to breed to an inferior male, she cannot be relied upon to produce pure bred animals for several succeeding pregnancies at least. Through a strong and retained impression; through the absorption into the system of living particles (germinal matter) from the fetus; or through some influence during pregnancy on the ova, then being most actively developed, the good or bad features of the first sire are perpetuated in the progeny of succeeding ones.

6. All breeds have a tendency to "throw back," that is, to produce offspring bearing the marks of their less improved and comparatively valueless ancestors; hence individuals of this kind must be rejected from the best breeds if we would maintain their excellence.

7. Certain bloods and individuals have their characters more fixed, and will transmit and perpetuate them in greater proportion than others with which they may be crossed. If their qualities are desirable, they prove highly valuable in raising other stock of greater excellence; if undesirable, they will depreciate the value of any stock crossed for many generations. That fixedness of type, however, is, above all, a characteristic of those bloods which have been carefully selected and bred up to a certain standard for many generations, so that in the best, longest established, and most esteemed breeds we have a most valuable legacy left us by the successful breeders of the past, with which we may mould our inferior bloods at will.

8. While breeding continuously from the nearest relations tends to a weakened constitution, the aggravation of any taint in the blood, and to sterility, these may be avoided by infusing at intervals fresh blood of the same family, but which has been bred apart from this branch for several generations. Moreover the highest excellence is sometimes attainable only by breeding very closely for a time.

9. Diseased or mutilated animals are generally to be discarded from breeding. Mutilations resulting from disease, disease existing during pregnancy, and disease with a constitutional morbid taint, are, above all, to be dreaded as transmissible.

10. There is some foundation for the opinion that the dog tends to contribute more to the locomotion and external organs, nerve and vigor, and the bitch to the size and internal organs, so that if we cannot obtain the greatest excellence in both, we should at least seek to have each unexceptionable in the parts and qualities attributed to it.

11. Judicious breeding in-and-in, improves the animal in the points desired, only when possessed by both male and female; but the mixing of two utterly distinct races, with the view of uniting the valuable properties of both, is to be condemned.

12. While early maturity may be attained, animals that grow rapidly are less firm in tissue, and break down sooner than those of slow growth; hence, while the breeder may be benefited by pursuing the forcing process, the purchasers, especially of those animals intended for active field work, will be more or less the sufferers. The terms *cultivation* and *improvement*, as used by breeders, too frequently are but imposing synonyms for the artificial induction of disease, premature development, and systematic degeneration.—*Hallock's Sportsman's Gazetteer.*

A DOG'S AFFECTION.—A remarkable illustration of the affection of a greyhound for its master has just occurred at Crews. A few days ago a notorious Crews poacher, named Thomas Blackburn, was sentenced to seven years' penal servitude for nearly killing a policeman near Nantwich. He was the owner of a favorite greyhound, which, in many a midnight poaching raid, proved itself valuable to its owner in the game preserves. Thus a strange but powerful affection subsisted between the man and his dog, and never were they found apart. After Blackburn's imprisonment the actions of the animal became singular. Regularly every day he visited the man's previous haunts, with a wistful look in his brown eyes; and when the shades of evening fell he would lie down under the seat of Blackburn's favorite inn, and there for several hours await the master who never came. The landlord, to his credit, put food before the animal, but laterily it did not seem to eat much. In the afternoon the faithful animal,

like a sentinel on duty, was seen to parade Market street backward and forward, between the corner of Earl street and Victoria street, looking for its master; but he appeared not. Gradually the movements of the hound became more languid, and on Friday night, on Market street, it dropped dead, as one of the crowd said, "of a broken heart at the loss of its master."—*Chester (Eng.) Guardian.*

CANINES MEEK IN SPIRIT.—An Omaha livery-stable keeper owned a fine lot of coach dogs. These dogs are white, with black spots all over them and are noted for their docile, not to say cowardly, dispositions. The dogs belonging to the livery-stable keeper were beset on other occasions by the other dogs in the streets, and, as they were meek in spirit, were as easily overcome as a lot of sheep. The livery-man stood this as long as he could, when, one day he found a large white bull-dog, and it immediately occurred to him what to do. He bought that dog, took him to his stable, and there kept him until he got thoroughly acquainted with the coach dogs. The bull-dog was then sent to the barber's shop, and black spots were neatly painted or dyed all over him, so that he looked like a veritable coach dog, with a somewhat short nose and elongated lower jaw. The next time the carriage was sent out this model coach dog went along, and the street dogs "went for him," thinking they would have their usual sport and victory; but in this they were mistaken; the bull-dog waded in, and the way the hair, guitar-strings and sausage meat flew was a caution. Since that time the coach dogs have been left alone.

—Hartford, Connecticut, is to have a dog show next week.

NAME CLAIMED.—I claim the name of Branch for my red Irish setter dog, whelped Jan. 13, 1877, by Plunkett, out of Stella. E. S. WANNABER.

Holokus, N. J., Sept. 17, 1877.

NAME CLAIMED.—I claim the name of Dike R. for my black, white and tan dog whelp, and the name of Louie R. for my black and white bitch whelp, both out of my blue belton bitch Mell, by Burges' Rob Roy, whelped May 15, 1877. L. F. WHITMAN.

Detroit, Sept. 22, 1877.

NAME CLAIMED.—I claim the name of Friend II. for an Irish Gordon pup, whelped April 20. Color, deep red with white markings; out of Geo. E. Poyner's red Irish Gordon, Fan, by the champion, Rufus. Also the name of Bob for red Irish setter pup whelped June 4. Color, "blood red," out of Matthew Von Culin's Moll II, by the Centennial champion, Rufus II. F. A. TREMAINE.

Pittsburg, Pa., Sept. 19, 1877.

—The brace of dogs advertised for sale in this issue by Mr. Humphreys are about four or five years old, and have been hunted in various sections from Maine to Florida, through Texas and Minnesota. They are valuable animals.—[Adv.]

## Game Bag and Gun.

### GAME IN SEASON FOR SEPTEMBER.

|   |   |
|---|---|
| Moose, <i>Alces malchis</i> .                                 | Black-bellied plover, or ox-eye, <i>Squatarola helvetica</i> .  |
| Caribou, <i>Tarandus rangifer</i> .                           | Ring plover, <i>Spizella semipalmatus</i> .                     |
| Elk or wapiti, <i>Cervus canadensis</i> .                     | Silt, or long-shanks, <i>Himantopus nigricollis</i> .           |
| Red or Va. deer, <i>O. virginianus</i> .                      | Woodcock, <i>Philohela minor</i> .                              |
| Squirrels, red, black and gray.                               | Red-breasted snipe or dowitcher, <i>Macrorhamphus griseus</i> . |
| Hares, brown and gray.  | Red-backed sandpiper, or ox-bird, <i>Trypana americana</i> .    |
| Red or rice bird, <i>Dolichonyx oryzivorus</i> .              | Great marbled godwit or marlin, <i>Limosa fedoa</i> .           |
| Wild turkey, <i>Meleagris gallopavo</i> .                     | Willet, <i>Totanus semipalmatus</i> .                           |
| Pinnated grouse or prairie chicken, <i>Cupidonia cupida</i> . | Tattler, <i>Totanus melanoleucus</i> .                          |
| Ruffed grouse or pheasant, <i>Bonasa umbellus</i> .           | Yellow-shanks, <i>Totanus flavipes</i> .                        |
| Quail or partridge, <i>Ortyx virginianus</i> .                |   |

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limaculæ* or Shore Birds.

The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

| States    | Pinnated Grouse. | Ruffed Grouse.  | Quail.          | Woodcock.        |
|-----------|------------------|-----------------|-----------------|------------------|
| Ill.....  | Sep 1 to Jan 15  | Oct 1 to Feb 1  | Nov 1 to Feb 1  | Sep 1 to Jan 15  |
| Ind.....  | Sep 1 to Feb 1   | Nov 1 to Jan 1  | Nov 1 to Jan 1  | July 1 to Jan 1  |
| Iowa..... | Aug 15 to Dec 1  | Sep 1 to Dec 1  | Oct 1 to Jan 1  | July 1 to Jan 1  |
| Minn..... | Aug 14 to Oct 1  | Sep 1 to Dec 1  | Sep 1 to Dec 1  | July 3 to Nov 1  |
| Wis.....  | Aug 15 to Nov 15 | Sep 15 to Jan 1 | Sep 15 to Jan 1 | July 4 to Nov 15 |
| Neb.....  | No Shooting      | No Shooting     | No Shooting     | No Restrictions. |
| Kans..... | Aug 1 to Feb 1   | "               | Oct 1 to Jan 1  | "                |

### LAKE KOSHKONONG.

I HAVE seen Lake Koshkonong, Wisconsin, mentioned several times in your columns as a famous ducking point, but I was quite ignorant that it had any other attraction for sportsmen until within a few days, when I was fortunate enough to visit it. I had been spending some time at Geneva Lake, Wis., where I went expecting to find good fishing, but was doomed to disappointment. While there I chanced to meet Mr. Richard Valentine, the Secretary of the Black Hawk Club of Lake Koshkonong, and upon his invitation I visited the club house. We landed from the cars at Fort Atkinson, about ten o'clock on a bright moonlight night in August, where we found a carriage awaiting us, and after a drive of some four miles down the river, passing through beautiful groves and across extensive meadows we arrived at the club house and were soon snugly in bed.

Next morning I was out early, and must say that I was pleased with my surroundings. The house, a two story Gothic structure, with ample room for forty guests, stands in a beautiful grove of elms and maples close to the bank of Rock River, and has an unobstructed view from its piazza for three

miles. The river flows into Lake Koshkonong about a quarter of a mile below. The land on each side at the mouth is heavily timbered and forms two long points which jut out into the lake and form two immense bays.

One of these bays is only a few rods back of the club house and is being connected with the river by a ditch navigable by small boats. I just had time to make these few observations when we were called to breakfast. Here we were miles from any house, and the steward not expecting company; but did we fare poorly? Judge for yourself—broiled prairie chicken and toast, baked potatoes, hot rolls, coffee and plenty of rich milk. Markres, the steward, apologized for the "meagre" fare, and said had he known of our coming he would have killed some woodcock for us. After breakfast we took a sail across the lake and then I saw what made it such a famous resort for carvas-back duck. It—the lake—is some seven miles long by two and two and a half wide, and nowhere, I judge, over four or five feet deep. The upper half is one vast bed of wild celery, and the lower is fast filling up with it. Markres says the canvas-backs come in greater numbers each year. All other varieties of wild fowl also frequent the lake, but the canvas-back is the one most sought.

Up to 1876, sneak boats were very extensively used in pursuit of the birds, bags of over 100 being frequently made. This tended to drive them away, and it was prohibited by a special law during the winter of '75 and '76, since which time shooting from blinds over decoys has been very fine. I saw scores of from 10 to 75 canvas-backs made by different parties in one day.

We lunched at a house across the Lake on yellow biscuit, corn beef so salt and hard that our dog refused it, and such tea! What a contrast to our breakfast. We left as soon as possible, and put back to the Club House. When Markres and Valentine took their guns and went after woodcock, returning in a half an hour with three brace of as fine birds as one could wish for, all shot within sight of the house on ground where Markres says he has killed a hundred since July 4, and will kill as many more before the season is gone. He tells me that W. H. Van Giesen, formerly of Whitewater, Wis., killed 60 birds on these grounds on the afternoon of July 4, 1871. Then he told me of bagging hundreds of snipe, prairie chickens, quail and ruffed grouse, and during the afternoons of two days catching, 64 black bass that averaged three pounds each; and again of 28 bass he and Valentine caught one morning before breakfast, in the river almost in front of the house.

These Black Hawk Club fellows have been enjoying this for years, but hereafter I propose to have my share also.

The next day was Sunday, and we spent it mostly in the shade of the trees, dining upon broiled woodcock.

Monday morning I returned to the city much pleased with my trip.

The Black Hawk Club is limited to thirty-six members, but at present it has but 31, five of its shares being still for sale to the right kind of gentlemen. The shares are only \$36.00 each, with an annual assessment of \$5 to keep the house and grounds in repair. The officers are, Geo. W. Estorly, President; C. E. Jenkins, Vice President; C. S. Jackman, Treasurer and Richard Valentine, Secretary. The Secretary's address is Englewood, Ills. Prominent in the list of members, I noticed the names of Hon. Thos. A. Logan (Glean), of Cincinnati, and Col. L. A. Harris, Prest. of the Cuyvier Club of Cincinnati, and N. S. Choteau of St. Louis.

The club controls very extensive grounds, keeping off all pot-hunters and campers. Any gentleman who loves shooting of all kinds could not do better than become a member.

H. A. S.

EQUITY TO RECAPPER.—"Bonnie Blue Flag," in the FOREST AND STREAM of June 7, quoted "Recapper" as holding that "snap-action guns were an abomination," and to this I took exception, and gave some of the reasons why I considered the top snap-action as made by Messrs. Purdy, Scott & Greener, superior to all others. "Recapper," in the issue of Aug. 10, says B. B. P., misquoted him, that he had always admitted the merits of the snap-action. If B. B. F. misquoted him, why did he not correct the matter, and not leave your readers to believe that he held all snap-actions "an abomination."

I dislike newspaper controversy as much as "Recapper" does, but I cannot endorse all his theories. He says in an article published Sept. 8. "There is not in the world a gun-maker who can build to sell here at a profit a thoroughly, sound and reliable double barreled breech-loading shot gun, no matter how plain the finish, for less than \$100 currency. How in the world any one who can read and inform themselves about such matters can think differently, passes my humble comprehension." In FOREST AND STREAM of Sept. 13, he says, "It gives me pleasure always to recommend the work of the Toleys." If it is impossible to sell a reliable gun for less than \$100 currency, how can "Recapper" always recommend the work of the Toleys, when those gentlemen for years have been selling their "Pioneer" gun in New York at \$65, gold. Either the Toleys have been selling guns at a loss, or "Recapper's" theories are incorrect. Now I own one of Toleys' "Challenge" guns, and it is a splendid hard shooter, but I cannot agree with "Recapper," that "The Toleys are the only reliable makers in Birmingham." I will challenge "Recapper," or any other champion of the Dougall gun to shoot against my 12 bore, 8 lb. Greener, with a Dougall of same bore and weight. It is true, Greener makes guns for the "trade," which "Recapper" says the Toleys absolutely refuse to do, and that that fact should go far toward recommending their guns to sportsmen. But what would "Recapper" have that large class of sportsmen to do, who cannot afford to pay \$100 or \$150 for a gun made to their especial order. Is it not folly to talk in that way. Cannot guns for the trade be made as reliable as guns made to order? Every sportsman in the United States should thank Messrs. Remington & Parker, on this side, and Messrs. Scott & Greener at Birmingham, for their efforts and success in producing a reliable gun that can be had at from \$50 to \$75. I remember a double-barreled muzzle-loader that I used twenty years ago with success, that cost only \$18, and is as good to-day as ever. "Recapper" appears to be writing in the interest of Dougall and his Lock-fast, (with now and then a second-hand compliment to Tolley), which he has a perfect right to do, if he chooses; but he has no right in my judgment to use every opportunity to discriminate so unjustly against American guns, and those makers of Birmingham, who have done so much for our sportsmen in the way of cheap and reliable guns. No, Mr. "Recapper," if you want to assist Messrs. Dougall and Tolley, "write up" their guns all you choose, but don't try to build them up on the ruins of others. There are as good guns sold to-day by Messrs. Remington, Parker, Scott, Greener and Tolley, at from \$65

to \$75, as any sportsmen need use. I prefer the finer finished guns of Tolley and Greener because I have more pleasure in their use, and not because they any more reliable. *Equerry.*  
Pittsburg, Pa., Sept. 16, 1877.

**A "WAD BOARD."**—There appeared in your columns some time since a description of a loading block with wad board attached. I made such a one about five years ago and found it very convenient, but now have one still more convenient, and at the same time thinner and lighter. It consists of a separate wad board which is placed on the shells after they are inserted in the block, which is simply an ordinary loading block about one inch thick, with a hinged bottom one-half inch, making the entire thickness about two and one-half inches.

The objection to the old block is that it must be made about four inches thick to take in the longest shell, and when shorter shells are used there will be a gap between the shoulder and the shell; while with the separate wad board, whatever the length of the shell, the shoulder rests directly upon it. Such a wad board may be made for any loading block, provided the holes are far enough apart (about one-fourth inch) to admit of the necessary flaring on the upper side. For boring I use one of Clark's expansive bits, which, by the way, is equal to a whole set of augur bits. After having marked the holes so that they shall correspond exactly with those in the loading block, the bit is set to bore a hole the size of the outside of the shell, and all the holes are bored about three-eighths of an inch deep to the shoulder. The bit is then set to bore the exact size of the wad, and the holes are continued through the board. They may then be flared with a fluted reamer. The holes are flared underneath, so that the wad board may settle at once on the shells without making it necessary to feel around to get it in the proper position. *CUVIER.*

**CONNECTICUT—Higganum, Aug. 24.**—Rail shooting on the Connecticut River is good this season. Two gentlemen bagged 50 one day last week, in about an hour and a half shooting, and again a day or two later they scored 45, which is good considering the continual warfare made upon these birds here. The birds were found some six miles down the river, where there are large fields of wild oats, which furnish splendid feeding grounds for rail, and also natural haunts for duck; but being easy of access, so much shooting is done there that ducking is very poor. Large bags of rail have been made all along down the river from here to Saybrook, at its mouth. There are about the usual number of quail. Expect to have some sport the two first weeks in October, but it won't last long, as there will probably be ten guns to one bird. *C. O. G.*

**Hartford, Sept. 24.**—R. L. Hungerford shot eighty-seven rail during two days' sport at Chester, recently.

**NEW YORK—Elizabethtown, Sept. 16.**—Deer are unusually plenty this season; they are feeding on my early sown rye every night. Partridges are more plenty than usual, though in the thicket as yet, on account of dry weather. Pigeons are around the grain fields in great numbers. *BRADLEY.*

**PENNSYLVANIA—Greenville, Sept. 20.**—Pheasants are reported to be very plenty in this section. Squirrels are nowhere to be found in this locality. There are reports to the effect that quail are quite plenty. The sportsmen at their last regular meeting elected attorney for the club A. P. Henlin; Ex-President S. S. Hewitt and M. Hargen Brooks, Sec., delegates to the State Association for the Protection of Game and Fish, which is to be held at Pittsburg, Oct. 9, 1877.

—The season for deer opens Oct. 1, and there is promise of very fair sport throughout Clearfield county and those adjoining.

**KINSEY'S ASHLEY HOUSE—Barnegat Inlet, N. J., Sept. 21.**—Bay birds not plenty, although Oscar B. Smith and Friend, of N. Y., have just shown a bag of 40 odd that they scraped together on North Beach. Black ducks increasing. *B.*

**SOUTH CAROLINA—CHARLESTON'S NOVEL STAG HUNT.**—Some Charleston sportsmen recently conceived the idea of getting up a stag hunt on the Washington race course, near that city. The project was received with enthusiasm by sportsmen throughout the county, and the affair as described in the *Charleston News and Courier* was certainly a brilliant affair. Choice dogs from choice packs were selected and entered for the sport, and excitement ran high as the day drew near for the test. Planters left their crops and came from fifty miles around in buggies, on horseback, muleback, and, in fact, as best they could. Sportsmen came up in style, looking wise and exchanging dog talk as they grouped around the dogs and passed upon their ancestry, their bottom, their speed, etc. The chase was to begin at 4 p. m., and by 8 o'clock the ground was thronged with horses and vehicles of every description. A grand pack of thirty-two dogs was entered, elaborate rules drawn up, judges and umpire selected, the stag was turned loose, and the four regular whippers-in rode out into the track and sounded the signal horns. The dogs grew wild at the welcome sound, and the crowd fairly boiled over with excitement and began climbing over each other in their wild effort to get a good place. For fully twenty minutes dogs and riders scoured the course without jumping the game, and the crowd waited impatiently, looking on at nothing. After a great many false alarms, the musical baying of the pack and the excited riding of the riders proclaimed the fact the trail was growing warm and that the fun was not far off, when, to the dismay of all, it was discovered that the deer could not be persuaded to look upon the dogs with other than friendly eyes—in other words, he wouldn't run at all. When first jumped he ran about twenty steps, and was then pulled down by Mr. Drubley's dog Ball. The dogs being whipped off the noble stag ran a few feet and tried to climb a fence. Finding that required too much exertion, he laid over on his back after the style of a naughty poodle and held up its legs supplicatingly. Every persuasion imaginable was used, but the stag wouldn't run, and was finally ignominiously dragged back to his cage by the hind legs by two men. This operation furnished the greater part of the crowd with their first sight of the deer, and when the animal was caged they crowded round and feasted their eyes upon him as if they were looking at an anthropophagus.

**TENNESSEE.**—According to a correspondent of the *Nashville Rural Sun*, squirrels have become a pest in Sullivan county, and the farmers are compelled to keep up a continuous fusillade against the invaders of their corn fields.

**LOUISIANA.**—Reports from the upper river parishes in Louisiana are to the effect that wild game, such as deer, bears, turkeys and a smart sprinkling of panthers, is more abundant than for many years. There is a good outlook for sportsmen all over the southern Mississippi Valley.

**TEXAS—Austin, Sept. 13.**—Our shooting season is close at hand, and some are getting their hands in on the plover, which are very numerous, but so loaded down with oil as hardly to be eatable. *J. B.*

**WILD RICE.**—In response to numerous queries regarding wild rice, we publish the following:

**OHIO—Toledo—Mud Hen, Cedar Point, Sept. 20.**—There is no wild rice in this market, and I am unable to give you the price per bushel. The wild rice crop in this region is pretty much harvested by wild fowl, and the only place where it is gathered in any considerable quantity is at the head of Lake Superior, where bands of the Chippewa tribe of Indians collect it for their winter's food. I have written to a friend at Sault Ste Marie for information, which, when obtained, I will forward to you. The Mud Hen is now in commission, and will be happy to entertain you or your friends of the F. & S. and R. & G. at any time. Very truly,

EMERY D. POTTER.

**AN OLD GUN.**—While engaged in logging near Schena, Mich., Mr. Chas. Hastings discovered at the side of a large ash stump a hollow piece of iron, the end of which had been exposed about two inches by the burning of the leaves and rubbish around the stump. Digging down by the side of the stump he found it to be the barrel of a gun firmly imbedded in the roots of the stump, which had grown around it. In getting it out the barrel was broken near the centre, where it had become very much rusted. It is about two feet longer than the modern gun, is "eight square" at the breech, large, smooth bore, and resembles an old-fashioned French flint-lock fowling piece. Neither the lock nor any traces of the stock were found. Occupying a horizontal position, about sixteen inches below the surface of the ground, and almost directly through the centre of the tree, with ends protruding on either side, it is evident that it must have been dropped there, either before the tree took root or while it was very small, as it was within an inch and half of its heart, and the growth of the tree shows a century and a half since it began encircling the gun. —Portland (Mich.) Observer.

**ILLINOIS—Lebanon, Sept. 21.**—Quail abundant this fall; found in coveys containing from 25 to 30 birds. The law of this State now prohibits quail shooting till Nov. 1st. Last spring and summer were favorable for prairie chickens here, and several fine broods are reported in the north-eastern portion of this county. We have no ruffed grouse or wild turkeys to afford any sport. Wood ducks are common, and mallards are just beginning to come in. *W. L. J.*

**DUCK SHOOTING ON ST. CLAIR FLATS.**—Speaking of the action of the Canadian Government in leasing the shooting on the St. Clair Flats, and the southern end of Walpole Island, to an association known as the St. Clair Flats Shooting Company, a year since, the *Sarnia Observer* explains as follows:

We have reason to believe that the whole action of the Government in relation to this matter has been taken in behalf of the Indians, and for the purpose of securing to them some compensation for the game which the locality produces. Previously, the shooting in question was trespassed upon with impunity by people from all quarters, the United States as well as elsewhere, who plundered it of the game without respect to the laws passed for its preservation. By the lease a right was given to the company to occupy the territory, and charge a fee not exceeding \$10 a week from all parties wishing to shoot thereon, on payment of which for one or more weeks, permits were given, which gave those holding them the right to shoot for the time therein stated. So far as the Government is concerned, they derive no revenue whatever from the lease. The Indians get the whole amount. The company, however, have found it somewhat difficult to prevent trespassing on their privilege; and some weeks ago they made arrangements with detective Wm. Smith, well known in the country, to look after their interests, giving him full power to take all necessary steps to prevent trespassing. This he has been able to do without any difficulty, parties who came to the place disposed to dispute the claim of the lessees having in all cases given way after a little calm explanation and remonstrance on the part of Smith, and either accepting permits or leaving the ground without any difficulty occurring. The practice followed by the company is to exact this rate of fee from all parties wishing to obtain shooting privileges. If at the close of the season the amount realized from the sale of permits is more than sufficient to pay the rent and other legitimate expenses the surplus is divided amongst those who paid it; if it is not sufficient for these purposes, then they must make up the deficiency.

**INDIANA—Sept. 22.**—Just at this time Harrison County and some portions of adjoining counties are being overrun with squirrels. They are daily crossing the Ohio from Kentucky, and seem to be extending themselves across the country in a northward direction. There was a similar but greater migration in 1838.

**KANSAS—Atchison, Sept. 19.**—Chicken shooting has been very poor in this part of Kansas thus far during the season, owing to the continued rains in the early spring and the late burning of the grass; all of the first sittings of eggs were destroyed. Our club has just returned from its annual hunt of a week, and found but very few; 500 chickens was the sum total for a party of ten. Quail are very plenty; as they nest in hedge rows and brush, the fires did not destroy the eggs, and as but very few were killed last winter, they are therefore unusually plenty, and will afford fine shooting as soon as the season opens—Oct. 1st. There is also a very fine prospect for ducks and snipe; the latter especially, and 100 per day is not unusual for a good shot. *H. K. B.*

—Capt. Ducaigne remarks in a late letter that near his home-stead and shooting box in Nobles County, Minn., two neighbors lately got one shot each at a fine elk, but failed to bring it down. It is seldom that elk are now seen on the plateaus of that elevated and beautiful region.

**CALIFORNIA—Santa Barbara, Sept. 26.**—Deer shooting good all about here.

**Humboldt Valley.**—Deer, geese, ducks and the several varieties of water fowl are in the greatest abundance.

**SPORT IN DAKOTA.**—In a former communication I asserted that "our prairies teem with chickens, plover and curlew, etc." I told only the truth, as many a good bag brought home since the season opened abundantly proves. The new law is an ad-

mirable one, and has already borne good fruits in increasing the game. Captain L. and myself, with "Sport," rode out over the prairie a few days since, and picked up about twenty chickens in driving about three miles, and then took a turn about an old lake bed or prairie pond nearly overgrown with high grass. Not a duck could be seen, but upon discharging a gun out from the grass arose probably fifty mallard. We left our wagon, the Captain taking one side, I the other, and in a few minutes dropped five or six splendid mallard ducks about two-thirds grown, fat as butter. Last Thursday we started for a day's hunt with two dogs. We killed nearly forty chickens and a jack rabbit, in spite of the fact that most of the coveys were on stubble, and wild as lawks. They seldom lay to the dogs, and most were killed outside of forty yards, which, considering that the wind blew a gale, I consider a fine bag. Persons need not expect to kick the chickens out of the grass at this season, but will have to shoot at long range and hunt if they expect success to crown their efforts. Early in the season, say the middle of Aug., while the birds are young, after a covey has been once flushed, if you can find them with your dog a second time, nearly the whole covey may be bagged, as they will crouch in the grass, and not stir until close upon them. I cannot understand why it is that a dog will run over a prairie chicken at times and not seem to get the least particle of scent from the bird. In fact I saw both of our dogs run right upon a whole covey and flush them up, and drop as though perfectly astonished. Again, I have flushed up a bird where the dogs have ranged backward and forward, apparently not getting any scent. I almost concluded (as some of your correspondents have held) that prairie chickens withhold their scent. Our dogs are both fine ones, and I cannot think them altogether at fault. Can you explain the reason? Ducks are becoming very plentiful although their autumnal flight from the north has not yet commenced, but when the season fully opens look out for feathers.

The FOREST AND STREAM comes a welcome visitor into this strange but most beautiful land. Long may it tarry.

J. E. WEST.

Yankton, Da., Sept. 17, 1877.

**SPORT ON VAN COUVEE'S ISLAND.**—A correspondent sends us the following extract from a private letter of Mr. J. Wilford Webb, who has been on a hunting expedition in the Northwest:

I have just come out of the bush. Part of the time I was by myself, later Captain M. joined me. We each had our Indian, and hunted separately, but camped together. I had Edwards' old guide, the Indian Sku-Jack. I killed a splendid bear, one of the largest that has been killed here for many years. For a whole week I carried my rifle under a broiling sun without getting a single shot. Afterward we got into a better country, and killed several deer; the bucks large, but does small. I never worked so hard in my life, up every morning at 8:30 A. M. hunting through the most infernal country you can imagine, till mid-day, then breakfast and sleep near sundown, when we hunted for a couple of hours. The walking is awful—all mountains, valleys one mass of underbrush so thick that at times you must cut your way through; fallen trees and half-burned timber abound. My first shot at the bear was one hundred yards; could not get a clear shot, but took my chance, struck him above the heart through the lungs. He jumped about six feet in the air and made right for me. My second shot broke his back, but again he came on. I didn't know how small and how low down a bear's heart lies, so again shot him in the lungs. Sku-Jack then slipped the dog which partly took up his attention, and turning his head round, I got a shot just behind his ear which felled him ten paces from my feet. He looked very savage, his little eyes twinkling like two balls of fire, blood pouring from his nose, while his growling as he advanced was well calculated to distract my aim. My rifle has terrible penetration, every ball going through him smashing all before it. You would hardly believe what tenacity of life they have; any one shot would have killed him, but he was rather too near to be agreeable company. I have killed any quantity of blue grouse and other small game. Friday I go to Mainland, 400 miles from here, and expect splendid sport on deer and chicken.

Esquimaux, Van Couvee's Island, Aug. 26, 1877.

—Two miners, J. H. Ritchie and W. F. Zambro, while crossing one of the California Water Company's flumes on the new South Fork ditch, two weeks ago, saw an enormous bear in an angle of the flume, walking on the foot board and coming toward them. Zambro had a two-barreled shot gun, loaded with buckshot, and two dogs were behind them. A fight was inevitable. The bear came on his hind legs toward Ritchie, and when the man was almost within the brute's hug Zambro fired and knocked the animal off the flume. Ritchie jumped off and, picking up a piece of scantling, began to pound his bearship on the head. A back blow of the scantling brained one of the dogs, which had come to Ritchie's aid. Then the bear, only slightly wounded, gave Ritchie a rough and tumble fight, although harassed by the remaining dog. Meanwhile Zambro had managed to climb into a tree, carrying his gun. He fired the remaining barrel, missed the bear, narrowly missed Ritchie, and killed the dog. Seeing his critical situation, Ritchie got out of the bear's embraces, and by a desperate effort pushed the animal over a bluff forty feet high. The fall killed the animal. When dressed it weighed 784 pounds. Through the right ear was a bullet hole made by some hunter. Ritchie lost coat, vest, pantaloons, shirt, and most of his hair.—*Ex.*

## PIGEON MATCHES.

**CONNECTICUT.**—Somers.—Bashni H. Pease, recently of Somers, and a brother of Dr. L. H. Pease, of Thompsonville, has been doing some tail shooting out West. At a shoot at Atchison, Kansas, he killed every one of a string of 24 birds at 26 and 31 yards score. Another man from St. Joseph, Mo., made the same score.

**OHIO—East Liverpool.**—A glass ball match took place here Sept. 17 between S. J. McCartney and Wm. Blover for the championship of Columbiana Co., at 18 yards rise, fifty balls. Won by a score of 48 to 38, by Mr. S. J. McCartney.

**BOGARDUS IN CINCINNATI—Cincinnati, Sept. 21.**—Capt. Bogardus gave an exhibition at the Highland House, City, this P. M., at 2 o'clock, in which amateurs participated. Tonight, 10 P. M., he has just finished a shoot, in which he attempted to beat his best time—that at Lincoln, Ill., last July—at 1,000 glass balls. Baum, timekeeper, made him break 1,000 balls in 77m. 25s., but by the ordinary watch of Maj. Olm-

berlain, of the *Enquirer*, the time was 74 minutes. This was his time to-night:

|                    | min.  |                    | min.  |
|--------------------|-------|--------------------|-------|
| First hundred..... | 13    | Sixth hundred..... | 67    |
| Second ".....      | 12    | Seventh ".....     | 64    |
| Third ".....       | 6     | Eighth ".....      | 6     |
| Fourth ".....      | 7 1/2 | Nine ".....        | 7 1/2 |
| Fifth ".....       | 7     | Tenth ".....       | 5 1-6 |

Powder used was Dittmar, with a slight admixture of black. Gsight not quite as good as it should have been, and traps did not work quite satisfactorily. Balls sprung, 1029; missed, 19; cartridges missed fire, 2; and at one declined to shoot. After burying his 457,071 pellets in the pine under the canvas screen, he answered 1,471 questions propounded by the "gawks" from the provinces, cleaned up, and then packed up. He goes to-morrow to Hamilton, Ohio, thence to Galesburg, Ills. Says he has a match on the carpet to shoot 5,000 balls in New York, in December.

KENTUCKY.—*Louisville, Sept. 15.*—The prosperous and growing Louisville Gun Club held a meeting last evening, at which the following officers were elected: President, J. V. Cowling; Vice-President, J. Griffith; Secretary, W. H. Stanley; Treasurer, E. Y. Peak. Board of Directors—E. Y. Peak, John E. Green, John M. Barbour, W. J. Watkins, L. W. Novell.

TEXAS.—*Waco.*—The Waco Gun Club shot their fourth match on the 15th. Terms; 60 double glass balls, Bogardus rules. C. C. McCulloch, 16; W. E. Cresap, 15; J. Thompson, 15; W. T. Lane, 13; E. Early, 9; G. B. Gerald, 8; C. M. Downs, 7; S. A. Garland, 3; E. McCall, 0. Waco.

## TO SPORTSMEN AND DEALERS IN SHOT.

At the Convention held at Batavia, N. Y., June, 1873, by the "N. Y. State Sportsmen's Association," a standard of sizes (diameters) for shot was adopted, to be known as the "American Standard," commencing with No. 12, to measure 5-100 of an inch, and each size increasing 1-100 of an inch to the largest. The object of their action was to induce all manufacturers to conform to that standard, so that a certain number should mean the same size throughout the country. There was no particular brand of shot adopted, as by so doing the very object in view would have been defeated. Without experimental test, it was assumed that the several diameters of shot would require a certain number of pellets of each diameter to make an ounce avoirdupois. Upon a careful calculation by a competent mathematician, we found that these assumed numbers were incorrect, and that, if we adopted the diameters we could not adopt the number of pellets. The scale of diameters, being absolute, governed absolutely the number of pellets to the ounce, and as the diameters increased regularly and uniformly, the number of pellets to the ounce must of necessity decrease in an equally regular and uniform ratio.

The following table will show the difference between the actual number of spherical shot of given diameters required in each ounce, as compared with the assumed number, and that the number of pellets in an ounce of such shot cannot bear the proportion there assumed, and still claimed by some parties.

| Increased number of Pellets on each size. | Assumed number of Pellets in an ounce. | Correct number of Pellets in an ounce. | Standard diameters. | Number. |
|---|--|--|---------------------|---------|
| 706                                       | 1178                                   | 2226                                   | 5                   | 12      |
| 706                                       | 982                                    | 1346                                   | 6                   | 11      |
| 706                                       | 820                                    | 1028                                   | 7                   | 10      |
| 706                                       | 680                                    | 828                                    | 8                   | 9       |
| 706                                       | 560                                    | 680                                    | 9                   | 8       |
| 706                                       | 460                                    | 560                                    | 10                  | 7       |
| 706                                       | 380                                    | 460                                    | 11                  | 6       |

| 706                                       | 20                                     | 30                                     | 22                  | B       |
| 706                                       | 15                                     | 20                                     | 23                  | B       |
| 706                                       | 10                                     | 15                                     | 24                  | B       |
| 706                                       | 7                                      | 10                                     | 25                  | B       |
| 706                                       | 5                                      | 7                                      | 26                  | B       |
| 706                                       | 4                                      | 5                                      | 27                  | B       |
| 706                                       | 3                                      | 4                                      | 28                  | B       |
| 706                                       | 2                                      | 3                                      | 29                  | B       |
| 706                                       | 1                                      | 2                                      | 30                  | B       |

It will be seen by the above comparison that this assumed number of pellets to the ounce, shows an irregular increase, and proves at once that it is incorrect. The increased number of pellets from BBB to BB, being less than from T to BBB. The difference of increase from No. 4 to No. 5 is very slight, whilst from No. 6 to No. 8 is more than six times as great. From No. 9 to No. 12 is again less. No. 11, which should properly show a very much greater increase than any of the larger sizes, shows less than either No. 9 or No. 10. No. 12 then suddenly jumps ahead 796 pellets. It may be well for Sportsmen to remember that the mere name "American Standard" printed on shot bags will not change the size of the shot. Perfection in this respect can be known only when by actual measurement the diameter is shown to correspond with the proper number of pellets in an ounce.

Many inquiries from Sportsmen, as well as misrepresentations made by some parties who do not make shot up to the standard, induce us to offer this explanation. When the "American Standard" was agreed upon, we at once adapted our machinery to its manufacture. The number of pellets to the ounce, which we publish, is calculated to mathematical accuracy and proved by actual test. It represents perfection. If all the pellets in all ounces were the exact size and perfect, they would count what is claimed. As it is difficult to reach perfection, we get as close to it as possible. Our shot will be found more uniform, less mixed in the bag, more perfect in roundness, better finished, and cleaner than any shot prepared with care.

Our attention has been re-called to some assertions made some years ago by interested and unscrupulous parties, and now re-published in various ways with the evident design to injure the sale of our shot, pretending that the term, "Patent Finish," which we have used for twenty years as a trade mark to designate its character, is nothing but an extra quantity of plumbago, beyond what is ordinarily used to polish shot, and that such surplus "leaves the gun," and is very disadvantageous to the user. We hardly know which to admire more, the disinterestedness or the wisdom of the author of this attempt to impose upon Sportsmen; disinterestedness in the design to injure a competitor under the guise of protecting the interests of the buyers, or wisdom in that they did not know that the chief object in using plumbago in polish-

ing shot is to prevent the leading of the gun! and that if it were possible to attach an appreciable surplus quantity to the surface of the shot, it would be the best possible security against such leading.

If the allegation were true, our shot would be lighter than other shot carrying less plumbago, by the great difference between the specific gravity of plumbago and of lead. Its falsehood is proved by the fact that a given measure of our shot has been found to be, and probably is, heavier than an equal measure of other shot of the same number and size. We know that intelligent and well-informed Sportsmen will laugh, as they have laughed, at the subject of this paragraph, but we are assured by some buyers that this notice is necessary to protect our business from damage.

TATHAM & BROTHERS.

NEW YORK, September, 21, 1877.

## Answers to Correspondents.

### No Notice Taken of Anonymous Communications.

J. McA., Philadelphia.—Can tell nothing from your description.

H. G., Third Ave., City.—Quail shooting will open on Long Island November 1.

F. C. P., Lowell, Mass.—Ans. You had best advertise in our columns, and will thus be accommodated. We know of nothing of the kind at present.

J. W. F., Cockeysville, Md.—You will find the desired information in "Hallow's Gazetteer." We have no knowledge of the parties you ask about.

A. B. C., Boston.—What rifles did N. Washburn use in the "Spirit of the Times" match and Mr. Selph in the "Wimbledon Cup" match? Ans. Remington rifles.

C. H. M., Rockville, Conn.—When does the woodcock and partridge season open in New Hampshire? Ans. Woodcock, 4th of July; Ruffed Grouse, 1st of September.

BIRD SNOT, Spotsylvania Court House, Va.—You probably sent the larvae of some insect fly, they had made their way out of the envelope before receiving.

F. S. C., Cleveland, O.—Middle of October I make a business trip to Clark Co., Wisconsin, and propose to take a few days' hunting. Would you take rifle or shot-gun? Can deer be shot in Oct. in Wisconsin? Ans. Use shot-gun. Yes.

S. B., Fall River, Mass.—Please inform me where to get wild rice for sowing in a pond somewhat frequented by ducks. Also best time and manner for sowing the same. Ans. See game bag and gun column.

J. M. C., Waterbury, Conn.—Does it injure a fine gun to use chilled shot in it? In target shooting is any position standing without artificial rest, off hand? Ans. 1st, No. 2d, Yes.

H. W., Bath, N. Y.—I have a "Thomson" duck shooting coat which has faded and now is a light yellowish brown, too light for shooting, as the birds can see me too far. How can I restore its color? Ans. Send it to any good dyer. It will take several days, however.

C. M. S., Lavindale.—Do the N. Y. State Guards use a Remington military rifle of 43 or 50 cal., and are the military arms used at 500 yards ordinary or special military arms? Ans. N. Y. State model is 50 cal. used at all ranges over which military practice is carried on.

A. H., Detroit.—1. What shaded front-sights were used by the members of the American and British teams in last week's match 72. Will your long-range rifle book have this match added to it shortly? Ans. 1. Open-head sights were generally used. 2. Yes.

Mosquito, City.—I am in the habit of shooting near Barnegat every fall, but have found the mosquitoes so bad that they have driven me away. Can't you recommend something that will prevent their attacks? Ans. Equal parts of lard and oil of tar is efficacious. Also pennyroyal and olive oil.

R. H. L., Raleigh, N. C.—Will you give me your opinion of the new breech-loading shot-gun recently brought out by William Read & Sons, 13 Faneuil Hall Square, Boston, which they sell for \$50? Ans. They are one of the oldest and best houses in the U. S. Write to them and you will be fully satisfied.

VIRGINIA, Boston.—Having seen good reports of gunning in Virginia, I desire your advice. 1st. How does Sussex county compare with the other counties for game? 2d. What size shot is used for wild turkey? Ans. 1. Good; go to Littleton, Md. No. 3. You want a copy of "Hallow's Gazetteer." It answers all such questions.

R. K. D., Rochester, N. Y.—Where can I go during the month of October with my family and find good shooting, either quail or duck, or both, at a distance not exceeding three hundred miles from this city; must have good accommodations? Ans. Star Island House, St. Clair Flats, Mich. Quail near Algonac.

A BOY READER.—The President usually selects the sons of officers of the army or navy for the cadetships to West Point which he fills. The candidate must be not over twenty years of age. A boy without influence cannot obtain the appointment. You had better apply to your Congressman, who appoints after a competitive examination.

WACO, Waco, Texas.—According to Bogardus Glass Ball rules does it require two judges and one referee or is it a referee and no judges, or in other words, does it require more than one man to decide if the ball is broken or missed? Ans. Two judges and one referee is common, but there is no rule to compel this number. Many matches are decided by one referee alone.

D. M. M., St. Denis, Pa.—A setter of mine who has had, for a long time, a canker in his ear, has suffered lately from a swelling on the flap of the same ear. It is on the inner side of the flap, and when opened, discharged a large amount of thin blood; it has since swollen again. What is the remedy? Ans. Give Donovan's solution as per "Hallow's Gazetteer," and apply iodine of cadmium ointment.

L. B. A., Acotah.—1. My liver-colored pointer whelped two black greyhounds (English). Will her future progeny by a pointer sire be affected either in quality or color? 2. I notice since she whelped that occasionally a serious bloody matter—sloughs from the vagina. What course should be pursued to correct this? Ans. 1. If this is first litter the probabilities are that all her puppies hereafter will bear our marks. 2. The discharge is natural. She needs no treatment.

G. H. W., Cornwall, Ont.—Would you be kind enough to inform me what you think of the enclosed sample of shot? I sent to Montreal for a bag of No. 8 chilled shot, and this is what they sent. It is marked on the bag: "Waukers, Parkers & Co.'s Patent Shot, Chester; No. Eight." Ans. The sizes of English and American shot are different; the shot you inclose is part No. 8 and part No. 9, with now and then a 7. This should not be so.

C. J., Matawan, N. J.—Please to state the cost of an outfit of a member of the National Rifle Association; that is, gun, uniform, if any, etc. Also, expenses he must bear by becoming a member of the organization? Ans. \$3.00 per year dues, and 50 cents per hour for marker's services at target. No uniform required. Cost of gun from \$50 to \$100, depending on style desired, whether short, m.d. or long-range.

A. S., City.—What part of Arkansas is best for game, and which is the nearest and most convenient way to ship the same by rail to the market in case we should be fortunate enough to capture any, and would you advise us to take any ammunition with us or buy it there? Ans. Game is plentiful throughout the State. Newport, Jackson county, would be good headquarters and furnishes excellent facilities for shipping. Ammunition can be had there.

I. J. B., City.—How can I reach J. M. Bradley's at Eldred, Sullivan Co., N. Y.? Ans. The day line Erie R. R. leaves New York City 10:45 A. M., reaches Shohola 4 o'clock P. M. Night express leaves New York City 7 P. M., goes far as Port Jervis, then take the Emigrant only twenty miles to Shohola. As the express does not stop, notify Bradley of the train and the day and he will send carriage to meet you. His house is six miles from Shohola over a good road.

A. W. G., Nashua, N. H.—In your reply to my question, if it was lawful to fish trout, *Salmo fontinalis*, in the issue of August 23, I think, you said that there had been an amendment to the old law which prohibits fishing trout from September 1 to April 1. I notice that among the fish that are now in season—September—you head the list with trout. Are you right now, or were you in your reply? There is a fair share of grouse in this vicinity. Gray squirrels reported plenty in the towns adjoining, but the weather has been so hot few sportsmen have been cut. Ans. There are different laws for different States. Trout are in season in Virginia and some other States.

G. L. A., Savannah, Ga.—Can you tell me what to do for my pointer dog? With the past two weeks a lump came on his hind leg like a large wart, as big as a filbert. It looks a little sore, but does not seem to worry him much: it is quite hard, but is not attached in any way to the bone. To-day I notice another one coming on the other thigh. Otherwise he is in perfect health. I am giving him sulphur, but can find no mention of any such disease in Dinks, Mayhew and Hutchinson. Ans. We are unable to answer from your description. Please state the anatomical situation of the lump as closely as possible, and give general conditions of the animal as to health. Dinks, Mayhew and Hutchinson is of no value whatever so far as the treatment of diseases of the dog are concerned.

T. K. C., Brainerd, Minn.—What can I give my three-months old pointer bitch? She has a number of places on her denuded of hair, and when I brush her I brush off lots of white dust like dandruff. She seems bright and frisky, appetite good, hair glossy, eyes bright. Feed her on kitchen scraps and corn meal; have not given any medicine. Has a good place to stay in—large yard with kennel full of fine shavings. Ans. 1. Sulphur of potassa 1 oz., water 1 pint, solve. 2. Muric acid 1 oz., water 1 pint, mix when ready to apply. Mix equal parts of Nos. 1 and 2, and sponge the animal thoroughly. Also brush his coat once a day after rubbing thoroughly with French chalk. You may have to use some alternative treatment as well. Are you sure it is not a case of *Trichosia furfuracea*?

ALSACE, Saint Paul, Minn.—In February last my two-year-old setter was taken ill; quick breathing, perhaps not less than one hundred respirations per minute, a pulse no less slow, good appetite, ambition and spirit, eyes clear, nose moist and cold. After three months he began to reduce in flesh, and as he attenuated his breathing became slower. Suddenly, on his right fore-shoulder, there appeared a deep hole as round as a bullet hole, another on his flank near the tail. These sores soon spread and became large and angry looking, and more shallow. When they appeared, he seemed to get better of his former trouble, they have now nearly healed and his coat is better; he shows no spirit or much appetite, every rib can be counted on him, and he shows within the last few weeks a very large belly. Ans. We should judge from the symptoms that the trouble is *Purpura canina*. See "Hallow's Gazetteer." Your description is hardly full enough to decide by.

R. L., Stoughton, Mass.—Please prescribe for my pup. He is five months old to-day; have given area nut for worms and emetics for distemper; the emetic consisted of tartar emetic and calomel. Eye inflamed, coat in fair condition; tongue coated and lips white. The flanks drawn in, being very poor. About 25 respirations per minute, and making rather hard work of it; bowels loose and urine yellow, and at times quite thick; appetite variable, but generally poor; think he shows no signs of fever; has been kept in a warm back room of my house, but has not had much exercise. At times he is very uneasy, continually moving about; but when lying down will get himself into some very awkward positions. His right eye and nostril discharges, most of the time, a white mucus. By answering the above questions you will greatly oblige. Ans. Calomel 3 grs., podophyllin 1/4 gr., extract of colocynth 3 grs.; give at one dose at night. In the morning a dose of Rochelle salts. Then quinine 9 grs., Leptandrin 7 grs., podophyllin 1 gr., rhubarb 20 grs.; mix and divide into ten powders; give one every four hours. Also, acetate of potash 2 1/2 drs., fluid extract balsam 2 1/2 drs., fluid extract eupatorium 5 drs., fluid extract gentian 1 oz., Quibb's sweet spirit of nitre 1 oz., water to make 8 ounces. Dose, teaspoonful three times a day. Pay strict attention to cleanliness, and give plenty of exercise in open air. Give him an out-door kennel and stop pampering him, allowing only plain and nutritious diet.

—Among our new advertisements this week will be found that of Messrs. T. Steele & Son, of Hartford, Conn. This establishment, which was founded in 1836, and is now under the admirable management of Mr. T. Sedgwick Steele, is one that would do credit to any metropolitan proprietor; indeed, there can hardly be its equal or even rival in New England, out of Boston. The store and all its furnishings are of the choicest character and exceedingly tasteful in style, embracing the latest and most elaborate devices for displaying a fine stock of goods. The stock itself is superb and complete, almost beyond description. Mr. Steele is a strong advocate of field sports, and of fish and game protection, and has woven into an elaborately illustrated catalogue of his stock the game laws of his native State. Mr. Steele wrote in this paper last spring a series of very readable articles on the "Rangle Lake Regions, Maine," and was also represented at the last National Art Academy Exhibition by three paintings of brook trout, which were "hung on the line," a pleasing compliment to his skill as an artist.

HARTFORD DOG CONVENTION.—The Hartford "dog-law" is off to day, and the six months' bondage of the dogs in muzzles will be exchanged for canine freedom. Unlike their superiors of the genus *homo* they will not celebrate the joyful day by all getting drunk; dogs have not yet reached that point in the Darwinian scale of evolution; but they will meet in dignified general convention on Oct. 5th, in the Opera House, and by the unanimous voice of the meeting testify the state of their minds on the situation.

THIERS AND HIS PETS.—M. Thiers had a great love for animals, but, strange to say, none for children. He took great pleasure in almost daily going into the garden that surrounded his residence and spending an hour or more watching the antics of a pair of gazelles and caressing them. He taught the doe to lie at his feet, with her head against him, when he was working at budgets and writing those despatches which so agitated the court of France in 1840.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 105) FULFON STREET, NEW YORK.

[POST OFFICE BOX 2332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

## Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

\* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, SEPTEMBER 27, 1877.

## To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Business Manager.S. H. TURKILL, Chicago,  
Western Manager.

## CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, Sept. 28.—Trotting: Ambler Park, Pa.; Dayton, O.; Elmira, N. Y.; East Saginaw, Mich.; Flora, Ill.; Toledo, O.; Fleetwood Park, N. Y.; Creston, Ia.; Kansas City, Mo.; Sharon, Pa.; Montgomery City, Mo. Base Ball: St. Louis vs. Louisville, at Louisville; Hornell vs. Cricket, at Binghamton; Monticello vs. Alaska of S. L., at Centennial Grounds; Excelsior vs. Brooklyn, at Brooklyn, E. D.

Saturday Sept. 29.—Trotting at Montgomery City, Mo.; Running meeting at Jerome Park, N. Y. Base Ball: Hartford vs. Boston, at Boston; St. Louis vs. Louisville, at Louisville; Chicago vs. Cincinnati, at Cincinnati; Quakestep vs. Crystal, at Capitoline Ground; Hornell vs. Cornell, at Ithaca; Fitchburg vs. Lowell, at Fitchburg, Mass.; Richmond vs. Alaska of S. L., at New Dorp, S. L.; Produce Ex. vs. Domestic of New York, at Centennial Grounds. Regatta of Dorchester Yacht Club off commercial wharf.

Monday, Oct. 1.—Running meeting at Louisville, Ky.

Tuesday, Oct. 2.—Trotting: Worcester, Mass.; Brooklyn, N. Y.; Syracuse, N. Y.; Manhattan, Kan.; Cleveland, O.; Loudonville, O.; Danbury, Conn. Running meetings at Jerome Park, N. Y., and Louisville, Ky.

Wednesday, Oct. 3.—Trotting as above; Running meetings as above. Base Ball: Louisville vs. Springfield, at Springfield, Ill.

Thursday, Oct. 4.—Trotting as above. Running meetings as above.

BACK AGAIN.—Mr. Hallock returned to his duties on Wednesday, the 26th September, embrowned and heavier in weight after his two months' excursion in the northwest, where he was the recipient of constant courtesies from the railway and steamboat companies and the gentlemen sportsmen whom he encountered throughout his route of many thousands miles. His investigations in the States of Michigan, Wisconsin and Minnesota have been extensive, and were compiled in copious notes, sketches, etc., which were unfortunately lost in the upper Mississippi River by the capsizing of a double-reefed sailboat in a squall, together with nearly the entire outfit and effects of Mr. Hallock and Dr. Estes, of Lake City, who was his companion. We hope, however, to be able to print a series of letters that will interest our readers, and inform them what abundant and accessible hunting grounds there are in the northwest, and the very comfortable means of reaching them. Mr. Hallock's escape was a narrow one, and

congratulations are in order. In some subsequent writing he may be induced to tell the story of his grief. He is welcome back to his old post.

## THE FAMINE IN INDIA.

ANOTHER season of deficient rainfall has prolonged and greatly aggravated the famine in Madras and Bombay, and portions of the northwest of India. The anxiety felt in India is announced by the constant telegrams to the effect that the famine is on the increase and an appeal to the home government for aid. The provosts of the United Kingdom have been apprised of the magnitude of the relief required and British liberality will no doubt be stimulated to a work of charity and patriotism which the most active measures of the Imperial government usually leave much to be done by way of voluntary supplement. The latest advices have happily been of an alleviating character, as rain has fallen in most of the Madras districts, in some parts of Bombay, as well as in the Punjab, and various districts of Central India where severe distress has been imminent rather than actual. The rainfall has so far improved the condition of the crops, though still complained of as defective; and if the monsoon should develop a sufficient quantity of water there would be a gratifying prospect of general relief in January next. But in the meanwhile there is the heavy calamity of the present famine to be contended with. The Presidency of Madras is the seat of the greatest difficulty. In Bombay, with the exception of the western border where the area or famine appears to be constantly enlarging, the distress is not unmanageable, and the rainfall, partial and insufficient as it has been, has imparted a more hopeful feeling. But in the Madras Presidency alone there are 1,750,000 persons kept alive only by daily assistance. The mortality since the first pressure of the famine has been increased by nearly a half a million—an awful proof of the suffering and sacrifices endured, notwithstanding all the measures of relief in operation. The increasing price of grain has the effect of extending the distress week after week to higher grades of the population and limiting the sources of local charity. The latest returns give the following account of the distress in the various famine-stricken provinces: "In Madras 957,000 relieved on works, 839,000 relieved charitably; in Mysore 48,000 on works, 151,000 charitably; in Bombay 248,000 on works, 149,000 charitably." The peculiar aggravation of the case of Madras is thus sufficiently apparent, and the residents in the capital of the Presidency must be admitted to have ample reason for their anxiety and for their appeal to the outside world for sympathy and assistance. Under the most favorable condition of the growing crops there must be several months of dreary struggle with famine and disease and what in all ages have been the fellest visitations of poor humanity.

It is gratifying to observe that the appeal from India for help is obtaining a liberal response throughout the world and in England in particular. A subscription fund opened at the Mansion house in London mounted up in a few days to over \$200,000 and there seems to be no cessation of money flowing in.

Failure of crops with its consequent deplorable scenes of misery, emaciation and death has for several years in succession been making the circuit of the Indian empire. The seasons have been irregular throughout nearly all parts of the world, even the United States not escaping; unusually heavy rainfalls in Europe, northern Asia and eastern U. S. have been accompanied with severe droughts in India and on the Pacific coast of America. We appear to have been passing through one of those recurring series of years in which the atmospheric equilibrium is disturbed over wide areas of the globe; and according to all past experience this disturbance gradually corrects itself and introduces a more favorable course of the seasons. But it is necessary to look on visitations of famine as almost permanent features of India. This is an enemy always present, and more or less destructive in some quarters of the vast empire. Within the past three or four years famines have destroyed large numbers of the Indian population, diminished the consuming and the tax-paying powers of the country, immensely increased the cares and expenses of the government, produced heavy deficits in the finances, where there would otherwise have been very moderate surpluses, and indefinitely postponed the reduction of the many taxes long condemned as oppressive or impolitic. Famines must thus be recognized as hitherto one of the most certain as well as baneful phenomena of the Indian Empire. In the old times when there was little communication and no heavy traffic between one great province and another, this scourge swept down tens of thousands unnoticed and unheard of beyond its own area, and its victims melted away in darkness and despair. But in this age of railways and telegrams, when the distribution of food supplies is so much more practicable, and intelligence is rapidly diffused, the humanity of a Christian people will insist on the relief of their fellow-men, and, while contributing of their means to this end, will hold the government of India responsible for adopting all proper means to meet such dreadful scenes of misery and starvation. And yet a regular and permanent official system of relief from famine is apt to encourage some of the weaknesses of the native races in India, unless accompanied by vigorous measures for the improvement of rural economy, and the development of a provident and enlightened industry among the tillers of the soil. It is to be hoped that the Indian government and its officers will not overlook this essential matter, and that the time will come when periodical crop failures and scarcities of food will be much less frequent than they have been in times past.

NEW YORK AQUARIUM.—Last week we enjoyed an evening at the New York Aquarium, corner of Thirty-fifth street and Broadway. Since our last visit, the enterprise of Messrs. Reiche has entirely restocked the vacant tanks, and the Aquarium now presents attractions hitherto unequalled. To be sure the white whale is no longer there, but his tank is occupied by five giraffes, animals which combine both ugliness and beauty, and hence form no small centre of attraction. Not the least among the observed are the seals, whose intelligence ranks second only to that of the human. In the deep sea tank is seen a veritable bottle-nosed dolphin, whose nervous and restless movements attract numerous gazers. Here too are the skates, models of ugliness, but with a grace of movement possessed by none other of the oceanic tribes. Sharks, eels, turtles, sturgeons, etc., etc., divide the honors of the tank. Among the latest arrivals are Southern prawns walking fish, flying fish, yellow caranx, big-eye balistes, hair-finned blepharis, unicorn fishes, balloon fishes, sea ravens, gurnards, serpula, etc. The list of tropical marine life is wonderfully complete, exciting the admiration of the beholder. Messrs. Reiche having secured the building adjoining the aquarium, will place therein a large and varied collection of South American birds, besides numerous monkeys, baboons, etc. A cormorant, flamingo and secretary bird are also on exhibition. The Sea-side Aquarium at Coney Island is to be brought here, so that the New York Aquarium will possess unrivalled attractions for the winter. Special opportunities are given naturalists to study the habits of the animals and fishes.

JIM.—A correspondent in Titusville, Florida, writes: "Tell 'Fred Beverly,' that the characters in his piece in your issue of August 30, were at once recognized, and that I will save the piece for Jim to read when he comes up here again. It will please him mightily. Tell him that Jim has recently taken unto himself a rib, and that he has turned his attention from alligators to manatees; he has recently captured alive a very large bull manatee. Old Capt. C. is still alive, but has given up boating entirely, and confines himself almost exclusively to that veritable grocery by the river side."

—Sir Henry Halford and secretary, Judge Gildersleeve and Major Fulton honored us with a call on Friday last. Sir Henry follows the advice of the Chappaque sage, and "Goes West," with a view of enjoying antelope shooting on Dismal River, Nebraska.

Hon. J. W. Babcock, of Rochester, paid a flying visit to our sanctum last week, sailing for Europe a day later. We are also indebted to W. J. Fay, Mr. Archer and other Denver friends for a call. These gentlemen came to New York expressly to witness the great match.

## GAME PROTECTION.

CONNECTICUT.—New London, Sept. 13.—I notice in communication of "Scales" that he is glad that the boys of New London are abandoning their poaching and piratical practices. I wish that I could learn that they had determined to give them up altogether. Our trout streams about here are fished from the breaking up of the ice in the Spring, or as soon as the brooks have run down enough, to late in the fall by many calling themselves gentlemen sportsmen, and who would look with holy horror on a countryman who claimed the right to fish the stream through his land in season and out, yet do not scruple to fish in and out of season and to bring home fish of two inches in length to increase the number of their catch. Our City Reservoir, Konomoc, has afforded good black bass and pickerel fishing, but if the outrageous practices of the countrymen pot-hunters who live about the lake are to be tolerated, we very soon will find their numbers sadly decreased. There is one man who, day after day, sits in his old skiff, and with bean pole, drop lines, and surrounded by diabolical inventions, is in a fair way to spoil all fishing, and rob us, who love the exciting sport of bass fishing, of all pleasure hereafter. He has a wooden float about a foot square, upon that an upright, a line passes from the float over the upright and into the water. He fishes there day after day, and, as the farmer boys say, "sells his bass to fishermen who have poor luck." Perhaps this fact may account for the indifference with which this matter was treated when it was mentioned to a gentleman sportsman, he saying: "Well! he catches them with a hook and line, does he not?" Is there no law to touch this robber of gentlemen's sport?

MISAL.

—The Pennsylvania State Game Association meets at Pittsburgh, Tuesday, Oct. 9.

WHERE ARE THE GAME CLUBS?—The waters of Oneida Lake threaten to be depleted of their fish by the wholesale depredations of lawless pot-hunters. Where are the game clubs whose duty it is to see that the laws are enforced? "Old Sport" writes to the Syracuse Journal:

Are there no law-abiding lovers of sport in Onondaga, Oneida, Oswego and Madison counties who have courage and perseverance enough to make a determined stand against the lawless gang of marauders who for twenty years in open defiance of the law have trapped fish in Oneida Lake? I have been spending the summer on this beautiful lake, and it is a well-known fact that there are at least 100 trap nets in its waters to-day. The men who own them are well known, and year after year they pursue their nefarious trade regardless of the law.

The writer notes the wilful inefficiency of the game constables, and urges that the interested sportsmen of the neighboring towns combine to stop the nefarious practice of those defiant law-breakers. The letter is commented on by the Utica Herald of the 10th inst., in the following language, which we can heartily indorse. Now for action:

Fishing at the lake has been very poor this year in consequence. A party of Syracuseans camping near the mouth of Fish Creek the past summer could not catch enough to supply their table, and were obliged to fall back on crackers and

cheese. Fishing has never been so poor at Fish Creek as this season. At Upper South Bay, Louis' Point, and all along the south shore of the lake seines and trap net are used daily, and legitimate fishing is about played out in consequence. A party of Uticans fishing off Louis' Point the past summer, took only four bass in one entire day. Nets are spread along the shore in plain sight to-day, and no secret is made of this violation of law by those who have made their living by it for years. If a boat was to be sent out from Syracuse, as last year, quite a large number of nets could be destroyed. Game constables make no effort to enforce the law. At North Bay affairs are little better. No seines are drawn openly, but persons in the village boast that they take hundreds of fish while the inhabitants sleep. One rattle-headed young fellow, and his name will be given to the public as soon as ascertained, boasted last week of having taken 400 lawyers and one game fish in a net. The one fish was kept, but the 400 others were left on the shores to die. "Zine" Fuller is the game constable at this place, and is cognizant of these violations of the law, but winks at them. He has doubtless failed to qualify, as he says that no service can be expected from an officer who has not given bonds. Oneida Lake is one of the finest bodies of water in the State, and at one time abounded in black bass, pickerel, pike, perch, catfish, eels and other good fish. As "Old Sport" says, "It can be made the finest fishing ground in the State if the nets are kept out for three years." There are quite a number of hotels on its shores, and their landlords should take an interest in seeing the laws enforced, as good fishing is just as requisite to the prosperity of a summer resort as good hotel accommodations. Sportsmen's clubs can do much toward enforcing the law, and it is to be hoped that the sportsmen's clubs will act in the matter.

Oneida Lake is within two hours' ride of Utica by rail, and is a favorite resort for sportsmen from Camden, Rome, Utica and other places. Every sportsman and every organization of sportsmen in the county should do their share toward enforcing the law. By co-operating with the sportsmen of other counties bordering on the lake, the evil of seine and trap-net fishing can be eradicated.

—The West Jersey Game Protective Society held their annual meeting at Camden, Sept. 19. The Treasurer reported a balance on hand of \$630.27.

The Chairman of the Committee appointed to attend to the duties of policing the five counties, Atlantic, Camden, Cape May, Cumberland, Gloucester and Salem, over which the Society has jurisdiction, reported that they had thoroughly officered every point where a violation of the laws governing the Society was likely to be made. They had established police arrangements from Petty's Island to Salem, and employed steam tug boats, with officers on board to attend to assigned duties. Over three hundred gunning boats had been stopped and the gunners examined, but each were acting in perfect accordance with the game laws as well as the rules of the Society. Three arrests have been made in the districts and the parties punished. The entire cost of police duties during the year, including printing and advertising, was \$584.65.

The following were elected directors for the ensuing year: Henry Vanuxem, Robert K. Neff, Jr., J. H. Willits, John R. Beebe, William B. Brown, Thomas B. Starr, Frank Furness, J. Howard Willits was elected President; Geo. E. Taylor, Treasurer, and Richard T. Miller, Secretary.

A motion was carried, referring to the Committee on Law the necessity of changing the time for shooting reed birds from the 15th of August to the 1st of September, the same as it formerly existed.

On motion, a bounty of twenty-five cents per head was ordered to be paid by the Society for the killing of foxes and hawks in the several counties, as they had been found to have destroyed many fowls during the past year.

The Society last year placed 2,300 black bass and 50,000 salmon in the different streams and ponds, and about 1,400 quails were let loose in the woods. All are doing well.

An appropriation of \$1,000 was made, to be expended in the purchase of quails for replenishing the forests, after which the Society adjourned.

VIRGINIA'S LAWLESS OFFICIALS.—A Culpeper correspondent writes to the Richmond *Whig* the particulars of a violation of the fish law by parties whose official position makes their misdemeanor all the more reprehensible:

It appears that a party of gentlemen, consisting of the county judge, deputy sheriff, agent of the fish commission and others had the seine hauled for a fish-ry in Nalle's Pond, in Mountain Run. Mountain run is a considerable stream, passes through two or more counties, and empties into the Rappahannock twenty miles below Culpeper Courthouse. It is pretty well supplied with pike, carp, whitefish and catfish, and affords good angling, when not disturbed by seining. The river was very low at the time.

If the facts are as stated, no time should be lost in bringing these offenders to justice. Their prompt conviction and punishment will prove an excellent warning for humbler marauders.

NO MORE NETS IN BARNEGAT BAY.—The citizens of Barnegat and the adjoining towns are awaking to the threatened destruction of their fishing industries, and according to the subjoined letter of our correspondent, wholesome measures will be urged at the next Legislature. The sheepsheading at Barnegat has been unsurpassed. Wholesale netting, however, must destroy any like fishing, and stringent regulations should be enacted and rigidly enforced at once. The exercise of a little timely prevention is the part of wisdom.

The occasional comparison of the FOREST AND STREAM to the fish laws as now in force in our bay, has at last awakened our citizens to what should have been done when our present law was passed) still further protect their fishing interest. Their cry is now, no more nets of any description in our waters, and your correspondent predicts such a bill passes by our Legislature next winter. In previous legislation on the subject the opposition cry was that such regulation would take the poor man's privilege away. I find but two men in the village of Barnegat, rich or poor, who are opposed to it,

Some fifty or sixty laboring men in that town who can afford to buy a hook or line, making fair wages catching sheephead during the months of June, July and August, this summer, have had their fishing greatly interfered with by parties who can raise sufficient funds to buy large haul seines and outfits, who sweep their grounds, destroy their hand fishing, and glut the market. From Mr. J. W. Kinsey, who is taking an active interest in the passage of such a law, I am furnished with the following actual comparison in revenue derived from one season's fishing, within a scope of six miles from Barnegat, including three hotels on the beach:

|   |          |
|---|----------|
| Money invested in yachts.....               | \$30,700 |
| Revenue derived from yachts.....            | 10,025   |
| Revenue derived from hotels.....            | 15,000   |
| Revenue derived from hand line fishing..... | 5,900    |
| Total.....                                  | \$60,625 |

Now, nearly \$25,000 are annually cleared from visitors who frequent this vicinity to enjoy the fishing. Break up this attraction (and it is the only attraction), and this revenue is lost. Against this, the revenue from nets, taking the whole of Barnegat Bay, will not foot up \$3,000. Understand this calculation is only based on the revenues of one village. There are some five or six other prominent places equally interested and eager for such a law, and not yet ready to sacrifice the goose that lays the golden egg.

—Fisher and Van Zandt, of Philadelphia, publish in pamphlet form the constitution and by-laws of the West Jersey Game Protective Society, and the game laws of New Jersey, New York, Penna., Delaware and Maryland.

ARITHMETIC FOR GAME CLUBS.—The Louisville *Commercial* has been figuring with this result: Each pair of quails produce an average of ten chicks per year—many, in favorable seasons, hatch out sixteen in a brood and then hatch a second brood. If we estimate only the small number of 500,000 quails to start with, and take ten per year as the produce of each pair, the totals will simply be stupendous, and we present them for consideration: first year, 3,000,000; second year, 18,000,000; third year, 108,000,000; fourth year, 648,000,000; fifth year, 3,888,000,000

## OUR WASHINGTON LETTER.

ORTOLAN SHOOTING ON THE PATUXENT—THE SPORTSMAN'S PARADISE—MARYLAND HOSPITALITY—PRESERVATION OF DEAD BIRDS—SOMETHING ABOUT COOKING THEM—A BENOH SHOW FOR WASHINGTON, ETC.

[FROM OUR OWN CORRESPONDENT.]

WASHINGTON, D. C., Sept. 21, 1877.

IN several of my letters I have referred to the great variety of game found in the States of Maryland and Virginia at all seasons of the year, and the pleasure which sportsmen have in these States not only from the magnificent shooting, but the proverbial hospitality of the people. They are all down on pot-hunters, but when a gentleman comes among them properly introduced he is courteously received, and free to shoot over their land and water. The many readers of FOREST AND STREAM AND ROD AND GUN have no doubt frequently heard of the extensive marshes of the Patuxent, and the great abundance of ortolan, reed bird and other varieties of marsh birds found thereon. In a recent letter I dwelt at length upon the habits of these birds, and hope that an account of a few days' shooting on the marshes of that river may now be interesting. In company with Dr. P. of Washington, who is a true sportsman, as well as something of a naturalist, I left Washington on Thursday last for Nottingham, a small village of about 300 inhabitants located on the Patuxent, sixty miles from its mouth. As all sportsmen appreciate and enjoy the natural scenery of their excursions, and have their hearts made glad by the sight of thriving crops and fertile lands, it will not be out of place to say something of the country through which we passed on our drive of twenty-five miles to the village above named. For a distance of three or four miles beyond Washington there are many small farms, well cultivated, and neat houses, surrounded in many instances by attractive gardens. As we reach Forestville, about eight miles from the city, the land becomes poor, and much of it is uncultivated. The road for eight or ten miles is through a country of this description but sparsely settled, and it will be many years before it is

"Heavy laden with the spoil of harvests rich."

Nearing the village of Croon, we cross the Pope's creek line of the Baltimore and Potomac Railroad, and enter a fertile country with immense fields of tobacco and corn now being gathered in. The farms here are very large and well-stocked; we passed many barns already filled with tobacco to be cured for market, and soon after sundown we reached Nottingham. The place was settled in the early history of the State of Maryland, and being located directly on the Patuxent, it was formerly a place of some importance. The State tobacco warehouses were located there, and until 1851 all the tobacco raised in that part of the State was inspected at the village and shipped, not only to our large cities, but oftentimes directly to Europe. The village was then filled with purchasers during the season for shipping tobacco, and a business aspect surrounded the place. A prominent citizen thereof in conversation with your correspondent in regard to those good old days, growing warm over his subject, somewhat vehemently exclaimed, "Why sir, before the City of Baltimore absorbed the whole State of Maryland we had some business. Now it is all gone." The Patuxent is navigable some fifteen or twenty miles above Nottingham, and Steamers from Baltimore touch there twice a week. The Channel in front of the village varies in depth from fifteen to thirty feet. Salt water commences about nine miles below, though it is sometimes brackish there after a long drought; crabs and other salt water fish are frequently caught there. But I have said enough

about the agricultural and commercial interests of Nottingham. It is beyond question

## THE SPORTSMAN'S PARADISE,

as excellent shooting may be found there nearly all the year. About the 20th of March, "Jack Snipe" (*Gallinago wilsoni*) make their appearance, and are abundant for several weeks. The marshes and meadow lands along the river afford excellent feeding grounds for them, and it is a common occurrence for a fair shot to bag twenty or twenty-five in a day's shooting. Two years ago they were so plentiful that a couple of gentlemen from Philadelphia made an average bag of ninety birds a day each during several days. Then come the woodcock (*Philohela minor*) about July, and they are quite plentiful for a month or more; with September the ortolan (*Porzana carolina*), reed bird (*Dolichonyx oryzivorus*) arrive and fill the marshes. Partridges (*Ortyx virginianus*) can be shot after the 15th of October, and they are plentiful on the stubble field near the village. The ducking season also begins in October, and the immense flocks often cover the river and creeks for a great distance. Among them may be found gray mallard (*Anas boschas*), black mallard (*Anas obscura*), blue winged teal (*Querquedula discors*), green winged teal (*Nettion carolinensis*), sprig tails (*Nafla acuta*), bald pates (*Mareca americana*), black heads (*Pulix macvalla*), and other varieties. Canvas backs (*Pulgula walliseria*) are sometimes killed, but do not frequent the waters of the Patuxent so far from the mouth of the river.

The sportsman visiting Nottingham may be sure of comfortable quarters and excellent fare at very moderate prices. The hotel there is kept by Mr. John Maccubbin, himself a sportsman and as good a shot as can be found in the country. His house is not more than a hundred yards from the river, and his table is bountifully supplied with the products of the surrounding country and neighboring waters, fish, oysters, game, poultry, fine old Maryland hams, etc., are the welcome dishes to the sportsman who has his appetite sharpened by the health-giving bracing atmosphere of the country. Mac is an old bachelor, with no other cares than to make his house acceptable to the sportsmen who patronize him, and well does he succeed. There is no conventionality there, requiring a man to leave off his hunting suit and don his broadcloth before appearing in the dining-room. His table is surrounded with sportsmen attired just as they come from the field, who compare notes and discuss the incidents of the hunt without restraint. Among his patrons are many well-known gentlemen of New York, Philadelphia and Baltimore—such men as Col. Munn, of the *Scientific American*; A. Rich, Col. Wm. B. Smith, Robert Robinson, Peter Donohue, Ben West and others of New York. Harry Madison, Jeremiah E. Sharp and Thomas Sevenk of Philadelphia; George J. Popplein and W. Morris Orem of Baltimore, and many other well known gentlemen also annually spend a short time at Nottingham to enjoy the shooting there. It was our good fortune to meet Messrs. Popplein and Orem there last week, they having arrived from Baltimore just previous to our arrival from Washington. We found them to be very desirable acquaintances, and experienced sportsmen, as they have been shooting in that locality for several years.

Upon reaching Nottingham after our tiresome drive from Washington we were cordially welcomed by Maccubbin, who had guns, ammunition and baggage carefully placed in our rooms, and barely giving us time to perform our necessary ablutions, he appeared with the announcement, "I have supper ready for you, gentlemen." We descended to the dining-room, and soon learned that we were perfectly at home. After supper we had a pleasant game of cribbage, and an interesting chat with our new acquaintances upon the sports of the morrow, and then retired to very comfortable beds, being first notified by Mac that he would call us in the morning at quarter before six; that breakfast would be ready at quarter past six, so that we could be on the marsh by seven o'clock, the tide being high enough at that hour to push a boat over the reeds. The next morning we were all out promptly, had a magnificent breakfast, and as soon as we had finished, our host escorted us to the water where he had a skiff and pusher for each, and saw us comfortably fixed for the day's sport. For half an hour the pushers paddled the skiffs up the river to reach one of the favorite marshes, and an interesting picture did we make as we ascended the stream four abreast. The bracing atmosphere of a September morning, the pleasant anticipations of the sport before us, the sight of myriads of reed and other marsh birds around us—all combined to make us forget the cares of business and noise of city life. Soon the marsh opposite Selby's Landing, a few miles above Nottingham, was reached, and the tide being sufficiently high to push the boats over the reeds we entered the marsh; but the bows of our skiffs had barely struck the reeds before the ortolan began to rise before us, and the sport commenced. The birds were so plentiful that it was a very common thing for us to have from four to six down at one time, but our pushers being good markers few birds were lost. We began shooting by half past seven o'clock, and from that time until ten, when the receding tide warned us that we must leave the marsh or be left in the mud, there was a constant fusillade kept up. About ten o'clock we started down the river toward Nottingham, still penetrating the edges of marshes on our way down, and dropping many birds. Upon reaching the wharf we found our host with an immense basket to receive the birds, which we nearly filled, all of us having had splendid shooting. A count of the birds killed showed 230. Mr. Popplein being the champion, he having ninety birds. Maccubbin, who is something of an expert in preserving dead birds,

had them conveyed to the house where he bunched them and hung them up by the feet, it being a theory of his that they keep longer when suspended in this way than if tied by the necks and allowed to hang with feet downward. His reasons for this are plausible. He claims that the entrails of the bird when suspended by its feet fall forward, and any deleterious gasses accumulating in the body can easily escape through the natural channel, while on the other hand, if the birds be suspended by the neck, the intestines all bear upon the lower part of the body, always the first part of the bird to spoil, and prevent the escape of gasses accumulating therein.

Speaking of the preservation of birds after being killed brings to mind a novel method of cooking Jack Snipe and other game birds followed by Mr. Robinson, of N. Y., a frequent visitor at Nottingham. After having the birds picked he places them in a small tin bucket which he covers and immerses in another bucket nearly filled with boiling water. He then covers the lid with live embers to brown the birds and allows them to cook slowly. They are taken from the bucket when done with all the juices retained.

During the balance of our stay at Nottingham we were treated with marked hospitality and the shooting continued excellent. It was a very common thing for our party to bag between two and three hundred ortolan during a single tide. Our Baltimore friends were enabled to send some to their acquaintances in Baltimore by the steamer, others we had cooked at Nottingham, and those not badly shot were carefully preserved until our return to Washington. We met several gentlemen owning the marshes bordering their farms on the river front, all of whom gave us a cordial invitation to shoot thereon, stating that they never objected to gentlemen gunning on their places, but they very sensibly prohibited any shooting for market. The people of Maryland are courteous, generous and hospitable, and I am sure no visitor to Nottingham leaves there with a bad impression of its citizens. In a future letter I will have something to say of the duck and partridge shooting in that locality.

#### A BENCH SHOW FOR WASHINGTON.

The *Sunday Herald* of this city, which, by the way, is an admirable paper, and often devotes much of its space to matters of interest to sportsmen, advocates a bench show for Washington. In a recent article on the subject it says:

"There is hardly anything pertaining to the animal creation more interesting than a good dog show, and there is no reason why one cannot be held in Washington quite as good as the recent ones in Boston and Baltimore. President Hayes and Secretary Evarts have some fine dogs, so have Messrs. Godfrey, Juenneman, Acker, Clarke, Henault, Rowe, Alexander, and many other citizens, and in the adjoining counties of Maryland and Virginia there are splendid dogs."

True, there are many fine dogs in Washington and the neighboring counties of Maryland and Virginia, and it is to be hoped that the show will be organized. Maj. Thos. B. Kalbfus, the business manager of the *Sunday Herald*, a true sportsman, is just the person to take an active part in such an undertaking. If the sportsmen here will aid him in connection with Mr. Charles G. Godfrey, who has had much experience in such matters, I see no reason why we should not have a very successful exhibition.

#### SQUIRRELS.

The *Shenandoah* (Va.) *Herald* says:

"Squirrels have been very plentiful this season. A large number have been killed. On Cedar Creek, in this county, over 2,000 were killed and reported. A number that were not reported, were, we have no doubt, killed in the same neighborhood. They have appeared within the last few days within a short distance of town. They are moving eastward. The cause of the migration is generally supposed to be the scarcity of mast in the Alleghenies. Many of our farmers have lost a great deal of corn."

R. F. B.

#### NEBRASKA NOTES.

IN CAMP ON THE DISMAL RIVER)  
Sept. 6, 1877.]

#### EDITOR FOREST AND STREAM:

Those writers who sagely affirm that the "Great American Desert" has no existence should come to Nebraska and explore its sandhills. A few day's travel through this region would, I am sure, cause an entire change in their opinions. Imagine, if you can, a strip of territory one hundred miles wide and four hundred in length covered by a mass of sand so soft and yielding that a horse's hoof at each step sinks two or three inches into the ground, and so fine and light that it is carried hither and thither in clouds by the winds that blow almost without ceasing. A little vegetation clothes the hillsides, but it is very sparse and there are wide spaces of bare sand between each tuft of grass or weeds. A few streams are scattered at wide intervals through the region and flow into the North Platte River, or the Loup Fork; and it is only along these streams that the rich dark green of living grass and shrubs appear to relieve the everlasting monotony of the gray sandhills with their scanty covering of subdued brown.

Although the buffaloes in this region have suffered the absolute extermination which awaits all our larger game, the antelope still exist in the sandhills in considerable numbers. Elk, too, are not unfrequently met with, and the mule-deer and Virginia deer are somewhat abundant. But here, as everywhere else, the diminution of game within the past few years is something terrible and cannot but grieve and shock the sportsman. Some years ago when I first passed through these

Nebraska sandhills at no time during the day were we out of sight of antelope, both species of deer were continually jumped from the ravines and creeks, and bands of elk of from fifty to two hundred and fifty individuals were met with almost daily. This country, although almost without large game at present, still abounds in wild fowl.

Less than one hundred yards from our camp is a beautiful little lake overhung by lofty bluffs and fringed with dark green rushes. On its surface can be seen at any hour of the day thousands of ducks and geese, and tens of thousands of waders. The most abundant ducks which we see are the smaller broad-bills (*Fuligula affinis*) and the blue-winged teal (*Q. discors*), though mallards, black ducks and gadwalls are numerous. Flocks of geese alight on the lake every day, and to my surprise I learned that two pairs of swans (*Cygnus Americanus*) bred on its shores during the past summer. Of this fact there can be no doubt, as both the old and young were seen daily for more than a month.

The waders comprise most of the more common varieties of snipe and bay birds, but there are also some of the rarer species, which we, of the East, seldom see alive. A large flock of the beautiful avocets glean a fat subsistence from the shallower waters, and when approached, make the air vocal with their shrill cries. Killdeer plover, Baird's sandpipers, and the little oxyeches hurry along the shores in search of food, and every now and then, in riding by, we start from the damp spots near its margin, that prince of birds, the Wilson Snipe. I must not forget to mention the hundreds of graceful little Northern Phalaropes (*Lobipes hyperboreus*) which, floating lightly on the mirror-like surface of the lake, form one of the most pleasing features of the scene.

My host is one of the cattle kings of this Western country, and his herds range about our camp for miles in all directions. It is a grand sight to watch the bands of cattle pour down from the hills on all sides, slowly and in single file, and move toward the water's edge to drink. So, in former times, did the buffalo, whose bones are still thickly strewn along the margin of the lake, file down and pour their dark columns into this peaceful valley.

Our hunting has, up to this time, been limited to antelope, at present the most abundant game in this vicinity, although even antelopes are scarce. We were fortunate enough, a few days since, to kill "the biggest buck antelope in the range," a splendid animal with a fine pair of horns, and so large that it taxed severely the strength of two men to lift him on to a horse's back. He was a wary old fellow, too, and it afforded us no little satisfaction to have succeeded in circumventing him. When first seen, the buck appeared on the crest of a hill half a mile or more from where we were seated, engaged in watching the movements of a small band of antelope, which were feeding toward us. As soon as we saw the buck, we decided that he was the antelope for us, and for more than an hour we sat and watched him. He promenade up and down that ridge and debated with himself as to whether those dark objects in the valley were, or were not, enemies. Sometimes, he would disappear behind the hill for a short time, but after a little we would see the tops of his horns appear again and he would take another peep. At last he disappeared and it was thought time to approach him. Cautious and deliberate stalking soon brought me within view of the game at a distance of one hundred and fifty yards. There the buck stood, placidly chewing his cud, and looking, to my eager vision, about as large as a cow. A carefully aimed shot pierced his heart, and he fell dead after running a hundred yards. We have seen a few deer, white tails all, but have not yet hunted them. Before long, however, we hope to have some sport with them, and perhaps, to get into a band of elk that is believed to be feeding on a creek about thirty miles from here. *Hasta luego.* Yo.

"Train up a child in the way he should go," etc., says the good book. But how can you train him up thus without keeping him clean? Use B. T. Babbitt's Toilet Soap, then, and when he is old he will not depart from his use. The soap is made of the best materials, and absolutely the king of toilet soap. Its scent is delicious, but not artificial, for no foreign odor is needed to disguise impurity and poison.—[Ado.

SEAL AND SALMON FIGHT.—An interesting sight (says the *Dun-dee Evening Telegraph*) was witnessed off West Ferry the other day in a desperate fight between a seal and a huge salmon. The combatants were not above a hundred yards from the shore, and the encounter was therefore plainly seen. For more than an hour the fight lasted, the seal all the while dashing about in the water after its agile prey. During the progress of the fight the salmon was tossed many times into the air, after the fashion of a cat with a mouse. It was then seen to be a very large fish. After the fish was fairly exhausted, for the seal was the victor, the seal rose frequently to the surface of the water with its prey in its mouth, the salmon, however, not being yet dead, as the movement of its body clearly indicated. Whether or no the seal swallows its prey whole is not known to the writer; but to spectators of this morning's fight the protracted nature of the battle seemed to have origin in some desire on the part of the seal not to injure its prey or break it with its teeth. There are large numbers of seals in the river at the present time. Between seventy and eighty of these animals, many of them very large and of different colors, were seen sunning themselves at low tide on Abertay Sands one day last week.

FOX HUNT ON LONG ISLAND.—A fox hunt of the English style, with a fine pack of imported hounds, is to be held at East Meadow Brook, Long Island, early in October. The enterprise is under the management of prominent members of the Westchester Polo Club, and everything promises a most successful meeting. The hounds are to be supported by subscription, and the chase is to be open to all lovers of true sport. The committee have been fortunate in their selection of East Meadow Brook, and have shown much good sense in their arrangements. If the enterprise is successful, it is proposed to hold two meetings yearly, and a suitable club house is to be erected.

## The Rifle.

### THE CENTENNIAL TROPHY TEAMS.

The captain of the British team is very anxious that the Board of Directors of the National Rifle Association of America should revoke their previous action on the matter of the Centennial trophy, and adopt his view of who should and who should not enter as competitors in future contests. Again and again has Sir Henry more or less pointedly given the American rifle managers to understand what his desires are in the matter; and in his impatience he recognizes the importance of striking when the iron is hot, and the immense advantage of personal as compared with documentary pleading. He insists that if we are to see another mixed team in the field for the great trophy, we are to say so very quickly, that the National Rifle Association of Great Britain may bestir itself and count up its available talent. But to fall in with Sir Henry's views means a curt turning of the back on the part of the American riflemen and the American National Rifle Association to their rifle friends of Scotland, Ireland, Canada and Australia, and of England, too, if there are any small-bore shooters there more anxious for a good team fight than to carry out the intentions of the British N. R. A. Great stress is laid upon the name *International* contest, which has been placed upon the matches for the Centennial trophy, the English claiming this as a misnomer, denying to Scotland or Ireland the rank of nations, and insisting that we shall acknowledge Great Britain as a nation, and her alone. If it be a misnomer, then also is the International Challenge Trophy restricted to teams of twenty, volunteers from England, Scotland and Ireland each year, equally a misnomer, and the Donegal Cup, of the Wimbledon programme, was, up to 1875, known as the Irish International Challenge Cup. So it would seem that if we are loose in our choice of designation, the English Association is even more so in styling a match *International* which is open to but three competitors. But we in this country can appreciate the difference between politics and sport. When Mr. O'Connor Powers came to this country as the official bearer of addresses of congratulation from the Irish Nationalists to the Congress of the U. S., he was not received except in his private capacity, and properly, as he came on a semi-political mission, and his approaches should have been made through the regular diplomatic channels. But to apply these cast-iron rules and niceties of red-tapeism to a rifle match, almost rises to the ridiculous. We can, if we put ourselves in the line of thought which Englishmen follow, begin to appreciate how their intense class feelings should blind them to the broader fields of view which a sportsman should cover. There is no political significance in these rifle matches, except so far as such may be attached to it by others than the shooters. In the selection of the team, of their arms and the place of meeting, questions of politics are entirely eschewed, and very properly. Were they to enter, we should be entitled to place in the field a team of Irish-American or Scotch citizens of adoption, or any other nationality finding a political home in America. But such have been barred out, with the special intention of making it a direct test between the natives of the several counties invited. There is a distinction, sharp and marked, and a thousand characteristics by which an Irishman may be distinguished from a Scotsman, and either from an Englishman. They may be stirred together in the same political caldron, may be yoked neck and neck to the same government car, but outside and independent of these accidental and changeful circumstances are the radical elements of race and blood. It was precisely these differences which the Directors of the N. R. A. wished to see tested when they decided that an invitation be "extended to riflemen of all countries" (not all nations), and then again requested the secretary to notify the riflemen not only of certain named places, but "all other countries." The British team managers were aware of this construction when they decided to come here. They suffer no grievance if next year Scotland and Ireland shall decide to send separate teams, and have really no ground of protest. The appearance of members of the Irish Rifle Association on the British team is no proof that the Irish riflemen waive their rights in the matter. As a matter of fact they do not, and Sir Henry's implication in one of his early speeches that they had done so was met by a prompt protest from the parties concerned.

The only correct course, the only one now to be pursued by the Board of Directors if they will avoid doing a positive wrong to A, B and C, lest they do imaginary wrong to D, is to keep in the path laid down two years ago; and despite the "bull-dozing" tactics of those who see, in a match between all the rifle-shooting countries of the world, merely a "scrub race between a dozen or more local clubs," keep faith with themselves and their friends abroad.

A British-American match would be an excellent idea, independent of the Centennial trophy matches. We would propose the same conditions, except that an eighteen-inch carton be placed upon the bull's-eye. This would enable finer marksmanship to be properly appreciated and recorded. As the two leading nationalities of the earth see this class of sport, it might be well for Sir Henry and the leading representatives in the shooting world here to confer on this suggestion, leaving the terms of the Centennial match as fixed and settled.

THE FOREIGN TEAM AT SHARPS' ARMORY.—On Saturday, the 15th, Sir Henry Halford, Lieut.-Col. Fenton, Messrs. Ferguson, Gilder and Peterkin of the British team, and Mr. Adams of the Canadian team, accompanied by Judge Gildersleeve, visited the armory of Sharps Rifle Company for the purpose of testing the arms ordered by them during their first visit to Bridgeport, previous to the great match. Upon their arrival at 12:40 they were received by Mr. Chas. H. Pond, secretary of the company, Mr. Winchester, Gen. J. R. Hawley, Major Yale, Mr. Borchardt and others. After partaking of a hearty luncheon the gentlemen repaired to the firing point of the 1,000-yards range, where some very fine scores were made. When it is considered that the rifles had never been used before, and that the gentlemen had never shot the Sharps rifle, the shooting may be put down as magnificent. Mr. Gilder shot the "Sharps Borchardt" new model rifle, making the splendid score of 88 points out of a possible 90, at 1,000 yards, having a run of 16 consecutive bull's-eyes. Lieut.-Col. Fenton shot in the "back position" for the first time, making 67 out of a possible 75. Mr. Ferguson made the handsome total of 71 out of 75. Mr. Adams, of the Canadian team, scored 72 out of 75. The British team gentlemen will return to England with breech-loading rifles, satisfied that for long-range match shooting there is no rifle equal to the "Long-Range Sharps." They unite in saying that for accuracy, safety, simplicity of construction and excellent workmanship, the Sharps rifle cannot be excelled. One of the gentlemen went so far as to say that in the future he would keep his muzzle-loaders for museum purposes alone, as relics of a time gone by. Sir Henry Halford, about starting on a hunting trip to the West, takes with him one of Sharps sporting rifles, which was made for him since his arrival in America. This rifle is a very handsome weapon, and is furnished with the spirit level wind-gauge of Vernier, so as to enable the owner to use it in match shooting if necessary. At the conclusion of the shooting the gentlemen visited the cartridge shop of the company, where they were shown the manner in which the shells are loaded. They gave large orders for ammunition to take back with them to England, evidently determined to show their friends at home what can be done with a Sharps rifle. The following are the scores in detail:

|                |   |      |
|----------------|---|------|
|                | W. H. Gilder.                                 |      |
| 1,000 yds..... | . . . . . 4 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5     | 4-88 |
|                | Mr. Ferguson.                                 |      |
| 1,000.....     | . . . . . 4 5 5 5 5 5 5 5 5 5 5 5 5 6 4 -71   |      |
|                | J. Adam—Canadian Team.                        |      |
| 1,000.....     | . . . . . 5 4 5 5 5 5 5 4 5 4 5 5 5 5 5 -72   |      |
|                | Lieut.-Col. Fenton.                           |      |
| 1,000....      | . . . . . 5 4 4 5 5 5 5 5 4 4 5 4 5 5 3 4 -77 |      |

THE BRITISH TEAM AT THE PARK THEATRE.—Sir Henry Haldord and the other members of the British team visited the Park Theatre last Friday evening previous to their departure, and were highly pleased with Sothorn's personation of the "Crushed Tragedian." They had previously seen him in England, but expressed their unanimous opinion that he had never appeared with more success than in his present character. The house, as usual, was crowded.

SCATTERING OF THE BRITISH TEAM.—Sir Henry Halford and the other members of the British team and party have laid aside their match rifles and are scattering here and there over the country. Friday evening, his last in town, Sir Henry, in company with General McComb, Judge Gilder, sleeve, Captain Bowly and T. C. Banks, visited the Park Theatre, taking supper afterward at the Union League Club. Saturday morning, Sir Henry, with Capt. Bowly, took the Albany day boat for a view of the far-famed scenery of the Hudson. He goes to the Remington Works at Ilion. Thence he will go to Lake George and up Lake Champlain to Plattsburg; thence to Montreal, where he will be entertained by the Dominion Rifle Association. At Toronto, his next point of stoppage, a reception will be tendered. The Sunday following he will spend at Niagara Falls, and then go to Toledo, where he will give a day to duck shooting on Maumee Bay. At Chicago he will be received by the Dearborn Rifle Club and become the guest of General Strong, by whom he will be accompanied to the Disnail River, in the northern part of Michigan, where some time will be spent in hunting elk, deer and other large game. From there Sir Henry will go to Fort Leavenworth, Kansas, where he will be the guest of the army officers stationed at the post, who will take him on the plains, where he expects to get a few shots at buffalo. He will sail from New York on Nov. 3. Col. C. L. Peel, Lieut. G. Fenton, E. Vaughan Thompson and Sergt. W. H. Gilder, of the team party, returned by the City of Chester, and few if any of the visitors will remain to accompany Sir Henry home.

**Boston—Walnut Hill Range.**—The 21st inst. was the worst day for shooting the members of the Massachusetts Rifle Association have experienced at their range at Walnut Hill during the season. The wind blew a perfect gale all day, and the air was exceedingly chilly. The members by their success at Creedmoor have been given renewed interest in shooting, otherwise few would have ventured out under such unfavorable conditions. Two competitions were shot, one of which was for the Sharps long-range rifle at 200-yds. distance, and the second for Sharps mid range rifle at 200, 300 and 500 yards. The shooting began at 1 o'clock. For the long-range rifle each competitor was allowed ten rounds at standing position, any rifle. The score stood as follows, 50 being the highest possible:

|                  |   |   |   |   |   |   |   |   |   |     |
|------------------|---|---|---|---|---|---|---|---|---|-----|
| J B Osborne..... | 3 | 5 | 4 | 5 | 3 | 4 | 4 | 5 | 4 | -41 |
| L L Rutbard..... | 4 | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | -40 |
| N W Arnold.....  | 4 | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | -40 |
| D Kirkwood.....  | 3 | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | -39 |
| L W Farair.....  | 4 | 3 | 3 | 4 | 4 | 4 | 4 | 5 | 5 | -37 |
| E B Souther..... | 3 | 3 | 4 | 5 | 6 | 8 | 5 | 4 | 3 | -37 |
| G W Davison..... | 4 | 5 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | -37 |

The rifle is required to be won by the same individual three times, and it has been won respectively by Messrs. Rabbeth, Lowell, Kirkwood, Souther and Arnold.

For the mid-range rifle five rounds were fired at each distance by each competitor, off-hand, the highest possible aggregate score being 75. The individual scores follow :

|                |              |    |              |    |
|----------------|--------------|----|--------------|----|
| D Kirkwood...  | 4 38 44 5-20 |    | 4 05 54 4-17 |    |

|                | 0 05 32 3-10 |    | 0 00 00 0-00 |    |

Mr. Kirkwood (who made the highest score in the shoot), Mr. Davison and Mr. Stevens are not to be included in the competition for the rifle, they having participated for the practice solely. The rifle was won by L. W. Farrar, this being his second time. It has previously been won by Arnold twice and once by Osgood.

THE FRANKLIN RIFLE CLUB.—The annual prize shoot of the Franklin Rifle Club took place at their range on Colt's Meadows, Harford, Tuesday afternoon, Sept. 18. The charming weather attracted an unusually large attendance of members and friends, some one hundred in all, who enjoyed the day as much as a picnic. A well provided luncheon was set under a commodious awning, where a capital collation was served. Among those present were General Franklin, Dr. R. J. Gatling, General J. R. Hawley, Ex-Mayor Robinson, Quartermaster General Green and Paymaster Joslyn. A large number of prizes had been contributed by friends of the club, some of them quite valuable. The prize shooting consisted of a string of five shots off-hand at 500 feet, the shots being counted by actual measurement from the centre of the bull's-eye, which is eight inches in diameter, the target being three feet in diameter. Anything counting four inches or under is a bull's-eye, and the shortest string is the best. All members of the club, both active and honorary, were entitled to shoot for prizes, and in addition a gold badge was offered to the honorary member making the best score. This was won by Capt. J. C. Kinney, who, making the best score of the day, also took the first prize, a massive silver ice pitcher, gilets and bowl, presented by Ernst Schall. The winning score (13 inches and 8-10ths) is the best ever made at an annual meeting, and one of the best on the clerk's records. A special prize, a package, contents unknown, was offered for score nearest to thirty inches, and was won by Captain E. P. Whitney, president of the club, who found himself the happy owner of a dried codfish. The prize for poorest shot (a Bologna sausage) was awarded to E. Frank Bodwell, the conditions being that the winner must hit the target at least once. The prizes were distributed in the evening at the club room, President Whitney officiating in his usual happy manner, making the occasion one of great entertainment.

CONNECTICUT, *Sept. 8.*—First competition by Stamford Amateur Rifle Club for a mid-range rifle, presented by Sharps Rifle Company of Bridgeport:

|                                       |   |   |   |   |   |   |   |   |   |    |

--The Irish-American Rifle Club, of Greenwich, Conn., met their friends of the Irish-American Rifle Club of New York in a return match at Creedmoor on Saturday last, and were again defeated in off hand shooting.

CHICAGO—*The Dearborn Club Meeting.*—The programme for the fall meeting of the Dearborn Club occupies three days, opening on the 4th prox. The list of matches includes:

*Wednesday*—Inter-State Match—Distances, 800, 900 and 1,000 yards; ten shots at each of the shorter distances, and fifteen shots at 1,000 yards; open to teams of four, not necessarily all from the same club, but must be members of a regular organization in the State which they represent; no sighting shots.

Mid-range match at 500 yards, any position; carton target; two sighting and ten scoring shots; open to members of regular rifle clubs or associations.

All-comers' short-range match, at 300 yards, off-hand, two sighting and seven scoring shots; open to members of regular rifle clubs or associations.

*Thursday*—Match for the Dearborn Club Challenge Cup, which is to be held by the winning club for one year, subject to a challenge by any of the competing clubs, and to be shot for on the range of the winning club at such time as they may elect, and within thirty days after the expiration of the year; and if no challenge is received within two years, then the cup to be the property of the winning club. Open only to teams of four or six, who shall be members of a regular rifle club or association; fifteen shots at 800, 900 and 1,000 yards; no sighting shots. Prize, solid silver ice bowl and salver.

Long Distance Match—Same conditions as above (the aim being to encourage the formation of rifle clubs); twenty shots at 1,000 yards, any position; no sighting. Prize, gold badge, value \$100.

**All-Comers' Short-Range Military Match**—Open to members of any State military organization or rifle club with military rifles. Distance, 200 yards, off-hand, with two sighting and ten scoring shots. First prize, gold badge; second, gold medal. Except when otherwise specified, the latest Creedmoor rules concerning rifles and conditions will govern. No practice on the days of the matches.

**Oct. 11—Sharps Rifle Company's Prize**—One long-range rifle, No. 1 extra. Monthly match. Conditions: Open to all comers, but not to be competed for by less than six competitors in one month. Entrance fee, \$1. Distances, 800, 900 and 1,000 yards; fifteen shots at each distance. No sighting shots, and no previous practice allowed on the day of the match. No coaching shall be allowed by either competitors or outsiders. No outsider to assist any competitor by the use of glass or by "spotting" any competitor's shots. Any competitor receiving or giving information shall forfeit all prizes he may win on that day, it being the

desire to make the competitions strict tests of individual shooting. The winner must lead all competitors at each of the three distances at one competition. One-quarter of the entrance money to go to the marksman making the highest score, unless he wins the prize, in which case it goes to the second highest. One-quarter of the entrance money to be added to principal prize, continuously, until finally won. Balance, entrance fees to Dearborn Rifle Club.

THE CALIFORNIAN VICTORY.—The *Pacific Life* is jubilant over the success of the California team, yet speaks with moderation, and contributes some interesting hints on ride topics. It says:

The noble sport of rifle shooting will receive an additional stimulus all over the United States after the events of the past week at Creedmoor, the great range of the American National Rifle Association. This form of manly recreation has been steadily advancing in the popularity of the people, and the triumphs that may be attributed to our frequent triumphs at the targets against the States of California, have special reason to pride against us upon winning the championship of the United States for military marksmanship, but it is the fact that the victory has truly been achieved after years of persevering devotion to the sport, that has won the men at Creedmoor to practice at the targets. No other State in the Union except New York has taken such an abiding interest in marksmanship as this State, and we are now reaping the harvest of progress that has been sown. The movement for the improvement of marksmanship, is that only two other States outside of New York were represented in the contest, and their immediate neighbors to New York, now that California has sent a team 3,000 miles to win a trophy, the delegates, it is possible the apathy of Massachusetts, Ohio, Illinois, and other States in the premises will end. Now that we have won the "Soldier of Marathon" we must keep him, and California will be compelled to sustain her reputation as the champion State next year.

It is as a means of still further promoting public interest in this reformed order of sport that we chiefly welcome the victory of the California team, and not from any motives of provincial pride. Our team had many advantages over their competitors, while the latter had no light one in shooting over ground with which they were familiar. We are confident that it discloses that the New York team was picked up in a better-kelter manner than the California team, and that the men unacquainted with each other, were destitute of anything like the tact or tact of itself sufficient to defeat them. Connecticut was most to be feared, because her representatives had twice before won the coveted trophy, and they would naturally put forth special efforts to maintain the contest in their State. As to us, the most humiliating incident of the contest was the fact that the only member of the team from New Jersey was the captain of the present team, the president of the New Jersey, the editor of the *Pacific Life* (Henry G. Shaw) acting as Executive Officer of a tournament held in Clifton, New Jersey, in September, 1870, three years before the range at Creedmoor was opened. At this tournament there were 400 competitors from all parts of the United States, and the New Jersey team led after the system in vogue at Wimbledon. With this start New Jersey should have led instead of brought up the rear at Creedmoor.

We congratulate one and all in the California team, and especially General McCoub, the captain, than whom they could have had none better, on their victory. He has been the pivot upon which the successful enterprise has turned. Something may perhaps be said for the weapons with which the winning score has been made. It is evident that there is no better military arm than the Springfield breech-loader.

—The Californians are anxious to get up a Pacific Slope inter-State team, to be open to the States of California, Nevada and Oregon.

—The Tokio (Japan) Times says: "Major Murata, the celebrated off-hand marksman, whom his European competitors last year tried to cheat as to ranges and distances, and ignominiously failed, has been wounded by a bullet shot in one of the engagements in Kiu Siu."

THE WIMBLEDON TEAM OF 1878.—The selection of the "20" to represent Canada at Wimbledon, in the contest for the Rajah of Kolopores Cup next July, are about concluded, and competitions have been held at Ontario, Quebec, New Brunswick, Manitoba and Nova Scotia. Each man fired 7 shots at 200, 500 and 600 yards each day, and repeat for two days, making a grand possible total of 420 points. Prince Edward's Island and British Columbia have not yet been heard from, though it is not expected that more than one man from each of those provinces will find a place on the twenty which now stands:

|                  |     |                       |     |
|------------------|-----|-----------------------|-----|
| Pallen, N. B.    | 326 | Finlayson, Quebec     | 298 |
| Parr, N. B.      | 320 | Lient-Ool Beer, N. B. | 296 |
| Riddell, N. B.   | 309 | Plouffe, C. S.        | 294 |
| Ross, N. B.      | 302 | R. C. Loggie, N. B.   | 293 |
| Klinebar, N. B.  | 302 | Ward, J. C. Quebec    | 293 |
| O' Arnold, N. B. | 301 | Perkins, N. B.        | 291 |
| Mc Arnold, N. B. | 300 | Gibson, Ontario       | 291 |
| Thomas, Quebec   | 299 | Shaud, N. S.          | 290 |
| Weyman, N. B.    | 298 | Perley, N. B.         | 290 |
| Wolby, Quebec    | 298 | Hunter, N. B.         | 290 |

James Pollen, of Chatham, heads the list, followed by another New Brunswick. Out of twenty men New Brunswick has twelve, Quebec five, Nova Scotia two, and Ontario one on the team. The work of the team will be watched with no small amount of interest by Canadian riflemen, as the system of selection this year is entirely different from that in vogue for several years past, and a New Brunswick paper, discussing the team chosen, says: "If there has been anything in the experience of the past two or three years to discourage the sending of a Canadian team to Wimbledon, the Council of the Dominion Rifle Association are to blame for it, because of the mode adopted for selecting the men."

WATCHING THE BULLETS.—Three gentlemen, members of the Amateur Rifle Club of New York, on Saturday last were in the town of Brighton, target shooting. The distance was 500 yards. All three were shooting "Creedmore" rifles. From the firing point to the target the ground gradually ascended, and to the rear the ground ascended so that a small telescope, but a good one, firmly fixed in true bounds on a tree, at a distance of perhaps thirty feet, made a fine point for observation. One of the shooters, while looking through the glass to mark the shot of one of his companions, exclaimed that he saw the ball as it sped on its mission. The announcement was received with incredulity; but one of the other shooters went to the glass, and he also saw the ball almost as it left the gun and through its whole flight nearly the whole line of its trajectory, until it struck the target. So interesting and beautiful was the sight that every shot was watched by one or the other of the gentlemen; and it is an actual fact that the point at which the ball would strike the target could be seen before the ball struck. It was even insisted upon that the rotary motion of the ball could be observed. An old gentleman, whose reputation as a rifleman is fixed, came upon the ground, and on being told of the discovery he would believe it when he saw it. He went to the glass, saw, and was fairly delighted. Other riflemen who heard of the matter last evening said that they knew such a thing was possible and had before been observed, but had never before had the good fortune to witness the sight. It is proper to state that the sun was shining brightly at the time and was at the shooters' backs. The glass was at a point about three feet above the head of the shooter, and at least thirty feet in the rear of him. It was just the right distance, so that the whole line of the trajectory was in the field of the glass. Some day not far in the future a number of unbelievers will be given a chance to witness the sight and testify to the truth of the above account.—*Rochester Sunday Herald.*

SHELLS LOADED FOR PARTRIDGE, QUAIL, WOODCOCK AND SNIPE, \$4 per hundred, at MARSTERS, 126 Nassau street, New York, and 55 Court street, Brooklyn.

# NEW YORK SHOOTING COAT.

A stylish, handsome Coat. First-class in every particular. Pleasant to wear, durable, and in the end the cheapest.

## MADE OF BROWN VELVETEEN.

Pockets and lining made to take out, so that it may be worn for early fall and winter shooting. (Horace Smith, Esq., says: "It is my idea of a shooting coat. I have worn them for several years, and would have none other.") Price for Coat, \$25; Vest, \$6.50. Also the best brown corduroy pants at \$10 per pair. I make only the one grade, as the cheapest goods do not turn briars and will not give satisfaction.

Also, in addition to the above, I am making a Waterproof Canvas Suit, cut same style as the Velveteen; goods, not stiff and hard, but soft and pleasant to wear; guaranteed to turn water. Sportsmen will have seen it say it is The Best Yet. Coat, \$6.00. For full Suit, \$14.00. I also make the Sleeveless Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

**F. L. Sheldon,**

RAHWAY, N. J.

For Sale in New York by

**H. C. SQUIRES, 1 Cortlandt St., N. Y.,**

**CREEDMOOR PARLOR RIFLE.**

Finely finished, carved stock. Loads at breech with small percussion cartridge. Will shoot 250 feet with accuracy and force. There is scarcely any report, and no smell from this rifle, making it very appropriate for parlor use, picnics and fairs. The shell extractor is on the hammer, pulling out the old shell every time the hammer is raised.

Price, \$10; cartridges for rifle \$5 per thousand, or \$1 per box of 50. Iron ball target, with numbers, \$5, sent C. O. D. or on receipt of price. Send for price list of Revolvers, Skates, Novelties and Sporting Goods.

**FISH & SIMPSON,**

132 NASSAU STREET, NEW YORK.

# A VICTORIOUS INVENTION

## The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game. The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation. It is adapted for half of any description and, when set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

- No. 1—For fishing and all kinds of small game and animals, sent by mail..... 35 cents.
  - No. 2—For catching Mink, Muskrats, Beavers, Jags, Game, Fish, &c..... 75 cents.
  - No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. \$10.
- All goods sent, charges paid, to any address on receipt of price. Address

## Town Point Farm FOR SALE OR RENT.

Located at the junction of the Elk and Bohemia Rivers, head of Chesapeake Bay, Cecil County, Maryland. Contains 100 acres of fine tillable land. Orchard of 300 pear trees, peaches, apples, plums, cherries, and small fruit in great abundance. A fine large modern house, tenant house and outbuildings. A fine lawn from the house to the river; no marsh, hard shores. From front splendid view down the Bay; the most healthy and beautiful site in Maryland; daily access to Philadelphia and Baltimore by steamboat and rail; wharf half-mile from house. This farm is celebrated as one of the best of wild fowl points. It is one of the best in the place, so located that four sportsmen can shoot daily from each point without interfering with each other; twenty varieties of ducks frequent these waters; from the place the famous Susquehanna Flats are in sight, where sink-bait shooting can be indulged in. The Farm and country around are stocked with partridges and pheasants; plenty of woodcock in season; fine rail and red shooting a short distance up the river; abundance of snipe in the spring; valuable herring and shad shares on the place; white perch fishing unequalled; a most desirable place for a gentleman's residence or club house. In view of its many advantages of health, beauty, drives, yachting, bathing, fishing and extraordinary facilities for shooting, if a summer boarding-house or hotel were opened here a constant influx of guests at paying rates could be depended on. We have had many applications for board from gentlemen from all parts. The Farm produces largely with good cash markets. Will be sold low. Two-thirds of the purchase money may remain. If not sold in due time the place will be to rent. Apply to O. L. FOUKES, on the premises; JOHN E. WILSON, Elkton, Md.; or WM. H. ABBOTT, 20 N. Seventh st., Phila. Sept 27 21

## TROUT FISHING!

## The Wisconsin Central Railroad

THROUGH TO

## LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for \$20 are sold at 63 Clark street, or the O. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipage taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha (Doty Island) for bass fishing; Butternut Creek and Lake for muscogee; the many branches and lake-a of the Flambeau and Chippewa which team with bass, pike and pickerel, never till this season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be reached along the shore from Ashland or Bayfield, while rock fishing and trolling in the Bay affords excellent sport.

The new hotel at Ashland, the "Chequamegon" will be opened in July. Meantime there is accommodation at the smaller houses.

Steamers from Ashland to all Lake Ports.

## THE "FISHING LINE"

## Brook Trout, Grayling and Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

## Grand Rapids and Indiana Railroad.

(MacKinnon, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly or trolled a spoon in the waters of the Grand Traverse Region will come again with solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also Muscogee, Pike and Pickerel, abound.

In no other streams east of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

The sportsman can rely on trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and invigorating. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, for considering the average in countries new enough to afford the sportsman.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, Mackinac and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Camps, etc., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address

J. H. PAGE, G. P. & T. A., Grand Rapids, Mich.

A. HOPPE, Eastern Passenger Agent, 116 Market Street, Philadelphia.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarer of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

TERMS—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

marked the PREMIER QUALITY

[Extract from FOREST AND STREAM, New York, December 26, 1876. Contributed by one of the Judges of Awards of Guns at the Centennial.]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

COMPENSATING LUMP. Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about \$10 extra. Choke-bored, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

W. W. Greener's CHOKE-BORE GUNS,

Tried on Game in America.

Supplied by H. O. Squires, 1 Cortlandt St., NEW YORK.

See the Following Testimonials:

Sir—It is a pleasure for me to inform you of my high appreciation of the 10-b. Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling-pieces since the introduction of the percussion cap. It gives the maker complete control of the pattern, and greatly increases penetration. To prove this, I will give you the performances of this gun. The 32-inch 10-gauge barrels, charged with 1/2 drachms of powder and 1 1/2 oz. No. 6 English chilled shot, give patterns ranging from 285 to 330 pellets in 30-inch circle at 40 yards. The same charge of powder and 1 1/2 oz. No. 4 American shot gives 160 to 175 pattern, with penetration which kills ducks at 5 to 7 yards like a stroke of lightning. It is a characteristic of the choke-bore to show its greatest superiority in the large sized shot. What I am about to say will perhaps surprise you as much as the performance surprised me. On trial of the 12-gauge 28-inch modified choke-bore barrels, with 3 1/2 drachms of powder and 1 1/2 oz. of shot, I got about the same pattern and spread of shot at 25 yards as with the full choke 10-gauge barrels at 40 yards, with tremendous penetration. This is just the performance required of a gun for thick cover, in which you generally find ruffed grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 25 yards.

COL. JOHN BODINE.

DEAR SIR—The guns arrived all right. We think these last guns you have sent us will place the Greener guns ahead of any other in this country, as guns of other makers don't compare in shooting qualities with them. We unhesitatingly recommend the Greener as far superior to any gun of foreign or domestic manufacture that we have seen. We say this after seeing and using guns of all the most celebrated makers.

CARLISLE JONES & CO.

The Greener gun presented by Mr. Squires for the best pointer, and awarded to me, is a close, clean, hard hitter, killing its game at very long distances. It is the second Greener that I have owned and they cannot be beaten. I win with them at the trap or in the field.

LAKE CITY, MINN.

Sir—I have a pair of W. W. Greener's breech-loaders (bought of H. C. Squires, of New York), modified choke-bore. I have had an opportunity to test these weapons on birds heavily feathered, and where great penetration was essential to success. I have repeatedly made long shots, always killing the game clean. At a target both guns made a very even distribution of the shot, and extreme penetration.

Sir—The Greener breech-loader I purchased of you is very fine indeed, and of great satisfaction.

WARREN, Pa. ROBERT DENNISTON.

W. W. GREENER, St. Mary's Works, Birmingham, England.

PURDY'S Glass Ball Trap.

SHONINGER ORGANS.

[PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The B. SHONINGER ORGAN CO.'S exhibit as the best instruments at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." THE ONLY ORGANS AWARDED THIS RANK.

This Medal and Award was granted after the most severe competition of the best makers, before one of the most competent juries ever assembled.

New styles and prices just issued, which are in accordance with our rule, the BEST ORGANS for the least money.

We are prepared to appoint a few new Agents.

## Paper and Metallic Shells

FOR

## Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

### "St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality, to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—2½, 2¾, and 3 inches; No. 12—2¾, 2¾, and 2¾ inches. Longer

Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of \$1.15 for No. 12; \$1.50 for No. 10.  
Factory and office, No. 2,339 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

### TO SPORTSMEN IN GENERAL!

Headquarters Bohemian Glass Works,  
214 PEARL STREET, NEW YORK.

MAKE THE FEATHERS FLY WITHOUT KILLING THE BIRD—SOMETHING MUCH NEEDED.

The Bohemian Glass Works having made a specialty of the manufacture of Glass Balls for Trap Shooting for the past year, and having facilities for manufacturing cheaper and better than other establishments, have secured the service of that well-known Sportsman,

### TRA A. PAINE,

to take entire charge of the production of his new patent Feather Filled Ball, which we hold the exclusive right to make and sell.

In offering this new ball to the public it will require very little introduction, as in no instance where it has been exhibited has it failed to take the place of all others, and is to-day the only perfect substitute for a bird in use.

The following is from the New York Herald, Sept. 1:

THE BRITISH VISITORS RECREATING AT ELM PARK—A TRIAL AT GLASS BALL SHOOTING.—The visiting riders, accompanied by Judge Gildersleeve, Col. John Bodine and Mr. L. M. Ballard, all of the American Team of 1875, arrived at the Park a little before eleven o'clock, and practice shooting was at once commenced. The shooting at glass balls sprung from a steel trap, instead of live pigeons as in Europe, was a novelty for the Englishmen. Mr. Ira Paine, who has invented the "feather balls," furnished them for the occasion as a compliment to Judge Gildersleeve and his friends. This style of balls gave during the afternoon such satisfaction that after the shooting was over the West Side Gun Club held a special meeting to adopt them, ordering 1,000 of them forthwith.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300 or boxes of 500. Send for price list. We intend offering special inducements to the trade.

### Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL—The only Ball that will break sure when hit by shot. Use none but the best. Every Ball marked. Patented April 10, 1877; Traps, March 13, 1877.

Geo. E. Hart & Co.,

NEWARK, N. J.

TRADE SUPPLIED.

### HUBER & MERWIN'S CHAMPION BALL TRAP.

We call the attention of the fraternity to the above trap, claiming to be the ne plus ultra. It combines compactness with durability, and is arranged, by a swivel on the bed-plate, to throw a ball in any direction or at any elevation unknown to the shooter, a screen preventing his seeing the direction in which the trap is set.

The spring, as the cut will show, is made of a steel rod or wire, bent spirally at the point of attachment, thus receiving the concussion its entire length, and preventing breakage.

PRICE \$10.

FOR SALE BY

BARTON & CO., Sole Agents,

337 BROADWAY, NEW YORK.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP, for durability and perfection of its operation, superior to them all, and take pleasure in recommending the "Champion" to sporting clubs and my friends. (Signed) TRA A. PAINE.

Price \$45. Re-boring and repairing breech-loading shot-guns done promptly and in the very best manner. Send for new price list to CHARLES GREEN, 3 West Main St., Rochester, N. Y.

[No. 111 Fulton St., N. Y.

### A VINTAGE SONG.

ONCE more the year its fullness pours  
To cheer the heart of toll;  
Once more we take with gratitude  
The blessing of the soil.  
I hear the children laugh and sing,  
They pull the grapes together;  
And gladness breathes from everything  
In this October weather.

The winter days were long and dark,  
The spring was slow to come?  
And summer storms brought fear and doubt  
To many an humble home.  
But rain and sunshine had their will  
And wrought their work together,  
And see! we hear our baskets still,  
In this October weather.

My heart has had its winter, too,  
And lain full bare and gray;  
I did not think a spring would come,  
Much less a summer day.  
How little did I dream that life  
Would bring us two together,  
And I should be a happy wife  
In this October weather!

Doubtless the frosts will come again,  
And some sweet hopes must die;  
But we shall bear the passing pain,  
And smile as well as sigh—  
Nor let us cloud with fears of ill  
This golden hour together;  
For God is in His garden still  
In this October weather.

E. D. R. BLANCHARD in Scribner's for October.

### South American Reminiscences.

#### Third Paper.

A VISIT was made to the magnificent retreat for the insane, known as the Hospital Dom Pedro Segundo, in the beautiful suburb of Botafogo, upon the small bay of the same name. It is difficult to imagine an edifice more appropriate for the purpose to which it is devoted. Cleanliness and cheerfulness seemed to be the order in this charity, and the classification of patients unexcelled. In furniture, attendance, appointments, etc., it surpasses the most celebrated of Northern institutions. Imperial regulations are very strict, and the modes of reporting and journaling cases very thorough.

The day following this visit the United States and Brazilian Mail Steamer arrived from New York, and all hands were the recipients of letters and papers from home, which were eagerly devoured. As eager an interest was taken in providing answers to the missives from loved ones at home, for the same steamer that bore them also brought orders for us to proceed without delay to Monte Video, and there report to Rear Admiral Chas. H. Davis, for duty in the South Atlantic Squadron, and on the Plata if necessary.

The mail steamer also brought news of the earthquake that secured in the harbor of St. Thomas on the 18th of November, and which she had escaped by being delayed one day in sailing from New York; she arriving the 19th. Three of our naval vessels, the *Susquehanna*, Admiral Palmer's Flag-ship, *De Soto*, and the *Monongahela* were in the harbor. The *Susquehanna* escaped without damage, but the *De Soto* was swept from her anchorage by the violence of the waves, both her heavy chains breaking, and was thrown violently upon the iron piles of a new wharf, but the next wave released her, carrying the ship into deep water, she sustaining no serious damage. The *Monongahela*, anchored off Frederickstadt, island of St. Croix, was carried by the wave over the warehouses and into one of the streets of the town. The returning sea deposited her upon a coral reef at the water's edge. Only five of the lives on board were lost, and, more wonderful, the ship herself sustained but little injury. She was relaunched the following May, and sailed for New York. The devastation at St. Thomas was fearful; the shore was strewn with wrecks, and many small craft were hurled high and dry upon the shore. Others were sunk, their upper spars appearing as monuments to the coffins which they had become, while those that escaped absolute wreck lay at anchor battered as though hav-

ing passed through a severe naval engagement. The warehouses were turned into deadhouses and hospitals, where hundreds of bodies lay awaiting identification. The buildings suffered terribly, blinds, balconies, roofs, awnings and decorative adjuncts were destroyed, and the streets obstructed with the debris. Even the lighthouse was destroyed, and the barracks, where were quartered the troops of His Most August Majesty, the King of Denmark, was gutted, the roof soaring away over the town. Had it not been for the shelter afforded by the semi-circle of high hills that surround the town the destruction must have been complete. The commander of a Spanish *Corvett* exhibited great presence of mind, cutting away his masts at the very outset, and traversed the harbor under full head of steam rendering every assistance possible.

Among other public departments visited by us before our departure was the post-office. The Brazilian mode of delivery is certainly unique; the mail is sorted into heaps alphabetically, but by the given name instead of the surname. These are then arranged on counters in apartments, to which a certain number of individuals are admitted at a time, who sort out their own mail and retire, making room for others.

No one should leave Rio without visiting the custom house where all is life and bustle. The vast warehouses have an extended water front, with all the conveniences necessary for landing goods under cover, which, when once out of the lighters—vessels are not allowed at the quays—are rapidly stored in their respective departments until released by a requisition of due form. The handling of the enormous quantities of goods is facilitated by a network of iron tramways extending to all parts of the buildings. At three in the afternoon, the hour of closing, the *Rua Direita* presents a busy scene, being blocked by the crowd of clerks and negro porters whose shrill voices and ludicrous attempts to be the first served, provoke the mirth of the spectator, while around the large gate, pianos and agricultural implements, boxes and hampers, bales and casks, wine pipes and bundles of cordage are jumbled into an incongruous mass. Fifteen minutes later all has vanished, and this portion of the street is as silent as if a funeral were in progress.

The Capital is well provided with educational facilities. Besides the public schools and numerous academies there is the Imperial Academy of Medicine with unsurpassed facilities for the student, while the college of Dom Pedro II. ranks with it in facilities for the study of literature and the arts. Here too are the Military and Naval Academies and the St. Joseph Theological Seminary. At San Paulo and Pernambuco are the Law Colleges, which have a high reputation.

For the scientific medical man Rio presents better advantages than any American city, and here are men whose eminence in Europe caused them to be sought out and tempted to Brazil by the advantages offered by the Imperial government.

Besides these institutions there are a number of associations and societies for the diffusion of knowledge and the advancement of science.

The *Bibliotheca Nacional* contains upwards of one hundred thousand volumes, a large share of which were brought to Brazil by Dom John VI., from Portugal at the time of his flight from the advancing columns of Marshal Junot, whose vanguard reached the heights of Lisbon as the fleet, with that self-exiled Prince was leaving the Tagus. This library has been increased largely by purchase and also numerous private benefactions, notably that of the late Jose Bonifacio de Andrada, Prime Minister during the reign of Dom Pedro I. This is rich in the classics and ancient literature.

An Imperial Academy of fine arts was founded by decree of the National Assembly in 1824, and is well supplied as to faculty, and furnishes instruction in painting, drawing, architecture, sculpture and design. The annual attendance is in the neighborhood of one hundred. The academy also provides for the support of a number of its most meritorious alumni who may choose to study ancient and modern art in Europe.

A *Conservatorio de Musica* has been established by the State, where instruction is given to both sexes in vocal or instrumental music, and also a *Conservatorio dramatico*. I have before mentioned the extraordinary musical talents exhibited by the Brazilians, and in connection with the foregoing this leads me to speak of the Opera.

In Brazil the Opera is supported by the government and rivals in properties, *artistes* and appointments those of Europe. Here Ristori obtained laurels before coming to America, and

Goldschalk, Jenny Lind, Patti and Rachel have delighted the the Brazilians. Sunday night is the great opera night, and then the house is filled with the beauty and nobility of the Capital, and the display of toilets and diamonds is dazzling to the beholder. Gentlemen are not admitted unless in full evening dress.

Of societies there are the Imperial Agriculture, the statistical, the Auxiliadora and the Brazilian Historical Geographical Institute. All enroll many public spirited men and notables of the Empire. The latter exceeds in point of numbers and in talent; its meetings are largely attended, and the most punctual of its members is His Majesty, Dom Pedro II. A quarterly is published giving the proceedings of the Institute at length, and containing a valuable collection of articles.

The National Museum is open to visitors without charge, and from appearances well patronized. Here is a rich collection of weapons, dresses, etc., of the aboriginal tribes of Brazil, and a collection of native ores and geological specimens.

Sunday we attended High Mass at the Imperial Chapel; the music was grand, the organ being assisted by a full military band, and the anthems were most impressive. After mass we took gondola to the Botanical Garden, passing through the suburb of Botafogo and under the shadow of Corcovado. The streets were filled with slaves, some nearly nude, others tricked with ribbons, handkerchiefs and bright colors. One is struck with the diversity of features among the slaves, showing representatives of a greater number of African tribes than are encountered at home. In strong contrast with the jolly, ever-grinning Congo we see the stately Minas of haughty bearing, statuesque poses, superbly moulded limb and graceful forms. The Mina is very strong, a perfect Hercules in strength, and may be seen carrying upon his head burdens that four men at home would consider heavy. It is said that they are of the religion of Islam, and all speak and write Arabic readily. From their proud demeanor, flashing eyes and studied reticence, one would suppose they were hardly the material to make slaves of. The gentleman who owns a Mina always treats him with consideration. More than usually intelligent, many early obtain their freedom, and become useful citizens. Such are the facilities for emancipation in Brazil that no negro need remain a slave unless he chooses, and on regaining his freedom his rise in the world and in society is only limited by his qualifications.

Arriving at the Garden we enter the avenue of the Palma Real, as unique as it is beautiful. Each palm is but the counterpart of the next, straight and firm as marble pillars, and rising to a height of eighty feet. Beyond is seen the rolling sea, while the lofty mountains cast their shadows to assist the arboraceous shade. The walks are winding, and overhung with trees. Here may be seen the North American maple, the South Sea Island breadfruit, sandal wood from Marquesas, tea plants from China and Japan, camphor, cinnamon, pepper and cloves from Ceylon, but lacking the fragrance they shed when on their native soil. Oranges, mangoes, mimosas and olives overhang every walk, and the croton and plantain cast in every copice the deep umbrage of their forest gloom. At one side a silver streamlet dashes down the steep side of the Corcovado, and near by is a mound crowned with an arbor vitae turned bower. Not far distant stands a nunnery where in former times, it is said, husbands departing on a journey were wont to incarcerate their wives.

Sunday is a day of pleasure in Rio, and is devoted to amusements, balls, theatres and military parades. Foreign merchants usually close their places of business, but the natives make as great display as on week days. We obeyed the old proverb, "When in Rome do as the Romans do," and spent our last evening at the opera. Returning at ten, we found the streets as deserted as those of a New England village at midnight, except here and there some poor slave scurrying home as fast as his heels would carry him, fearful lest the hour should strike, and he fall into the hands of the police; for if not housed by ten he is arrested and committed to the calaboose until his master ransoms him by a smart fine. The law is very strict in this particular. The same rule is not applied to freedmen; yet one would think it equally in force without regard to class or caste, for the Brazilian himself practices the old saw of "early to bed and early to rise."

Seated in the stern sheets of the cutter that was bearing us swiftly over the bosom of the placid Nitherhoi to our ship, many and regretful were the glances thrown back upon the

beauteous city to which we were to bid adieu on the morrow. The moon had not yet risen, and the evening remained dark. This circumstance heightened the beauty of the city, and the effect her numberless lights lining the immense borders of the city to the water's edge were reflected from the water in quivering flashes. The outlines of the hills were defined against the darkness by rows of lamps extending over their verdure-clad summits; an occasional ferryboat with its various colored lamps, with every turn of the wheel furrows through a diamond sea; every dip of the oars, every ripple from the evening breeze causes millions of phosphorescent scintillations to illuminate the dark waters. We sit on deck smoking and chatting, loath to lose the beauty spread before us, and drinking in the novelty and splendor of the scene. What! eight bells? Yes, midnight; and we regretfully seek our cots bearing memories of the lovely panorama that will never be forgotten.

Slowly we moved down the bay in the early morning light, passing under the guns and frowning battlements of the fortress of Villegagnon and out between the fortifications of Santa Cruz and San Jo-ao, past the Sugar loaf, and we bid adieu to the lovely Niterhoi and the metropolis of San Sebastian de Rio de Janeiro. This harbor is situated just within the Torrid zone, and communicates as before described with the wide rolling Atlantic, by a deep and narrow passage between two granite mountains. The entrance is so safe as to render the services of a pilot unnecessary. The fortresses occupy so commanding positions at the mouth of the harbor, upon the islands and surrounding heights as to make the entrance of a hostile navy practically impossible, at least to wooden vessels and the lighter armored ships. Rio is the largest city of South America, and the third in size upon the western Continent, and boasts an antiquity greater than that of any city in the United States. Being at once the commercial emporium and political capital of a country which embraces greater territorial dominion than any other country of the New World, together with natural advantages second to none, the position, scenery and increasing magnitude of its capital render it a metropolis worthy of a great empire. And now we are out on the broad Atlantic. What a contrast! We have exchanged a quiet harbor, gentle breezes and a climate of almost eternal sunshine for tumbling ocean and fierce storms, and are soon to encounter a region of snow and ice.

The following day at meridian we were two hundred and fifty miles from our anchorage at Rio, with the breeze directly aft. The weather was extremely warm, and the night quite oppressive, particularly when occupying the staterooms. The wind sails, however, made the wardrobe far more tenable than it otherwise would have been. Sailors must be always prepared for changes; to-day suffering the heat and lassitude induced, of the tropics, and to-morrow suffering from Boreas blasts and discomforts of an Arctic winter.

For several days the weather was close and sultry, while the sky was filled with a dull haze; the sea smooth, and the breeze almost stationary. We gathered daily under the awning on deck in cool, white duck and panamas, reading, smoking and chatting, varied only by watching the quartermaster leaving the log, and laying wagers on the result. Now four! four and a half! six knots! good! pslaw, only three! and so on as the breezes varied in intensity. How we chaffed under slow sailing, though we had nothing in the world to hurry for, and even so slow a rate as sailing as three and four knots covers a great deal of space in twenty-four hours. The fifth day from Rio we touched at that entomological paradise known as the Island of Santa Catharina to take in coal, for here the government had stored some hundreds of tons. Here are found specimens of the *Lepidoptera*, beside which those of all other parts of the world pale, many butterflies measuring seven inches from wingtip to wingtip when spread. Here, too, are found in great numbers the *Coccinea* beetles, which glow with such intensity at night that if eight or ten are placed in a vial the light will be strong enough to read by. A magnificent fire fly is also found here, which ladies are in the habit of enclosing in gauze nets, and wearing as ornaments in the ballroom. The island has many attractions; its fruits are unrivalled, and the scenery wild and picturesque. The climate, though warm, is so modified by a sea breeze that the heat is never oppressive, and the birds are remarkable for the sweetness and brilliancy of their music. The salubrity of the air is such that it is often visited by invalids from northern cities of the Empire, and even from distant countries. Here too, is where a large share of the fish scale and shell jewelry is manufactured. A writer has justly said, "Could Eden have taken its departure from the East in the shape of an island, I should think it had anchored itself here, under the name of St. Catharine."

"How sweetly does the moonbeam smile  
To-night upon you leafy isle!  
Oft in my fancy's wanderings  
I've wished that little isle had wings,  
And we, within its fairy bowers,  
Were wafted off to seas unknown,  
Where not a pulse should beat but ours,  
And we might live, love, die alone—  
Far from the cruel and the cold—  
Where the bright eyes of angels only  
Should come around us, to behold  
A paradise so pure and lonely."

We only remained at St. Catharines a few hours. Our Captain hoped to have met the Admiral here, and perhaps be relieved from going to Montevideo, for he had no desire to serve under the gentleman, having had sufficient experience as to his vagaries. We juniors, however, were anxious to see the Plata. In less than twenty-four hours we experienced a material change in climate, having encountered a *pampero*—a wind that gives no admonition, but always springs upon you unawares—and though we had heretofore sweltered in the lightest summer clothing we were now uncomfortably cold, even with the warmest apparel. Many were suffering from colds, and for the first time it was found necessary to place several men on the binnacle list. The apothecary was several times asked if he could not prescribe for the monkeys, numbers of which had been brought on board by the men at Para. The sudden change was fatal to them, and many of the intolerable nuisances died. In fact none were left alive when we reached the Pacific. My marmosets were kept in their cage near the heater plentifully supplied with wool, and managed to survive until just before we reached the Straits, when they too succumbed. One mischievous and villainous little beast became the victim of my own curiosity. Several times he had been caught in the officers' staterooms and severely thrashed, but punishment seemed to be only a new incentive to his curiosity. He would destroy every scrap of paper that he could lay his paws on, and on one occasion he beautifully mixed all the contents of my dressing-case and adorned himself with pomade, capping all with a liberal application of lather and perfumes. Another time I came in just in time to see him grab a piece of opium, from which I had been making pills; on discovering my presence he hastily stuffed it in his cheeks and scampered up the companion. Being well satisfied with

the meal he had taken I did not pursue, and the dose took effect, for on leaving the wardroom he rushed to the cross-jack stay which he nimbly clambered, then he got on the weather cross-jackyard arm and proceeded to masticate the morsel, which, having been mixed with confection of roses, he found palatable. The effects of the drug were soon apparent for he went to sleep, and finally tumbled from his lofty perch into the sea.

Five days from Santa Catharina we entered the broad mouth of the Plata, and anchored the following day in front of Monte Video, the Capital and principal city of Uruguay or Banda Oriental. Here we found the Guerrierie, flagship, the Shamokin and Kansas, the latter having preceded us by two days. The Wasp, which also belonged to the squadron, was up the Uruguay with the Admiral. All the talk in the fleet was of the war then in progress between Paraguay on the one hand, and Brazil, Uruguay and the Argentine Confederation on the other. Rear Admiral Godon had been in command until the previous July, when he was superseded by Rear Admiral Bell, owing to the extreme self-importance of the former, who was so puffed up with his own importance and the consequent littleness of every one else, that his name had become a byword and a reproach upon the United States Government. Even Minister Webb, our representative at the Imperial Court of Brazil, was forced to speak severely of the conduct of Admiral Godon, and this was the more marked from the fact that Hon. Mr. Webb always had a good word for every one. All the American ministers had been gratuitously insulted by this commander of the South American squadron. With the officers of the squadron he bore an unenviable reputation from his ungentlemanly conduct. The new Admiral, as might be expected, was but little improvement, as Porter would not send any one who was not a firm believer in the Porter theory, viz., that all officers in the United States service, civil or naval, were inferior to the line officers of the Navy. I may here digress sufficiently to show why the United States Navy has degenerated, and why it is impossible to fill the vacancies in the staff that occur. A little before this D. D. Porter, as Vice-Admiral was called to act as an assistant to the Secretary of the Navy. He proceeded to issue a new Bluebook, or Naval Regulations, in which every ship was saddled with two captains, one ornamental, the other useful. Next he declared that Surgeons, Chaplains, Paymasters and Chief Engineers had no rank except by courtesy, and hence were subordinate to the lower line officer; thus making the half-fledged youth who was just from the Naval Academy, and holding a warrant as midshipman, the superior of all the staff, even if they held the rank of Captain, which corresponds to Colonel in the army. The duties of Admiral were thus defined: "To command a foreign squadron when he chooses;" this was all, but the Vice-Admiral was to be the coadjutor of the Secretary of Navy. This was with the design of shelving Farragut, and allowing no interference from him in matters naval; in fact, making Porter the superior of his superior in rank. After the death of Admiral Farragut, of course the duties formally assigned to the Vice-Admiral were now transferred to the Admiral. Further on—I am speaking of a time subsequent to our arrival in Monte Video—all badges of rank, etc., were taken away from the staff, while the midshipman was fitted out with a gorgeous shoulder knot. The constant insults thus heaped upon the staff officers were too much, and many left the service of which they were an ornament, others remained for a time trusting that Congress would right the matter, which it did in part, but so dilatory and partial was its action that many more had left.

## INTRODUCTION AND SUCCESSION OF VERTEBRATE LIFE IN AMERICA.\*

By O. C. MARSH.

PRESIDENT OF THE BIOLOGICAL SECTION OF THE AMERICAN ASSOCIATION.

### FIFTH PAPER.

THE Artiodactyles, or even-toed Ungulates, are the most abundant of the larger mammals now living; and the group dates back at least to the lowest Eocene. Of the two well marked divisions of this order, the Bunodonts and the Selenodonts, as happily defined by Kowalevsky, the former is the older type, which must have separated from the Perissodactyle line after the latter had become differentiated from the primitive Ungulate. In the Coryphodon Beds of New Mexico, occurs the oldest Artiodactyle yet found, but it is at present known only from fragmentary specimens. These remains are clearly Suilline in character, and belong to the genus *Eoelys*. In the beds above, and possibly even in the same horizon, the genus *Helohys* is not uncommon, and several species are known. The molar teeth of this genus are very similar to those of the Eocene *Hyacotherium*, of Europe, which is supposed to be a Perissodactyle, while *Helohys* certainly is not, but apparently a true lineal ancestor of the existing pigs. In every vigorous primitive type which was destined to survive many geological changes, there seems to have been a tendency to throw off lateral branches, which became highly specialized and soon died out, because they are unable to adapt themselves to new conditions. The narrow path of the persistent Suilline type, throughout the whole Tertiary, is strewn with the remains of such ambitious offshoots, while the typical pig, with an obstinacy never lost, has held on in spite of Catastrophes and Evolution, and still lives in America to-day. In the lower Eocene, we have in the genus *Parahys* apparently one of these short-lived, specialized branches. It attained a much larger size than the true lineal forms, and the number of its teeth was reduced. In the Dinoceras Beds, or middle Eocene, we have still, on or near the true line, *Helohys*, which is the last of the series known from the American Eocene. All these early Suillines, with the possible exception of *Parahys*, appear to have had at least four toes, all of usable size.

In the lower Miocene, we find the genus *Perchirus*, seemingly a true Suilline, and with it remains of a larger form, *Elotherium*, are abundant. The latter genus occurs in Europe

in nearly the same horizon, and the specimens known from each Continent agree closely in general characters. The name *Pelonax* has been applied erroneously to some of the American forms; but the specimens on which it was based clearly belong to *Elotherium*. This genus affords another example of the aberrant Suilline offshoots, already mentioned. Some of the species were nearly as large as a Rhinoceros, and in all there were but two serviceable toes; the outer digits, seen in living animals of this group, being represented only by small rudiments concealed beneath the skin. In the upper Miocene of Oregon, Suillines are abundant, and almost all belong to the genus *Thimohys*, a near ally of the modern Pecary (*Dicotyles*), but having a greater number of teeth, and a few other distinguishing features. In the Pliocene, Suillines are still numerous, and all the American forms yet discovered are closely related to *Dicotyles*. The genus *Platygonus* is represented by several species, one of which was very abundant in the Post-Tertiary of North America, and is apparently the last example of a side branch, before the American Suilline culminate in existing Pecaries. The feet in this species are more specialized than in the living forms, and approach some of the peculiar features of the ruminants; as for example a strong tendency to coalescence in the metapodial bones. The genus *Platygonus* became extinct in the Post-Tertiary, and the later and existing species are all true Pecaries. No authenticated remains of the genera *Sus*, *Porcus*, *Phacocharus*, or the allied *Hippotamus*, the Old World Suillines, have been found in America, although several announcements to that effect have been made.

In the series of generic forms between the lower Eocene *Eoelys* and the existing *Dicotyles*, which I have very briefly discussed, we have apparently the ancestral line ending in the typical American Suillines. Although the demonstration is not yet as complete as in the lineage of the Horse, this is not owing to want of material, but rather to the fact that the actual changes which transformed the early Tertiary pig into the modern Pecary were comparatively slight, so far as they are indicated in the skeletons preserved, while the lateral branches were so numerous as to confuse the line. It is clear, however, that from the close of the Cretaceous to the Post-Tertiary, the Bunodont Artiodactyles were especially abundant on this Continent, and only recently have approached extinction.

The Selenodont division of the Artiodactyles is a more interesting group and, so far as we now know, makes its first appearance in the upper Eocene of the West, although forms, apparently transitional, between it and the Bunodonts occur in the Dinoceras Beds, or middle Eocene. These belong to the genus *Homacodon*, which is very nearly allied to *Helohys* and but a single step away from this genus, toward the Selenodonts. By a fortunate discovery, a nearly complete skeleton of this rare intermediate form has been brought to light, and we are thus enabled to define its characters. Several species of *Homacodon* are known, all of small size. This primitive Selenodont had forty-four teeth, which formed a nearly continuous series.

The molar teeth are very similar to those of *Helohys*, but the cones on the crowns have become partially triangular in outline, so that when worn, the Selenodont pattern is clearly recognizable. The first and second upper molars, moreover, have three distinct posterior cusps, and two in front; a peculiar feature, which is seen also in the European genera *Dichobune* and *Crinotherium*. There were four toes on each foot, and the metapodial bones were distinct. The type species of this genus was about as large as a cat. With *Helohys*, this genus forms a well marked family, the *Helohyidae*.

In the *Diplacodon* horizon of the upper Eocene, the Selenodont dentition is no longer doubtful, as it is seen in most of the *Artiodactyla* yet found in these beds. These animals are all small, and belong to at least three distinct genera. One of these, *Eomeryx*, closely resembles *Homacodon* in most of its skeleton, and has four toes, but its teeth show well marked crescents, and a partial transition to the teeth of *Hypotamias*, from the Eocene of Europe. With this genus, is another (*Parameryx*), also closely allied to *Homacodon*, but apparently a straggler from the true line, as it has but three toes behind. The most pronounced Selenodont in the upper Eocene is the *Oromeryx*, which genus appears to be allied to the existing Deer family or *Cervidae*, and if so is the oldest known representative of the group. These facts are important, as it has been supposed, until very recently, that our Eocene contained no even-toed mammals.

In the lowest Miocene of the West, no true crescent-toothed *Artiodactyla* have as yet been identified, with the exception of a single species of *Hypotamias*; but in the overlying beds of the middle Miocene, remains of the *Oreodontia* occur in such vast numbers as to indicate that these animals must have lived in large herds around the borders of the lake-basins in which their remains have been entombed. These basins are now the denuded deserts so well termed *Mauvaises Terres* by the early French trappers. The latest specialized, and apparently the oldest, genus of this group is *Agriocherus*, which so nearly resembles the older *Hypotamias*, and the still more ancient *Eomeryx*, that we can hardly doubt that they all belonged to the same ancestral line. The typical Oreodonts are the genera *Oreodon* and *Epeorodon*, which have been aptly termed by Leidy ruminating hogs. They had forty-four teeth, and four well-developed toes on each foot. The true Oreodonts, which were most numerous east of the Rocky Mountains, were about as large as the existing Pecary, while *Epeorodon*, which was nearly twice this size, was very abundant in the Miocene of the Pacific slope.

In the succeeding Pliocene formation, on each side of the Rocky Mountains, the genus *Merychys* is one of the prevailing forms, and continues the line on from the Miocene, where the true Oreodonts became extinct. Beyond this we have the genus *Merychoceros*, which is so nearly allied to the last that they would be united by many naturalists. With the close of the Pliocene this series of peculiar ruminants abruptly terminates, no member surviving until the Post-Tertiary, so far as known.

A most interesting line, that leading to the Camels and Llamas, separates from the primitive Selenodont branch in the Eocene, probably through the genus *Parameryx*. In the Miocene we find in *Puotherium* and some nearly allied forms unmistakable indications that the Cameloid type of ruminant had already become partially specialized, although there is a complete series of incisor teeth, and the metapodial bones are distinct. In the Pliocene, the Camel tribe was, next to the Horses, the most abundant of the larger mammals. The line is continued through the genus *Procamelus*, and perhaps others, and in this formation the incisors first begin to diminish, and the metapodials to unite. In the Post-Tertiary we have a true *Anubis*, represented by several species, and others in South America, where the Alpaca and Llama still survive. From the Eocene almost to the present time, North America has been the home of vast numbers of the Camelids.

\* Delivered before the American Association for the Advancement of Science, at Nashville, Tenn., Aug 31, 1877.

and there can be little doubt that they originated here and migrated to the Old World.

Returning once more to the upper Eocene, we find another line of descent starting from *Oromeryx*, which, as we have seen, had apparently then just become differentiated from the older Bunodont type. Throughout the middle and upper Miocene this line is carried forward by the genus *Leptomeryx* and its near allies, which resemble so strongly the Pliocene *Cervidae* that they may fairly be regarded as their probable progenitors. Possibly some of these forms may be related to the *Tragulidae*, but at present the evidence is against it.

The Deer family has representatives in the upper Miocene of Europe, which contains fossils strongly resembling the fauna of our lower Pliocene, a fact always to be borne in mind in comparing the horizon of any group in the two continents. Several species of *Cervidae*, belonging to the genus *Ovis*, are known from the lower Pliocene of the West, and all have very small antlers, divided into a single pair of tines. The statement recently published that most of these antlers had been broken during the life of the animals is unsupported by any evidence, and is erroneous. These primitive Deer do not have the orbit closed behind, and they have all the four metapodial bones entire, although the second and fifth are very slender. In the upper Pliocene, a true *Cervus* of large size has been discovered. In the Post-Tertiary, *Cervus*, *Alces* and *Tarandus* have been met with, the latter far south of its present range. In the caves of South America remains of *Cervus* have been found, and also two species of Antelopes, one referred to a new genus, *Leptotherium*.

The Hollow-horned Ruminants, in this country, appear to date back no further than to the lower Pliocene, and here only a single species of *Bison* has as yet been discovered. In the Post-Tertiary this genus was represented by numerous individuals and several species, some of large size. The Musk Ox (*Oobos*) was not uncommon during some parts of this epoch, and its remains are widely distributed.

No authentic fossil remains of true Sheep, Goats or Giraffes have as yet been found on this continent.

The Proboscideans, which are now separated from the typical Ungulates as a distinct order, make their first appearance in North America in the lower Pliocene, where several species of *Mastodon* have been found. This genus occurs, also, in the upper Pliocene and in the Post-Tertiary, although some of the remains attributed to the latter are undoubtedly older. The Pliocene species all have a band of enamel on the tusks, and some other peculiarities observed in the oldest *Mastodons* of Europe, which are from essentially the same horizon. Two species of this genus have been found in South America, in connection with the remains of extinct Llamas and Horses. The genus *Elephas* is a later form, and has not yet been identified in this country below the upper Pliocene, where one gigantic species was abundant. In the Post-Pliocene remains of this genus are numerous. The hairy Mammoth of the Old World (*Elephas primigenius*) was once abundant in Alaska, and great numbers of its bones are now preserved in the frozen cliffs of that region. This species does not appear to have extended east of the Rocky Mountains or south of the Columbia River, but was replaced there by the American Elephant, which preferred a milder climate. Remains of the latter have been met with in Canada, throughout the United States and in Mexico. The last of the American *Mastodons* and Elephants became extinct in the Post-Tertiary.

Another of the interesting changes in mammals during Tertiary time was in the teeth, which were gradually modified with other parts of the structure. The primitive form of tooth was clearly a cone, and all others are derived from this. All classes of vertebrates below mammals, namely, Fishes, Amphibians, Reptiles and Birds, have conical teeth, if any, or some simple modification of this form. The Edentates and Cetaceans with teeth retain this type, except the Zeuglodonts, which approach the dentition of aquatic Carnivores. In the higher mammals, the incisors and canines retain the conical shape, and the premolars have only in part been transformed. The latter gradually change to the more complicated molar pattern, and hence are not reduced molars, but transition forms from the cone to more complex types. Most of the early Tertiary mammals had forty-four teeth, and in the oldest forms the premolars were all unlike the molars, while the crowns were short, covered with enamel, and without cement. Each stage of progress in the differentiation of the animal was, as a rule, marked by a change in the teeth; one of the most common being the transfer, in form at least, of a premolar to the molar series, and a gradual lengthening of the crown. Hence it is often easy to decide from a fragment of a jaw to what horizon of the Tertiary it belongs. The fossil horses of this period, for example, gained a grinding tooth for each tooth they lost, one in each epoch. In the single-toed existing horses, all the premolars are like the molars, and the process is at an end. Other dental transformations are of equal interest, but this illustration must suffice.

The changes in the limbs and feet of mammals during the same period were quite as marked. The foot of the primitive mammal was doubtless plantigrade, and certainly five-toed. Many of the early Tertiary forms show this feature, which is still seen in some existing forms. This generalized foot became modified by a gradual loss of the outer toes, and increase in size of the central ones, the reduction proceeding according to systematic methods, differing in each group. Corresponding changes took place in the limb bones. One result was a great increase in speed, as the power was applied so as to act only in the plane of motion. The best effect of this specialization is seen to-day in the Horse and Antelope, each representing a distinct group of Ungulates with five-toed ancestors.

If the history of American Mammals, as I have briefly sketched it, seems as a whole incomplete and unsatisfactory, we must remember that the genealogical tree of this class has its trunk and larger limbs concealed beneath the debris of Mesozoic time, while its roots doubtless strike so deeply into the Paleozoic that for the present they are lost. A decade or two hence we shall probably know something of the mammalian fauna of the Cretaceous, and the earlier lineage of our existing mammals can then be traced with more certainty.

The results I have presented to you are mainly derived from personal observation; and since a large part of the higher vertebrate remains found in this country have passed through my hands, I am willing to assume full responsibility for my presentation of the subject.

For our present knowledge of the extinct Mammals, Birds and Reptiles of North America, science is especially indebted to Leidy, whose careful, conscientious work has laid a secure foundation for our vertebrate paleontology. The energy of Cope has brought to notice many strange forms, and greatly enriched our literature. Agassiz, Owen, Wyman, Baird, Hatcher, Deane, Emmons, Lea, Allen, Gibbs, Jefferson, DeKay and Harlan deserve honorable mention in the history of this branch of science. The South American extinct ver-

tebrates have been described by Lund, Owen, Burmeister, Gervais, Huxley, Flower, Desmarest, Aymard, Pictet and Nodot. Darwin and Wallace have likewise contributed valuable information on this subject, as they have on nearly all forms of life.

In this long history of ancient life I have said nothing of what Life itself really is. And for the best of reasons, because I know nothing. Here at present our ignorance is dense, and yet we need not despair. Light, Heat, Electricity and Magnetism, Chemical Affinity and Motion, are now considered different forms of the same force; and the opinion is rapidly gaining ground that Life or vital force is only another phase of the same power. Possibly the great mystery of Life may thus be solved, but whether it be or not, a true faith in Science admits no limit to its search for Truth.

(To be Continued.)

## A CRUISE AROUND NANTUCKET.

WE lay over a couple of days at Nantucket, took out our bowsprit, and put in a temporary one strong enough to hold a man-cage at the forward end, took in a couple of weeks' water and a sword fishing outfit and pilot, and one bright fall morning bade the old town good-bye, and stood away over the shoals for No-Man's Land.

We had a good top-sail breeze from the southward until evening, when it died away, leaving a nasty sea on, in which we pounded and "kicked" all night with hardly enough wind to keep our sheets out of the water. Towards morning the breeze freshened, and before noon our pilot pronounced us on the grounds and went on lookout. While the watch below were taking a bite we heard our Nantucketer sing out to his helmsman, "Let her off a couple of pints—so—stiddy;" and, sotto voce, "Thar's so'thin' off thar I can't 'zactly make out." John's coffee and sandwiches were forgotten, much to our ebony cook's disgust, and we were on deck before our course was fairly changed; but it was some time before we could distinguish the speck, rising and falling with the sea, which had attracted the old whaler's attention. Soon he pronounced it a "fish," and after putting us on the other tack to run down partly to leeward of it, went below to bring up the irons. When we had worked perhaps a mile before it, we lay to for our final instructions, the skipper took the wheel to "keep her head on if yer can," and the one who held the air tight barrel was told "when y're sure I've struck him, over with it."

He was as cool as a cucumber as he took the harpoon and cutting spade forward, coiling the line (one end of which was fast to the harpoon, the other to the barrel) carefully on deck, with the caution, "Ware when it flakes out," and taking only enough with him to his roost on the bowsprit end to give him ample elbow room. His station reached, he fixed the spade in the support ready to receive it, laid the iron in front of him across the cage, waved his hand, and we filled away, close hauled. Never was a mile more slowly sailed by the little group in the pit of the White Cloud. Never had our hearts beaten faster than as we neared the fifteen feet fish, rolling, asleep, in the trough of the sea. Now the pilot is almost over him; slowly he raises the iron, braces himself, and hurls it with all the strength of both sinewy arms. The iron sinks deeply into the sleeping fish; there is a mighty surge, the line flakes overboard as quickly as thought, the float spashes as it disappears beneath the water, then all is still. We luff and wait. Presently up bobs the float. The fish fluting the strain of the air-tight barrel too severe is coming to the surface. Now the water bubbles and boils just under our lee, and the sword fish breaches half his length out of his element, shakes himself savagely, and swims at lightning speed for the barrel. He strikes it again and again with his sword, but it rests so lightly on top of the water that he cannot injure it. Then he stops, looks at us an instant, and darts toward the boat. We have not time to bring her head around, and if he strikes it will be amidsips. The pilot comes quickly aft, bringing his long-handled, three-cornered spade, and as the fish comes within striking distance, aims one swift, unerring blow full at his forehead. The terrible sword drops harmless, the upper muscles at its base are severed, and he passes under us, jarring the boat and splashing us with water as he sounds.

Again the float goes under and is out of sight a longer time than before. Again the fish throws himself out of water, showing his sword hanging down at an angle of forty-five degrees. He swims once or twice around the barrel, then starts to windward at too furious a speed to last with the float plowing behind him. When we beat up he is feebly fighting it. He sounds for a short time, but comes up exhausted. Once or twice he rolls over on his side, but recovers himself and swims on in short tacks. We press him too closely, and he charges us again, but we make no effort to avoid him, knowing that now he is powerless to injure us, nor does he try to strike, apparently realizing that his weapon is useless, but goes under, coming up the other side.

And so he sounds and swims, fights and runs, until at last he succumbs to exhaustion and lies still. We work up alongside, and as we luff, the pilot puts a lance into his very life. There is a shudder along his whole body, his fins work convulsively a moment, and then he lies motionless and dead. We rig a tackle to our mainmast, and after considerable labor get him aboard, where we can examine at our leisure his peculiar shape, and admire his graceful "clipper build." Our Nantucketer estimates his weight at between five and six hundred pounds. His sword is over three feet in length, its broken point and nicked edges proving that its owner was an old as well as a fighting fish.

Our fish is on board, and after reserving a few choice cuts, turned over to our pilot, who asks that we run in to Martha's Vineyard that he may dispose of him before he spoils. And so we set gaff and jib top-sails, haul off before the wind, and lay our course northward. At sunset the wind died away again, and we lay becalmed for several hours. After a well-earned supper of fried swordfish, which, by the way, is a coarse, but not unpalatable dish, we stretched ourselves on deck and watched the purple tints fading away in the west. The gray crept over the east, the clouds above us lost their undergraze of crimson, and the stars—those sentinels of the night—came slowly on watch, and then those other sentinels, the light-houses and light-ships, flashed their warning rays over the quiet sea.

Our pilot, resting his broad back against the mast, tells us

through clouds of tobacco smoke, of his adventures by sea and land. How a sword was found, a third larger than ours, while repairing a New Bedford whaler, piercing the vessel's side, and wedged so tightly into a cask of oil that none had leaked away. How his brother's boat was struck by a fish on the same grounds we were on, staving her quarter, and sinking her from under the three men, who pulled ashore in a dory; how he had once been pierced, but had saved his boat by drawing canvas over the leak. And then, as he cuts another filling from a plug of "navy," rubbing it to pieces between his horny hands, and settles himself more comfortably against the mast, he tells of the wrecks that strew his island every year, and almost every gale. Of the ship *Newton*, with a crew of over twenty men, that grounded on "Tom Nevero Head," on Christmas night of '66, going to pieces and drowning all but one poor fellow, who got ashore and crawled a mile through bitter cold and blinding snow, only to die within a few rods of shelter; how the surf was filled and the beach strewn for miles and miles with debris from the wreck, with here and there a ghastly dead thing rolling in the undertow; how all the recovered dead are quietly sleeping side by side in the green burying ground at N. He tells how a schooner came ashore with all sails set, not a soul on board, not a drop of water in her hold; a cat purring contentedly before a bright coal fire, and the log written up to twelve o'clock the night before. "Took to their boats and were swamped," he said. Then, knocking the ashes from his pipe, went below and turned in.

The others soon followed his example, and the watch on deck was alone. The sails hung motionless from stays and gaff, or else slapped lazily as a wandering puff partly filled them. The moon came up, and sent a great silver wake across the sea, brightening the crests of the gentle swells rolling in from the southward, leaving their troughs in shadow, throwing so ghostly a light on the sails of a distant vessel that the watch involuntarily started as he saw them through the gloom. A faint streak of light to the northward marked the passage of a steamer, and farther west the bold light of Gay Head flashed out. The night wore on, and before the watch was changed a cat's paw came out of the west followed presently by a gentle breeze.

When morning dawned the sandy cliffs of the vineyard lay dead ahead, and in a short time we were moored alongside the wharf at the camp grounds, where the pilot soon disposed of his fish, realizing quite a little sum from its sale. We wandered through the rows of cottages and big and little tents, heard part of an open-air sermon, then went on board and were soon under way. A vote was taken on the question of more sword fishing, and was almost unanimously negative, so it was decided to run into Nantucket, refit our bowsprit, retain the pilot and take a turn at the shark and bluefish that abound among the neighboring shoals.

Half an hour out we caught sight of a low lying yellow line, which gradually arose from the waves until the island was in view, a white lighthouse glistening in the sun on its northern point. Nantucket lies in a semicircular form, or rather like two sides of a parallelogram, the ends connected by a parabolic curve, and the apex rounded. The longer side of this parallelogram points westward. At its end lie two small islands, Tookemuck and Maddequet. The shorter side runs northerly, on the end of which, as I have stated, stands Great Point Light. The town of Nantucket lies near the centre of the curve, and northeast from it, separated only by a narrow point (Coatue) from the outer harbor, lies the inner one. This, at its farther end, almost cuts through to the ocean beyond. Indeed, so narrow is the beach between that in the days of the island's prosperity a ship canal was projected and came very near being excavated here. Entrance to the harbor is made between Brant and Coatue Points, on the former of which stands a harbor light with other smaller "bearing lights" near by.

Across the island from the town, eight miles away, and near the imaginary apex, lies the little fishing village of Sinsconset, perched upon a sandy cliff, while to the northward, a mile or more, stands Sankoty Head lighthouse, one of the finest on the coast, whose light has been seen nearly thirty miles at sea. Southeast from this, thirty miles away, and marking the outermost edge of the dangerous South Shoal, lies a light-ship. Monotonous as is the life on a light-ship it is not a hard one, and there are plenty of broken down seamen on this island of sailors who gladly ship. The crews are on board from three to six months, and an equal length of time on shore. Their only duties are to keep their ship and lights in trim, and to stand regular watches night and day. They amuse themselves in the meantime by making baskets and "gaw-gaws," which they take ashore and sell, and by fishing. Occasionally they are hailed by a passing vessel, and sometimes receive godsend in the shape of newspapers from the same source. At intervals a gale or a wreck furnish variety, but the life is one of such terrible monotony that but few young men can be induced to go out a second time, in consequence of which the captain and his crew are generally old gray-headed water-dogs.

Some years ago the captain of one of these ships came ashore for supplies, leaving his mate in charge, and his wife and children on board. During his absence a gale "came on to blow" (in island vernacular), preventing his return. It soon increased to almost a hurricane; the vessel's iron cables were through her hawser holes and forced the crew to cut. They set a mainsail on the crazy old craft and tried to work her into port, but the rotten canvas blew out of the bolt rope and left her at the mercy of the gale. The crew managed to keep her before the wind, and she scudded by Great Point in full view of the agonized captain and drifted out to sea. Ten days after she was sighted off Cape Hatteras. Her crew were taken off, and the ship sank before the rescuing vessel was out of sight.

As we came in over the bar, which stretched to the right, and left for miles, our pilot told us of the gallant rescue of the crew of an ice-bound schooner by a few Nantucketers. The vessel lay just inside the bar surrounded by loose ice, the crew out of fuel, and the schooner leaking badly, her decks and rigging a mass of ice. The rescuers, taking their lives in their hands, started in dories, taking planks to aid them in crossing the tender ice. They were several hours in getting out to her, but finally succeeded in getting every one safely ashore. All were given medals by the Humane Society in reward for their bravery.

Nantucket—with its rambling, grassy streets and quaint old buildings, each surmounted by a platform, on which the townspeople used to gather in the old prosperous times to see the ships come in from their whaling voyages with oily cargoes and bronzed crews; with its crumbling warehouses and rotting wharves—blinks lazily at the visitor, as if, Van Winkle like, it were just awakening from a sleep of many years.

One cannot follow the windings of the almost deserted streets and realize that only forty years ago they were blocked with loads of oil and whalebone and ships' stores; that the

## Fish Culture.

## PRIORITY OF FISH BREEDING IN THE UNITED STATES.

The subjoined correspondence we cheerfully publish, with the hope that Dr. Garlick may receive all the credit which he seems to deserve as the pioneer in American fish culture. Further comment is unnecessary, as the merits of the case are set forth with sufficient clearness in the letters themselves:

CLEVELAND, Sept. 12, 1877.

EDITORS FOREST AND STREAM.—Gentlemen:—We consider here that Prof. Baird in his report of 1872 and '73 did great injustice to Dr. Garlick in regard to the priority of fish culture in America, and see that he has not seen fit in his report of 1874 and '75 to mention the subject in any way, as it was supposed he would do. The doctor is consequently much exercised over it. The old doctor has been an invalid for many years, and is now confined to the house and almost constantly to his bed. We sincerely hope, then, for his sake, you will publish the enclosed articles from him and Judge Potter, and so give him rest.

Yours respectfully,

DR. E. STERLING.

DR. GARLICK'S LETTER TO PROF. BAIRD.

BEDFORD, Cuyahoga Co., O., Sept. 10, 1877.

To Prof. S. F. Baird, Assistant Secretary of the Smithsonian Institution, and United States Commissioner of Fish and Fisheries:

Sir:—I must continue to protest against the statements made by you in the Reports on Fisheries for 1872 and 1873, attributing to Dr. Bachman priority in fish breeding in the United States. In this paper I have no new proofs to offer, which you have not already had and long before those reports were made. On page 536 of your reports for 1872 and 1873, you say that "an account was first given by Dr. Garlick in the *Ohio Farmer* of the methods employed by himself and Dr. Ackley, within two or three years after beginning their experiments." Why you persist in repeating those statements in the face of such proofs is beyond my comprehension. As soon as I saw Dr. Bachman's claims as put forth by him in December, 1855, and January, 1856, in the *Southern Cultivator*, I made a counter statement in the *Ohio Farmer*, published at Cleveland more than twenty years since. These statements were published in my book on fish culture in 1857.

I now briefly recapitulate what has transpired since 1853, hoping that the time will come when you will regret the continued injustice done to Dr. Ackley and myself by your partiality for a deceased friend. If this correction cannot be affected on the ground of justice and evidence, nothing is left but to continue to defend the memory of Dr. Ackley and my own rights by scattering as widely as possible the proofs contradicting your official statements.

In 1853 the subject of fish culture was brought before the people of the United States, in a letter from Paris then published in the *National Intelligencer* at Washington. It was in substance the Report of *Milne Edwards* upon the experiments of Géharrard Rény in the streams of the Vosges in France. When we saw this article Dr. Ackley and myself went into the work enthusiastically, made artificial pools in the vicinity of Cleveland, spent several thousand dollars, produced brook trout which we exhibited at two of the Ohio State Fairs, gave descriptions of the process in the Cleveland papers, and before the Cleveland Academy of Natural Sciences. Our first artificial fecundation of trout was on the 26th of November, 1853, which were hatched and alive on the 24th of January, 1854. My articles on Fish Culture which were published in the *Ohio Farmer* at Cleveland were commenced in 1854 and extended into 1855. On the 7th of February, 1854, I read a paper on the subject before the Cleveland Academy exhibiting the fish, which article was published in the March number of the *Annals of Science* at Cleveland, edited by Prof. Hamilton Smith, now of Hobart College, New York.

Dr. Bachman has claimed that he read a paper on the same subject before the Zoological Society of London in 1838, but of which the following letter from yourself shows there is not the slightest proof. Your letter is now before me, and the following is a verbatim copy of it:

"No. 106 SMITHSONIAN INSTITUTION, Washington, D. C., May 23, 1837."

"My Dear Sir—I have carefully looked over the proceedings of Zoological Society from 1835 to 1840 inclusive, and find nothing whatever relating to fish breeding.

"Any references you may wish to have made I will attend to with pleasure. Yours truly, (Signed) SPENCER F. BAIRD.

"DR. T. GARLICK, Cleveland."

Allow me here to ask two or three questions. Do you think that, if such a paper had been read before that Society, it would have been omitted in the published proceedings? What next? More than two years after we had produced the fish, made the most public exhibitions of them, and published the results as widely as possible, Dr. Bachman comes forward with a claim cutting under everything done, not only in this country but by Géharrard Rény in France.

In 1855-6 he claims that in 1841, one year before I was born and at the age of fourteen, he made successful experiments somewhere in New York, not only in artificially fecundating the ova of living but of dead fish, the living product of which had such remarkable vigor that in nine months they were large enough for him to make a meal on them. It appears to me, with much deference to your powers of discrimination, that it requires a large stock of both charity and credulity to accept such a claim.

It must be accepted entire or not at all. He claims in his paper read at Columbia, that the ova of perch which he fecundated were dried for ten days, and from these dried ova he hatched young and living perch. He also claims that he impregnated the ova of dead fish, which is an impossibility.

But if this difficulty could be got over, it is a rule of the scientific world that priority belongs to the discoverer who first makes publication. Any other rule would place it in the power of pretenders to lay claim to anything and everything by falsifying dates. No record evidence can be found to sustain Dr. Bachman's claim of priority in this country. More than two years elapsed after our experiments were made in public and exhibited to the Academy, and nearly two years after myself and Dr. Ackley had published the results of these experiments, before the learned Doctor placed himself on record any more.

THEODORUS GARLICK.

LETTER FROM JUDGE E. D. POTTER TO DR. T. GARLICK.

TOLEDO, May 8, 1876.

DR. T. GARLICK:

Dear Sir:—I see in a late Youngstown, O., paper a communication in which it is stated that I was identified with you in 1853 and 1854 in your experiment in artificial fish culture. Now, it is not exactly fair, after the attempt of Dr. Bachman to rob you of the merit of hatching artificially the first fish so produced in America, to divide the remaining honors with me or anybody else. I disclaim any merit in your experiments, save an earnest desire for your success. With many others I was a close observer of your processes. I was a great deal of the time,

during the years 1853, 1854 and 1855, in Cleveland, and a good deal of the time a guest in your house, where I became a very interested looker-on in your new enterprise. We spent many days and nights together in procuring and fecundating the spawn of the speckled trout. I was a witness to your complete success in producing from these eggs large numbers of speckled trout.

During these years no claim had been put into experiments prior to yours. I was surprised when I saw the article of Dr. Bachman in the *Southern Cultivator* in the fall of 1855, two years after your experiments had been published in the *Ohio Farmer*, which he must certainly have seen, making the extraordinary claim of having spawned and fecundated the eggs of the speckled trout in August, 1851, from which he produced the young fry of that fish. I have all my life been a close observer of the habits of the speckled trout, and it is known to every one familiar with the subject that speckled trout never get into their spawning beds till after the frosts of September and October, and not many spawn before the month of November. Their eggs are never mature in August. The extrusion of eggs from the parent trout in August must necessarily have been a fruitless abortion. The improbability of Dr. Bachman's account is rendered still more apparent by his assertion that the next autumn he ate a fine trout breakfast from these young fish. They could not have been more than seven or eight months old, and less than an inch and a half long, weighing not more than the sixteenth of an ounce each before they were dressed, and a fine breakfast would have required at least five hundred of these fishes. Dr. Bachman says he fecundated the ova taken from the caporal and from brook trout that had been dead several hours. He also says that he fecundated the ova taken from the perch, and after drying them for ten days, hatched young perch from them. You may as well look for progeny from a fecundated Egyptian mummy, as for young fish from perch eggs that had been dried ten days. I have fecundated the eggs taken from a fish that had been dead a few, say three, hours, but it was done with the milk from the living male. Whether the fecundation can be accomplished by using the milk from the male that has been dead any number of hours, I cannot say, never having made the experiment; but the laws of physiology do not favor such a presumption. The eggs taken from a dead bird, when ready to lay, have hatched, but the fecundation took place prior to the death of the bird. I have tried the drying process without success. Reason would teach us that such an experiment would be fruitless. My experiment was with white fish eggs that were dried but forty-eight hours: not one even showed any signs of life; I failed to restore the transparency of the egg; and these were taken from a parcel ninety-five per cent. of which I hatched with the ordinary process. Dr. Bachman must have been more fortunate than most experimenters if he succeeded in hatching the perch at all, for the adhesiveness of those eggs, as well as those of the wall-eyed pike, render their hatching next to impossibility. Most, if not all, experiments with these two and their congeners, have proved fruitless. It must be borne in mind that Dr. Bachman wrote his article more than fifty years after making the experiments he speaks of. He was an old man. He may have eaten trout for his breakfast in the next autumn after experimenting with his eggs, but they were not trout from his spawning—and so with his dried eggs; the fishes he found were not from them. I have long known Dr. Bachman's reputation as a Christian gentleman and scholar, and should be led to believe that he would deliberately make an assertion which he did not believe to be true. It is more charitable to believe that he was mistaken in the identity of his progeny from his trout and caporal eggs, and his dried perch's eggs, than to conclude he deliberately stated what was not true—and this view of the case would be more consonant with the truth of science, than a blind, implicit reliance upon the statement of tests, which we all look upon as exceedingly improbable. But you need no vindication from me; you are fully capable, as shown by your publication, of establishing your priority in this enterprise, and I only write this to disclaim any share in the honor of inaugurating in the United States a science which is working such wonders in the production of cheap food, and to congratulate the country that you did not place your light under a bushel for fifty years or more.

Very truly,

JEMERY D. POTTER.

SALMON IN OUR LAKES.—The amount of work done by the State fish commissioners in stocking our lakes with fish during the past three years is probably not appreciated by one-half the people of Minnesota. And yet the work has been done on a large scale, considering the newness of the enterprise and the foundation laid for a generous harvest at no distant day.

The general government gives the fish spawn to any State making application for it. Three years ago it gave to Minnesota 80,000 eggs of the California salmon—a magnificent fish, weighing in fresh water, when grown, from 20 to 30 pounds, and in salt water from 40 to 50 pounds. Fifty-one thousand eggs were saved from this donation and distributed in different lakes about the State. The second year our donation was 20,000 eggs, nearly all of which were hatched and distributed. Last year the State got 300,000 eggs, 95 per cent. of which hatched and were mostly distributed—there being only about 20,000 young fry on hand at present.

These fish are doing just as well as they possibly could. The two year olds are now 12 and 14 inches long, and will soon be large enough to be game on a hook. In Iowa they have been in the business longer and have four year olds that are 22 inches long and weigh from nine to eleven pounds. These fish will breed this fall, being now full of eggs. The government has about eighty men on the Pacific coast engaged in taking spawn, and Minnesota will soon come in for another generous gift. The State in order to be fully prepared to receive it, is building hatching houses in St. Paul, where the eggs will be hatched at public expense and distributed.

Salmon are lovers of deep water, while pickerel prefer that more shallow; hence it is thought that but few of the fry has been eaten by these voracious inhabitants of our lakes. At four years of age they are fully able to make a breakfast out of pickerel, and will then become masters of the situation; while sportsmen will find them just about as big even then, as they will care to lift into a boat on the end of a line. The State is largely indebted to Dr. Day, of St. Paul, and to the present fish commissioners, Messrs. Golcher, Sweeney and Burt, for the progress already made—indeed we may say that had it not been for their efforts and a few others, there would not have been a salmon in our waters, even though the cost of the eggs was nothing.—*St. Paul Pioneer Press*, Sept. 19.

NEW JERSEY.—Fish Warden Weller, of Warren county, and his men have removed thirty-five wing walls from the Delaware, eleven from the Pequett and five from the Paulina Kill. These walls contain shoots, to which are attached wire fykes, an apparatus for taking fish, in violation of the law. He has shipped this season to Commissioners Anderson and Shotwell 3,000 black bass, for stocking purposes, and several thousand more will be shipped before the season closes.

SALMON HATCHING ON THE COLUMBIA RIVER.—We are obliged to defer a valued and interesting article from Livingston Stone, Esq., describing his operations at the hatching house on the Chinamas river, a tributary of the Columbia. It will appear next week.

decaying sail lofts and oil-houses were crowded then; that the long lines of time-worn spiles supported wharves that once groined beneath a weight of oily merchandise; that the town, owning now scarcely a dozen coasters, then fitted out a hundred whalers. Every other man you meet has been an officer on board a whaler; every old one has been either a ship owner or a follower of the sea. Quaint sea terms and phrases greet your ears at every turn, and at the "House of Lords" or "Captain's Room" (club rooms) thrilling tales of adventures on the deep and in foreign lands are daily told by the participants. Names familiar to the mercantile world of long ago—Macy, Gardner, Coffin, Starbuck—stare at you from over the doors of the little shops scattered through the town.

We climbed into beach wagons and drove through the sand to the south side of the island. Skeleton hulls, their ribs rising spectrally from the waves, are scattered along the beach, moss-covered timbers rise and fall in the surf, ropes and cordage, with seaweed clinging to them, are driven ashore by every gale, and evidence of the might and mystery of the ocean are constantly before the visitor.

The fishing village of Sinesonset serves also as the summer resort of the island aristocracy; it crowns the top of a cliff of yellow sand, with a beach stretching from its base to the sea, 300 feet away. This distance, however, did not prevent the sea from reaching it some years ago and tumbling a row of cottages into the surf.

Wandering among these tiny cottages, and through the narrow, grassy lanes of the little village, one can easily imagine himself to be a Gulliver on his travels, with the days of the Lilliputians come back again; and instinctively feels astonished to see full-grown men and women entering the miniature doorways or playing croquet on the green lawns in front.

A day was spent refitting and another in exploration, so it was not until the morning of the third day after our arrival that we once more rounded Brant Point and stood away for the fishing grounds, hugging the shoals and "drailing" for bluefish on our way.

The drail is made by running half a pound of lead or more around the shank of a cod hook, moulding it into something resembling the form of a fish. For boat fishing or trolling this has a few inches of eel skin drawn over it and fastened to the line above, its lower end just clearing the point of the hook. For heaving and hauling from shore, the drail is made heavier and sharper at either end. When used the line is grasped a fathom from the drail, which is then swung several times around the head before throwing to give it impetus. The coil of line is held in the fisherman's left hand, with the shore-end made fast to a stake in the sand or the fisherman's leg. This latter mode is not a very safe one, however, as a fifty pound bass at the end of a stout line might succeed in ducking the fisherman, if nothing worse came of it; and bass are often caught while heaving for bluefish.

We hauled in the blue beauties hand over hand, and in a couple of hours caught enough for our purposes and then beat up against a stiff northerly breeze to the shark grounds off Great Point. We anchored in about eight fathoms of water, with a rapid tide and lively sea, and as one of the preliminaries, emptied overboard the bloody water from the fish barrels. This of course runs down with the tide, and the sharks scenting it follow up like hounds until they reach the boat.

The tackle used in taking these fish consists of a long, three-quarter inch line, to which is attached a fathom of chain to prevent them from biting it off, as they will often do without this precaution; and to this, in turn, is fastened a quarter-inch hook, eighteen inches long and eight inches across the bend. This, baited with bluefish, is flung overboard, and allowed to sink as deep as the tideway will allow, and the boat end of the line made fast to something solid.

We waited perhaps an hour, when our skipper, who a moment before was dozing in the stern, made a frantic leap in the air, and failing to stop his line from running rapidly overboard, called lustily for help. Three of us laid hold with him, and slowly, hand over hand, hauled in. Now we could see the shark's white belly flashing as he turned on his side in his involuntary ascent, and then with a gurgling roar he broke water close to us. Now, he would attack the boat, his jaws snapping together like bear paws, and leaving numberless teeth sticking in her sides; then he would roll himself over and over, biting savagely at the iron chain, but soon we hauled him close aboard, when our pilot by repeated blows with a club soon laid him stiff alongside.

Shark fishing cannot be called sport; butchery is a more proper name to apply. Sword fishing is dangerous, and consequently exciting. Shark fishing lacks one iota of danger, and the putting forth of sufficient strength to haul one to the surface, and then to beat his head to a jelly, can hardly be exciting. The sand shark is most frequently taken here, although the blue dog or man eater, shovel-nose, hammer-head and river shark are also sometimes caught. The fishermen try the oil from their livers by letting them stand in the sun; sell the jaws to visitors and the bodies to farmers for manure. I forgot to mention the dogfish, another of the family, although much inferior in size to the others, rarely exceeding three feet in length. They are caught for their oil, and the livers are also "sun-dried." They are fierce brutes, two men often taking nearly a thousand per day. A hook without a barb is used, as they are ugly customers to handle, being armed with a spike near the tail, and which they do not hesitate to strike into any one foolish enough to handle them.

I will not mention the smaller fish we caught, nor speak of the clam-bakes, the hops, nor the moonlight sails in the harbor, but when our time was up—when fate with relentless finger pointed northward, and we laid the White Cloud's course for the mainland—not a man among us, from the captain to cook, that did not leave, with sincere regret, the hospitable shores and teeming waters of Nantucket.

R. H. M.

—Prof Thomas Taylor, of the Department of Agriculture, who was sent some time ago by Commissioner Le Due to New Jersey to investigate the disease known as "rot," or "scald," that has for the past season so seriously affected the cranberry interests of that section, has just returned, and is preparing a long report on the subject, to be submitted to the Commissioner. He has visited plantations in many parts of the State, examined the condition of the fruit on every variety of soil and under almost every kind of culture, and gathered such valuable information in relation to the health and successful cultivation of the plant as he thinks will be of incalculable benefit to the cranberry growers of the country. The facts observed are considered by Mr. Taylor as warranting the conclusion that the disease is due less to direct solar heat than to other causes, and he believes that on suitable soils the culture of the cranberry may be successfully carried on much further south than it has heretofore been thought practicable.

## Woodland, Farm and Garden.

### THE NEW YORK HORTICULTURAL SOCIETY.

THE autumn exhibition of the above flourishing society was held at Gilmore's Garden last week, and must have delighted the hearts of the managers by its completeness and great success. Though this society has been resuscitated only two years, this is the fifth exhibition that has been given by it, each one being incomparably superior to its predecessor. Indeed we heard one gentleman remark that this exhibition far surpassed one that he attended in Paris only five weeks ago. The plants shown, whether large or small, were models of grace and elegance, the fruits were the largest and best we have seen for years, and, though not including so many varieties as were shown at the Pomological Convention at Baltimore, was far superior in the size and quality of the specimens exhibited; while, thanks to the amateurs and private gardeners around New York, the display of vegetables in quantity as well as size was simply wonderful. This, taken in conjunction with the beautiful garden, the cascade and the mountains, the delightful music, the sweet perfume from the many cut flowers, and the beautiful designs, made the garden appear, especially when lighted up in the evening, a veritable Fairyland.

It is impracticable to give a full list, either of those who took the many and liberal premiums offered (amounting to over \$1,500) or of the names of the many fine plants exhibited by them. Mention may be made, however, of the principal in the various classes, and this season again Mr. J. Taplin, the efficient manager of Geo. Such's greenhouses at South Amboy led the way with some wonderful specimens of horticultural skill. The most striking and novel plant in his exhibit was a noble plant of *Nepenthes Dominiana*, a hybrid variety of the East Indian pitcher plant, *Morimum tenax*, *Veitchii*, the New Zealand Flax, *Ananassa Portiana*, the variegated Pine Apple in fruit, a number of finely grown *Dracaenas* and *Ferns*; notably among the latter six immense plants of *Gleichenias* in as many species, rarely grown New Zealand *Ferns*, and large plants of *Pteris aculeata* and *Hypolepis distans*, five feet in diameter; *Marantas*, *Mackoyana Warscewiczii*, *Veitchii*, and many others; 12 species of *Crotons*, all specimen plants; 6 species of *Alocasias*, 12 species of *Palms*, 10 species of *Selaginellas*, etc. Mr. Taplin also exhibited an exceedingly fine seedling *Nepenthes* raised by him, which bids fair to take its place as one of the best in its class. Louis Menaud & Son, of Albany, showed a very choice and well-grown group of variegated leaved plants, some beautiful *Orchids*, and an exceedingly interesting collection of *Agaves*, *Cacti*, *Mammillarias* and other succulents. Mr. William Bennett, Flatbush, L. I., showed as usual a very neatly staged and interesting group, evidently selected with reference to their commercial usefulness. Each plant was a model of its kind, and the collection, comprising over one hundred and eighty species and varieties, many of them new and rare, deservedly took the first premium for the "Collection of Store and Greenhouse plants." He also exhibited ten splendid *Palms*, and a very fine plant of *Agave filifera*. Mr. John Bush, Tremont Botanic Gardens, received a special award for a very choice and well arranged group of plants, including a number of well-grown *Dracaenas*, *Crotons*, *Dieffenbachias*, *Alocasias*, *Marantas*, *Ferns*, etc., as well as many new plants; notably a fine specimen of *Abutilon Darwinii tessellatum*, which was certificated by the judges. Mr. Isaac Buchanan, Astoria, L. I., was also awarded a special premium for a large and well arranged group of *Palms*, *Cycads* and other tropical plants, including a noble plant of *Musa Ensete*, the Abyssinian Banana, and a plant of *Philodendron* or *Monstera deliciosa*, fruit of which he exhibited in the fruit department. Mr. J. M. Paterson, Newark, N. J., also received a special award for a very large and finely grown *Pandanus utilis*, a large plant of *Olea fragrans*, a number of *Palms*, and a fine plant 15 feet high of *Stenocarpus Cunninghamii*, in flower. Mr. James Riddle, Inwood, N. Y., took the premium for a very neatly designed and arranged flower garden (15 ft. by 5 ft.) of living plants, and a special award for a lovely group of *Ferns*. Premiums were also awarded to Keller and Dean, Bay Ridge, L. I., for a neatly arranged group of plants, suitable for market purposes; to John Henderson, Flushing, L. I., for a collection of *Coleus* and group of *Smilax*; to Charles Zeller, Flatbush, L. I., for a collection of tropical plants; to Peter Henderson, Jersey City, N. J., for a collection of *Coleus* well grown; to Laurenz & Weigand, Astoria, L. I., for a collection of *Ferns*; to W. C. Wilson, Astoria, L. I., for *Ferns* and a group of tropical plants, etc. The special premium in this class, offered by C. Zeller, Flatbush, for the best collection of Monthly Carnations grown in pots, was awarded to Wm. Ball, Spuyten Duyvel, who also received premiums for Hanging Baskets of plants, and a miscellaneous collection of plants; the special premiums offered by Louis A. Lienau, 105 Front street, New York, for the best and most correct labeling of plants and flowers, were taken by Louis Menaud & Son and Geo. Such, in the order named. The premiums offered for the best collection of ornamental Evergreens brought out a fine lot of specimen evergreens, and was closely contested; they were awarded to S. B. Parsons & Sons, Flushing, and R. B. Parsons & Co., in the order named.

In the section devoted to Cut Flowers the display was

good for the season, especially as the late drought has nearly stopped all growth out of doors. The principal premiums were awarded as follows: To Dr. Hexamer, Newcastle, N. Y., for the best collection of named varieties of *Gladioli*; to James Vick, Rochester, for *Gladioli*, *Dahlias*, and the best seedling *Gladiolus*; to Peter Henderson for the best display of Cut Flowers and *Verbenas*; to W. A. Burgess, Glencove, L. I., for *Roses*; to the C. L. Allen Co., Queens, L. I., for *Coxscombs*, Cut Flowers and *Dahlias*; to R. B. Parsons & Co., Flushing, L. I., for *Roses*; to H. D. Carmohn, Staten Island, for magnificent *Niphetos* *Roses*; and to N. L. Britton, New Dorp, S. I., for a collection of native plants correctly named.

Notwithstanding the scarcity of flowers, the display of designs in Cut Flowers was large and extremely creditable to the florists, who were the principal exhibitors. The premiums were awarded in the order named below: For Table Designs, to Isaac Buchanan; for Hand Bouquets, to Ekerch and Wilson, 1203 Broadway; for Basket of Flowers, to Mrs. W. J. Davidson, Brooklyn, N. Y., and Hanft Bros., 795 Broadway; for Funeral Design, to W. C. Wilson, 14th St., N. Y., and to C. L. Allen Co.; for Bouquet of Native Grasses, to N. Hallock, Creedmoor; for Design of Pressed Ferns and Autumn Leaves, to Mrs. W. J. Davidson and Mrs. Wm. Charlton, West New Brighton, S. I. A certificate of merit was also awarded to Hanft Bros. for a unique and beautiful Funeral Design (an Artist's Easel) sent in the second day of the exhibition.

The display of fruits was unsurpassed, John Finn, Morrisania, taking first honors for the collection of six varieties of hothouse grapes; Thomas Duncan, Astoria, for Black Hamburg and Charles Atkins, Inwood, for Black Barbarossa and White Muscat. J. H. Ricketts, Newburg, showed a fine collection of Native Grapes, and received a certificate of merit for the best new Seedling Grape. A special premium was also awarded him for a fine collection of pears, which, by some delay, was received too late for competition. Ellwanger & Barry, Rochester, N. Y., and C. J. Copley, Staten Island, also showed good grapes, and took premiums in many classes, while the collection of Pears exhibited by Ellwanger & Barry was simply magnificent. Their collection filled a large table, and it can be safely affirmed that every fruit exhibited was a specimen of its kind. W. S. Carpenter, Rye, N. Y., also exhibited some splendid pears, notably some fine *Duchess d'Angouleme* and *Beurre d'Anjou*, the largest of the latter variety weighing eighteen ounces. Some very fine *Duchess* were also shown by Wm. Smith, Hunter's Point, and Major Jacob Boemer, Flushing, whose eight fruit were grown on the one tree, and weighed eight pounds. Messrs. E. & J. C. Williams, Mont Clair, N. J., showed a fine collection of twelve sorts, and fine examples of *Beurre Bosc*, and *Vicar of Wakefield*, came from Thomas Duncan; of *Bartlett* and *Sheldon*, from Wm. Reed, N. Y.; of *Dana's Hovey*, and *Urbaniste*, from A. G. Baldwin, Newark, N. J.; of *Belle Lucrative* from Geo. Tate, Inwood, and of *Louise Bonne* from Aug. Dejonge, Staten Island. A fine collection of Plums was also shown by Ellwanger and Barry, and a dish of very fine Peaches named *Reed's Choice*, by W. Walsh, N. Y. The special premium of \$50, offered by John Henderson, the president of the society, for the best collection of foreign and domestic fruits, was awarded to W. C. Smith, 189 Broadway, for a very large and complete collection, their pears, apples, grapes and oranges, being exceedingly fine. W. S. Carpenter, Rye, N. Y., took almost all the premiums in apples, his collection of forty varieties being very choice and large in size.

In Vegetables the collections exhibited were very fine, every sort represented being carefully selected, both as to size and quality. The award went to Robert Chesney, Inwood, and Arthur Ball, Spuyten Duyvel in the order named for the best collection. For the best collection of potatoes, the prizes were taken by F. M. Hexamer, Newcastle, and B. K. Bliss & Sons, 34 Barclay st., N. Y., with very fine collections, large and clean, some of the varieties wonderfully fine. B. K. Bliss & Co. also took two premiums for the best seedling potatoes, with two very promising sorts, marked A No. 103, and A. No. 6. The awards for the collection of tomatoes were secured by Peter Henderson and Louis Compondu, and that for the best single dish by A. Baudais, Washington Market. There was a spirited competition for the various other varieties of vegetables, and the many fine specimens were examined by large numbers with increased interest. The Society was fortunate in securing the services of judges thoroughly conversant with the requirements in their several departments. Their labors were arduous, and we have reason to believe their decisions gave universal satisfaction. Messrs. W. R. Smith, Washington; E. S. Rand, Boston, and John May, Madison, were the committee on Plants. Messrs. Geo. Thurber, Isaac Buchanan and William Saunders, Washington, on Fruits, Messrs. C. C. Olney, L. A. Lienau and Dr. Barston on floral designs, and Messrs. Jos. Edwards, Thos. Tait and Thos. Duncan on Cut Flowers. In conclusion, we cannot do better than advise our readers to help the society along as much as is in their power. The membership is only \$5 per annum, or \$50 for life membership. The objects of the society are to collect and diffuse correct information on all subjects relating to Horticulture, and to promote a taste for the same. Any information will be gladly furnished by the secretary, W. J. Davidson, 258 Fulton st., Brooklyn, N. Y.

QUEEN'S CO. AGRICULTURAL SOCIETY.—The thirty-sixth annual fair of this society takes place this week at Mineola, and there is every promise that it will be one of the most successful which has been held by the

society. Important improvements have been made on the grounds since last year, not the least of which is the erection of a large building on the lawn to the eastward of the main exhibition building, intended for the show of Agricultural implements, etc. The list of premiums is large and varied, and includes a large number offered by private individuals for special excellence. We trust our friends will have good weather, a good exhibition and an overflowing attendance.

### MEETING OF THE AMERICAN POMOLOGICAL SOCIETY.

THE sixteenth biennial exhibition of the fruits of America, by the Pomological Society, which represents the United States and Canada, was held in conjunction with the regular annual exhibition of fruits, flower and plants by the Maryland Horticultural Society, at Baltimore, in September, and was certainly the most elaborate and interesting display of the kind that has ever been held on this continent, and perhaps vies with the great exhibitions of a similar character that have been held heretofore in Europe. Some of the delegates from a distance, who had visited all the great horticultural and pomological exhibitions that have been held in this country within the past twenty years, said that this one surpassed them all. The display of fruit was very fine, and from all sections of the country; while the plants and flowers were simply gorgeous. The Pomological Society held a two days' session, and in the absence of the President, Marshal P. Wilder, C. M. Hovey, of Boston, one of the vice-presidents, was called to the chair. Credentials were presented from a large number of horticultural societies, both from the United States and Canada, and a most interesting and instructive report on the rise and progress of fruit growing in this country, the immense crops now produced, mentioning that the estimate by the Government for the Centennial last year furnished the following statistics (soon to be published) of the fruit culture of our country, viz.: the number of acres under cultivation in orchards, vines, and small fruits is estimated at 4,500,000. The number of trees is estimated as follows: Apples, 112,000,000; pears, 28,500,000; peaches, 112,270,000; grapes, 141,250,000. The estimated value of fruit products is: Apples, \$50,400,000; pears, \$14,130,000; peaches, \$56,135,000; grapes, \$2,118,900; strawberries, \$5,000,000, and other fruits \$10,432,800, giving a grand total of \$138,216,700, or nearly equal to one half the value of our average wheat crop. California, to say nothing of figs, oranges, almonds and olives, has nearly one-third of the whole grape area, sixty thousand acres of vineyard, and forty-three million of vines, yielding annually, besides raisins and grapes for the market, ten millions of gallons of wine; to which may be added the wines of Missouri, Ohio and other States; the whole wine product being 15,000,000 gallons as the annual crop. The statistics of the apple, peach and strawberry crop is equally surprising, more especially what is sent to foreign market, which Mr. Wilder says is now as well established as that for our wheat, and as the refrigerating progress becomes more and more perfect, it will and largely the exportation of peaches, pears and other delicate fruits. The report concluding, says:

Standing here as conservators of American Pomology, enjoying as we do such peculiar privileges for research and discovery, let us use every effort to advance our cause by diligent experiment and observation, so that as we come up from session to session we may add something to the common stock of information, and thus develop for the good of mankind, the rich treasures which our science has in store for the world. Thus let us work on, hand in hand, to scatter these blessings broadcast through the land. Others may seek for the honors of public life or the victories of war, which too often carry with them the recollection of wounded hearts and painful disappointments. But let us continue to work on, feeling assured that our labors will cause no regret. Let us commence the new century in the history of our Republic with increased enterprise and zeal for the promotion of our cause, and should any of us be called from our labors on earth let us feel assured that others will continue the work we have begun, and continue it to still greater perfection. Let us work on, full of hope, regardless of obstacles, "still achieving, still pursuing," until we reach the better land, where the garden shall have no blight, fruits no decay, and where no serpent lurks beneath the bower, where harvests are not ripened by the succession of seasons, where the joys of fruition shall not be measured by the lapse of time.

HYACINTHS IN MISSISSIPPI.—The receipt of an autumn catalogue reminds me that I must order a few hyacinths and fulfill a promise made to the readers of FOREST AND STREAM, to tell them what I know about roses and hyacinths. In the autumn of 1870 and 1871, respectively, I bought each time one dozen un-named hyacinths at \$1.50 per dozen, losing three bulbs each time through ignorance and unsuitable soil. The original eighteen bulbs have increased to hundreds. They have improved from year to year. The past spring I had at least one spike of flowers that came up to, if it did not surpass, the pictures in the catalogues, and a dozen that more or less approached the standard. I speak of single varieties exclusively. I must add here that I have no more of the white and the shaded hyacinths than when I started six years ago; those I have are nearly all deep blue and deep red. I had no yellow, hence I must order a few white, tinted and yellow to get a variety of colors. I cultivate as stated before; my soil is a strong, heavy clay. I shifted my hyacinth bed every year, not because I had a purpose, but forced by the surroundings; have now come to the conclusion to change every season if practicable, because the result seems good. I select my spot with a view to perfect drainage, full exposure to the sun, and sheltered if possible against north and east winds.

The top soil is thrown to one side; the clay below that wheeled away to a low spot in my garden, spading out at least eighteen inches, then filling in to its former level with equal portions of sand and cow manure (the manure I used was never more than six months old—did not have any other), mixing the top soil, sand and manure well by spading. I plant any time I can get the bed ready, from first of November into January, always selecting a time when the ground is, comparatively speaking, dry. I never plant immediately after a rain; always before a rain. Neither do I wait, taking the bulbs for a guide, to plant, as a catalogue before me says, "Whenever the bulbs begin to throw out roots," but I look at the tops whenever they push the least. I plant as soon after as possible in the border in a perfectly straight line, it being easier prepared for the bulbs, and they are easier taken up without sticking a prong of the spading fork through your finest bulb, as I have done frequently when they were out of the line; bulbs eight to ten inches apart, and top of bulbs four inches below the surface. If cultivated in beds, should prefer straight rows about twelve inches apart, and beds never wider than one could reach for the purpose of weeding or cutting the flowers without stepping on the beds. Before and after flowering I cultivate the bulbs by keeping the soil loose and free from weeds, taking care, while doing so, not to break off a single leaf. Much less do I, after flowering, cut the leaves off to two or three inches of the ground because they do not look well; I would as soon dig them up and throw them away. When most of the tops have died down, I dig them up in dry weather, handling the bulbs with green tops very carefully, laying them on boards in the shade to dry for several days, removing with my hands, previous to storing them away, any top, root or soil adhering to the bulbs. Kind readers will please remember that I am writing for folks that cannot afford to keep a private gardener, who, of course, knows all about it; I am writing for those who cultivate flowers for the love of it, and not because it is a *la mode* de-ding-dong to have them on one's grounds. Please remember I am living in latitude of about 32 deg., 15 min., where the Cape Jessamine grows out of doors; where the rose is an evergreen almost; where the Sweet Olive (*Olea fragrans*) lives without protection, blooming now (Sept. 12) until heavy frost, and again in the spring, sending out from its insignificant flowers a perfume so exquisite that while you are passing you find yourself stopping to take deep inspirations of the perfumed air. I am reminded of street-car rides, years ago, in New Orleans on Esplanade street, taken for the sole purpose of inhaling the air heavily laden with the odor of orange flowers; flowers and the golden fruit on the tree at the same time.

Jackson, Miss., Sept. 12, 1877.

GEO. C. EYRICH.

## Natural History.

### FOUR MONTHS IN THE FOREST.

IN the year 1860 I fully made up my mind to go out West, and live a naturalist's life for four or five months, and collect some new specimens for my cabinet. On the first of April, in the above year, I started with my beautiful dog Pike, and my well packed valise and gun and implements for skinning birds and animals. When I started, I knew not where I would locate, as it was the first time in my life that I ever left home to go on such an expedition. After traveling for nearly two weeks, and riding in the cars for several hundred miles, I at last found a place in the deep forest that I thought would be suitable. At the end of my journey, feeling somewhat fatigued by my long and weary ride, I began to wish myself home in the good old city of Brotherly Love, but as I had fully made up my mind to devote four or five months to collecting something new for my cabinet, I was willing for a time to deprive myself of the many delicacies and happy days that I had spent at home. My house in the forest was not wrought by human hands, but was constructed by the great Builder of the universe. It was nothing more or less than a hollow tree. This tree I occupied for four pleasant months; it is the species known by botanists as the *Platanus occidentalis* in more common term buttonwood of America. This tree, as you have doubtless found by your reading, sometimes grows to an immense size, and frequently, when of great age, it becomes hollow. The hunter of the West often finds his lodging in its capacious trunk, and often emigrants take up their abode in them for weeks at a time. The one that I occupied was ten feet in diameter, and twenty-two feet in circumference. I said that my house was not built by human hands. This is strictly true of the external walls. It stood almost in the heart of a deep and ancient forest, occupying the highest point of land for miles around. The foundations were deeply laid in the heart of earth, being protected and secured by immense ledges of rocks, which extended a great distance. There was a massive grape-vine that had trained itself over two short horizontal boughs, as if on purpose to form a portico over the doorway to my humble place of resort. I constructed a sofa by raising some earth and limbs to a suitable height at the side of my fabric, and covering it with beautiful lichens and moss of different colors arranged in figures to suit my taste. There was a path of light, sweeping through the green boughs of the colonnade as if the angels of peace and love had opened it for their daily and nightly visits, by the soft sweep of their majestic wings. My room was lighted by a single window; the pane of that was composed of a beautiful plate of mica—you may know it by its sparkling lustre, like small thin fragments of glass. In that little cozy apartment I had everything that ensured my comfort for my four months' stay. Nearly every day I rambled through the forest with my faithful companion, collecting specimens of different plumage, quite different from any I had ever before met with, and a few animals such as, foxes, wildcats, porcupines, and a variety of snakes and squirrels. Among my choice collection was a fine bald eagle (*Haliaeetus leucocephalus*). This bird, glancing, I think, repays me for my Western trip. He measures

from the point of his beak to the end of tail 37 inches, and from tip to tip of wings 82 inches. He is the finest specimen I ever saw before or since I shot this one. How often, night after night, as I lay in that hollow tree, and as I listened to the yelping of the foxes and the cries of the wildcat and the hooting of different owls, and many other hideous noises that echoed through the forest, I had wished myself at home; but as soon as rosy morn opened her smiling eye, and the wild birds began to warble their morning songs of love, they filled me with joy, and it quite refreshed me after my long night's broken sleep. I returned home on the second of August, with my dog and choice collection of birds and animals, and can truly say my trip in the far West was a pleasant one. And now as I sit and think of the many joyous hours and weeks that I passed in the wild forest of the West, it makes me almost wish that I were there again, and living in that cozy room in the hollow tree.

GEO. BOUDBIN, Station E., Phila.

A CURIOUS INCIDENT.—In ROD AND GUN of May 13, 1876, I said, in a letter dated from this place, that I thought quail did at times withhold their scent, but that it was not a voluntary action of the bird, but a natural consequence of a former action—that of pressing its feathers very closely to the body when frightened and lying concealed. I am now convinced that it is so. Last Friday I went out quail shooting (*C. communis*, partridge) with two friends. We had two very good dogs with us, Harras and Max, English pointers, the one my own and the other belonging to one of my friends. At one time Harras came to a sudden point. I walked up to him and flushed two birds, one of which I dropped. The other one took an opposite direction, and I was not quick enough to turn round and make use of the second barrel. However, I was careful, and marked it down on a stubble field. I called my friends and we all five (including the dogs) followed. We searched for that bird a long time, but could not find it. Then a laborer, who was at work a short distance off, came to us and said the bird must be just where we were; he had also seen it alight. We looked and looked, and could not see it. Finally the laborer called out: "Why, gentlemen, here it is." It sat under our very feet in a furrow. One of my friends proposed to try to catch it in his hat, but I protested and insisted that the dogs should be put to work on it first. Now comes the interesting part of my story. We called the dogs in. I took Harras to heel, and Max was told to find bird. Both dogs, as I said before, are superior animals, and there is not the slightest doubt about quality of nose. I have seen both make remarkable points. Well, Max stepped over the bird several times and did not get any scent. We then took Max to heel and let Harras go. The same thing over again. At one time when the dog stepped over the bird, he actually brushed the bird's tail with his hind foot, and still the bird did not move; and four men stood and talked and laughed within three yards of it. The position of the bird was as follows: It sat in a furrow without any cover; head end down, tail up; the head was thrown back into the feathers of the neck, so that the eyes were all I could see of the head. The feathers of the whole body were closely drawn in, so that the surface seemed quite smooth, and every time a dog came very near it I noticed a convulsive drawing-in motion over the surface, which I can best compare with the slow closing of some bivalve. When the dog had passed the whole bird seemed to grow a little larger again. It was certainly the most interesting observation I have ever made with dog and gun. When I was fully convinced and satisfied I told my friends to get ready, and then let go both dogs again. I called them to and fro until they accidentally flushed the bird, without either, however, having shown any signs of getting scent.

Weisbaden, Germany, Sept. 10, 1877.

C. F. W. B.

CARNIVOROUS WOODPECKERS.—A correspondent of the *American Naturalist* speaks as follows of a novel habit of one of our commonest woodpeckers: "During that summer a friend raised a large number of black Cayuga ducks. It was noticed that while the birds were still very young many of them disappeared, one after the other, and the bodies of several were found with the brains picked out. On watching carefully to ascertain the cause, a red-headed woodpecker was caught in the act. He killed the tender duckling with a single blow on the head, and then pecked out and ate the brains. Though my friend was an enthusiast in protecting the birds and squirrels that came about his premises, this provocation was too much." The woodpeckers were speedily shot.

SHOWERS OF TOADS.—Notwithstanding the fact that the so-called showers of toads have been accounted for by naturalists showing that the long needed rain has called myriads of young toads from their hiding-places, and the grounds where none were seen a few hours before suddenly become alive with the little creatures who come forth to enjoy the moisture, there are still many who firmly believe in their pluvial origin. There is a fact in this connection that does not appear to be generally known, even to those who are well posted in such matters, which is, that the young toad has two modes of development, the best known one is that of passing through the tadpole state when the eggs are laid in water, in a manner similar to that of the frog, but the other is the wonderful property that is possessed by the egg of a toad enabling it to skip the tadpole form and hatch a perfect toad if laid in moist earth instead of water. It is not improbable that a warm rain may be required to develop the embryo, or at least release it from the egg, if so, a "shower of toads" is the result.

FRED. MATHER.

A CURIOSITY.—Dr. Furber has shown us an anomaly; it consists of a second perfectly formed hen's egg inclosed in the first.

SHARKS.—I have seen articles in the *FOREST AND STREAM* denying that sharks will attack a man. When on a voyage of two years in the American ship *Webfoot*, I saw sharks in the harbor of Batavia jump clear out of the water at boys painting the sides of the ship on stages. At Colombo in Ceylon it is a weekly occurrence for the green sharks to go right into the harbor in five feet of water, and take away the Indians discharging lighters. In 1866, at the port of Aden (Arabia) white men could not bathe, except by dropping a sail overboard to do so in, because of the number and voracity of sharks.

R. D. V.

HABITS OF DEER.—An article in *FOREST AND STREAM* of Aug. 23, touching the habits of deer, is both interesting and instructive; but is not altogether correct, therefore I crave a space in your columns to show wherein I think it is in error. I have hunted deer (*Cervus virginianus*) for many years, have had several fawns in my possession, have watched their movements. "Sycamore" is out when he says "deer rarely weigh over two hundred pounds." I killed a buck once that weighed two hundred and twenty-seven pounds, and I have often killed them that went over two hundred, but I think one hundred and fifty pounds would be a fair average. Does, naturally being the smaller animals, will not average over one hundred pounds. I do not believe that the points of the horns indicate age, from the fact that often they do not have the same number of points on each beam, and are often two years old before they have "spikes," at least I have killed them in the fall, when they were yet in their red coats, and their heads were as smooth as a doe's. Now if they had not been over a year old they would have had white spots on them. "Sycamore" seems to think that the deer deposit their horns in some secret place, but it is not the case, it is a very common occurrence to find deer horns in the open woods, and sometimes, though seldom, both horns are dropped at the same time. I have never saw a deer that had shed his horns before February, and I do not think they ever do. The horns of the buck make their appearance about the time does bring forth their young, i. e., in the latter part of May and the first of June. The food of the deer might be said to consist of almost everything, for they will eat anything that any other ruminant will. I might make one exception—they are not fond of grass nor will they eat it so long as they can get any thing else. I do not think that the "spike" buck ever engages in a contest with an old buck, or any other, at least I never saw one that showed any signs that would justify the conclusion. I have sometimes found the dead bodies of both of the contending deer lying but a few yards apart, and I have killed bucks that that were badly used up, but in every case the marks upon the body showed that it was the work of an old buck, or one with branching horns.

That the deer have their regular crossings when chasing each other is true, but generally they have several runways, and may be here to-day and there to-morrow. I have tried watching their crossings, and I find it rather a precarious way of getting game, and entirely devoid of sport. I have hunted deer in every way possible, and I find more real sport and pleasure in still hunting than in any other. Yes! give me the still hunt, where it takes nerve and skill to bring down the keen scented and wary game. All that wish may follow the baying hounds or sit idly in the shade of some tree, waiting for them to bring out the deer; but none for me. I am not well posted in the "lick" business, but I know that breaking down limbs or scattering powder about the lick will not spoil it. I have tried such physic for that purpose in order to cut tail Cully's chance of killing deer in their breeding season, but it was a failure. "Sycamore's" theory about the deer slapping its tail down, would lead the novice to think he had not struck the deer, unless he sees it give its tail a pretty hard jerk downward and dance off at railroad time. That tail business will not do. I have seen deer slap their tails down and get off in double quick time when there was not a hair touched. They will invariably do so if the shot pass close to their heads, sometimes they will go off apparently unhurt, when they have received a death shot. I have often shot them through the heart with a large rifle-ball when they would enter off with their tails up as though they were not hurt.

South Bend, Ark.

ANTLER.

[We corroborate "Antler" regarding the dropping of horns. The reason more are not found is that they are made way with by the small rodents.—Ed.]

DROWNED BY AN OCTOPUS.—A story comes from Victoria, Vancouver Island, of an Indian woman who while bathing was seized by an octopus, or devil fish, and drowned. The body was discovered by Indians next day lying at the bottom of the bay in the grasp of the octopus. They cut the tentacles and recovered the body.

—Elephants are employed in the timber yards of Burmah to handle the heavy logs of teak wood, the Burmese not having machinery for the purpose. The sagacious animals use their vast strength with remarkable skill.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUESDAY, Sept. 25, 1877.—One great horned owl (*Bubo virginianus*), presented; two brown lizards (*E. fasciatus*), presented; one chicken snake (*C. quadricinctatus*), presented; one coon snake (*C. guttatus*), presented; one green snake (*Cyclophis vernalis*), presented; two banded rattlesnakes (*C. durissus*), presented; one common crow (*Corvus americanus*), presented.

ANTHUR E. BROWN, Gen'l Supt.

ARRIVALS AT NEW YORK AQUARIUM FOR WEEK ENDING SEPT. 26.—From Bermuda.—One octopus, one land shark, eighteen angel fishes, two Spanish hog fishes, four common hog fishes, three parrot fishes, two unusually large porcupine fishes, twelve red squirrel fishes, six gray snappers, one green gar or sea serpent, three surgeon fishes, and about 100 other smaller ones. The octopus, sand shark, and two immense catfishes over 200 pounds weight have since died. There have also been received one secretary bird, three Stanley cranes, and a flamingo.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING SEPT. 29, 1877.—One festive parrot (*Chrysotis festiva*), one St. Domingo parrot (*Amazonia domencionis*), presented by Mr. Thos. L. Dainey, New York city; one Grivet monkey (*Chlorocebus erythraea*), three Macaque monkeys (*Macacus cynomolgus*), received in exchange; one Humboldt's iguana (*Lagotheris humboldti*), presented by Mr. Isaac Brandon, Panama; one red fox (*Vulpes fulvus*), presented by Master Owen Connell, New York city; one red-tailed hawk (*Buteo borealis*), presented by Master Clarence Jucker, Orange, N. J.; one Spring buck (*Gazella elaphure*). This animal derives its names from the extraordinary perpendicular leaps which it makes when alarmed, reaching to the height of ten or twelve feet, and clearing fifteen feet of ground at each spring. It stands about two feet eight inches at the

shoulder, and is about four feet long. General color, cinnamon brown, with face, croup, inside of legs, tail and belly white, separated from the brown by a well-defined band of venous red along flanks; a chestnut streak from the horns to the nose; horns lyrate, with tips turned inward; end of tail with a tuft of black hair posteriorly directed. From the loins to the root of tail are two folds of skin, running parallel to each other, lined with fine white hair. These folds open when the animal leaps, thus exposing the white croup and producing a very beautiful effect. It is a native of South Africa, and goes in immense herds, migrating during seasons of excessive droughts, so that they have been compared to swarms of locusts. Mr. Pringle, an English traveler in that country, says that he once passed through one of these migratory herds, and he estimated the number at one time in view at not less than 20,000.

W. A. CONKLIN.

## SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,

Manufacturers, 65 Fulton Street, N. Y.

## Sea and River Fishing.

### FISH IN SEASON IN SEPTEMBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*, *M. nigricans*.  
Mascouche, *Esox nubilior*.  
Pike or Pickerel, *Esox lucius*.  
Yellow Perch, *Perca flavescens*.  
Sea Bass, *Sciaenops ocellatus*.  
Striped Bass, *Morone americana*.  
White Perch, *Morone americana*.

FISH IN MARKET.—The piscatorial savants have been delighted the past week with a rare curiosity displayed in Fulton Market, by Mr. Blackford. The fish is known to naturalists as the American Angel fish, and was caught by a party of anglers who were blue fishing off Canarsie. The specimen has a broad, flattened body, elevated toward the pectorals. The tail is attenuated and sharp edged. The head is rather wider than long, obtuse and emarginated in front between the nostrils; depressed above and between the eyes. The neck is rather tumid and distinct, and the cheeks are flat. The eyes are small, furnished with blunt tubercles, with similar ones above the nostrils. The tongue is triangular, flat, not distinct, and terminated by a small, fleshy, round ball. Its length is about four feet, and its forward fins very like wings; the connection with the body being dissimilar to that of ordinary fish. This fish is very rarely caught, the present specimen being only the second seen in this city within twenty-five years. It is sometimes known among fishermen as the monk or monkey fish; the male rejoices in pre-eminent ugliness among the ugly forms of fish life. It belongs to the shark family, and being of the flesh-eating class a prejudice exists against it being considered edible.

Our quotations are as follows: Striped bass, 20 cents per pound; smelts, 15 cents; bluefish, 8 cents; salmon, frozen, 30 cents; green do., 35 cents; mackerel, 15 cents; white perch, 15 cents; weakfish, 12 cents; Spanish mackerel, 25 cents; green turtle, 15 cents; terrapin, \$15; frost fish, 8 cents; halibut, 15 cents; haddock, 6 cents; king-fish, 25 cents; codfish, 8 cents; black-fish, 10 to 15 cents; native herrings, 6 cents; flounders, 8 to 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; scallops, \$1.25 per gal.; English turbot, 40 cents; soft clams, 30 to 60 cents per 100; Salmon trout, 18 cents; black bass, 15 cents; sheephead, 25 cents; whitefish, 15 cents; pickerel, 15 cents; yellow perch, 10 cents; hard shell crabs, \$3 per 100; soft crabs, \$1.25 per dozen; frogs, 45 cents per pound.

MASSACHUSETTS—Gloucester, Sept. 28.—Elbridge Gerry, off Eastern Points, last Friday, caught a halibut weighing 320 pounds.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrival at this port the past week has been 62, including 11 from the Banks with 145,000 lbs codfish and 335,000 lbs. halibut; 16 from Georges, with 200,000 lbs. codfish and 5,000 lbs. halibut; 25 from shore mackereling trips, with 1,175 lbs. mackerel; and 10 from fishing trips off shore, with a fair catch of lake, codfish, pollock and haddock. The fleet engaged in the latter fishery is increasing, and will soon number some twenty-five vessels, making short trips and disposing of their fares fresh or round. A large proportion of the shore mackereling fleet are in the vicinity of Cape Cod, and have been prevented from fishing a part of the week by windy weather. They have found rather better fishing than during the summer months, but the receipts are yet very small for the season.—*Cape Ann Advertiser*, Sept. 28.

VERMONT—Castleton, Sept. 28.—Perch fishing is as good as ever in Lake Bomoseen, thanks to the efficient measures adopted by the town authorities in removing the dead and decaying fish during the epidemic earlier in the season.

NEW YORK—Schenectady, Sept. 29.—Black bass are caught in large numbers in the Mohawk River this fall. Last Thursday, Wm. Haverley and Chris. Clute caught a string of sixty that averaged 2½ pounds each.

U. W.

PENNSYLVANIA—Leesburg, Sept. 26.—Bass fishing looking up. One man brings in eighteen, ranging from one lb. to four lbs. apiece, caught at Orrison's Farm, six miles above here.

T. W.

NEW JERSEY—Kinzey's Ashley House, Barnegat Inlet, Sept. 26.—Bluefish have been plenty past week, catches being made of from 80 to 100 per boat; average weight ten lbs. Capt. N. Crummer caught a 31-lb. drumfish on his squid yesterday.

R.

Barnegat Inlet, Oct. 2.—Bluefish plenty, outside; sea bass thick; sheephead all gone; some few weakfish. Caught 38 sea bass to-day in one hour and forty minutes, averaging one pound.

Bull's Lake, Sept. 29.—The fishing the past season has not been so fine as formerly. Several good catches of bass and pickerel have been taken.

Flatbrookville, Sept. 29.—Black bass fishing in the Delaware has not diminished. One day last week two men caught 104 pounds—including specimens weighing 3½ pounds—using small catfish half an inch long as bait. It is estimated that the average number caught per day at Flatbrookville since July 1st, is 600.

MARYLAND.—Taylor fishing is good in the Chesapeake near Tilghman's Point.

VIRGINIA—Leesburg, Sept. 22.—A man brought four bass to-day, which weighed 17½ lbs.—one weighed 5½. A salmon (*Quinnat*) is thought to have been caught on Potomac near Harrison's Island. A man well acquainted with *S. fontinalis* and our usual fish took it and had never seen anything like it. He (confound him!) ate it.

T. W.

Norfolk expects to ship many oysters to Europe this winter at fair rates of remuneration.

A rural editor says that the good are never successful in catching fish. He has proved it by personal experiment.

KENTUCKY—Louisville, Sept. 29.—Tooth herring are caught at the falls.

GEORGIA.—The Ochopee River teems with fine fish.

OHIO—Youngstown, Sept. 20.—Messrs. J. N. McEwen, Tom Ford, Robert Bently and Henry Stambaugh have just returned from a fishing expedition to the upper Negigon. They found excellent trouting two miles below the lake, and report an abundance of grouse and rabbits.

INDIANA—Spencer, Owen Co., Sept. 22, 1877.—On Thursday, the 14th inst., Martin Parks and his son John, who live on Calvin Fletcher's farm, put out their trout-line, just above Spencer, at the narrows of White river, and at midnight "ran the line." It was evident that something unusual held the line close to the bottom. The movement of the same up and down stream led Mr. P. to decide that he did not have to deal with a rock or snag. After half an hour the cautious fishermen had an immense yellow catfish, weighing forty pounds, safe in the canoe. Again the line seemed to cling to the bottom, and again a half hour was spent in securing the game, which proved to be, not the mythical Mississippi monster, but the varmint that has for years devastated the cornfields and hog-pens along the valley of White river. Twice trains of ears have been thrown from the track by it (or something else), and children refuse to go to school near the river. "Well, what was it?" you ask. A yellow cat-fish nearly five feet long, with head a foot and a half, eyes just eight inches apart, and mouth two feet around. The girth in the largest place of the fish was four feet, the weight eighty pounds. Messrs. Parks, knowing that Mr. Fletcher wanted some catfish minnows in a pond near his residence, notified him, and with a two horse team the monsters were removed to where they can be quietly fed on roasting ears until the joint high international commission send on Sitting Bull, or some other kind of beef, to sustain life.

OWEN COUNTY.

P. S.—Since writing the above I learn that the night after the above recorded event, Mr. Parks caught another catfish weighing over sixty pounds.

O. C.

Indianapolis, Sept. 22.—Mr. Reed, of the *People*, had wonderful luck at the Ripple on Saturday last. Among his other captures was a three-pounds eel. Enos drew him up till he saw the point of his nose, and then let go, under the impression that he had caught a constrictor. On Monday he went out again, and came home disgraced. On Monday last Capt. Arnold and Messrs. Spahr and Griffin, of the Indianapolis bar, were fishing at the Ripple. Arnold caught twenty-three fishes, all croppies, and Griffin, who fished by his side, took thirty-one, all bass. Spahr bagged twenty bass. As the parties used the same bait and tackle, it is singular that all the croppies should have patronized Arnold, while the bass took to the legal profession. Quite near them fished the crest-fallen Bard, and he'er a bite did he get the entire day.

CANADA.—Nipigon Bay, Sept. 14.—From the visitors' register at Red Rock I take the inclosed list of anglers to the Nipigon River for the season just closed. The fishing has been exceedingly good, and the speckled trout not the least diminished by the number of "rods" at work. The trout, however, have averaged somewhat less than usual—say about two pounds. Many have been caught from 4 lbs. to 5½ lbs., but the general average has been small. The question is very often asked, "What is the weight of the largest speckled trout ever been taken out of the Nipigon River?" The Hon. John Simpson, of Bowmanville, Ont., about four years ago caught, in the rapids immediately above the Post, a speckled trout weighing 9 lbs. 9 oz. This I believe to be the largest ever caught in this river. Mr. W. La Ronde at Nipigon Lake, however, in the fall sometimes catches some very large speckled trout; one he weighed turned the scale at 17 lbs. He has often tried to keep these big fellows, but the length of time between the fall and the first boats in spring has been too long to keep them. He has promised to try again this fall and preserve one, and send it down to a gentleman in Cleveland. If he succeeds I will drop you a line, giving dimensions and weight.

The season has been an extremely hot one, the warmest for the past four years. Early in July the black flies were very bad, but had nearly all disappeared the first week in August. As mentioned in a letter last year, if the steamers were only properly advertised a great many more visitors would be adopted to visit this famous trout river. As it is, the Sarnia line (Beatty & Coys) is the only one to be depended on. The steamer Manitoba is obliged to call in once a fortnight with the mail, and is therefore a sure means of getting to and from the Nipigon.

I hope to again see many old friends up this way next season. The Government makes a charge of \$5 per rod for the season, or \$1 per day up to five days for permits to American anglers. This is supposed to protect the trout a little, but as only sportsmen come here there is very little fear of the fishing being spoiled by carelessness.

L. TROUT.

SALMON-FISHING ON THE RHINE.—Travelers who have made the usual journey "up the Rhine" in the proper season will not readily forget the dishes of trout and the fresh and smoked salmon that accompanied their breakfasts; and, although the latter relish is eaten raw, shaved into thin slices

and made into sandwiches with brown bread and butter, there is a flavor in it which commends itself to the palate as unique in its savory, appetizing qualities. Salmon is, in fact, good every way, just as herring is; and, though we cannot, as patriotic judges, award the palm to the fish of the Rhine, after a long experience of the Tay, the Wye, and the Severn, the German salmon possess the good qualities necessary to make them appreciated by the gourmet no less than by the artist. The small head, the round, plump body, and little scales almost lost in the thickness of the skin, are all indications of high breeding; and doubtless the noble fish has a capital time of it in the deep river, under the shadow of the craggy-clad hills, or farther away in the gravelly bays and rapid falls that invite him and his kind from the sea from June to October.

The fishermen of the Rhine are a skilled and thriving class of men, for not only salmon but carp of wondrous size and flavor are to be found there. There are anglers, of course, who quietly pursue their sport in wild, sequestered spots; but those of the craft generally use the seine for taking the salmon; while in the season of their arrival, when they are most numerous and in best condition, a net is stretched from piles driven into the bed of the river. These nets are, in fact, long reticulated bags, distended by rings and open at the mouth. They are placed in the midst of a rapid current; or, if the stream is not swift enough, the flow is accelerated by means of banks. When the salmon are very plentiful they are frequently taken by a hand net, almost like that used for shrimping, and by another kind of net, stretched on arms or blades that open like a pair of scissors, and inclose the fish. The seine is carried by two boats, one end on each; and when the boats approach each other, the salmon are inclosed and hauled on board. Some, again, are taken by a drag-net from the shore, on which the fisherman walks; but that must be in places where the stream is comparatively shallow. Late in the autumn the fishing season comes to an end; the salmon is out of condition and not worth eating till he has been to the sea again to take a new lease of health and life. But there is other sport to be had, and the fishermen are seldom idle, even though they spend dull days and long evenings in making or mending their nets, caulking their boats, and preparing for the spring campaign.

SEAL FISHING.—The prosecution of the seal fishery off the coast of Newfoundland involves more danger and hardship than is generally known. About three weeks after leaving port the seals are "struck" and are frequently found in such numbers as to blacken the ice for miles around. The seal-hunters leave their vessel either in punts or by directly jumping on the ice, according to the ship's position. Their dress usually consists of a heavy "Guernsey frock," flat-peaked caps, sou'westers, heavy pilot-cloth trousers, and oilcloth overalls stuffed into long sea boots. Their arms are a scalping knife and a long pole, with a gaff at the end called a "bat." The seal is easily dispatched by a single blow of this rude weapon on the skull. With the scalping knife the glistening oil-laden pelt is removed from the carcass, which is left on the ice. The cry of the seal when approached by its human enemy is most hideous, and bluff and hardy hunters have often been known to hesitate before wielding the fatal blow, especially if the pleading seal is guarding its young. In that fickle Arctic atmosphere, and when the body of the seals is a long distance from the vessel, the hunters are often benighted when storms arise and open a channel in the ice that separates them from their craft. Sometimes the vessel has to bear away for safety, and many of the crew perish from cold and hunger unless luckily picked up by some other vessel. At other times, when the ice grows weak, they remain for hours together immersed to the knees, or perhaps to the middle of the body, on frail cakes of ice. If they should survive this dreadful torture and be rescued, the evil of frost-burn awaits them, and, at the close of the homeward voyage, their limbs are at the mercy of the surgeon's knife.

## The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

THE LONDON, ONTARIO, BENCH SHOW.—Mr. Charles Lincoln, who superintended the Centennial, Baltimore and New York Bench Shows, has again achieved success in the Dominion. Through his kindness we are enabled to lay before our readers the following list of awards of the London, Ontario, Bench Show:

CLASS 1.—English Setters—1. T. W. Jackson's Bruce, Chatham; 2. F. A. D'Espard's Dash. Highly commended, F. G. Simpson's Storm, Exeter. Bitches—1. W. B. Wells' Star, Chatham; 2. F. G. Simpson's Morsey. Highly commended, J. Hennessy's Kitty, Chatham; and W. G. Coupland's Fan. Pups—1. Chas. Murray's Bronte, London, also taking S. Griggs' gold medal for best English setter pup in show.

CLASS 2.—Irish Setters—1 and 2, J. O. Goodenough's Rap and Shot, Windsor. Highly commended, E. L. Wilkes' Silvio, Galt; R. Culbert's Dash, Exeter. Bitches—1. J. Weighell's Bird, Rochester, N. Y.; 2. W. G. Coupland's Beauty. Highly commended, John E. Platt's —, London. Pups—1. E. L. Wilkes' Dash, Galt. Highly commended, Jas. Longhead's —, Strathroy.

CLASS 3.—Gordon Setters—1. T. A. Smallman's —, London; 2. W. T. Crisp's Bob, Ingersoll. Highly commended, Dr. Niven's Don, London. Bitches—1. Jas. Glen's Belle, London; 2. J. D. Thomson's May, Toronto. Pups—1. Dr. Niven's —, London.

CLASS 4.—Pointers over 50 pounds—1. J. Weighell's Dash, Rocher-ter; 2. E. Richard's Bob, London. Highly commended, J. Rombough's Blas, London. Bitches over 50 pounds—1. A. H. Graydon's Belle, London; 2. S. T. Bastedo's —, Princeton.

CLASS 5.—Dogs under 50 pounds—1. J. Weighell's Shot; 2. J. Glen's Sport. Bitches under 50 pounds—1. J. Weighell's Mollie; 2. Geo. Hare's Toronto.

CLASS 6.—Pointer Pups—1. George Hare's Tronto. Highly commended, Robert Griffin's, T. Howson's, Windsor; J. O. Boyd's Burlington; A. Elliott's, Rond Eau.

CLASS 7.—Chesapeake Bay Dogs—1. G. W. Kierslead's Nelly, Lu Port, Ind.; 2. E. H. Gillman's Pride, Detroit.

CLASS 8.—Water Spaniels—1. Big Point Kennel Club's Micko,

Chatham; 2, do, Grooms. Highly commended, A Cleghorn's Ranger and Trim; C Cannon's Bob; Dr Niven's Jeff.

CLASS 9.—Cocker Spaniels.—1, C A Brough's Peter, Toronto; 2, do, Rita. Highly commended, G D McDougall's Lady Bessie, E Tinsley's Garry, W E Walsh's Dash, John Hammond's Bessie and Sailor.

CLASS 10.—Field Spaniels.—1, J F Hellmuth's Louie, London; 2, P O McCann's Kaiser, London. Highly commended, G R Murray's Don.

CLASS 11.—Fox Hounds.—1, J Weighell's Rock; 2, do., Buck. Highly commended, D Shoa's Forrester, A J B Macdonald's Clyde, Wm Sloggett's Ratter and Kolla, G Kennedy's Hasty, G Cummings' Nook, E L Wilkes' Lady.

CLASS 12.—Fox Terriers.—1, Chas J Fox's Young Sport; 2, do., Prince. Highly commended, R Gibson's Viper, Venom and Tip, Wm Dobson's Nettie.

CLASS 13.—Grey Hounds.—1, J Dawson's McGrath, London; 2, C A Brough's Lady, Toronto. Highly commended, J E Dawson's Flirt, D L Cavan's Sallie.

CLASS 14.—Scotch Deerhounds.—2, W R Barry's Gannett, Hamilton.

CLASS 15.—Mastiffs.—1, J Leary's Countess, St. Mary's, St. Bernard's; 2, Wm Dempster's Barry, Ingersoll; 2, A E Davis' Novell, Hamilton. Highly commended, M P Hays' No Name.

CLASS 16.—Newfoundlands.—1, Maj Milligan's Nell, London; 2, A G Sanders' Neptune, London. Highly commended, J A Doyle's Jim Penders, John Glen's Major.

CLASS 17.—Dalmatians or Coach.—1, John Ormerod's Spot, Brantford; 2, J H Heath's Spring, London. Highly commended, J Thompson's Juno, J Bairn's Spot, T E O'Callaghan's Kaiser.

CLASS 18 and 19.—Rough-coated Shepherds.—1, C G Hartman's Driver, Davinville; also taking special prize of silver cup; 2, Jas Cox's Shepherd, Strathroy. Highly commended, James Cox's Chester. Smooth Coats.—1 and 2, Jas Cox's Nettie and Dart, Strathroy.

CLASS 20.—Bull Dogs.—1, Jas Dains, London.

CLASS 21.—Bull Terriers over 20 pounds.—1, G F Gurnet, Ingersoll; 2, Wm Vesle, Cleveland, O. Highly commended, E C Ellis, St. Thomas.

CLASS 22.—Bull Terriers under 20 pounds.—1, H V Meredith, London.

CLASS 23 and 24.—Black and Tan over 11 pounds.—2, A Thorne, London. Black and Tan under 11 pounds.—1, D T Perrin's Jack, London, a pretty little dog; 2, J J Brown. Highly commended, A Arbuckle, London; H Jell, Wardsville.

CLASS 25.—Skye Terriers.—1, Miss Mitchell's Sam, London, a handsome old dog; 2, Hey Mr Darnell's, London.

CLASS 26.—Yorkshire Terriers.—1, Mr. Wilkes' Rowdy, Galt; 2, Job Pilling, Cleveland.

CLASS 27.—Scotch Terriers.—1, Jas Smith's Tiny, London; 2, A Black's Toby. Highly commended, Wm Elliott's Jerry and Tom; W Dempster, Mr. Black.

CLASS 28.—Toy Terriers.—1, Jas Glen's Pinkney.

CLASS 29.—Pomeranians.—1, A Anderson's White Prince, London; 2, H Roat's Doodle, Preston. Highly commended, H R Ghes, James Anderson, R. Richard, M O Andrews.

CLASS 30.—Miscellaneous.—1, B O Marshall's very handsome retriever bitch; 2, H Hartin's French poodle, of Brantford.

LARK.—We call attention to the advertisement in another column of this stud dog, in the hands of Mr. Wanmaker. Though not coming in direct competition, Lark has virtually beaten the best blue bloods in America, as he took the first prize in the largest class ever shown—that of native setters at New York Bench Show—over Bruce and Nip and Tuck. These latter having beaten both Paris and Leicester. He is the property of Mr. P. H. Morris, of this city.

A DOG SHOW FOR SAN FRANCISCO.—San Francisco is to have a dog show. Premiums aggregating \$5,000 are to be offered.

NAME CLAIMED.—Thos. P. Cantwell, of Brainerd, Minn., claims the name of "Blix" for his black pointer bitch pup, bred by J. L. Woodbridge, of North Manchester, Conn. Sire, Strong's Champion Pete; dam, Woodbridge's Nell, whelped June 22, 1877.

W. H. Pierce, of Peekskill, N. Y., claims the name of Pride of Cortland for his black and white setter-puppy, out of his Fanchon, by Crary's Nero, of Oshkosh, Wis.; he also claims the name of Queenie for bitch puppy, same litter, the property of M. H. Hovermale, Independence, Iowa.

CROOKED LEGS IN DOGS—HOW TO CURE.—Take an old boot leg and cut a strip off as long as his leg from the first joint above his toes and wide enough to go around his leg. Make some holes in each side so as to run a piece of cord through and lace quite tight, but not too tight, for if you do it will chafe him. Cut some slits in the end of this boot, so it will be quite soft and not chafe his leg while moving around. Examine his leg now and then to see that the boot does not chafe.

LOUISVILLE DOG SHOW.—Al. Bourlier gives as a special premium a galvanized iron cup of immense proportions to the ugliest dog exhibited. The special premium list for the bench show is growing very rapidly, and numbers thirty-five or forty already.

DOGS THAT SUCK EGGS.—"Check Cord," of Shrewsbury, N. Y., sends the following remedy for this bad habit: I wish to state it is my belief that a judicious use of the whip will do it, but if that fails, place a charge of gunpowder on the ground, put an egg upon it and lay a train of powder from the charge to a convenient distance, and stand by it with a lighted segar. When the dog is in the act of taking the egg touch the segar to the train of powder. Information is requested from those trying the above remedy if a second application is needed.

APPARENT WANT OF NOSE.—Although it sometimes happens that young dogs lack those olfactory powers for which they are so valuable to the sportsman, they should not be condemned without a fair trial. It often happens that this defect is remedied as the animal advances toward adult age. With dogs that have but just recovered from distemper, this defect is frequently noticeable, but is seldom if ever permanent. During a long drought, when the herbage is in a very dry state, it happens that the keenest nosed animals are frequently unable to find game. In such case let a second trial be given when the state of the weather and moisture of the fields will be more advantageous to the animal. We are confident such will prove satisfactory.

A beautiful setter pup presented to the writer a few years since, seemed to be absolutely without the faculty of scenting game. Being shut in the cage one night, in his high jinks, he overturned a jar of leeches, and probably nosed them, as in the morning he was found bleeding profusely from the nostrils, and had evidently been suffering from hemorrhage the greater part of the night, as he was badly ensanguined.

An examination into the state of affairs showed the leech jar broken, whereupon it was conjectured that some of the reptiles had found lodgment in the nose or throat. The result confirmed the diagnosis, two being found attached to the posterior fauces, and three were washed out of the nostrils, four remaining to be accounted for after those on the floor were picked up. They were probably swallowed. The animal recovered, and with the recovery his infirmity disappeared. Such active treatment is not however recommended.—*Hallock's Sportsmen's Gazetteer*.

LOUISVILLE'S HYPOCHONDRIAC CANINE.—There is one of the strangest and most singular dogs in this city that we have ever known. He is a medium-sized yellow dog, with some long wiry hairs about his muzzle, with unusual reddish looking eyes, as if he had been weeping. He is a waif of unknown parentage and ownership, and no one knows from whence he came and where he sleeps and habitates. He looks about two and a half years old, and as he has no owner nor home, he goes by the euphonious title of Gutters. He wears a singularly sad and melancholy look, never associates with other dogs, and seems to be overcharged with sorrow. The strangest and most peculiar trait in his character is his fondness for funerals, and for the last two years not a funeral cortege has passed through the gates of our beautiful cemetery but what has seen Gutters in close attendance. Mr. Bell, the superintendent of the cemetery, says that Gutters visits him twice every Sunday, morning and evening, and that it is only on Sundays that he deigns to notice him or any of his family, totally ignoring them upon every other day of the week. When spoken to he does not approach you with a wailing tail and cheerful countenance, but seems to accept your attentions formally and with a sad air.

Some malicious person has put out one of Gutters' eyes, which gives him a still more sad and melancholy countenance. He seems to visit few places besides the cemetery, but about 7 o'clock every morning he can be seen in front of Mr. Featherston's butcher shop on South Upper street, waiting for his breakfast. After his morning meal he is not seen again during the day, except there be a funeral, when he is certain to be present and take his place among the mourners, starting with a vacant and sad look as the coffin is lowered to its last resting-place. How he learns when there is to be a funeral we are unable to state.—*Kentucky Live Stock Record*.

The nine prizes were awarded as follows:

Hermes, first prize, silver and glass wine stand; Mabel, first prize, silver fruit dish; Violet, second prize, metal encased marine clock; Reble, first prize, silver celery stand; Wanderer, second prize, a silver sugar spoon; Sankey, first prize, one pair sugar spoons; Psyche, second prize, a gold chain compass; Sanbeam, first prize, a toilet case; Lydia Adams, second prize, olive fork; Marquitta, first prize, a silver goblet.

MASSACHUSETTS.—Boston Yacht Club.—The final regatta of the Boston Yacht Club for the present season was sailed on Wednesday, Sept. 26, to settle the prizes in the second and third classes. The Shadow and the Violet had each gained one race in the second class, and the Wanderer, Reble and Posey one each in the third class. The Shadow won the prize in the second class, and the Posey the prize in the third class.

UNION BOAT CLUB.—Sept. 29.—The four-oared shell race of the annual fall regatta was rowed on the Charles River Saturday evening. There were two crews. Williams crew—C. H. Williams, Jr., I. H. Houghton, R. H. Jones, W. S. Eaton, Harry Williams (coxswain). Lee crew—George Lee, Richardson, W. Appleton, Caleb White, E. C. Ellis (coxswain). The Williams crew won in fourteen minutes.

CONNECTICUT.—Hartford Rowing Club.—In the annual regatta, held Sept. 26, the one-mile single-oar race for the senior championship and a gold medal was won by Capt. I. H. Andrus, in 14m. 43s.; the junior championship and a silver medal won by H. H. White in 15m. 24s.

NEW YORK.—Atlantic Yacht Club Regatta, Sept. 27.—The annual regatta of this club for the champion pennant, and additional competition prizes for schooners and first-class sloops was contested by ten yachts. The course was for second-class sloops from the starting point off Bay Ridge to and around buoy No. 83 on the Southwest Spit and return. The schooners and first-class sloops the course led around buoy No. 83 out to and around the Sandy Hook Light-ship, back through the Swash channel to the place of departure. Following is the summary:

GRAMERCY VS. FRIENDSHIP.—On the Harlem, Sept. 27, single scull race was rowed by representatives of these clubs, in which George Garsil of the Gramercy Club 1, Emil Conlon of the Friendships. Time, 20m. 49s.

HUDSON RIVER AND PAVONIA YACHT CLUBS.—Union Regatta, Sept. 27.—This regatta was sailed on the Hudson, a course from a stakeboat off the club house, foot of Seventh street, to and around a stakeboat off Fort Lee and return. It was sailed twice over, making in all a distance of two miles. Following is the summary:

HARLEM REGATTA ASSOCIATION, Oct. 2.—The first annual regatta of this association was rowed on the Harlem River, proved very successful. The contests were open to all amateurs and the several events were well contested by numerous competitors. The course for the trial heats was from McClellan one mile straightaway down stream; in the final heat one mile straightaway up stream from Gates' Dock. The summary of the trial heats is as follows, the names being given the order in which they crossed the line:

Junior sculls.—First heat: E. Conlin, Friendships, 6m. 32½s.; S. Wilson, Nassau; J. V. Elliot, Seawanhaka; W. Content, Cobias; J. J. Gunther, Nassau. Second heat: W. Hurley, Friendships, 6m. 37½s.; W. R. Kent, Nonpareils; J. Frazier, Palisades; J. D. Nassau; S. S. Lee, Palisades. Third heat: H. Livingstone, Yale, 6m. 45½s.; W. Childs, Nautilus; J. A. Ackerman, Empires; Alan Argonauts. Fourth heat: G. G. Galt, Gramercy, 6m. 41½s.; F. Ockerhansen, Indisons; J. P. Kington, Seawanhaka; E. A. Son Wesleyan College. Final heat: Livingstone, 6m. 42½s.; Galt, 6m. 43s.; Conlin, 6m. 23½s.

First.—First heat: Athletics, 6m. 29s.; Nautilus, 6m. 47½s.; Ayton, 6m. 57s. Second heat: Atlanta, 6m. 41½s. Final heat: Athletics, 6m. 11½s.; Athletics, 6m. 15s.

Senior sculls.—First heat: J. McCarty, Friendships, 7m. 22½s.; Pearson, Yorkers; J. A. Ackerman, Empire. Second heat: G. W. Trenton, 7m. 26½s.; J. P. Kington, Seawanhaka; A. Moffat, Palisades. Third heat: E. Mills, Athletics, 9m. 59½s.; J. H. Abell, Nassau. Heat: Lee, 6m. 37½s.; Mills, 6m. 37½s.; McCarty, 6m. 50s.

Four.—Columbia College, 6m. 10½s.; Atlanta, Wovenhooks, 6m. 10½s.

Six-oared gigs.—Columbias, Danntless and Friendships. The distance between the first two was adjudged to be just one-quarter second.

MINIATURE YACHTING.—The monthly regatta of the Annapolis Model Yacht Association took place on the lake at Annapolis, Md., Sept. 29. There were six entries; four schooners and two sloops. The schooners entered were the Vi Maria, Katie B. and Yankee Traveller; sloops Club Commodore Bennett. There were three heats sailed, but in the third heat the first boat in was six seconds behind the specified time for making the distance, which is 15 minutes the race was not decided.

THE OWASCO LAKE REGATTA.—The three-mile race for professional single sculls, which was rowed Sept. 27, resulted another easy victory for the champion Courtney, who now come in ahead in twenty-eight races. The following is the time of the competitors:

|   |                |
|---|----------------|
| Charles Courtney, of Union Springs..... | 35             |
| James Riley, of Saratoga Springs.....   | 21             |
| Frederic Johnson, of Boston.....        | 21             |
| James Ten Eyck, of Peekskill.....       | 21             |
| Laberge, of Pittsburgh.....             | Time not taken |

ARGONAUTS VS. NETTUNES.—The four-oared shell race between the Argonauta Club, of Bergen Point, and the Nept Club, of Staten Island, took place Sept. 29 on the Kill Kull. In 1870 and 1871 the Neptunes vanquished the Argonauts, and in 1872 and 1873 the Argonauts beat the Neptunes. This contest was waged for the championship of Kill Von Kull and a set of colors, and resulted in a hands victory for the Argonauts, they winning by four lengths. The race course was from between Elm Park dock and Light-house to a point this side of Elizabethport and return being one and a half miles each way, or three miles for whole race. Time, 21m.

DARE DEVIL VS. WALTER F. DAVIDS.—The second race between the yachts Dare Devil and Walter F. Davids came off at New Rochelle, N. Y., Sept. 29, stakes \$250 each. The contest proved a close and exciting one, and won by the Davids by one minute. Time, 4 hours 10 m. The course was ten miles to the windward and return—11 Echo Bay to a stake boat anchored off Oak Neck, about 11 miles east of Matinecock Point, and return.

FLUSHING REGATTA, Sept. 26.—This regatta passed off very success. The breeze was from the southwest and favors for fine sailing. The course was from the Hoffman House

A. H. R., Port Crescent, Me.—How can I keep gold fish, and what attention do they demand? Ans. Use any well, or creek, or river water that is not impregnated with mineral; change the water when the fish come to the top and stay there and breathe part water and part air. When you change the water take out nearly all, leaving enough for the fish to swim in, and fill the vessel with fresh water. Never take the fish in your hand. If the aquarium needs cleaning make a sort of muslin netting and take the fish out with it. There are many gold fish killed by handling. Keep your aquarium clean, so that the water looks as clear as crystal, and watch the fish, and in a little while you will find out whether your fish are all right. Feed them all the while they will eat and anything they will eat, worms, meat, fish, or fish spawn. Take great care that you take all that they do not eat out of the aquarium. Any decayed meat or vegetables in water has the same smell to fish in water that it does to you in air. If your gold fish die it is attributable, as a rule, to one of the three causes—handling, starvation, or bad water.

It is needless to say that on going to the place next day he found that the odor of the dissecting room existed only in the imagination of the composer, perhaps excited by the sight of a small quantity of red paint (blood!) which had been spilled on the cover of the box and its address.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[Post Office Box 2839.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

#### Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 4, 1877.

#### To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

#### CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, Oct. 5.—Trotting: Syracuse, N. Y.; Manhattan, Kan.; Cleveland, O.; Loudonville, O.; Danbury, Conn. Base ball: Cincinnati vs. St. Louis, at Louisville; Louisville vs. Chicago, at Chicago; Cricket vs. Rochester, at Rochester; Chelsea vs. Alaska, at Jersey City; Lowell vs. Boston, at Brockton, Mass.; Excelsior vs. Brooklyn, at Williamsburg.

Saturday, Oct. 6.—Trotting: Danbury, Conn. Base ball: Cincinnati vs. St. Louis, at St. Louis; Lowell vs. Manchester, at Lowell, Mass.; Syracuse Stars vs. Auburn, at Rochester. Cricket match of veterans, Prospect Park, Brooklyn. Boston Union Athletic Club games on Boston base ball grounds.

Monday, Oct. 8.—Base ball: Louisville vs. Mutual, at Janesville, Wis. Tuesday, Oct. 9.—Trotting: Poughkeepsie, N. Y.; Frederick, Md.; Leavenworth, Kan.; Columbus, O.; Beacon Park, Boston. Base ball: Louisville vs. Mutual, at Janesville, Wis.

Wednesday, Oct. 10.—Trotting as above. Base ball: Louisville vs. Milwaukee, at Milwaukee, Wis. Fall meeting of the Dartmouth Athletic Association, Hanover, N. H.

Thursday, Oct. 11.—Trotting as above. Meeting of Dartmouth Athletic Association as above.

THE BRITISH TEAM.—We have the pleasure of presenting our readers this week with correct portraits of the British Team, the descriptions of which will be found in another column. The photographs of the American Team are now in the hands of the engravers, and the portraits will appear in a subsequent issue.

ACKNOWLEDGMENTS.—We acknowledge, with thanks, the receipt of numerous invitations to attend agricultural exhibitions, very few of which it is in our power to accept; we wish them all success.

HALLOCK'S SPORTSMAN'S GAZETTEER.—Mr. Robert Ormsby Sweeny, Fish Commissioner of Minnesota, says: "I am the happy recipient of 'The Sportsman's Gazetteer.' To begin at the beginning, I think the portrait of the author is remarkably correct, and when I look upon the counterfeit presentment it seems to me uncommon fair. The contents of the volume as far as my cursory examination warrants a judgment, are very interesting, useful and valuable. It gives much information which heretofore was only to be had upon considerable research among many authors, necessitating outlay of time, labor and money, three ingredients of this life not always at one's disposal simultaneously."

#### INITIATING AN IMPORTANT MOVEMENT.

WE are well aware of the efforts that have been made by individual railway corporations and local agents of Express companies, during the past two years or so, to prevent the transportation of game over their lines during the close seasons, but we believe that the Adams Express Company is the only corporation that has publicly promulgated rules to govern its employees in accordance with the State enactments or the dictates of that policy which perceives the necessity of proper restrictions at certain seasons to prevent the extermination of our game. Below will be found a printed copy of an order just issued from the office of the Manager and Superintendent of this company at Bridgeport, Connecticut, which other Express and Railway companies would do well to imitate at once, so that the object of the laws and the aims of our game associations and their supporters may be carried out through that co-operation and harmony of action which is required to insure success.

We are glad that so powerful an organization as Adams Express Company has been moved to take the initiative in this matter at so opportune a time as the present. Laws and protective societies are comparatively useless while transportation companies clandestinely carry illicit game under false labels, and thereby encourage the killing of game out of season by providing a market for it. We have seen our Western pinnated grouse or prairie chickens sent to England by the steamer load, and our ruffed grouse brought from New England localities to Boston, New York and Philadelphia markets by the thousand packages; woodcock sold at our Saratoga hotels, and our highest public officials who are the sworn conservators of the laws, partaking of illicit dainties with a gusto and relish which would hardly seem to pertain to a palate conscious of wrongdoing. This will be put a stop to in future if the action of Adams is sustained throughout the country. We think the true key to the solution of a difficult problem has been reached herewith. While no better measure was devised—or rather adopted—we were inclined to encourage the maintenance of those State laws which forbade the carrying of game out of the State wherein it was killed at any time of the year whatever, although they were arbitrary and discriminating; they prevented all the States of the Union enjoying alike the delicate morsels of quail on toast, partridge roasted, or prairie fowl en fricassee. Why should the people of Iowa and Kansas be alone permitted to enjoy those luxuries which other States are willing to pay a high tariff to secure for themselves also? This is a question that has been asked with proper seriousness by the most thoughtful minds.

Toothsome as these viands are, and careful students as we have been of the science and pleasures of gastronomy, we have, nevertheless, been willing as law-abiding citizens, to journey to Iowa and eat our chickens on the spot where they were shot, at great expense of purse and tear of travel, in order that the desired results of restrictive measures might accrue. We have submitted to behests which wisdom compelled the folly of wanton waste and senseless destruction to submit to. Now, however, with the action of all the carrying companies combined, such odious laws would become no longer necessary. A call for their abrogation is in order just so soon as such measures shall be thoroughly and capably carried out.

All honor is due the Adams for initiating this movement, and if they shall preadvantage be the means of giving us an epicurean diet in future, instead of the sour, emaciated and unhealthy food which we can only obtain by stealth when its use is forbidden, then all the world of Eaters will rise up and call them blessed.

"As in Adam's fall  
We sinned all,"

so in the uprising of their well-doing let us all find grace, mercy, peace of conscience and grateful abundance.

ADAMS EXPRESS CO., NEW ENG. DIV.

BRIDGEPORT, CONN., Sept. 20, 1877.

OFFICE OF MANAGER AND SUPERINTENDENT.

The attention of employees is called to the subjoined extracts from the game laws of Connecticut, and they are hereby notified that a strict compliance with said laws on the part of this Company will be exacted.

C. SPOONER,  
Manager and Superintendent.

Be it enacted by the Senate and House of Representatives in General Assembly convened:

Sec. 1. That it shall be unlawful for any person or persons to hunt or pursue, kill, destroy, or attempt to kill, woodcock, quail, or any ruffed grouse (commonly called partridge) between the first day of January and the first day of October in each and every year. And every person so offending shall, for each and every offense (the killing or destroying or having in possession of each bird shall be deemed a separate offense) be deemed guilty of a misdemeanor, and on conviction shall be fined not more than twenty-five dollars for each and every bird killed, and costs of suit, and shall stand committed to the county jail until such fine is paid; provided that such imprisonment shall not exceed twenty-five days for each and every offense above named.

Sec. 4. No person or persons, or transportation companies shall buy, sell, or expose for sale, or have in his or her possession, for the purpose of selling or exposing for sale, or for transportation, or for any purpose, any of the birds mentioned in section one of this act, during the period in which it shall be unlawful to kill such birds; and any person or persons so offending shall, on conviction, be fined and dealt with as specified in section one of this act.

Sec. 1. No person shall catch any brook trout, except with a hook and line, nor sell, expose for sale, purchase, catch, or have any trout in his possession, except from the fifteenth day of April to the first day of July; provided, that any person may take trout in waters owned by

him, for the purpose of stocking other waters, or take and sell any trout reared in such waters.

Sec. 2. provides a penalty of not less than three nor more than fifty dollars, or imprisonment in jail not exceeding thirty days, or both.

"FAUNA BOREALIS."—In one of Mr. Hallock's recent Hunting Notes from Minnesota, while in company with John Swainson, Esq., of St. Paul, who is recognized everywhere as a naturalist of no mean abilities, he mentioned Mr. Swainson incidentally as being the joint author with Richardson of "Richardson and Swainson's Fauna Borealis." The statement was made under a false impression, and we herewith hasten to apologize for having inadvertently hurt the honorable sensibilities of Mr. Swainson or done injustice to the gentlemen whose name his own was connected with. We take the liberty to publish the following private letter as the best vindication which we can offer in our own or Mr. Swainson's behalf:

ST. PAUL, Minn., Sept. 27,

EDITOR FOREST AND STREAM AND ROD AND GUN:

In your last issue there is a mistake which I am very anxious to have corrected at your earliest opportunity. Mr. Hallock, in his description of our grouse hunt at Madelia, and of your very humble servant, has put me down as "the joint author with Mr. Richardson of Fauna Borealis." After writing the article in question, and probably mailing it, Mr. Hallock, in the presence of Mr. Werner, asked me whether I had not written the work in question, to which I emphatically answered, No. He probably afterward forgot all about it. This places me in a rather unpleasant position, as anybody seeing the statement, which apparently was written while Mr. H. was in my company, would naturally come to the conclusion that his information in regard to the authorship of "Fauna Borealis" came from me, and thus be very apt to put me down as an impostor. If there is any weakness I carefully tried to avoid in the whole course of my life it is to shine with borrowed plumage. Please put this matter in the right, and oblige very much

Yours respectfully, JOHN SWAINSON.

—We are indebted to Brother Rowe, of the Chicago Field, for very courteous attention shown us during our brief visit in Chicago, a week ago, while on our return from a visit to the farther West.

—Mr. Fred Mather will sail for Germany, October 13, per steamer Mosel. He takes out a few *Salmo gairdneri* eggs for Frank Buckland, of the United Kingdom Fishery Commission, for the *Societe d'Acclimatation*, Paris, for the Prussian Minister of Agriculture, for Honoring, and for the *Deutsche Fischerie Verein*, and also number for the Netherlands. Mr. Mather's principal object is, however, the study of the chief Aquaria of Europe, their construction and management, with a view to future application in the United States.

BEAR WITH US.—Here is one of those incidents which a sporting editor becomes heir to by virtue of his profession. Read this message which was sent us but recently:

BUTTERNUT CREEK, WIS., Sept. 29, 1877.

Editors Forest and Stream.—Sent yesterday by express a bear, and today a cub, both killed on the town plot; plenty more here.

HART & BARNADGE.

In view of the foregoing it becomes us to ask "What's brewin' now?" Why this premeditated invasion of our sanctum by the shaggy denizens of Butternut Creek? Times have been bad with us, but now they promise to grow *ursa* and *ursa*! We can hardly be blamed, however, as we have never played for high steaks. "For-bear" is always our motto, though we do not intend that our exchequer shall be entirely bare at any time. If our friends Messrs. Hart & Barnadge have really instigated this raid upon us, or if the officers of the Wisconsin Central Railway are their abettors in the matter, we will try and practice this virtue of forbearance. We can only say that if bears are common on their town plot we are equally well off here; and if they will only come to New York we will show them the lions of this place. We await the arrival of the express with equanimity.

#### GAME PROTECTION.

CONNECTICUT.—Hartford, Sept. 21.—We have been unfortunate in this State, until the present year, in having statutes that were so worded that they could not be enforced; but, by earnest efforts, we have at last succeeded in securing what I believe to be the best law now in force in any New England State—first, because it makes the season open on the same day for quail, partridge and woodcock, and secondly, because it forbids the shooting of woodcock in summer, thus preventing their too rapid extermination, and saves the young quails and partridges which are killed out of season by parties who pretend to be hunting for woodcock. We have for several years received information that certain parties in Tolland and Windham Counties paid no attention to the game laws, but boasted that they would do as they pleased in spite of all law or game clubs. By the judicious use of a detective, we have succeeded in convicting three of those very parties during the past week, and they have been obliged to pay such heavy fines that I do not think they will soon repeat the offence. We have sufficient evidence to convict about eight now, and their cases will be pushed as fast as possible. I believe that the game laws when properly constructed can be enforced.

Yours truly, MEDICUS.

Hartford, Sept. 25.—For years the sportsmen of Connecticut have waited patiently for the enactment of proper game laws by our State Legislature for the protection of game and fish, and not until this year have their efforts been rewarded. But we now have laws as near complete as we ever hope to make them, and if only observed for a few years will make this State a "happy hunting ground" for sportsmen. These impose heavy fines for the netting of trout, or their capture in any way except with hook and line, and only then from April 15 to July 1.

## The Rifle.

## OUR TEAM PICTURES.

The cuts which we present in our extra sheet of to-day of the British team have been engraved expressly for our pages from most excellent photographs taken by Fredericks & Co., of 779 Broadway, N. Y. They show to the life the lineaments of this celebrated band of small-bore experts, and will enable the readers of the FOREST AND STREAM AND ROD AND GUN to see at a glance of what stuff riflemen are made.

Sir Henry Hallford is an Englishman through and through—a sportsman and a gentleman, ready to own up to a fair square defeat, when such shall befall him, but with the same breadth to declare his willingness to try conclusions again. His love for the rifle and rifle shooting has led him to take a very active part in the management of the affairs of the National Rifle Association of Great Britain, and in the council board and on the field at Wimbledon his presence is rarely wanting. His abundant leisure and ample means have enabled him to gratify his inclinations as a marksman to their full bent, and since 1860 he has taken and maintained a position among the foremost rifle shots of England. He has fired seven times in the Elcho shield eight, twice making the leading scores. He is now 49 years of age, stands about 5 feet 9½ inches high, and shoots in the "Fulton" position.

Joshua K. Miller is one of the Irish wing of the team, and a genuine Irishman he is. He is a young man, his years being less than thirty, and in build he is lithe rather than bulky. As a rifle shot he has enjoyed great experience, and as a member of the Irish eight on several occasions has done gallant work; 203 was made by him at Wimbledon recently, the best that range can boast. While at Creedmoor, a year ago, his spurt of fifteen consecutive bull's-eyes at 1,000 yards makes him as well the champion here. His posture in firing is a peculiar modification of the back position, the barrel rests upon the upturned toes, while the heel is tucked into the right arm-pit.

Lieut. George Fenton is another of the Irish contingents and his great, stalwart form and broad, resolute face have been seen on other occasions at Creedmoor. He is thirty years of age, full 6 feet tall, and weighs 187 lbs. In all his small-bore experience Lieut. Fenton enjoys the peculiarity of never having scored a miss in a match. He has fired at Dollymount and at Wimbledon, and has been on the Irish eight several times. He is a firm advocate of the prone, or "belly" position in firing, and thinks it as good as any other.

William Rigby is a cousin of John Rigby, and is associated with that gentleman in the firm of John Rigby & Co., makers of the celebrated Rigby Fire arms. He has visited this country as a member of former Irish teams, and in his quiet, almost solemn way of shooting impresses the spectator as a formidable adversary. He is about forty years of age, and uses a position exactly similar to Miller's in firing. He has been a pretty steady representative on the Irish eight, and has in private competitions enjoyed a good run of success.

William Ferguson is the sole Scotchman on the team and was fully worthy of his place. He holds the post of color sergeant in the First Inverness regiment of volunteers and does equally good service at Snider rifle shooting and at long-range work. He is short of stature, about forty years of age and for nearly a score of years has been prize winning on Scotch and English ranges. On the Elcho shield Scottish eight Sergt. Ferguson has fired again and again. His position in firing is a back one with rifle resting between the crossed legs.

Arthur Paget Humphry is the youngest man on the team, almost as slim as a whip-stick in build. He is twenty-seven years of age and has not yet dissolved his connection with Cambridge University, his intention being to enter upon the profession of law. He, too, is an old Snider shot and has won the highest distinction attainable to an English volunteer—the Queen's prize for his corps of the Cambridge University rifle. Lately he has devoted himself to long-range work and on two occasions has fired on the English eight. He uses the prone position in firing.

Henry Saville Ward Evans is another of the young men of the team and has a quiet, self-dependent way of working which makes him a team, whose system is to have each shift for himself. He is small in build and shoots in a back position peculiar to himself, crossing his legs and pulling off the trigger with his left hand. He is a barrister and is connected with the Inns of Court Rifles, "the Devil's Own" as they are humorously dubbed. He came over last year as a friend of the Irish Riflemen, and at home has fired for years at Wimbledon and always with brilliant success.

Lieut.-Col. James Fenton derives his rank from his post in the 24th Lancashire Volunteers. His extensive acquaintance with military shooting leads him to keep to the belly position at long range work, making him not so reliable as he otherwise would be. He has for many years been successful in winning a place upon the English Eight for the Elcho Shield Match, and to recite the list of his deeds and successes in private contests would be tedious. He is a stout-built gentleman, with full beard, and filled the post of trusted counselor to Sir Henry.

## A CHAPTER OF ERRORS.

I. The officers of the American Rifle Association announced a contest for the De Peyster Badge at their range at Glendrake on Thursday last, but in place of the spirited contest in 300-yards' shooting which was anticipated, the day was spent in a wrangle, and ended in a temporary settlement of the dispute before a justice of the peace. The badge, which is a valuable one and much prized by the National Guard marksmen, has been since the last contest, some months ago, held by Lieut. J. A. Gee, of the Eighth New York Regiment, under the custom of allowing the winners to hold the trophy, from match to match, until it is finally won for the third time. When the hour for shooting the match had arrived, the trophy was demanded from Lieut. Gee. He refused to deliver it until the match had been fired. Major Coburn, of the Twenty-seventh Regiment, the executive officer of the range, refused to permit the competition to go on until the badge was formally in possession of the association. Each of the contestants held to his position and spent the day in heated discussions of the situation, a number of the Eighth Regiment men and others filling up the time in subscription or sweepstake shooting. When Lieut. Gee came to leave the range late in

columns that the Legislature pass the necessary enactments, and we now call upon sportsmen and sportsmen's clubs for united and determined action in this scheme:

To the Editor of the Utica Morning Herald:

In your weekly issue of the 4th, I received an editorial article upon the preservation of game in the Adirondacks the perusal of which suggested the few words I send you in this communication.

"The startling facts" you mention concerning the wholesale slaughter of deer in the wilderness are well known to all frequenters of that region. The general public also have knowledge of them through the medium of the newspapers which are constantly giving them publicity.

Your suggestion that the State should create, by law, a forester with necessary assistants, having requisite power to enforce the game laws is wise. There is no other efficient means for remedying the evil complained of. This was one of the measures contemplated by those who sought a few years ago the creation of a State Park in the wilderness. They strove by a very simple legislative act to preserve the woods, the waters, the fish and the game of that wild region. I am sorry to say that the effort, contrary to your statement, failed. New York has no "State Park," although it has at hand all the material for a magnificent one. Some day the Legislature may seize the opportunity to create such a park. It would cost nothing, but would be worth a great deal to the people of the State.

Syracuse, Sept. 15.

✓ *Eagle's Nest, Adirondacks, September, 1877.*—Ill health, the effect of hard service in times past, kept the writer hereof away from FOREST AND STREAM a great part of the season, and broke up his promised Adirondack tour altogether, and he fears will break up another to the far-famed Grant County woods and waters in West Virginia, spoken of in an enticing sketch in "our paper"—the F. and S. and R. and G., some weeks since.

But I did manage to get in two days of the last week of the season on the Beaver Hill and to pull in, on dark flies, mostly black ant, about 250 nice speckled trout.

I was too mad most of the time, however, to fish well, for there was a gang of pot-hangers over there, fishing night and day, going up all the little brooks that run into the stream and taking out the trout from under the rocks with their hands, literally by bushels, for the water was so low the poor things could not escape that kind of fishing.

I can forgive a hungry man if he plays crane to get enough to eat; but such wholesale slaughter—such a low-lived grab-game should elicit the scorn of all true sportsmen. The same gang were shooting ruffed grouse before the season, well knowing that there was no game constable over in that wilderness, nothing that they possessed in the shape of a conscience to stop them. The Beaver Hill a few years ago was one of the best streams in the State. But its day has gone—I fear forever gone! Gangs go in, in the winter, and fish the ponds in which the stream heads, through the ice, taking out trout by the thousands, regardless of law or policy, and now it hardly pays a true sportsman to go there for enjoyment.

In 1872 I camped two months on its banks, had three large wall tents full of guests most of the time, and rarely did I ever go over a quarter of a mile from camp to catch all required for my table.

Now, to make the same catch, miles have to be waded over, and the stream whipped till one's arm aches, even with an eight ounce rod, such as I always use.

But enough grumbling: if it does a little good and shames some of the inhuman fellows who ape the name of sportsman, I shall be gratified.

"NED BUNTLINE."

NEW JERSEY.—At the last meeting of the West Jersey Game Protective Association, J. Howard Willets was elected Pres.; George E. Taylor, Treas.; R. T. Miller, Sec. The meeting took active measures toward changing the time for shooting reed birds from the 15th of August to the old time, the 1st of September. During the past year there have been placed by the society 2,300 black bass and 1,400 quail. An appropriation of \$1,000 was made for the further introduction of quail, and a bounty of twenty-five cents is to be paid on foxes and hawks. The police expenses of the year have been \$584.65.

A NEW GAME CLUB.—A number of gentlemen residing in Hackensack, N. J., met at the residence of J. J. Berry, a few days ago and organized a society for the protection of game, to be called the "Bergen County Society for the Protection of Game and Fish." The following were the officers elected: Wakeman Holberton, Pres.; W. A. Linn, Sec.; J. J. Berry, Treas. It is the intention of the society to prosecute all offenders and also to indulge somewhat in glass ball and rifle practice.

✓ *ILLEGAL FISHERMEN PUNISHED IN OHIO.*—Cincinnati, Sept. 21.—A case has just been disposed of before one of our courts which is gratifying to lovers of game and fish protection. The defendants, Debolt Rinkles, V. and Jacob Winnings, were farmers living near Barnesburg, Hamilton County, and were indicted for illegally fishing by seining, in the waters of the Big Miami, on July 24, 1877. The parties plead guilty, pleading in their reply that they were merely fishing for their own amusement, and not for profit. The court caused the law to be read to them, and in passing sentence, remarked that the object of the law was a very salutary one. It was to protect fish from being destroyed with seine or net, or in any manner that by hook and line, the object being to give fish an equal chance with the angler. Reference was made to the propriety of the formation of Associations for the protection of game and fish, and the court stated that, as the parties had not in this case caught the fish for profit, and had pleaded guilty, the sentence would be the minimum one. They were then fined \$10 each and costs. Several other parties who have been operating on the same stream and also depopulating the waters of the Little Miami, have been spotted, and, if nothing happens, will be prosecuted. May the good work go on, we say, and these evil doers be brought up with a round turn,

R. E. DUCAIGNE.

The shooting of game birds is also restricted to October, November and December, and the breaking of the law entails a fine of \$25 a bird. To show our appreciation of the last acts of the Legislature, the club of this city has gone energetically to work, and last week captured, tried and convicted a number of parties.

At a meeting of the club in the spring, it was decided that posters containing the essential features of the law should be sown broadcast throughout the eastern portion of the State where no game clubs are known to exist, so that no one might fail to observe the law through ignorance, and it may be said here that one of the parties who have just been heavily fined for breaking the law at Ashford had one of these very posters at his house. These notices were sent to every town in Hartford, Windham and Tolland counties, and to most of those in Middlesex county. A reward of ten dollars was offered for such evidence as would produce conviction of any one violating the law. Soon letters began to arrive, stating that certain parties were infringing the law, but in each case the witnesses stated that they were so fearful of having their barns burned or their cattle or horses maimed or killed, if known to have given this information, that they were unwilling to aid in convicting the offender, or even to have their names mentioned in connection with it. They begged the club to send a reliable detective for the purpose. This was accordingly done, and as a result of his operations, three of the most notorious of these fellows have been convicted and heavily fined during the past week, and the club has information of eight or ten more who will be prosecuted during the coming week and who are certain to be convicted. It is evident that the game laws can be enforced if earnest efforts are made to do so. Of course all this requires a liberal outlay of money, and any persons throughout the State who may feel inclined to aid the work can do so by becoming members of the club and paying the annual fee of five dollars. It is believed that a strong central organization, by a liberal use of detectives, can accomplish more than scattered clubs of few members in various parts of the State. If these marauders can once be convinced that there exists a determination to enforce the law by those who are able to do it, they will cease to become law breakers, simply because they will find the amount of fines which they may be compelled to pay will far exceed any probable profit which they may make from the sale of their birds. None of these men are true sportsmen, but most of them are hired by parties to procure game for the Boston and New York markets.

The Hartford Game Club is an organization composed of gentlemen, well known in the highest circles of society in this city and vicinity, members of the law and medical profession, together with our honored Governor, being of the number. These gentlemen are fond of a day's sport with rod and gun and are in favor of such laws as shall afford to all the privilege of taking fish and game in their proper seasons, and at the same time protect them from being killed or captured during their breeding period. Their efforts were first directed toward securing suitable legislation, and in consequence it is believed that the statutes in reference to fish and game in Connecticut are better adapted to the purpose than those of any other New England State. But this is not sufficient. Some one must be on the look-out to see that these laws are enforced; and "what is everybody's business is nobody's business," so the club think they have made a dash in the right direction, and desire the co-operation of all true sportsmen. The enthusiastic meeting of the club held last Friday night, presided over by our genial President, Mr. Lyman B. Jewell, showed the interest taken in the work, and the money pledged to carry out the laws their sincere devotion to the cause.

T. S. S.

ACTIVITY OF SUPERVISORS.—The current number of the *Fur, Fin and Feather* takes us to task for informing a correspondent that the supervisors have the right to lengthen the close season for game. He says:

"We have carefully examined the statutes of this State (N. Y.), from the present to many years back, and the only shadow of authority we can find the supervisors have for altering the close seasons for game and fish is derived from Section 16, chap. 463, passed June 5th, 1875, which empowers them

To provide for the protection and preservation, subject to the laws of this State, of game animals and birds, and fish and shell-fish in all waters within the territorial jurisdiction of the county, and to prescribe and enforce the collection of penalties for the violation of any laws or regulations they may make pursuant to the provisions of this subdivision.

The supervisors in various counties of New York State have been in the habit of making local laws regulating the taking of game and fish. In April last the Court of Appeals decided in favor of the local authorities, affirming the right of the supervisors to legislate in these premises. The case in which the decision was given is that of Hallock against Dorniny and Osborn (the latter two Easthampton Bay constables), for false imprisonment. At the hearing of the case at the Suffolk County Circuit, before Judge Pratt, the plaintiff was nonsuited. This decision was reversed by the General Term, and a new trial ordered. The court of last resort reversed the General Term decision and sustained Judge Pratt; and this case decided a number of others pending on the same state of facts.

THE NEW YORK STATE PARK.—The project of converting the Adirondack region into a State Park was, in 1873, considered by the Legislature. After some preliminary proceedings the matter was however dropped, and has not since been carried through. This plan, in its connection with the wholesale destruction of game in the North Woods, has been recently discussed in an able editorial in the Utica Morning Herald, which called out the subjoined letter from Mr. P. H. Agan, whose views are entitled to the serious consideration of all interested in this scheme. We have before urged in these

the afternoon he was arrested by a constable, who had been kept in waiting during the day, and taken before a neighboring justice on the complaint of Jas. M. Jarvis, secretary of the association, which alleged that Mr. Gee "wrongfully withheld from that body its property, to wit: a badge." The court-room scene was a renewal of the day's wrangle, a dozen or more National Guardsmen holding a wordy war with the Squire. The trophy was finally forcibly taken by the association, and Lieut. Gee entered a charge of disorderly conduct against Major Coburn, who he said had threatened to knock him down. It was a disgraceful scene, and the American Rifle Association might as well pay its debts if it can, and wind up its affairs, so far as any further support from metropolitan guardsmen may be expected.

II. In conjunction with the cavalry practice at the Creedmoor range on Friday last, a strange performance was witnessed on the Creedmoor lawn. Where but a few days before the crack long-range teams of the world had been battling, a general pigeon batteau and beer-drinking tournament was in progress. The beer-seller of the range had taken advantage of the lax oversight of the Directors to invite down a few dozen of his German friends. Two hundred pigeons, mostly squabs, were also provided, and for several hours the banging was lively, and exceedingly promiscuous as well. Often a half dozen shots failed to bring down the birds, and not infrequently the pigeons were knocked over as they walked out of the traps, without spreading a wing. Altogether it was a humiliating exhibition, and the more so as it was totally out of place at Creedmoor, which was paid for in large part with State funds, on the distinct understanding that it was to be kept and occupied for the encouragement of skill in rifle shooting, and not for beer-drinking picnics; as one Director put it when informed of the occurrence: "We may soon expect to have a little cock fighting or dog matching, and other exhibitions of what some would call sport if this thing is to be allowed to go on."

III. The *Dramatic News*, having in some way been misinformed that the members of the American team had received compensation for their attendance at Gilmore's Garden at the presentation of the trophy, takes them to task for such petty means of money-getting, and Gen. Dakin on being informed of it dashes out with the following:

To the Editor of the Forest and Stream:

SIR—A gentleman has this evening handed me an article clipped from a weekly New York paper, in which it is stated "the American team was paid \$1,000 by the management to secure its presence" at Gilmore's garden on Tuesday night of last week. The person who makes such a statement I pronounce a base liar. That they refused to attend unless full the gross receipts of the performance, after expenses was paid them, is another lie, and I take the opportunity to brand the author of the article referred to as a coward.

THOMAS S. DAKIN, Capt. of the American Team.

BROOKLYN, Sept. 27, 1877.

The fact is that the managers of Gilmore's Garden have paid into the treasury of the National Rifle Association a share of the net profits of the evening on which the prizes were presented in the Garden. This was done both in 1875 and 1876, and is considered by the officers of the association a better way of providing the necessary ways and means for their work than voluntary and uncertain subscriptions. Judge Gildersleeve, who was chairman of a committee of the association intrusted to arrange for a suitable place wherein to make the presentations, had offers this year of Stenway and Chickering halls rent free, but after figuring up the cost it was concluded to accept Mr. Gilmore's offer, as more money could be secured in that way for the association.

THE LESSON OF CREEDMOOR.—The tenacity with which Englishmen have adhered to the muzzle-loading rifle must weaken in the face of the pregnant lessons which their matches with the Americans have brought out. The superiority of the breech-loading arm has been very effectually demonstrated. Mr. Blydenburgh, with a breech-loading Remington, in two days' shooting made four hundred and twenty-nine points out of a possible four hundred and fifty, thus making the highest record ever attained by any rifleman in the world. The majority of ninety-two points over the highest score ever reached by the English team is also a speaking fact. It is evident that a rifle which opens at the breech, giving a clear sight through the barrel, is not only more easily cleaned, but is far more reliable in the ability which the marksman has in removing any dirt, etc. It is probable that a close examination of the British rifles would have disclosed fouling at the breech. It is a fallacy to suppose that accurate shooting can be obtained with a dirty barrel—the grooves being very shallow and the bullets very hard—the least accumulation of dirt would throw the bullets out of a direct line of fire. Englishmen, Irishmen, Scotchmen, Australians and Canadians, after successive defeats, are beginning to realize that it is the weapon, and not the men, which overcame them. Probably ere another international match shall take place these marksmen will all supply themselves with Remingtons. Since the international team match, an individual match, composed of the leading riflemen of the world, to the number of seventy-eight, assembled at Creedmoor, each standing on his own merits, without the aid of team organization and coaching. This really determined the relative merits of the marksmen, those who were at the front in teams were far from leaders when withdrawn from team discipline. The first fire in the list of winners used Remington breech-loaders, as also did the seventh and eighth. In all the matches that took place at the fall meeting the winners used the Remington. To illustrate the superiority of the breech-loading arm we append the scores of the winners who were armed with Remingtons.

—National Banker.

—Co. A, Twenty-third Regiment, have entered for the Nevada Badge; also, Co. I, Seventh N. Y.

—The *Volunteer Service Gazette*, of Great Britain, compliments us by quoting at length an account of the British team reception and says:

The reception of the Imperial British Team at New York was of the cordial kind which might have been anticipated, and the account of their arrival, which we print in another column, will be read with pleasure. Perhaps it deals with individuals in a manner—though familiar to our friends over the Atlantic—not much acquired here yet; but we cannot fail to recognize the portraits which are given, in no unkind spirit, of some of our representatives.

## THE CREEDMOOR PROGRAMME FOR OCTOBER.

1. During the month of October the range will be thrown open on Mondays, Tuesdays, Thursdays and Fridays for practice, and on the regular military days members of the N. G. S. N. Y., in uniform, may practice without charge. Wednesdays and Saturdays will be occupied with the all-comers' matches as follows:

Wednesday, 3.—Practice.

Saturday, 6.—At 10:30 A. M., seventh competition for Sharps' Rifle Company's prize of \$250 in gold. National Rifle Association. Open to all comers. Rifles, any. Entrance fee, \$1. Distances, 500, 200 and 1,000 yards, 15 shots at each distance. No sighting shots or previous practice allowed on the day of the match. No "coaching" allowed by competitors or outsiders, and no person to be allowed to assist any competitor by the use of a glass, or by spotting any competitor's shots. Any competitor giving or receiving any information shall forfeit all prizes he may win on that day. The winner must lead all competitors at each of the three distances at one competition. One quarter of the entrance money to be awarded to the competitor making the highest aggregate score, unless he wins the prize, in which case the next highest score will take it. One quarter of the entrance money to be added to the principal prize continuously until finally won. The match will not be commenced with less than ten competitors. At 3 P. M., Seventh Regiment Rifle Club, competition for Diamond Badge.

Wednesday, 10.—At 3 P. M., fourth competition for a Ballard Mid-Range Rifle, N. R. A. Open to all comers. Distance 200 yds. Fifteen shots, without cleaning and without sighting shots. Position, standing. Any rifle. Entrance fee 50 cents. Highest aggregate score to be one quarter of the entrance money; the next highest score, one-sixth; and the third highest, one-twelfth. To be won three times (not necessarily consecutive) before becoming the personal property of the winner.

Saturday, 13.—At 10:30 A. M., fifth competition for a Parker Shot-gun. Open to all members N. R. A. Rifle and position, any within the rules; distance, 1,000 yards; rounds, thirty, and two sighting shots. Entrance fee, \$1. Prize to become the property of the competitors winning it three times, not necessarily consecutive. At 3 P. M., second competition for the Marksman's Badge, conditions same as announced under date Oct. 31. Seventh Regiment Rifle Club competition for Remington Special Military Rifle.

Wednesday, 17.—At 3 P. M., second competition for the Wylie Badge, a gold badge, presented by Brig.-Gen. Daniel D. Wylie. Open to members N. R. A., or N. G. S. N. Y. Weapon, any military rifle. Distances, 200 and 500 yards. Position, standing at each distance. Rounds, seven at each distance, without sighting shots. Cleaning allowed only between distances. Entrance fee, 50 cents. Badge to be won three times (not necessarily consecutive) before becoming personal property of the winner. One-fourth of the entrance money in each competition to be awarded the competitor making the second highest aggregate score. At 3 P. M., Seventh Regiment Rifle Club, Competition for the Rifles and Sharps' Special Military Rifle. At 3 P. M., New York Stock Exchange Rifle Club, Competition for the Woerhoff Prize and Bronze N. R. A. Medal.

Saturday, 20.—At 2:30 P. M., fifth competition for the Turf, Field and Farm Challenge Badge. Open to all comers N. R. A., except dual winners of the two previous badges. Distance, 200 yards. Position, standing. Weapon, any breech-loading rifle within the rules. Rounds, ten, with privilege of two sighting shots. Entrance fee, 50 cents. To be won three times (not necessarily consecutive) before becoming the personal property of the winner. Seventh Regiment Rifle Club competition for the Shells and Sharps' Special Military Rifle. At 3:30 P. M., first competition for a new *Spirit of the Times* Medal, presented by the editor of the *Spirit of the Times* newspaper. Open to all comers. Distance, 300 yards. Position, standing. Rifle, any. Rounds, ten, with privilege of two sighting shots. Entrance fee, 50 cents. To be won three times (not necessarily consecutive) before becoming the personal property of the winner. At 3 P. M., Seventh Regiment Rifle Club competition for Sharps' Special Military Rifle.

Wednesday, 24.—At 3 P. M., Seventh Regiment Medals.

Saturday, 27.—At 10:30 A. M., competition for the Remington Prize, \$300 in gold. Open to all comers. Rifles, any Remington breech-loader within the rules of the N. R. A. Must be loaded at the breech, with cartridges as furnished from the factory of E. Remington & Sons, which will be issued by the Superintendent of the Range to each competitor, at firing points, in sealed packages at \$1 for forty rounds. All shells to be returned. Distances, 500 and 1,000 yards. Rounds, twenty at each distance. Position, any without artificial rest. Highest aggregate in each competition to win. Ties to be decided according to the rules. No coaching, spotter, nor exchanging or giving information allowed. No previous practice on day of match. No sighting shots. Entrance fee, \$2. The prize must be won three times (not necessarily consecutive) before becoming the property of the winner. One-half of the entrance money in each competition to be divided, two-thirds being given to the highest score, and one-third to the second man. Not less than ten entries to constitute a match. At 3 P. M., Seventh Regiment Rifle Club competition for the Shells and Remington Special Military Rifle.

Wednesday, 31.—At 3 P. M., third competition for the Marksman's Badge (a fac-simile in gold of the Marksman's Badge, issued by the State), presented by the General Inspector of Rifle Practice, S. N. Y. Open to all members N. R. A., and all members N. G. S. N. Y., in uniform. Distances, 200 and 500 yards. Five shots and two sighting shots at each distance. Weapon, Remington rifle, New York State Model. Position, standing at 200; any, with head toward the target, at 500 yards. Entrance fee, 50 cents. The badge to be awarded to the competitor winning it three times (not necessarily consecutive). Twenty-five per cent. of the entrance money to be awarded the competitor making the highest aggregate score, fifteen per cent. to the one making the second highest, and ten per cent. to the one making the third highest aggregate score. Members of the National Guard may, with the consent of their Inspector of Rifle Practice, count their scores made in this match as a qualification for the Marksman's Badge issued by the State. Members of Cavalry Organizations will be permitted to compete in this match, under the same conditions as are required of them to qualify for N. Y. State Marksman's Badge.

CREEDMOOR, Sept. 29.—The Remington \$300 cash prize went begging again on Saturday last, and ten men could not be found willing to waste their time shooting factory ammunition, and making poor scores, though fully twenty long-range men were busy at the long ranges shooting for their own amusement and drill. In the afternoon the *Turf, Field and Farm* match was called, and forty-six contestants responded, making an interesting match. Mr. Lewis Cuss, a Seventh Regiment man, carried off top place with 43 in the possible 50, at 200 yards, the full scores running:

|                      | 500 yds. | 900 yds. | 1000 yds. | pts. |
|----------------------|----------|----------|-----------|------|
| Lewis Cuss.....      | 43       | 41       | 41        | 125  |
| C E Blydenburgh..... | 43       | 41       | 41        | 125  |
| D Chumley, Jr.....   | 43       | 41       | 41        | 125  |
| A F Flint.....       | 43       | 41       | 41        | 125  |
| W M Farrow.....      | 43       | 41       | 41        | 125  |
| A Stube.....         | 43       | 41       | 41        | 125  |

|                       | 500 yds. | 900 yds. | 1000 yds. | pts. |

| A Anderson.....       | 37       | 35       | 35        | 107  |
| J Carman.....         | 37       | 35       | 35        | 107  |
| W W Cochran, Jr.....  | 37       | 35       | 35        | 107  |

Later in the day a new competition was inaugurated for gold marksmen's badge, to be shot for with five shots each at 200 and 500 yards, with the State model rifle. Fifty contestants entered. A. B. Van Hensen, of the Twelfth Regiment, with a score of 31 at 200 yards, and five bullets-eyes 500, holding first place. The totals of those getting over per cent. ran:

|                      | 500 yds. | 900 yds. | 1000 yds. | pts. |
|----------------------|----------|----------|-----------|------|
| A B Van Hensen.....  | 45       | 43       | 43        | 131  |
| J L Price.....       | 45       | 43       | 43        | 131  |
| S F Kneeland.....    | 45       | 43       | 43        | 131  |
| G E Pasco.....       | 45       | 43       | 43        | 131  |

CREEDMOOR, JR. 100 YARD RANGE.—Saturday, September 29th, a match was shot between the Western Union Telegraph operators of New York and Brooklyn; off-hand, 15 shots each:

|               | NEW YORK. | BROOKLYN. |
|---------------|-----------|-----------|
| Cushing.....  | 52        | 51        |
| Mitchell..... | 48        | 46        |
| Shelton.....  | 41        | 36        |
| Ritter.....   | 37        | 35        |
| Dennin.....   | 29        | 28        |
| Total.....    | 210       | 206       |

A prize of \$10 for the highest score was awarded to C. Cushing.

THE SIXTH DIVISION N. G. S. N. Y. MEETING.—A programme for the annual meeting of the Sixth Division Association show eight matches. All of them confined local candidates. The cutting down of all-comers contest a single match may be policy, and should certainly induce rifle shooters thereabouts to come out in good force. The programme includes:

Competition I.—Directors' match. Open only to directors of Sixth Division Rifle Association. Distance, 100 and 200 yards. Directors' gold badge, value \$25.

Competition II.—Short range match. Open to all comers. Distance 200 yards. Prize, \$15, \$10, \$5, \$3.

Competition III.—Sixth Division N. G. match. Open to teams from each regiment, battalion or separate company of infantry, each troop of cavalry and each battery of artillery in the Sixth Division. Each organization may send more than one team if it chooses, and entitled to as many prizes as it wins. Weapon, Remington rifle carbine, State model. Distances for teams using muskets, 200 and 300 yards; for teams using carbines, 200 and 300 yards with short ammunition; or 200 and 350 yards with long ammunition. Five shots per distance, with two sighting shots. Positions, standing at 200; kneeling at 300 or 350 yards; any at 500 yards. Entrance fee, \$1 each man. First prize to the team making the highest aggregate score—the Sixth Division Trophy, value \$100.

Competition IV.—Cavalry and Artillery, Sixth Division National Guard Match. Open to teams of five from any troop of cavalry battery of artillery in the Sixth Division. Each company must send one or more teams, at its option, and be entitled to all the prizes. Distances, 200 and 500 yards to teams using carbines, and 200 and 500 yards to teams using muskets. Entrance fee, \$1 for each man. Prizes.

Competition V.—The Dunbar Badge match. Open to all members of the National Guard in the Sixth Division.

Competition VI.—Officers' match. Open to all commissioned officers in the Division. Distance, 200 yards. First prize, to the highest individual score, an officer's gold badge worth \$50, to be won at three regular meetings of the Sixth Division Rifle Association, to become the property of the winner, and cash \$10. Value, \$10.

Competition VII.—Fifty-first Regiment Officers' Badge. Open to commissioned officers in the Fifty-first Regiment, officers to appear in full uniform, and to have been commissioned previous to Oct. 1, 1877.

Competition VIII.—Long-range match. Open to all residents of Sixth Division District, comprising the Counties of Broome, Orleans, Cortland, Otsego, Oneida, Onondaga, Oswego, Seneca, Tompkins, Tioga, Chenango and Madison. Weapon, any rifle. Distances, 200 and 1,000 yards. Rounds, ten at each distance, with two sighting shots at each distance. Position, any. Entrance fee, \$1.50. First prize an elegant gold badge, presented to the Association by Lieut. George N. Crouse, valued at \$50, to be competed for at each regular meeting, and held permanently by the winner of three contests.

CONNECTICUT—Hartford, Sept. 24.—There was a large attendance at the Willowbrook rifle range on Saturday. N. Washburn won the long-range badge for the third consecutive time and becomes its owner. The leading scores possible 150 were:

|                               | 800 yds. | 900 yds. | 1000 yds. |
|-------------------------------|----------|----------|-----------|
| N Washburn, Hartford.....     | 45       | 41       | 41        |
| Mr King, New Britain.....     | 41       | 45       | 41        |
| J W Wessel, New Britain.....  | 41       | 45       | 41        |
| W H Bine, Hartford.....       | 38       | 42       | 46        |
| Wm Parker, New Britain.....   | 41       | 41       | 41        |
| J R Hawley, Hartford.....     | 37       | 43       | 41        |
| Orange Judd, Middletown.....  | 41       | 41       | 41        |
| Gen T Judd, Middletown.....   | 41       | 41       | 41        |
| Major Graham, Middletown..... | 41       | 41       | 41        |

Messrs. Coffin, of Middletown; Yale, of Hartford; W. bridge, of Manchester, and Gunn, of Bridgeport, did not complete their scores.

The scores at the 500 yards mid-range match (ten shots possible 50), were Mr. Gunn, 48; Major Graham, 47; Wessel, 47; Mr. Woodbridge, 46; Mr. Parker, 46; Mr. King, 45.

# Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, *Alces maculif.*  
 Elk or wapiti, *Cervus canadensis.*  
 Hares, brown and gray.  
 Wild turkey, *Meleagris gallopavo.*  
 Woodcock, *Philohela minor.*  
 Ruffed grouse, *Bonasa umbellus.*  
 Plover, *Charadrius.*  
 Godwit.  
 Rails, *Rallus virginianus.*  
 Snipe and Bay Birds.  
 Caribou, *Parnulus rangifer.*  
 Red Deer, *Cervus virginianus.*  
 Squirrels, red, black and gray.  
 Quail, *Ophea virginianus.*  
 Pinnated Grouse, *Cupido Cupinotia*  
 Curlew, *Numenius arquaria.*  
 Sandpipers, *Tringina.*  
 Wild Duck.  
 Reed or Rice Birds, *Dolichonyx oriz-*  
*corus.*

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *limicola* or Shore Birds.

The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

| States    | Pinnated Grouse. | Ruffed Grouse.  | Quail.          | Woodcock.        |
|-----------|------------------|-----------------|-----------------|------------------|
| Ill.....  | Sep 1 to Jan 15  | Oct 1 to Feb 1  | Nov 1 to Feb 1  | Sept 1 to Jan 15 |
| Ind.....  | Oct 1 to Feb 1   | Nov 1 to Jan 1  | Nov 1 to Jan 1  | Oct 1 to Jan 1   |
| Iowa..... | Aug 1 to Dec 1   | Sep 1 to Dec 1  | Oct 1 to Jan 1  | July 1 to Jan 1  |
| Minn..... | Aug 1 to Oct 1   | Sep 1 to Dec 1  | Sep 1 to Dec 1  | July 3 to Nov 1  |
| Wis.....  | Aug 1 to Nov 15  | Sep 15 to Jan 1 | Sep 15 to Jan 1 | July 4 to Nov 15 |
| Neb.....  | No Shooting      | No Shooting     | No Shooting     | No Restrictions. |
| Kans..... | Aug 1 to Feb 1   | "               | Oct 1 to Jan 1  | "                |

"RECAPPER" TO "EQUITY."—I am very sorry that in your paper of Sept. 27 "Equity" takes my opinions so much to heart. He very evidently misunderstands me from beginning to end. I do not write in the interest of Messrs. Dougall or Tolley. Their work needs no pulling at my hands. I have always admitted that the snap-action had merits, but I claimed that they were not so many as possessed by the positive action, whether of the lock-fast pattern or the double-grip. "Equity" seems to be ignorant of the fact that all systems of breech-action are open to all makers, and that I may think highly of any one of them without any reference to the inventor. I do like Mr. Dougall's guns, and Tolley's likewise, but my saying so is no more a proof of my effort to puff them than "Equity's" own article wherein he speaks well of Scott and Greener, or Remington and Parker.

When I spoke of the impossibility of building a gun to sell here at a profit for less than \$100 currency, I spoke of fine guns. The coarse work may be just as reliable, but you cannot be so sure of it. I have never said that trade guns cannot be made good; I only claim that out of a case of perhaps hundreds you may get one thorough good gun, and you may not. As to "Equity's" challenge I cannot accept it, for I do not own a Dougall gun, and if I did and shot it against his Greener and got beaten by him, that would prove nothing more than his gun shot better than mine. It would be a question of shooting powers and not one as to the merits of the different actions. It strikes me that "Equity" is trying to puff Greener and his guns. But enough of this; it is only a question of taste after all. I have the bad taste to prefer snap-actions. Very well; so be it. I have, however, the endorsement of some of the best sportsmen in America of my views, and I am weekly in receipt of letters from them thanking me for my letters. Don't let us be like a couple of dogs fighting over a plate of bones. You stick to your bone and I will try and hold on to mine.

CONVERTING MUZZLE-LOADERS.—A number of cases have occurred lately where owners of goodish muzzle guns, disliking to throw them away, have had them altered, and have found to their sorrow that the muzzle guns which can be converted to a safe, effective breech loader, are very few in number. Guns under the old regime—good ones I mean—were well built, and were built, having in view the sole purpose of its construction. Every particle of metal that could be spared was cut away. Well, those persons who have spent half the price of a fair breech-loader, getting for their pains a comparatively weak weapon, mean by their muttered d—, I suppose, to express the fact that they have been lamentably late in learning that in the construction of a fine and expensive tool there is and must be unity of design, a sole end kept always in view during the building of it. Seldom is it, I say, that such a tool can be torn to pieces and a new tool built of the debris which will do the work, *e. g.*, of the modern choked breech-loader. It is a pity that so many fine muzzle guns should now be so completely shelved; but it is the truth that they are almost cast into outer darkness, save for the good they've done in days of yore. And they do not sell. I speak of good goods in the hands of individuals, because, so wonderful have been the advances since the Field Trial days of 1858-1866, that the best muzzle gun that Pape won with in the latter year is now easily outdistanced, so far as concerns the essential matter of killing qualities by a score of \$50 breech-loaders. Converted guns would never stand a decent proof-charge and generally it will be money in one's purse to sell the muzzle-loader for the old iron which it is, and buy a tool which was intended by its builder to be used for the definite work which you intend to make it do. So will you be spared the temptation to say and emphasize naughty words.

R. E. DUGAIONE.

MASSACHUSETTS.—Salem, Sept. 24.—There has been quite a flight of teal, principally blue-winged, through our county the past week, and some of the gunners have done finely. I shot a blue-wing with a fresh water clam fast to one of its feet; the bird attracted my attention while in the air by its singular appearance. This same teal flew a good hundred yards after I shot her, and when picked up had only a wing broken close to the body. The bird evidently kept up until the bone became displaced when it had to drop. I took a trip to West Newburg, where I found a fine rail (*P. carolinus*). Newburyport Commons are very dry, and all our grounds are much in need of rain. Our usual "line gale" went back on

us this time, giving us only a thunder shower with cooler weather and strong nor'-wester per 48 hours. Woodcock are things we read of. There are a few scattering snipe, one gentleman killed two last Friday afternoon on Miles River near Beverly. Partridges are more numerous than other game birds. Messrs. Loud and Gardner, of this city, shot 16 between them last Friday at or near Topsfield. A Peabody gentleman shot 13 green back plover (*S. helodia*) at Ipswich one day last week. Uplands, at least the most of them, are gone. Cape-brace (*C. septentrionalis*) were very numerous in Ipswich Bay a week ago. Cooting off Tinkers Island is now in order. Mark Proctor, of Swampscott shot the first about 10 days since, and they have been more plenty lately, so the fishermen say. Sheldrake (*M. serrator*) have arrived; rather early for them. Gulls are seen in large flocks outside the Islands, and loons (*C. longicaudus*) are getting up the Green Harbor. They make much of this last named bird at Bona Head, N. H., both to shoot and eat, good young and plump ones often bring a dollar a piece.

TEAL.

Rockport, Sept. 28.—George Parsons shot the other day, near the village, a rough-legged hawk, a bird rarely seen in this locality.

Westport Harbor.—Woodcock and partridges rather scarce, but large coveys of quails are numerous, and they promise excellent quail-shooting this fall.

J. W. B.

Springfield, Oct. 1.—Ruffed grouse are very plenty here, owing to the almost entire absence of snaring. Quail are fairly plenty. Woodcock scarce.

H.

Salem, Oct. 1.—Nothing special this week except two pigeon shoots. Plaster balls as a substitute for glass ones are a failure with our shooters.

TEAL.

NEW HAMPSHIRE.—South Tamworth, Sept. 21.—The shooting is very fair here this fall. I was out a few hours this morning, and succeeded in bagging three ruffed grouse and a few pigeons. Ducks have been flying well since the last cold snap; have bagged over a dozen, which is doing very well for this section, as they are usually not very plenty. I have shot but one woodcock this summer; they are scarcely known here.

KENEBOUC.

NEW YORK.—Brushton, Franklin Co., Oct. 1.—This place is on the Ogdensburg Railroad near the northern part of the Adirondack Mountains, among which is Blue Mountain, Cavanaugh Pond, Long Pond, Trout Pond, the 16-mile level on the St. Regis River, all which are as good localities for deer hunting, if not the best, in the Adirondacks. The deer are plenty there this fall. Four nice ones have been sold here within the last two weeks.

A. C.

AN AUTHOR'S ENCOUNTER WITH A CATAMOUNT.—Mr. Wallace Bruce, the distinguished author and lecturer, and a companion recently encountered a large catamount in the Adirondacks. They were walking on the highway through the forest in the neighborhood of the Lower Iron Works, half a mile from John Cheney's place, at about 8 o'clock in the evening when they discovered in the road, a few rods ahead of them, an animal in crouching attitude which they mistook for a dog, evidently inclined to dispute their passage. Approaching within three feet of it, Mr. Bruce extended his hand to smooth it caressingly, with the expression, "nice fellow," when the savage creature, whose eyes glittered with cat-like brilliancy, gave a terrific scream, bounded several feet away in the road and after a slight pause suddenly disappeared in the woods toward the mountains. Our travelers, being unarmed, did not tarry to watch for his reappearance, but with nervous and hurried steps pursued their journey.

DEATH OF AN ADIRONDAK GUIDE.—Scores of readers will learn with regret of the death of John Cheney, the oldest, most widely known, and generally beloved of all the guides, hunters and hosts of the North Woods. His virtues have been celebrated in the verse of Hoffman and the prose of numerous writers, and an account of his exploits, extending far back into the early part of the century, would, if collected, fill a volume.

NEW JERSEY.—Morristown, Sept. 29.—"Lark Quimby" and a party of hunters have started for a deer hunt in Pike county, Penn.

Barnegat Inlet, Oct. 2.—Black ducks increasing. Sprigtails in large flocks made their appearance on Sunday.

IS.

PENNSYLVANIA.—St. Marys, Sept. 28.—Wild pigeons are abundant in the vicinity.

Huntingdon.—The sportsmen of the vicinity are to have a game association.

Leesburg, Sept. 26.—Doves, bull-bats and occasionally ducks are being killed.

FROM THE "TAR-HEEL" STATE.—Lilesville, N. C., Sept. 22.—The outlook for sport hereabouts is of doubtful cast. Our wing shooting commenced (by law) on Oct. 1, but from last winter's dreadful severity, and other causes unknown, game is scarce.

The long-bills are going to Florida, Louisiana, Alabama and Southern Mississippi. No sport from them can we have until February and March, when, too fat for long journeys, they may stop hereabouts for a short time, one pair in ten thousand possibly remaining to breed here and stay during the summer. By "next moon" the Canadagoose and green-head ducks will make our "Old Pee Dee" River a sportsman's paradise for a few weeks, and you may hear from me again.

E.

New Berne, Sept. 20.—Bears are unusually numerous in the vicinity.

VIRGINIA.—Harrisonburg, Sept. 28.—Nimrod Dove and John May, who reside on Shenandoah Mountain, one day last week, while shooting squirrels, heard a hog squeal for life. They advanced in the direction of the noise and saw a bear sitting on a hog, the bear looking strange at the new comers. Mr. May only having a single load of squirrel shot, took direct aim and hit him in the breast. He left a line of blood in the direction he took, but was not caught. They then, the same day, built a bear-pen, as old hunters call it, and on visiting it the next day the old bear was there. He was caught with a ham of the hog that he had killed.—Harrisonburg Commonwealth.

KENTUCKY.—Louisville, Sept. 29.—H. M. Griswold, J. V. Cowling, and J. W. Short leave Monday night on their hunting expedition to the Kankakee, where they will be joined by Dr. Henry Griswold, of New York. Mr. Spurrier, of the firm of Sues & Spurrier, with a party of gentlemen, left last week for a few weeks hunting and fishing on the Arkansas

THE CONNECTICUT RIFLE ASSOCIATION.—The annual contest for the T. Steele & Son silver cup will probably take place at the Willowbrook range, Berlin, on Saturday, October 13th. The prize is open to teams of four from the different towns in the State, ten shots each man, at 500, 900 and 1,000 yards. The prize was easily won last year by the Middletown team, the other competing teams being from Hartford, New Britain and Manchester. More interest is exhibited this year, and it is probable that more teams will be represented. It is expected that New Haven will send a selection from its Creedmoor team, and probably the rifle clubs in Norwich, Waterbury, Bridgeport and Stamford will be heard from. Special trains from Hartford will run to the range during the day. Greater importance is placed in this trial each year, and are long the largest portion of the towns in the State of Connecticut will be represented in it.

NEW YORK.—Hornellsville.—A soldiers' field day and target shoot was held at Jones' Trotting Park September 26, and drew together an interested crowd to watch the contest for the championship of Western New York in target shooting. Rifle teams from Elmira and Buffalo were present, with whom the Hornell Independents contested for the prize and championship. Victory rested with the latter team by a handsome score. When it is remembered that they were wholly unused to the fire-arm used at this contest, and besides had never practiced at 500 yards, the victory is the more surprising. The following is the score:

|               | ELMIRA TEAM.          |         |            |  |  |

GUNNERY EXPERIMENT.—Did you ever hear of the small cannon experiment made before the Abyssinian war by the English War Office? The facts are as follows: The Commander-in-Chief thought that a small battery could be carried and fired on the backs of camels. So a small brass cannon was cast, a day fixed, a donkey procured, and cannon, donkey, commander-in-chief, the Prince of Wales, and a large and gorgeously dressed staff went down to Shoeburyness. A target was fixed, and the donkey, with the cannon loaded with grape and safely strapped on, placed at some 400 yards distance; a sergeant then placed a fuse to the touch. The donkey, who had heretofore taken a very sleepy kind of interest in the proceedings, now pricked up his ears at the spluttering of the fuse, and calmly wheeled about, placing the spectators in the place of the target. Then took place a most undignified skeddaddle, and commander-in-chief and staff officers were seen elbowing each other in any dry or wet ditch they could find near. When the explosion took place the donkey exploded at the same moment, and it would take Mark Twain or Dion Boucicault to properly describe the figure cut by scarlet and white uniformed aide-de-camps after lugging mother earth for ten minutes or more. They certainly were not fit to grace a St. James reception. Nothing more was heard of the camel field battery.

R. D. V.

—Shakespeare says, "Care is no cure, but rather corrosive, for things that are not to be remedied." We cannot associate care and corrosion, however, with B. T. Babbitt's Toilet Soap, for it saves care and is deliciously emollient. This new toilet soap is the highest achievement of a well-known manufacturer, for its perfect purity and pleasant reaction on the skin are combined with a sweet natural odor.—Lido.

BRAINERD, Minn., Sept. 29, 1897.—Please stop my ad. I have not time to answer half the letters that have poured in upon me regarding the setter dog I advertised. Dog is sold to Hon. S. Leo Davis of St. Paul. Yours truly,

THOS. P. CANTWELL.

The above curt notice is from the gentlemen who is popularly known as the "Wild Rice Man," and this incidentally puts us in mind that the two dozen inquirers for wild rice, whose letters we have, will do well to address him at once at the above address.

River. The Louisville Gun Club will keep open house during the bench show and tournament, and the hospitalities of the rooms are tendered all visiting sportsmen. Jack snipe are shot at the falls.

**TENNESSEE—Nashville, Sept. 20.**—Cheering reports come from Humphrey's County concerning attractions for those fond of sport. Thousands of quail can be found there, and the woods are literally alive with squirrels; wild turkeys are also abundant, and occasionally a deer can be found.

The number of squirrels in Davidson County this fall is much larger than for years past. Partridges can be found in fair numbers, and altogether plenty of fun can be experienced by the devotees of Nimrod.

The limits of the game law expired on the 15th inst., and sportsmen are now busily engaged in making things uncomfortable for game of all kinds.

**LOUISIANA.**—Teal ducks and many other kinds of game are now to be shot at Miller's Bayou and Chief Menteur.

**TEXAS—Galveston, Sept. 24.**—The coast is just alive with shore birds. Teal duck in abundance. Chickens are in fine condition, and afford good sport. B. R. B.

**ARKANSAS—South Bend, Sept. 25.**—The large game, such as deer, bear, turkey, etc., are numerous here, and will give sportsmen fine and exciting sport. Game birds are scarce; grouse were nearly exterminated by pot-hunters during the heavy snows of last winter; there are some quail and a few waders. This would be a fine game region if we had any game laws, but we have none, and the game is slaughtered in and out of season. G. W. C.

**MICHIGAN—Port Huron, Sept. 26.**—Recently two men captured a large white pelican at the head of Black River which measured seven feet across the wings. It has a bill seventeen inches long. A blue heron was shot on Stock's Creek, two miles from the city, which measured from the tip of his bill to his toes four feet eleven and one half inches, and six feet four inches from wing tip to wing tip. QUIN.

**INDIANA—Indianapolis, Sept. 22.**—There is too much quail shooting, and somebody needs to be made an example of.

Southern Indiana papers announce a great migration of squirrels from Kentucky. They are daily seen swimming the river in immense numbers, and spread northward on landing. It does not seem that they have yet commenced depredations upon the growing crops, but everything in the shape of mast is rapidly melting away; hickory, beech, and all kinds of oak are stripped clean of their fruit. As to flesh the little animals seem to be in good condition, and every old rusty gun in the country is brought into requisition. In every neighborhood the incessant bang of firearms, from early morn till dusky eve, reminds one that thousands of the little creatures are brought down every day; and yet every day they increase in numbers. Numbers of them are killed with clubs and sticks at the water's edge, while attempting to land on the Indiana shore. The last begonia of squirrels occurred in 1833. On that occasion the city of New Albany was overrun with them, and hundreds were killed in the streets.—*Saturday Herald.*

**COLORADO—Denver.**—A party consisting of Col. J. W. Hall, Capt. H. H. King and Hon. C. W. Wright, have been on a bear hunt in the Yampah River country of Rout County.

**THE CZAR'S BEAR PRESERVES.**—A correspondent of the San Francisco *Chronicle* writes of the Czar's game preserves at Gatchina:

We went our steps toward the deer and elk park, which is inclosed in order to keep the wolves from preying upon the young. The animals here are quite tame, and evidently are but seldom hunted. My guide informed me that the emperor preferred the more exciting pursuit of bears, which are very numerous in these forests, and must not be shot except by highest permission. It was not long before we caught sight of one of the bruin family in a little clearing, where some trees had been felled and cut into firewood, a huge stack of which had been selected by his bearship as a convenient spot to sun himself. On our approach the animal, one of the brown, curly-haired kind, sat up and sniffed the air, and then, evidently put out at being disturbed, he growled crossly and began to move uneasily about, knocking the loose sticks of wood to the ground right and left. I was for moving on, but Fedka, the guide, assured me there was no danger, as the bears of Gatchina are abundantly fed, and have never been known to attack a man unless driven to the wall.

As we turned away to let bruin continue his siesta, Fedka related to us an incident which occurred at one of the Emperor's bear hunts some years ago. The Spanish Ambassador to Russia at that time was the Duke of Ossuna, a very pompous, conceited grandee, well versed in all the rules of court etiquette, but a small, weazened, dried-up man, of no physical courage and but an indifferent sportsman. The Emperor had invited him to one of his hunts at Gatchina, an honor which could not be declined, and muffled up in costly habits the Duke set out with the imperial party and was consigned to a post of honor, a tree next to the one behind which the Czar awaited the coming of such game as the huntsmen might drive up. A huge bear made his appearance, his temper somewhat riled by the unwelcome noise of dogs and horns behind him, and the Emperor made a sign to the Ambassador to shoot. The duke bowed deeply, and declared his unwillingness to shoot before his imperial host. The Emperor urged him to disregard etiquette for once, but the little grandee continued his profuse protestations until the bear had drawn uncomfortably close, and by his forbidding aspect caused the Spaniard to shake with fear and forget his polite utterings. A shot from the Emperor, who was laughing in his sleeve, interrupted the animal's progress, but the victim of the joke, bathed in perspiration, fell fainting upon the snow, and had to be taken to the palace on a stretcher.

**FRANCE—Paris, Sept. 15.**—The sportsmen are not very eager for opening the season; the chief game in France at present is politics, and men cannot cultivate two passions at once. Generally at this period, the streets were thronged with "bagmen," pulling along strapping, sporting dogs, which had the air of anticipating martyrdom, and gazed wildly about seemingly in search of some members of the society for the protection of animals, but we have none of these spectacles at present.

**PRESERVATION OF GAME.**—Game of all kinds, birds, rabbits, or deer, can be kept sweet a long time by putting finely pulverized charcoal in a thin muslin bag, and placing it inside the game. Change the charcoal every day. It is excellent to keep any meat, fish or fowl, pure and sweet. Wash clean before cooking.

## PIGEON MATCHES.

**MAINE.—Portland, Sept. 29, 1877.**—The annual shoot for the Maine State Championship and Diamond Badge came off on Little Chebeague Island, Casco Bay, on Sept. 27 and 28. The Maine and Forest City clubs of Portland, and the Androscoggin Club of Lewiston participating. Terms, 15 birds each, 21 yards rise, 80 yards boundary. The birds were mostly tame ones and strong flyers. The following is the score:

| MAINE CLUB.        |    | FOREST CITY CLUB. |    |
|--------------------|----|-------------------|----|
| Pollister.....     | 12 | J Smith.....      | 12 |

**Hornellville, N. Y., Sept. 26.**—There were three contests of trap shooting to-day, in which several of our citizens participated. The prizes were awarded as follows: First Contest—Jeffries first, Gardner second, Kennedy third. Second Contest—Jeffries first, Gardner second, Kennedy third. Third Contest—Gardner first, Kennedy second, Penwell third.

**NOTICE TO SPORTSMEN.**—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box 1,291.—Adv. ABBEY & MERRIE, 35 Maiden Lane.

**POUND-NETS IN LAKE ONTARIO.**—A large company who have organized themselves into a firm, are daily netting and shipping to the New York market tons of fish. They have forty acres of pound-nets in the vicinity of Round Pond, and are rapidly extending their operations to all the bays and inlets along the lake shore. If there is no law which can reach these parties the matter should be brought before the next legislature, and suitable measures enacted.

## A CANOE CRUISE IN VIRGINIA.

EDITOR FOREST AND STREAM:

We launched at Covington, on Jackson's River, 205 miles west of Richmond, near the summit of the mountains, on water over 1,200 feet above the sea. The stream is narrow and swift, with dashing rapids and cascades every few hundred yards. A good day's paddle carries the voyager to the Cowpasture's mouth, whence the stream takes the name of James. The entire route is through a most attractive region. The water is full of life, with a spice of danger all the way to Buchanan. From Buchanan to Lynchburg we had the canal and broad, deep, beautiful pools of the James River and Kanawha Canal, affording steady but pleasant paddling. From Lynchburg to Richmond the dams are very few—only five—and there is plenty of rapid water, with some falls that are more than lively. Balcony Falls, five miles long, where the James bursts through the Blue Ridge, are enough to tax the nerve and skill of the best paddler. Thornhill's Falls, twenty-five miles below Lynchburg, a short stretch of swift water, terminating in a cascade of several feet, brought your correspondent to grief against an unseen rock in the tortuous channel, and on the leap of the fall, where the canoe broached to, broadside on, in a flash, and filled in a twinkling in a current so strong that a good half-hour's sturdy work—breast deep in the water, was necessary to work her off the rock to which she was pinned. The thorough wetting of capras and baggage required a day in camp drying out. Below these falls and on to Richmond is beautiful water and finely cultivated country.

From Covington to Tye River is a constant stretch of incomparable mountain scenery. Clifton Forge—a grand arch of stone in relief on the mountain side, 1,000 feet high and one half a mile in the chond; the Rat Hole, almost equal to the Delaware Water Gap in dimensions and a deal wilder; the constant views in the Alleghenies and Blue Ridge; the Natural Bridge, reached on foot in two miles from Gilmore's Mills; the Peaks of Otter, easily reached on foot or by stage from Buchanan; the magnificent pass through the Blue Ridge at Balcony Falls—these make pictures scarcely to be seen in a canoe cruise elsewhere in the whole country. Throughout the whole cruise the voyager is sure of the unvarying kindness and genuine hospitality that is a grand trait of all Virginians. We did our own cooking, and slept in the canoes all the while, but our larder was always full and money almost invariably declined.

We urge canoeists in the East to try this splendid stream. Go to Covington via Chesapeake & Ohio R. R., from Richmond. It is a road that is kindly to men of the paddle. An easy week's work will carry the traveler thence to Lynchburg, whence he may return eastward by rail direct; four to five days more will carry him to Richmond, where he may again leave the water; and four days yet longer will afford a superb cruise down the lower James to Norfolk, where railway or steamer opens a direct way to New York. The whole can be done in two weeks with hard work, and three weeks will give time for an easy journey, and the desirable pedestrian tours adjacent to points of interest.

If any of our Eastern brethren of the paddle desire something more definite concerning our James River cruise, the information can be had in a series of three letters published in the *Louisville Commercial*.

A. H. SIEGFRIED,  
Louisville, Ky., Sept. 20, 1877.

—There was at Dieppe, in France, at last accounts, an old three-masted vessel called the *Petrus*, built 200 years ago. The stern is elevated, and the bows are rounder than those of the present day. She is staunch, and still in service. She was built in Norway, and has always been employed in the Baltic and North Sea trades.

**A RAPID JOURNEY ROUND THE WORLD.**—Dr. Hass, American Consul at Jerusalem, writes:—"Not counting the time I lay over at different points, as these breaks in the journey could all have been avoided, I made the entire circuit of the globe in exactly 68 days, and but for heavy weather on the Pacific, would have made it in 62 days. The journey from Alexandria, Egypt, via Brindisi and Paris to London, and thence to New York and San Francisco, was accomplished in 20 days, and we were just the same number of days going from San Francisco to Yokohama, Japan. Crossing over from here to Canton, in China, took six days. A sail of ten days over the China Sea and through the Straits of Malacca, touching at several points we have not time to notice, brought us to Ceylon, of the southern coast of Hindustan, and one of the richest of the East India Islands. Thence we sailed directly to Suez, in Egypt, which took 12 days, and thence, in a few hours, by rail to Alexandria, our starting point, making the entire distance of 25,000—16,000 by water and 9,000 on land—in 68 days, without any accident or detention of any kind."

**THE LEAF OF LIFE.**—There's a certain curious member of the plant family, very common in Jamaica, I am informed, called the *Life plant*, or *leaf of life*, because it is almost impossible to kill the leaves. You may cut one off, and hang it up by a thread, where any ordinary leaf would be discouraged and dry up. It will send out long, white, thread-like roots, and set about growing new leaves. You may cut off half a leaf and throw it into a tight box, where it can get neither light nor moisture (necessaries of life to other plants), the spirited little leaf puts out its delicate roots all the same. Even pressed, and packed away in a botanist's herbarium—the very driest and dustiest place you ever did see—it will keep up its work, throw out roots and new leaves, and actually grow out of its covers. I'm told that botanists who want to dry this pertinacious vegetable are obliged to kill it with a hot iron or with boiling water.—*St Nicholas, Mag.*

## National Pastimes.

**NEW YORK ATHLETIC CLUB, Sept. 29.**—The third open handicap games were held at Mott Haven, and comprised the following events:  
Hundred yards run—First heat, H. Lauterbach, C. H. Birch, 20 ft. Won by Lauterbach in 13 3/4 seconds.  
Second heat, W. H. Griffin, 10 ft. C. S. Phillips, 20 ft. Won by latter in 13s.  
Third heat, E. A. Fawcett, 10 ft. W. H. Meyers, 10 ft. S. P. Wier, 30 ft. Fawcett won in 11 1/2s.  
In final heat the handicaps same as in trial heats. Griffin won in 10 1/2s; Lauterbach, second; Fawcett, third; Phillips and Birch a dead heat.  
One-half mile run—F. Banham, J. A. Ferguson, 20 yards; B. C. Williams, 20 yds.; C. H. Rowland, 20 yds.; A. W. Anderson, 30 yds.; W. R. Connor, 30 yds.; A. M. Hunter, 40 yds.; E. G. Gurney, 40 yds.; M. Holbrook, 40 yds.; J. E. Kane, 40 yds.; Banham won in 2m. 5 1/2s; Rowland, second; Anderson, third; Holbrook, fourth.  
Two miles walk—F. J. Mott and T. B. Bates, scratch; W. Van Ripper, 15s.; T. J. Hill, 25s.; B. W. Anderson, 45s.; W. J. Rowland, 45s.; W. R. Whittemore, 90s.; J. Connor, 1m. 45s.; H. C. Cohen, 90s. Anderson won in 16m. 51s.; Whittemore, second; Mott, third; Bates, fourth.  
Steeple chase—Won by Merrit in 1m. 43s.; Duffly, second; Perken, third; Williams, fourth; Birch, fifth; Griffin, last.

**INTER-COLLEGIATE FOOT BALL MATCHES.**—The Polo Club of New York City has offered a prize to the victorious team in a series of foot ball matches, to be played early in November on the polo grounds in New York. The contending eleven are to represent Yale, Harvard, Princeton and Columbia.

**VETERAN'S CRICKET MATCH.**—A cricket match of unusual interest is to be played on Prospect Park, Brooklyn, next Thursday, Oct. 11. The players are to be selected from the local clubs of the metropolis and its vicinity, some of which are extinct organizations, and the match is to be between Long Island and New York and New Jersey. The list of the eligible candidates, those over fifty years of age having the preference, is as follows:

From Long Island—Crossley and Marsh, of the New York Club; Labon and Thornton, of the Long Island Club; White, Nash, Harlhorn, Lester and Hoggis, of the King's County Club; Dr. Andrews, North, Reid and Jones, of the East New York Club; Joe Wright and Hatfield, of the Queen's County Club; Tilley and Palm and Pink, of the Satellite Club.  
From New York and New Jersey—Jas. Smith, Tyler and Maxwell, of the New York Club; Baker, Elevation, Warner and Jefferson, of the Newark Club; Tilt, of the St. George Club; Boyd, Neeve and Syms, of the Manhattan Club; Langford, of the New Brighton Club; Holmefield, Crossley and Bridge, of the Paterson Club.

**A SIX YEARS' WALK.**—An Englishman has turned tramp, and recently started out from Calais on one of the greatest wagers ever made. He has bet \$250,000 that he will in six years walk through France, Germany, north Russia and Siberia to China, returning through India, Persia, southern Russia, and from there over Greece and Italy to France. He must be in Liverpool by the 1st of July, 1883.

## New Publications.

**THE OCTOBER MONTHLIES.**—Harper's, this month, contains fifteen papers, of which nine are illustrated. The place of honor is given to "Myltown," a gossip bit of word description from a woman's pen. "Myltown," it is conjectured, is none other than a quiet Connecticut village. Hunting the Walrus contains some lively reading descriptive of a sport which is not without the added zest of danger. The Life of a New York Fireman affords admirable material for the third paper, the other papers being: The Campaign of Burgoyne—one of those timely topics for the selection of which Harper's has gained an enviable reputation—a group of classical schools, Part Second; A sketch of foreign travel. From Brusa to Constantinople; the fourth of the series on Popular Exposition of Some Scientific Experiments; the Regular Army of the United States, by Gen. Geo. B. McCallan; the stories are the continuation of Europa; or My Father's Son; Raspberry Island and On a Melon Schooner. The poems are: Girl and Woman; Eabries; An Old Umbrella, and The House Convent.

**Scribner's** presents its usual variety of good things. How New York's Fed is described by W. H. Ridding in an interesting sketch with excellent illustrations. Dr. Holland concludes his story, Nicholas Minturn, and the novel now appears in book form. Hejalmir Mjorth Boyesen, is the subject of an appreciative paper by Frank E. Heath, and his American friends will be glad to receive Boyesen's portrait, which is done in the Scribner's best style. Clarence Cook furnishes an illustrated paper on Logan's Dogger, which is written in the usual happy vein of the author. Timely pieces are, An Autumn Song, by E. Norman Gunnison; Clematis, by Mary C. Knapp; Ripe Corn, by C. L. Cleveland; Woodbine in October, by Charlotte F. Bates, and A Vintage Song, by Mrs. E. D. R. Biancardi. A Yankee Tar and his Friends, by Mrs. M. F. Armstrong, is pleasant reading.

In the *Atlantic*, T. B. Aldrich continues his serial Queen of Sheba, and as the story progresses, it proves one of the best that this favorite fiction writer has given to the *Atlantic* readers. H. C. contributes one of her characteristic and ever delightful sketches, The Procession of Flowers in Colorado. W. V. Story writes an Memorial. John Lottrop Motter's Edgar Lawton's poem this month is on the Willow, and there are other poems of unusual excellence. Mark Twain gives Some Random Notes of an Idle Excursion. The departments of fiction, travel, literature and miscellany are well represented by stories, sketches and essays. The Contributor's Club deals with a variety of topics from a variety of standpoints, and has become one of the most interesting features of the magazine.

The *Galaxy* has a paper from the pen of Gideon Wells—Administration of Abraham Lincoln; a discussion by Albert Rhodes of the question: Shall the American Girl be Chaperoned?; a paper on Guns and Armor, by E. Simpson; and Edwin Forrest, an Actor's Estimate of a Great Artist, by Lawrence Barrett. A Legend of the Delaware affords material for Our Witch, a story by Emily Read; Our Near Neighbor is discussed by C. M. Raymond, the Strange Adventure of Lieutenant Verganoff, is translated by A. Vornor from the French of Ivan Tourgueneff; Justin McCarthy concludes his serial, Miss Misanthrope. There are other stories, poems and essays; the departments of Drift Wood and Scientific Miscellany are treated in a style peculiar to the *Galaxy*. The whole number is a most excellent one, and sustains the reputation for vivacity and sprightliness long ago earned by the magazine in past years.

**Tiffany & Co., Silversmiths, Jewelers, and Importers,** have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & Co.,** of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

AND  
**GENERAL GUIDE,**  
WITH MAPS AND ILLUSTRATIONS.

\$96 pp., Price \$3.

Tinted Paper, 1/2 bound Morocco, 35; Tinted Paper, Muslin, \$4.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST AND STREAM" PUBLISHING CO.

Sent by mail post paid on receipt of price.

This book is a complete encyclopedia for sportsmen. It is a sportsmanlike method for capturing every known game animal, bird and fish in North America. It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish. It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. It describes 207 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each. Every kind of dog used for sport is designated, and his points for bench judgments fully given. It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any person can administer the prescriptions with perfect confidence in their safety and efficacy. It contains very useful recipes and remedies for wounds, bites, poisons, illness and emergencies of all kinds; for cleaning, repairing and preserving every implement used for sport; for selection and use of every kind of boat usually by sportsmen, and a directory where to buy outfitting goods. It instructs in Taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

## INDORSEMENTS.

**SPORTSMAN'S GAZETTEER.**—Geo. Bird Grinnell, of the Peabody Academy of Science, New Haven, writes: "I have to thank you for a copy of the Sportsman's Gazetteer received day before yesterday. I have delayed acknowledging it, in order that I might be able to speak intelligently of its merits. I have looked it over somewhat carefully, and I must say that I am delighted with it. It seems to be just the book that we have so long wanted in this country—an American 'Stonehenge' in fact. On the fishes you have surpassed yourself, and I am astonished at the amount of material you have collected, and the happy method in which you have treated the group. The Dog and Diseases of the Dog are admirably written, and will prove one of the most useful of manuals for sportsmen. The Art of Fly-Fishing, and the hints and recipes are all that could be desired; in fact the book seems to be a complete success. I do not see how it can fail to have a very large sale."

**THE SPORTSMAN'S GAZETTEER.**—The Gazetteer duly came to hand, and to say that I am delighted with the book only faintly expresses my appreciation of it. How you have been able to gather so much valuable matter together is almost a mystery to me. It certainly speaks well for your industry and knowledge of the subjects discussed. For the size and valuable information contained, the price, I think, is remarkably low, and I would not be without it for double the price. Every sportsman and everybody interested in sporting matters should have a copy, and I shall take great pleasure in recommending it to my army friends.  
H. C. YARROW, M. D., U. S. A.

**THE GAZETTEER.**—The Sportsman's Gazetteer was duly received, and myself and many of our best judges in sporting literature have critically examined the book, and all unite in pronouncing it the most valuable work ever issued from the press on kindred subjects. It is a wonder to all how so much valuable information could be so intelligently crowded into a book of its size. The task must have been very great, but has been accomplished in a remarkably concise, intelligent and pleasing manner. Every page demonstrates the fact that the author was a master of his subject. No sportsman or tourist can afford to be without the book, and it ought to be, and no doubt will be, generally by the masses, and certainly by all interested in the study of natural history.  
Lake City, Minn., Aug. 1, 1877.  
DR. D. C. ESTES.

# NEW YORK SHOOTING COAT.

A stylish, handsome Coat. First-class in every particular. Pleasant to wear, durable, and in the end the cheapest.

## MADE OF BROWN VELVETEEN.

Pockets and lining made to take out, so that it may be worn for early fall and winter shooting. (Horace Smith, Esq., says: "It is my idea of a shooting coat. I have worn them for several years, and would have none other.") Price for Coat, \$25; Vest, \$6.50. Also the best brown corduroy pants at \$10 per pair. I make only the one grade, as the cheapest goods do not turn briars and will not give satisfaction.

Also, in addition to the above, I am making a Waterproof Canvas Suit, cut same style as the Velveteen; goods, not stiff and hard, but soft and pleasant to wear; guaranteed to turn water. Sportsmen who have seen it say it is The Best Yet. Coat, \$6.50. For full suit, \$14.00. I also make the Spoonslee Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

## CREEDMOOR PARLOR RIFLE.

Finely finished, carved stock. Loads at breech with small percussion cartridges. Will shoot 250 feet with accuracy and force. There is scarcely any report, and no smell from this rifle, making it very appropriate for parlor use, picnics and fairs. The shell extractor is on the hammer, pulling out the old shell every time the hammer is raised.

Price, \$10. Cartridges for rifle \$3 per thousand, or \$1 per box of 250. Iron bell target, with numbers, \$5, sent C. O. D. or on receipt of price. Send for price list of Revolvers, Skates, Novelties and Sporting Goods.

**FISH & SIMPSON,**

132 NASSAU STREET, NEW YORK.

# A VICTORIOUS INVENTION The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game. The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape, does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

- No. 1—For fishing and all kinds of small game and animals, sent by mail.....35 cents.
- No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c.....75 cents.
- No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. \$10.

All goods sent, charges paid, to any address on receipt of price, Address

For Sale,

## Town Point Farm FOR SALE OR RENT.

Located at the junction of the Elk and Bohemia Rivers, head of Chesapeake Bay, Cecil County, Maryland. Contains 100 acres of fine tillable land. Orchard of 900 pear trees, peaches, apples, plums, cherries, and small fruit in great abundance. A fine large modern house, tenant house and outbuildings. A fine lawn from the house to the river; no marsh, hard shores. From front splendid view down the Bay; the most healthy and beautiful site in Maryland; daily access to Philadelphia and Baltimore by steamboat and rail; wharf half-mile from house. This farm is celebrated as one of the best of wild fowl points. There are four points on the place, so located that four sportsmen can shoot daily from each point without interfering with each other; twenty varieties of ducks frequent these waters; from the place the famous Susquehanna Flats are in sight, where sink-bait shooting can be indulged in. The Farm and country around are stocked with partridges and pheasants; plenty of woodcock in season; fine rail and reed shooting a short distance up the river; abundance of snipe in the spring; valuable herring and shad shares on the place; white perch fishing unequalled; a most desirable place for a gentleman's residence or club house. In view of its many advantages of health, beauty, drives, yachting, bathing, fishing and extraordinary for shooting, if a summer boarding-house or hotel were opened here a constant influx of guests at paying rates could be depended on. We have had many applications for board from gentlemen from all parts. The Farm produces large yield with good cash markets. Will be sold low. Two-thirds of the purchase money may remain. If not sold in due time the place will be let to a tenant. Apply to L. FOLKES, on the premises, JOHN E. WILSON, Elkton, Md., or WM. H. ABBOTT, 20, Seventh st., Phila. Sept 27

**FOR SALE**—English breech-loader; central fire, under lever, 12-gauge, 30-in. barrels, 8 lbs., will sell cheap. Room 17, 9 Murray street, N. Y. Oct 4

## Gunpowder.

## Warren Powder Mills,

MANUFACTURERS OF

BLASTING AND MINING, SHIPPING AND SPORTING GUNPOWDER.

**SPORTING BRANDS**—Eureka, Continental, "Border Rifle," Snap-Shot, and Warren Sporting Cannon and Musket, U. S. Standard. The above can be had of the dealers, or at wholesale at the office, 27 Duane street, Boston, Mass., and of the agents, JOHN P. LOVELL & SONS, corner of Washington, Cornhill and Brattle street, Boston, Mass. 1919

THE

## HAZARD POWDER CO.

MANUFACTURERS OF

## GUNPOWDER.

**Hazard's "Electric Powder."**  
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

**Hazard's "American Sporting."**  
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

**Hazard's "Duck Shooting."**  
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

**Hazard's "Kentucky Rifle."**  
EFFG, PFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/2 lbs, and cans of 5 lbs. EFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The EFFG and PFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

## Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPERTS OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

## Sportsmen's Goods.

## BOSTON

## SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS &amp; SON,

BOSTON.

Flexible. Water-Proof. Tan Color. Duck

Each article—coat, trousers, vest and hat—has the name and manufacturer's address stamped upon it, and no suit is genuine until it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We make but one quality, and that is the VERY BEST. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest and choice of either cap with havelock, or hat.

The material is of the best quality of duck, water-proofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are riveted, and nothing is neglected to make the whole suit complete in every way.

## OUR HUNTING SHOES,

which are considered the best in use, are also sent by mail at an advance of 35 cents above the price \$5.50 per pair. These shoes are made to our special order to match our suits, and the design of the whole embraces the best points of the English and French equipments, combined with all necessary requirements for American service.

## THE SOLA TOPE.

AN EAST INDIAN SHOOTING HAT, Helmet Shaped. Ventilated. Of same Water-Proofed Material. PRICE, \$2.00. Those who prefer this to the ordinary hat or cap, can have the same sent, with "The Boston Shooting Suit" at an added cost only of \$1.00.

Such a popularity as the "Boston Shooting Suit" enjoys, has never been attained by any other similar garment in this country. It is in constant demand from all parts of America, and orders have been filled for Canada and England.

"Shipping clothing to England strikes us very much like sending 'coals to Newcastle,' but the merits of the BOSTON SHOOTING SUITS have been heard of in the Old Country, and that kind of sportman has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others."—Boston Paper.

The author of "Tales of the Adirondacks," the Rev. W. H. Murray, one of our most enthusiastic sportsmen, says of it:

"We were shown the other day a new waterproof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we paid attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suit, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, waterproof quality and capacity. The coat is a marvel in this latter respect."

THE FOREST AND STREAM says:

THE BOSTON SHOOTING SUIT.—One of the most successful manufacturers of waterproof shooting suits is the firm of G. W. Simmons & Son, Oak Hall, Boston. We had one of their suits on duty at Hunt-er's Camp, at Philadelphia Centennial Exhibition. It has grown gray in service, but is good for use yet. This suit is known as the "Boston Shooting Suit," in contradistinction no doubt, from the garments which are manufactured out West and at Washington, each of which has a local demand of its own.

A letter from San Francisco, Cal., says:

G. W. Simmons &amp; Son:

"Gentlemen:—I have this day received the 'Boston Shooting Suits' ordered from you on the 16th.

My object in writing is simply to say that they came to hand by mail in perfect order, and I am more than satisfied with each article. They are all, if not more, than represented in your advertisement in FOREST AND STREAM. They supply a want long felt here, and we have no doubt many will be ordered. I am obliged to you for sending by mail and thereby saving me several dollars. Enclosed please find the money to repay you for postage.

Yours very truly,

(DIRECTIONS FOR MEASUREMENT.)

Around the breast.

Inside seam of pantaloons.

Around the waist.

Size of head.

Inside of seam or coat.

Mention height and weight sleeve.

Price of Suit complete, with choice of hat or cap, \$13.

Note again, the coat and vest are all double-seamed, each pocket being riveted at corners with copper rivets. French hunting buttons on coat and vest. Each button-hole made of leather. The whole suit as described above is made of 10-oz. army duck, water-proofed by a patent process, and colored to the shade of dead grass. Each suit distinctly marked.

For those who prefer, we make a hunter's coat, with sleeves attached to the vest. We make but one grade of suit, and that is the very best in every particular.

An illustrated circular, containing full description of each garment, with sample of the material from which made, will be sent free on application.

## LYMAN'S

## PATENT BOW-FACING ROWING GEAR.

This invention enables an Oarsman to see where he is going. He sits with his face to the bow. Every rower knows how awkward it is when pulling single, or as bow-on in a crew, to have to turn and watch the course. By using this arrangement the rower is brought into his proper position, and he can row as he would drive. There is NO LOSS OF POWER. Send for circular, directions and opinions of the press to the Patentee,

WILLIAM LYMAN, Middlefield, Conn.

## TRIPLEX.

Marked the PREMIER QUALITY

[Extract from FOREST AND STREAM, New York, December 26, 1876, Contributed by one of the Judges of Awards of Guns at the Centennial:]

"This action (The Triplex Lever Grip) combines in the highest degree strength and simplicity, and must rapidly secure the favor of all who test its merits.

**COMPENSATING LUMP.** Strongly recommended. It is invaluable, and should be ordered on every gun. Costs about \$10 extra. Choke-bore, medium or full. Our guns to be had of the principal dealers in the trade only.

PREMIER GUN WORKS, Birmingham, England.

## ESTABLISHED IN 1837.

Consult your interest by sending for our revised and reduced prices.

## Excelior

## LATEST IMPROVEMENT.

Double Treadle, including one doz. Saws, thirty immitable Free Sawing Patterns and prepared Wood, to the value of \$4. A new device for tightening Saw, Power Drilling attachment, Wrench, Oil Cup and Screw Driver. Speed, 800 strokes per minute. Saws, 12-inch thick. Price, complete, cash and delivered on board cars or Express office, \$12.

Saw only, without attachments, \$9.

## SMALL STREAM ENGINES.

With Copper Boiler, to drive light Lathes, Scroll Saws, etc. Are all sizes from 1½ up to 2 horse power; either plain castings, partly finished, or complete, ready for use.

The "Scientific American" of June 10, 1877, says the above, in an extended Editorial, introducing our manufactures to the public. "It can turn wringers, chums, washing machines, rice cream freezers, run coffee mills, pump water through a house, actuate foot lathes, scroll saws or light boxing machinery, run knitting or sewing machines, turn a grindstone or emery wheel, work a rotating or hand thrashing machine, cutters, meat or feed choppers, or sausage machines, drive small blowers for pneumatic dispatch tubes in a building, or for a blacksmith's forge, or compress air or work an air pump on a small scale in a laboratory. These are a few only of the purposes to which it can be applied."

Also Engines and Boilers capable of propelling 15 to 18 inches. The boats have keel, stem, with rudder and tiller, row locks and cars; These with a pressure boat will find

## BUFFALO PONY PLANER.

NEARLY ONE THOUSAND IN USE. Buffalo Pony Planer. Will earn its self and pay expense of running in 8 days. Price from \$50 and upwards, each.

**LIGHT MACHINES FOR PONY OR HORSE POWER.**

The great success of these machines is unprecedented, and it may be confidently affirmed that no article has ever more clearly proved its superiority for the quantity and quality of its work than this. It is made in several sizes, and can be fitted up

Buffalo Excelior Pony Planer and Matchbox.

Patented March 30, 1875.

Best of its kind in use. Price, complete, \$275. Also Planing Machine Knife, which are recommended as superior and extra in quality.

water for exploring expeditions and surveying parties. The Engine and Boiler can be easily detached from the boat, and is then available for Agricultural, Mechanical, Commercial or Domestic requirements or for the use of Amateurs, when power is needed for running light machinery.

Price of 20 feet boat, complete, \$225.00

Price of Engine and Boiler, without boat, including driving pulley, \$225.00

## Paper and Metallic Shells

FOR

### Breech-Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs patent waterproof primers, never misfire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers.

### "St. Louis Conical Base Paper Shell."

Having made important improvements in our Shell, we can safely recommend them as equal, if not superior, in quality to any Paper Shell manufactured in this country or in Europe.

Among the advantages claimed for these Shells, are: A saving of 25 per cent. in the use of powder; also the great decrease in recoil. The sizes made are No. 10—3/4, 3 1/2, and 3 inches; No. 12—2 1/2, 2 3/4, and 3 inches. Longer

Shells will be made at extra cost. They are not mailable. Sample, 100, sent by express on receipt of \$1.15

for No. 12; \$1.30 for No. 10.

Factory and office, No. 2,329 De Kalb street, St. Louis, Mo.

St. Louis Patent Shell Manufacturing Company.

### TO SPORTSMEN IN GENERAL!

Headquarters Bohemian Glass Works,  
214 PEARL STREET, NEW YORK.

MAKE THE FEATHERS FLY WITHOUT KILLING THE BIRD—SOMETHING MUCH NEEDED.

The Bohemian Glass Works having made a specialty of the manufacture of Glass Balls for Trap Shooting for the past year, and having facilities for manufacturing cheaper and better than other establishments, have secured the service of that well-known Sportsman,

**IRA A. PAINE,**

to take entire charge of the production of his new patent Feather Filled Ball, which we hold the exclusive right to make and sell.

In offering this new ball to the public it will require very little introduction, as in no instance where it has been exhibited has it failed to take the place of all others, and is to-day the only perfect substitute for a bird in use.

The following is from the New York Herald, Sept. 1:

THE BRITISH VISITORS RECREATING AT ELM PARK—A TRIAL AT GLASS BALL SHOOTING.—The visiting riflemen, accompanied by Judge Gildersleeve, Col. John Bodine and Mr. L. M. Ballard, all of the American Team of 1876, arrived at the Park a little before eleven o'clock, and practice shooting was at once commenced. The shooting at glass balls sprung from a steel trap, instead of live pigeons as in Europe, was a novelty for the Englishmen. Mr. Ira Paine, who has invented the "feather balls," furnished them for the occasion as a compliment to Judge Gildersleeve and his friends. This style of balls gave during the afternoon such satisfaction that after the shooting was over the West Side Gun Club held a special meeting to adopt them, ordering 1,000 of them forthwith.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300 or boxes of 500. Send for price list. We intend offering special inducements to the trade.

### Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL—The only Ball that will break sure when hit by shot. Use none but the best. Every ball marked. Patented April 10, 1877; Traps, March 13, 1877.

Geo. E. Hart & Co.,

NEWARK, N. J.

TRADE SUPPLIED.

### HUBER & MERWIN'S CHAMPION BALL TRAP.

We call the attention of the fraternity to the above trap, claiming to be the *me* *plus* *ultra*. It combines compactness with durability, and is arranged, by a swivel on the bed-plate, to throw a ball in any direction or at any elevation unknown to the shooter, a screen preventing his seeing the direction in which the trap is set.

The spring, as the cut will show, is made of a steel rod or wire, bent spirally at the point of attachment, thus receiving the concussion its entire length, and preventing breakage.

PRICE \$10.

FOR SALE BY

BARTON & CO., Sole Agents,

337 BROADWAY, NEW YORK.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP, for durability and perfection of its operation, superior to them all, and take pleasure in recommending the "Champion" to sporting clubs and my friends. (Signed) IRA A. PAINE, Aug 9 ly

### THE LOST HEIR.

"Mr. Penguin, an egg!" "Good gracious! my dear, Where is it?" "Don't joggle. Right under me here." "In the nest that we made?" "We? Isn't that fun? I built it of stones, and you brought me just one Extremely small pebble the day it was done."

"Put the egg—are you certain?" "As sure as can be; So get ready this moment and start for the sea; Th ere eat and grow fat, and your pouch fill with food Of the kind that will strengthen and nourish our brood."

"Our brood?" Why, you said there was only one egg." "Don't stand wasting time, Mr. Penguin, I beg. That egg, you'll remember, was laid, sir, by me, And the chick that I hatch, you may wager, will be Worth twenty young penguins of lower degree."

"Methinks I can see him becoming dressed In a little dark coat and a little white vest, With cunning wee flippers, eyes wondrously keen— The handsomest penguin that ever was seen!

"At first his short steps I most carefully guide, Then graceful and haughty he walks by my side, Like a prince among birds, with his head carried high, And the sea-fowl who gather to see us go by Are ready, my dear, of sheer envy to die!"

While she spoke, a small bird, much resembling a crow, Peeped over a rock at the picture below, And he danced like an imp, and he wagged his head, And he grinned such a grin when he heard what she said,

And he laughed a strange laugh, without making a sound, And he flew from the rock to the nest on the ground; And behind Mrs. Penguin he crept like a snail, And jerked a long feather straight out of her tail.

Then, as quickly she turned, he as quickly took wing, While she s reamed, "Oh, you robber! you hard-hearted thing! Oh, Penguin, how can you, how dare you, stand there Like a fowl made of marble, and heartlessly stare? Don't you see what he's got? I am mad with despair!"

But, alas! all in vain did she threaten and shriek; Crow was off with the egg sticking fast on his beak; And Pen remarked, calmly, "Next time 'twere as well To say naught of your son till he's out of the shell."

—Harper's Weekly.

### The Dunmore Meet.

A VIRGINIA FOX HUNT OF TO-DAY.

"To learn to shoot your gun sure;  
To fight the game cock, to chase the fox;  
Or to win at the Piedmont races;  
To kiss your wife; or take your life  
At twelve or fifteen paces;  
With wine for man, but whisky galore;  
Oh that's the more for Dunmore."

WITHIN less than a radius of a hundred miles from the National Capital, in the Old Dominion, lie the three contiguous counties, Fairfax, Prince William and Fauquier. In the good old olden time, when the hoary headed old grand-sire, who now sits pensively in his split-bottom chair under the shade of the ancestral oaks, was but a little freckled-faced youngster running wild over the plantation, these three counties were the garden spot of Virginia. In my "Sportsmen of the Olden Time," which was published in the FOREST AND STREAM of Oct. 5, 1876, I portrayed the easy life of the planters in the section I write of, and, although that epoch was before the Revolution, yet the immense estates, the numerous retinues and the profuse style of living were kept up until the beginning of our late Civil War.

In the year 1861 the Piedmont region was a land fair to look upon, broad estates joined each other, and were cultivated thoroughly by the scores of field hands. Each plantation was a colony in itself, and had its blacksmith, wheelwright and carpenter shops, spinning, weaving and tailors' rooms, all surrounding the pretentious mansion, and giving to the place an air of a thriving village. It cost but little to live then. Cattle and sheep were raised in large numbers on the estates. His own mill ground the farmer's wheat into bread, and each planter had his own private still, and his cellar was filled with apple-jack and generous pure peach brandy of his own brewing.

Every housewife took particular pride in her garden, her fowls and her dairy—the latter of which was under her own

special charge—and the house was furnished in profusion all the year round with their products. Naturally it took but little ready cash to live in elegant and liberal style. The thousand and one little things that now cost money were to be found upon the place as a matter of course, and the money accumulating from the harvest was spent lavishly at the watering places, where the planter and his family went every summer.

In those days the life of the Virginia country gentleman was very pleasant; his prolific acres grew annually richer and increased in value. Such was the contrast with the present time, when, as Gov. Wise once wittily expressed it, "The landlord skins the tenant, the tenant skins the land, and they both get poor together." The large estates are now all subdivided and rented out to working men, who, in a few years, make that a sterile patch of land, which once was prolific soil. It was a fine country for a gentleman and landed proprietor to live in, for a life of ease was his; but had you been a poor white, better never have been born, for the gulf that separated Dives from Lazarus was never so deep and broad as that between the planter and common white.

Fox hunting was the popular pastime of the Virginians, fighting the cock was considered rather disreputable, and men would indulge in it as they did in their loved recreations of old sledge and draw poker, go off by themselves, have a stag party and say nothing at all about it. Early in the morning the "mastrer," as he was called, would ride over the plantation, and in an hour or two his work would be done. The rest of the day was devoted to his horse, his gun and his hounds. Each gentleman kept as much blooded stock as he could afford to hold; and his kennel was visited as regularly as his stable.

It has always been an open question with economists and philosophers as to whether progress and the immutable change, is after all a benefit to the human race. To the young on the very threshold of life, it doubtless is, the future is to them a roseate hued land, a veritable realm of promise, and to their ardent minds the successive changes are eagerly welcomed, and the future beckons alluringly to them as the fabled Evadne to the storm tossed Argonauts. Their past has no thought, no regret. To those who have reached or passed the magic age of thirty, that middle post in the race course of life, the case is different, and they learn to know that anticipation is after all sweeter than realization. Only when experience tempers their passion, and disappointment blasts their hopes, then it is that they linger over the past, and sigh for the glorious long ago. I never go to a fox chase now that I do not recall regretfully the splendid "meets" of my boyhood days.

However much the country may have been benefited by the events of the past fifteen years, it has certainly not improved fox hunting, and there are many ancient sportsmen who so devotedly love their calling that they would rather have the sport as it was in the days of its pristine splendor, than even the blessings of a national debt, a paper currency or the liberated, though ungrateful, African.

Fox chasing is now shorn of many of its former attractions. No open house with hospitable doors thrown wide, no brilliant hunting dress, or famous thoroughbred barb; no succession of miles of tilled fields, where the pride of the stable could go in a sweeping gallop, leaping the fences with the long Arab stride. No, a meet of to-day is a very common-place affair, with no accessories of the pride and pomp of the old glorious chase.

Last winter, a few days after Christmas, I received the following epistle, which will explain itself:

DUNMORE C. H., Va., Dec. —, 1876.

MY DEAR FELLOW: Where have you been keeping yourself? Not a sign of you among the scenes and faces you were once wont to love so well. Still, if you are not ill or dead, I know you will accept the invitation which I am commissioned to send to you. There will be a grand meet at Dunmore C. H. next Saturday; all the good riders for miles round will attend; and there will be some crack dogs from a distance. Come a day or two before the meet. I can give you a fine mount if you are not already suited. Faithfully yours, DOUGLAS.

Dunmore C. H. is situated in the middle of the Piedmont region, and has the fastest men and the best riders of the whole country. Douglas, the writer of the letter, is a thorough sportsman some thirty years or so of age, who keeps bachelor hall, and has ruined—so the young wives and old mothers say—nearly all the youths in the section. He is one of those men who do every thing well; spurs, fences, shoots, rides,

and is besides, as the girls say, the tenderest wooer in the whole region.

Of course I accepted this invitation, and the next afternoon found me at my friend's. Night found us at the tavern, where the village magnates and the huntsmen sat around a big stove in the centre of the room. In their talk of the chase and of sporting reminiscences they stretched veraciously very far, and I heard of longer runs, higher leaps, and more wonderful dogs than were ever before chronicled. The more they talked the thirstier they got, and as the means to satisfy thirst was close at hand they imbibed much and often, and the more they drank the faster flew their tongues; and as the potent liquor mounted to their heads and fired their imaginations, they told wilder yarns and more atrocious lies, and swore to them too; then they would drink again, and the "ruby wine," as Dick Swiveller would call it, began to flow like water. All friends meeting after a long time, must, of course, drink to each other's health; new acquaintances just introduced must tip their glasses; men with money in their pocket, in a generous mood treated all their friends, and as the night waxed apace everybody was drinking with everybody else. About midnight some old soaks, veterans of a thousand drinking bouts, proposed to lock the doors and make a night of it. This was carried stormily, some few strongly protesting, but the door was shut. A big iron kettle was placed on the stove, and quiet reigned until the keeper brewed a huge pitcher of punch, made with Virginia's own apple-jack, and then the crowd quaffed long and deep, and the fiery liquor began to show its work in the wild eye, unsteady gait and thickened speech. Then all broke into a Bacchanalian chant, each man on his own hook; and so the debauch was kept up, the revel growing madder and madder until a real Saturnalia was in progress. I had seen enough, and left about two in the morning, pausing as I passed through the door for another look. The scene was one that a Cruikshank or Darley would have delighted to picture. Here were a trio of old fellows as happy as lords, singing away at some ancient song that had died out a half century since; next to them was a young man, whose head was probably weak, for he had pitched forward, and with his head resting on the table he was peacefully snoring away in the midst of a din fit to wake the dead. There were half a dozen young bucks singing a love song, and nearly a score more talking, singing, discussing, disputing and arguing at one and the same time.

The next morning broke cloudy with a light wind, a perfect day for a hunt. Daybreak dawned, but the village reposed in absolute quiet, and the huntsmen appeared not. Nor was it until the mantle of night had lifted, and the gray dawn had melted into day, long after the villagers commenced their daily routines, that the huntsmen came forth, sad-eyed, heavy-browed, and drowsy. Those who were on time waited anxiously for the others, but it was nearly nine o'clock before the cavalcade started; and such an assemblage of steeds was never seen since Lee's army surrendered. There was Bill Thomas mounted on a three-year-old colt, that kicked and bit at everything within her reach; and there Ned Malone bestrode an old piebald, ewe-necked mare, which carried her head so high in the air that Ned couldn't be seen from the front; Dick Martin was well-mounted on a thoroughbred of great power and endurance; Will Cossens on an old plug, some five-and-twenty years old; Richardson sat perched upon a quaint old rip of a mare that wheezed and coughed at every step. Others there were who had splendid horses, who could leap any ditch or fence in the country. Broadwater had a mare which showed her noble blood in every motion and quiver of her sinewy form, and I saw at a glance that if the race were to be a long one, and Broadwater knew how to manage his animal, the odds were heavy in his favor. John Thomas brought up the rear with a steed whose equal mortal eye never rested upon. It was the veritable ghost of an old Confederate charger, whose sides resembled a patent beefsteak broiler.

The dogs were of all colors, sizes, breeds and conditions. The blare of the horns, the shouts of the huntsmen, and the yelping of the hounds, brought out every cur in the village to join the chase, and the whole good village of Dunmore was in an uproar. As the procession passed out, windows were raised, doors opened, and disgusted sleepy faces appeared inquiring the cause of the row. Out in the fields a halt was made, and Will Cossens, the "master of the hounds," ordered every cur of low and high degree to be clubbed and chased back into the village, but just here it was discovered that the

jug of whisky was empty, and as the air was raw and biting, a squad were deputed to go to Powell's and get it refilled. Two volunteers departed on this mission, but they stayed away so long that a certain ill-defined suspicion was felt by the waiting crowd, and another deputation was sent out, who found the two worthies, with the jug, reclining beneath a hedge. Before their return the curs were all joined in a promiscuous fight, while the huntsmen watched the scrimmage with interest, betting drinks on the result. Just at this period an old Mollie cotton tail—*videlicet*, rabbit—jumped up close by, and away went curs, hounds and huntsmen in a regular scrub race. Devil take the hindmost. It was a glorious chase across an open field, and the hounds' deep tones, mingled with the frenzied yelping of the short-legged, stump-tailed mongrels, who found that in spite of their best running they were falling behind; while the riders were so convulsed with laughter at the absurd spectacle that they almost rolled from their saddles in the ecstasy of mirth. The old hare, running for her life, cleared the ground in such fine style that soon none but the hounds had the trail; but in about ten minutes poor Mollie was overtaken, and gave up the ghost.

Now began the serious business of the day. The leading hounds were rebuked for chasing a rabbit and then sent out right and left in the newly cleared woods. Soon staunch old Silvertongue gave forth a challenge which was answered by the others, and as the scent became warm their united bay rose grandly in the air, making

The welkin answering back  
And tetch shrill echoes from the hollow earth.

Across on our right, a half a mile away, the fox could be seen making for a dense cover. The cheery cry of the master was heard, and away we went to place the hounds on Reynard's trail. We found the pad of the fox plainly imprinted in the soil, when calling to the pack and pointing to the track, they followed hard upon him in the dense copse, which we ourselves could not penetrate. By direction of the master we scattered a half a mile or so on either side, and followed on. The hounds were now in full cry, and we feared the game would be mobbed in the woods and all our sport lost; but it was a cute old fox, a red one at that, who evidently had been run before, and knew his business. "He's bound to break cover," said Broadwater; "it is too hot for him in there." "He won't leave until the last moment," answered Richardson, "for he knows his safety lies in those thickets." "That's so," said Wilcoxon, coming up; "boys, I've chased that 'old red' before, and he will give us the best run you ever saw. I am only afraid he may climb a tree or go into some hollow. Hark! there's a check now!" and so it was, the dogs had lost the trail. All was perfect silence, and we listened as eagerly and excitedly as ever we did in a skirmish line in the Wilderness in '64.

"Now we are all right," sang out Malone, "there's old Music's challenge." The other hounds closed up, and then broke into a full cry again, and out from the cover they went, tailing beautifully across a narrow open meadow into the woods. Putting spurs to our horses, we followed, neck or nothing, several getting some ugly crashers as they went, but, mounting again, kept on. Into the woods, riding like mad, swinging our limbs and ducking our heads, we rode like Mazeppa, with the rushing pack in front instead of behind us, and the cheers of the riders, mingled with the stirring tones of the horns and the baying of the hounds joined grandly together and floated through the forest aisles.

"While all the wooded hills reply  
To hoof-clang, bound and hunter's cry."

The hounds soon left us behind, but we followed recklessly enough in their wake, and were beginning to fear that we would not be in at the death, when suddenly the full cry ceased, and the baffled notes of the hounds were heard. We soon came up and found the pack cold hunting, and clearly at fault. The master then examining the ground was nonplussed, and many reasons were given as to where the "old red" could have gone. The ground was open, and could not have concealed a rabbit, and yet his foxship had vanished. Many were the conjectures; some said he had climbed a tree, others that he lay skulking under the leaves, whilst one profane individual even asserted that he was gone to the devil. All this time the master was busily engaged examining the ground, it was an oak grove with no underbrush nor thickets. An old worm rail fence ran through, marking the boundary of a farm. The master placed a dog on the top of this fence; the hound instantly gave tongue, and the whole pack began to climb the fence. "Hurrah, boys! Mount your horses; the old fox has climbed the fence and headed back!" And so it proved; when in full run the fox had scrambled the fence, ran along the top of it and doubled, leaving the whole "meet" utterly balked by this artifice. We retraced our steps, the hounds running on either side of the fence, when just at the corner of the woods the pack struck the scent and were off again on the back track. In a few moments they trailed Reynard back into the very thicket from which he had originally started.

We could hear them searching for him; but if he was in there he was evidently lying close, for except an occasional yelp not a sound could be heard. It was very depressing, and many gave up, saying that it was simply impossible to start him from cover the second time, as he probably had his den deep down in the earth. As it was late, about two o'clock, and dinner hour had arrived, more than half the huntsmen returned to the village; and only too soon, as the sequel showed.

Calling in the hounds, and keeping them close, the master sent several outriders to see if they could hear anything of the fox. Within four minutes one of them came tearing back, saying that a farmer had seen the fox cutting across a field about a mile distant. We lost no time in galloping to the spot, and the hounds were sent to search, and soon old Silvertongue, throwing his head high in the air, gave a melodious note, and then darted off like an arrow with every dog after him. It was evidently a burning scent, so strong that the hounds were running breast high. We followed at full speed through some low swampy ground, when suddenly John Thomas's plug stuck fast, and to John's whips, frenzied kicks and yells, old Reb, for such was his name, gave only a series of dismal, almost human, groans. "Good-bye, old Stick-in-the-mud," shouted Malone as he swept by, leaving John almost crying from vexation. Across the field a half a mile away the fox could now plainly be seen heading for some imber. A deafening cheer burst from the horsemen, and spurs were driven deep into the heaving flanks of their steeds. Across the field was a stake and rail fence with a ditch on one side, "a real cropper." As we approached it each rider seated himself more firmly in his saddle, held in his horse, and then attempted the leap. Nearly all were old cavalymen and understood their business well, and all but three or four accomplished the feat in safety. One got a crashing fall, and lay stunned in the ditch; another was pitched over the fence, clearing it himself

in splendid style, but not carrying his horse over with him. Douglas's horse fell headlong, so did mine, but neither of us was hurt. Bill Thomas's young colt craned, and threw Bill backward over her rump into the soft mud, and quietly started for home. Bill, full of rage, pursued, hurling stones, sticks and curses at her departing form.

The excitement was now intense. Each face glowed; each lip was compressed with determination, as in the olden times, when they charged with Ashby in the Valley, Stuart in the gorges of the Blue Ridge, and Hampton in the Slashes of Hanover. Another fence, and half the horses broke down, and the best mounted kept on. The pace was terrific, and the fox in plain sight, about two hundred yards away, running for his life. There was no time now for his artifices; it was a square question of fleetness and endurance, and Reynard flew on as straight as a die, the whole pack running "mute," for the scent was so heavy, the game in full view, and the gait so fast that they could not give tongue at all. A yawning ditch and every horse fairly tried it, but only four out of the dozen leaped. Blood was telling now. No common horse could keep up the strain of running through swampy, muddy land, fetlock deep, and taking every fence and ditch as it came. No sound was heard save the rap of the flying hoofs and the quick breathing of the horses and dogs. Fields sped past us in the mad chase; farm houses dashed past; little patches of woods came and spun off; trees reeled aside, and the pack of hounds, their bellies nearly touching the ground, their hungry eyes fastened on the running fox a hundred yards ahead, pursued, in desperate eagerness, their prey. A half mile further on and another fence barred the way, and the huntsmen again faced their failing horses for the leap. Vain! vain! Broadwell's thoroughbred cleared it and kept on; so did another. Dick Martin's stallion leaped, knocked off the top rail, fell, recovered himself, and dashed on. It was glorious to see the hounds jumping over one after another; but the huntsmen could not follow, and they watched with vexation and envy the three successful riders disappear. The poor fox was now sinking fast. His tail hung drooping behind, but still he made frantic endeavors to escape. It was a wide field, with neither bushes nor stone, and as level as a parade ground. The hounds were not fifty yards behind, old Silvertongue a yard in advance, with bloodshot eyes and hanging tongue, his lithe, sinewy body stretched to its utmost tension. Broadwater in front, his thoroughbred, with ears back, running like a race-horse on his last quarter stretch; and behind, each rider, with bent body and steady rein, followed on. Poor Reynard's moments were numbered; his brush was dragging the ground, and Silvertongue's red, yawning mouth was within a few yards of him, when seeing that the game was up, he turned and stood at bay. A rush—the hurried snapping of two scores of jaws; a confused, struggling mass of dogs, piled writhing, snapping, biting upon one another—and the day was over. Broadwater reached the scene first, and by a free use of voice and whip stopped the battle, and held up the mangled body of the fox, while his cheer of triumph rang through the evening air.

Exhausted and hungry we wended our way back to Dunmore, where a piping hot dinner refreshed and soon restored us. Pain would I write of a grand ball, where bright eyes, waving tresses, ruby cheeks, brilliant smiles and swaying forms, keeping rhythm to the sweet strains of the band, repaid the wearied huntman for his toils. All this would be very poetical, but alas, it was not our luck. Dunmore is not famous for its beautiful women, and as for the musicians, they were not.

The "Dunmore Meet" was over, but ah me! the consequences that ensued from that unlucky fox hunt! In the first place the hunt brought to Dunmore Court House a young city fellow who must needs fall in love with a Dunmore belle. A misunderstanding with her suitor occurred, and the result was a duel and a bullet through the stranger's shoulder. More unfortunate still, Bill Thomas caught a cold, which merged into a violent attack of rheumatism, and drew his leg up so that one limb was now six inches shorter than the other, and Bill hops about on crutches to this day. Then Dick Martin went home drunk that evening, fell helpless in his stable, was kicked in the back by a mule and confined to his bed for a week. John Thomas' old mare died from the effect of the unwanted gait; that gallop was too much for her, and she breathed her last that night. John used to say that if he could cheat the buzzards he would make his corn crop next summer sure. But alas, John's babies may cry for bread, but their wallings will be as unavailing as the frenzied yell of the *sans culottes* in the days of Marie Antoinette. Then, most melancholy of all, there was a youth, one who could not touch liquor without being crazed. He had signed a temperance pledge and was engaged to be married to as sweet a little specimen of femininity as ever trod a number one shoe. Well, this modern Amadis got drunk at the meet; his Phyllis took him to task, a fierce quarrel ensued, and Amadis banished himself to Texas, leaving the broken-hearted Phyllis to deplore that meet, the liad of all her woe. All these evils and many more came from the "Dunmore Meet." To offset these woes, Broadwater has the fox's tail, and if, of the readers of FOREST AND STREAM, some should moralize that a fox's brush is but a perty return for maimed limbs, ruined steeds and sundered loves, I at least have fulfilled my task, and have faithfully pictured a Virginia fox hunt of the present day.

ALEX. HUNTER.

#### FOUR DAYS IN A ROB ROY CANOE ON LONG ISLAND SOUND.

MY boat was a fourteen feet, oak-hulled, cedar-decked canoe of the orthodox Rob Roy pattern, carrying a lug-sail, and weighing complete about seventy-five pounds. She was built by Searle & Sons, of Lambeth, near London, after the construction of the original MacGregor canoes. A weight of seventy-five pounds is unnecessary; Wm. Jarvis, of Ithaca, N. Y., can build fully as seaworthy a boat, fifteen pounds lighter. The cargo of the "Star" consisted of a night-shirt, a pair of socks, one handkerchief, necessary toilet articles and smoking materials. All of this was packed in a water-tight rubber bag, one foot by one and a half—a capital article for this purpose. The last and most important part of the outfit was an U. S. Coast Survey Chart of the Sound. Another rubber bag of cargo had been prepared containing such luxuries as a pair of Indian moccasins, some potted chicken, a nip of brandy, etc., but unfortunately it was stolen before starting, and greatly missed. The uniform of the captain is easily described: old flannel trousers, older flannel shirt,

oldest flannel shooting jacket and a prehistoric wideawake. The necessity of leaving behind everything that is not absolutely necessary cannot be too rigidly impressed on the prospective canoeist, for, when paddling against the tide and perhaps a head wind, an extra pound is a great deal.

It is 2 P. M. on Wednesday, July 11, and I am ready to start; foot, bottom and back boards are adjusted, with cargo bag fastened so that it cannot shift. The mast is stepped, and the sail furled, as there is no wind, and the little red and blue burgee hangs idly at the masthead. The chart is rolled up and shoved between the footboard and the deck, where it is least likely to get wet, and with a hearty handshake and a "Take care of yourself" from my cousin and chum, P. T., I push off from the foot of Harlem Bridge, and as the water covers my blue-bladed paddle for the first time, I try to guess how many times it will dip, before I get to Bridgeport, seventy-five miles from here along the shore, and wonder what strange things are to happen to me before Saturday; for I must be at my destination at 4:50 on the afternoon of that day, that I may catch the train which is to take me up into the Berkshire Hills to rusticate for a couple of weeks before returning to town and to business.

I believe all canoeists will agree with me that there is a certain feeling of freedom and security in a canoe which is not felt in any craft short of a yacht, and I do not think that there is any solitary pastime which is less lonely than canoeing. I do not mean to say that it is not desirable for two men to go on a cruise together, but I do say that the opportunities for observation and thought offered to a man on such a solitary cruise are not to be overlooked, particularly when the trip lasts but a few days.

But I am getting out of the course, and am forgetting that I have passed the docks of the Harlem water front, and am now battling with the adverse tide in the Bronx Kills, north of Randall's Island. Might is right here; the current is soon vanquished, and my little craft steers straight on, leaving the North Brother on the port hand, and the South Brother and Riker's Island on the starboard hand. There is a game of bare ball in progress on Riker's Island. Somebody sees me, and all hands stop to halloo. "Halloo, yourself," I answer back, which, if not true eloquence, is at least to the point. And so I paddle on, stopping for a moment here to chaff the skipper of a passing lighter, resting there on my paddle to get some information from some one on shore, until finally touch at Whitestone. Here rest for an hour, and some picnickers near by stroll down to the beach and ask numberless questions while I am lurching. They are very kind, and one of them goes fully a quarter of a mile to get me a dipper of water, which you may be sure is gratefully quaffed.

Off again, for it is late, and I must make Sand's Point before dusk. Right under the guns of Fort Schuyler the little "Star" rocks on the swell of the steamer Bristol, and then I dash on past the Stepping Stones light, and get a good view of City and Hart Islands off the port beam. Manhasset Bay is covered with vessels at anchor, and is tinged here and there with the color of the setting sun; a more beautiful sight could not be imagined. Sand's Point at last, and there is the hotel not two hundred yards from the beach. A darkey is procured, and between us we carry the canoe up and on to the piazza. The jolly proprietor has given me a big room on the ground floor, and has ordered a specially good dinner, which disappears like chaff before the wind. What is pleasanter after such a day than lying quietly in a hammock, smoking and thinking of nothing in particular? It is a well-earned lazy enjoyment, and in its way is perfect. Later on in the evening mine host invites me to join him in a jorum of Sand's Point punch, the potency of which is marvelous. Some of the guests, who have been dancing upstairs, come down and join in, and it is fully midnight before I am permitted to crawl under my blanket to dream of the next day.

About sunrise is the right time to start when traveling in this manner, so that one may accomplish a good half of the day's work before ten o'clock. The hours between ten and four are wisely employed in eating a light lunch, taking a nap, or walking, which is advisable, as the canoeist is apt to get cramped if his legs are not exercised a little. To-day, however, I am destined not to carry out the above good rule, for, half awake and half asleep, I hear somebody playing a fiddle solo on my door, and crying, "Nine o'clock, sir; breakfast is ready." To dress and eat does not take long, and in an hour's time I am on the water again. The ladies on the hotel porch wave a farewell as I slowly paddle past the point and on to the broad sound. There is not a ripple on the water and the sun is beating down; but we have no time to lose, so I shape a diagonal course for the main shore, stopping only on the shady side of a becalmed coasting schooner to cool off and ask the skipper what he thinks about the wind to-day. We have a long confab, at the end of which he asks, "Air you doin' this on a stent?" Evidently he does not consider canoeing a pleasure.

The picturesque New York shore along here is studded with villas. I will stop at one, where the lawn slopes down to the water's edge and a wharf runs out invitingly, to ask for some water, and then I row in under the pier where, in the cool and shade, a smoke is indulged in. Presently some ladies come down and encamp themselves right over my head. They see the smoke curling up between the boards and smell it, but cannot imagine that anybody should be underneath, and are consequently in a great flutter, which subsides into much laughter, however, when I port out. The wind is coming now in lazy puffs on the port beam, so up goes the sail, and with the sheet in the weather hand, and steering with the paddle

on the lee side we bowl along opposite Captain's Island, when the swell of a passing steamer lifts the "Star" and drops her on a rock. The shock is severe, but subsequent examination proved that no damage had been done to her hull. The wind is freshening up as I pass Greenwich Harbor, and I am making excellent time, meanwhile lying at nearly full length, with my head resting on the back board and feet on deck, eating fruit, munching hard tack, and smoking, until I pass Greenwich Point, a few miles further on, where I let go the halliards, for it is not worth while to beat into Stamford Harbor, where I have decided to stop for the night. Unhappy thought that; let no canoeist stop here. The harbor is wretched and uninteresting, besides being very long; and the two hotels are over a mile from Van Tassel's boat-house, the only place where one may leave his canoe, and where, by the by, our pursuer was shamefully swindled by the said Van T. Six small boys, walking Indian file, and each one bearing triumphantly some article from the "Star," pilot me to the Stamford House.

Friday I wake up at about eight o'clock, feeling much more cheerful and charitably inclined than on the previous evening. A few letters are written to expectant and anxious friends, breakfast is disposed of, and the same half dozen small boys escort me back to the boat-house, where quite a crowd has assembled to see us off. To launch is the work of a moment, and as I get under way, I find that some of the Stamfordites, who are curious to see how the "Star" will behave in a sea-way, are to accompany me to the mouth of the harbor in single-sculs, rowboats and cats. There is quite a breeze from the North, which enables me to go out before the wind in grand style, to the delight and astonishment of my friends, who had not thought it possible for so small a boat to do so well under sail. Talking and laughing, we soon reach Shipman's Point, at the entrance to the harbor, where, with a cheer and a goodspeed, I am left to pursue my way. I have since learned that there is a good hotel on the east side of this point, quite near the water, which might save canoeists the annoyance of stopping at Stamford.

This morning is much the same as yesterday afternoon, just enough of a breeze to make it exciting, and to moderate the heat of the sun, which would otherwise be unendurable. There are quantities of small craft darting about, and I am many a time hailed, "Whither bound?" and often asked, "What kind of a boat is that?" But it remains for some one in a small yacht anchored off my starboard quarter, to hail me, "Canoe ahoy!" This is rather strange, as it is the first time the "Star" is hailed as a canoe, so I ease the sheet and bear down to see who it is that calls my craft by its right name. It is one of a couple of Englishmen, a canoeist himself, and who takes me for a countryman of his, for he says: "I didn't think anybody knew what a canoe was, in this country." They are, both of them, nice fellows, and I leave them only after having had lunch with them. As a reminder of the visit they kindly press on me a bottle of beer and one of hard cider which are destined to come in very handy later. As I reach Norvaton Point the wind dies out, and the sun's rays scorch so mercilessly that I decide to stop here until sunset. This decision is the more hastily arrived at, as I can see a picnic grove where hunger may be appeased, and perceive a number of young ladies, evidently city girls, who are spending the summer in the neighborhood, with whom after dinner it will be festive to converse. This delightful combination of the good and the beautiful is not to be resisted, so we make hastily for the shore. Among others who welcome me there is a big, jolly, goodhearted son of the sea, a Sound pilot, who, when he finds out what I am about and where the "Star" comes from and is going to, invites me to make his house my headquarters for the night. "I live in a snug little box on Tavern Island, about a mile out from here," says he, "and you shall be made as comfortable as a clam." I am about twenty-five miles from Bridgeport, but think that by getting up at sunrise the following morning I can manage it, so I accept the hospitable offer. We call each other Cap. and Commodore, and presently are as close friends as two peas in a pod.

Without any preliminary formalities I boldly approach several of the before mentioned young ladies—for that canoeist is a craven catfish, who needs an introduction to a pretty girl—and ask them if they would not like to look at the "Star." The bait takes, and presently I am surrounded by a dozen at least of the fair ones, and we pass a very jolly and wordy afternoon. At sunset the Commodore and I adjourn to his little island, which is just large enough to hold his house and no more, and sit down to a hearty dinner. A couple of pipes and a paddle out to Sheffield Island light-house finish the evening, and at half-past nine I am comfortably packed away for the night.

"Wake up Cap.," roars the Commodore outside the door, four o'clock Saturday morning. It is nearly an hour before sunrise, and I dress by candle-light, and slip down the ladder which serves as stairs, to find my kind host getting the breakfast ready. This meal is discussed, and the clock strikes five as I go on board the "Star." My friend will accept nothing for his kindness to me, so we pledge each other in what is left of the hard cider, and after he has given me some points about the currents, warned me to keep close to the shore, as it is going to blow great guns to-day, and giving me a package of luncheon, we part. Thanks to you again, Commodore, for your hospitality; among many inhospitable strangers you were indeed an exception.

Although the sun had but just risen, the wind was quite

fresh from the northwest, and, mindful of the pilot's advice, I try to weather the many islands which make up the Norwalk group, but somehow I cannot manage it, and every time drift off to leeward. With a stiff wind on the beam, and an ugly sea on, a canoe will always drift a good deal, but in the excitement of the moment, rushing along with the spray dashing up from the bows, and the ice well combing flush with the water, I do not take much notice of this until when about twelve miles from Tavern Island, I notice for the first time, with horror and amazement that I have been making most fearful leeway, and am now fully five miles in a bee-line from the main-shore. What shall I do? The wind has been increasing so that now for my little boat it is blowing a hurricane and the waves every moment are breaking on the deck fore and aft, with an exceedingly unpleasant thud. There are but two things to be done, and one of them must be done quickly. Either run before the wind to the Long Island shore, some twelve miles away, or else paddle in the eye of the wind for the Connecticut side, for it would be madness to make it by trying to sail closer to the wind. My mind is soon made up to do the latter, for at all hazards I must catch that 4:50 train. With infinite trouble the mast is unsteepled, and stowed away below, the rudder apron is well fastened around my waist, and off I go, steering straight for Greens Farms.

It took three hours of uncommonly hard paddling to accomplish those five odd miles, but it was grand fun, with just enough of danger to make it spicy. Here it was that the good qualities of a canoe showed themselves in a sea where no rowboat could have lived five minutes. Ever and anon a tremendous wave would wash over the Star from stem to stern, wetting me completely and blinding me with spray; and once the boat was actually lifted from the surface by the combined force of wind and water. Still, with all this, I made steady headway, never stopping to rest for a moment, nor, indeed, feeling a wish to. While still some way from shore I cross the bows of a trading schooner of some 400 tons, with only main, foresail and jib set. Her captain thinks I am in distress and shouts to me if I want assistance. Of course his kind offer is declined. We reach the land in safety. The water is dumped out of the boat (she had shipped about four buckets full), and the cargo bag is examined. Great guns! it has opened and is full of water, tobacco matches, etc., all destroyed. What an ugly sarcasm is a pipe and nothing to put in it! Luckily, amid all these misfortunes, the lunch is dry, having been carefully packed, and I proceed forthwith to dispose of it. Damages are repaired, and my clothes from having been wet are now so dried that they are only damp, and I embark again. But here I meet with another accident: Standing up to restep the mast I lose my balance, and, to prevent the boat from tipping over and filling, am obliged to jump overboard head foremost. It is only up to my waist, a few feet from shore, so I wade out. Still it cannot be helped, so I wring the water out of coat and trousers and push on, for too much time has been lost, and as near as I can guess it must be one o'clock. The wind has not abated a jot, and is still blowing directly off shore, but I am more careful now and have a glorious run, paddling and sailing, dancing along over the big waves past Southport harbor and Kensie's Point. Even with the chart before me I mistake Black Rock harbor for Bridgeport harbor, and do not discover my mistake until some distance in. The mistake is easily rectified. I turn about, dash through a marsh, and come into full view of the Bridgeport Park, which extends into the harbor on a neck of land. I am stared at hard by the people out driving and walking, and many young ladies wave their handkerchiefs to us as we glide past close to the bank. The good Bridgeporters on the water are quite as curious, for they all ease off or close haul their boats that they may see the novel craft, and ask us where it hails from. I am escorted in by two or three, and, at precisely four o'clock, weather-beaten, sun-burnt, and with face, hands, and in fact everything covered with a crust of white salt from the evaporated sea water, I touch at the float at the foot of the bridge, and my trip is at an end.

Accidents, however, never come singly, for when I came to fee the man who helped carry my boat to the depot, I was thunderstruck to find that my assets had disappeared. My two purses, one containing silver change and the other greenbacks, had fallen out of my pocket when I went overboard at Green's Farms. It is not necessary to say that I did not take that 4:50 train which I had worked so hard to catch, but was obliged to stay at Bridgeport until Monday morning, when I received remittances from New York. It is not out of place to speak here of the exceeding friendliness of the clerk of the Atlantic House at Bridgeport, who, when he discovered my damp and disconsolate condition, furnished me with an entire dry outfit from his own wardrobe until my own clothes had been thoroughly dried, and advanced money for current expenses. I thank him again here for his kindness.

Early Monday morning, knowing that it was low tide, and thinking it might be possible to recover some salvage on the Greens Farms beach, I went down there by train, and sure enough found my little coin purse intact and high and dry; the other had probably floated off.

A word about my canoe. Much has been said concerning the respective merits of the Baden-Powell and Rob Roy canoes. Never having used the former type, I cannot say much about them, except that over the Rob Roy they have the advantage of much better and absolutely dry stowing-room, and are perhaps slightly better sailers and sea boats. On the other hand,

the Rob Roy, if carefully managed, is as dry as can be wished for, her one sail is easily and safely managed, and her superior lightness, combined with her excellent model, makes her a much easier boat to paddle. These various qualities make the Rob Roy, to my mind, a much better boat for general work than the Baden-Powell.

If this account of my adventures in the Star does but induce one man to follow my example and take a canoe cruise I shall consider the time spent in preparing it well employed.

L. F. D'O.

For Forest and Stream.

## THE SINNEMAHOING COUNTRY.

FROM the St. Lawrence River to the Rio Grande, I know, within those bounds, no better region for brook trout and ruffed grouse than that about the Sinnemaehoning River in Potter Co., Pa., the trout making up in flavor, numbers and game qualities what they may lack in size, and being nearly at the head even in the latter particular, and the grouse being in all respects unexcelled. Deer, bears, wild cats and panthers are also moderately abundant—or were in the happy days "befo' the wah." How, now, I cannot say. Wolves and the various fur bearing animals were also in moderate abundance. Ducks and geese were rare, wild turkeys unknown, and quail scarce. There were plenty of woodcock in season, and as to wild pigeons, they nested there, and darkened the air with their flight.

The Sinnemaehoning below the junction of East and First Forks I have known both as a rattman and sportsman. At the junction stood Bartran's house, where the wide mouthed fireplace, piled high with huge logs, gave the pilgrim as warm a welcome as he could desire. A short distance below was Barclay's mill, where the water, pouring over the dam twenty feet in height, left a space under the sheet of water next to the dam large enough for a man to go under. Here trout in endeavoring to leap the dam would sometimes fall back, and have been actually caught upon an inverted umbrella. I well recollect the remarks that were made by the rude lumbermen at the mill about the first sportsman passing that way who was too fastidious to eat trout caught in that manner.

The various tributaries of the Sinnemaehoning number, I suppose, one hundred trout brooks, ranging from middling to first-rate. All the other game common to that country was in abundance. There was a herd of elk, too, well up the East Fork; let us hope they are "still there," and that no son of "Nimrod" has walked up to them on a thick snow crust and murdered them.

But the natural approach to this region is, or was, by way of Genesee Station, on the Erie Road; thence eighteen miles up stream, and up hill to the head of the Genesee, and to the top knot of that part of creation, near the pretty little village of Lewisville, where in a radius of two miles may be found the heads of Genesee above mentioned. Cowanesque, a tributary of the north branch of Susquehanna; Pine Creek, tributary to the west branch of the same river and the Allegheny—which has several tributaries, including the Oswayo in the county—all trout streams.

The Genesee and its tributaries furnish from ten to fifteen trout brooks, from fair to middling. The country along the banks of these streams is, or was, thicker settled than the remainder of the county.

With the Tiadaghtan branch of Pine Creek the best of the trout fishing and grouse hunting begins; there are, I suppose, twenty or more tributaries all good. Passing up the west branch of Pine Creek and over the divide the waters of Kettle Creek are reached, and soon the charming little town of Germania, in the midst of a colony of Germans, planted by Mr. William Radde and others, of New York. A few miles below, New Bergen, a Danish colony; and further on, Oleona, a colony of Norwegians, established by that great torturer of "pussy's bowels," Mr. Ole Bull.

At this point, just below the frowning white pine board battlements of Ole Bull's castle comes in the Carey Fork, a celebrated trout stream, running its entire length through an unbroken wilderness; but Carey's cabin has long since become a "grease spot." Below the junction, for five miles, extends the Laurel Bottom Creek, almost a river, flowing in a succession of deep black pools and wide shallow riffles.

Happening at the foot of this bottom one Fourth of July morning, with a good cast of rather sober-colored flies, I cut a light, springy black birch rod and resolved to fish the stream up as far as Oleona, in preference to walking. The water was low and clear, the fish were on the riffles and at the lower end of the pools, and distinctly to be seen. The view was very bracing, in fact exciting. Being headed up stream I had the advantage of seeing the trout before they saw me, but the disadvantage of having to cast up stream, and thus getting no help from the current in managing my flies and keeping my line taut. Whenever one would take my fly, however, he would start for the deep water above and soon take the slack out, but the problem was to land him without frightening all the others on the riffle between us in plain view, lazily fanning the water their broad tails.

We have your excellent paper as a witness of the extreme difficulty of relating a fish story with accuracy. It would be hard to give an adequate idea, much more so to exaggerate the sport enjoyed by this solitary and quiet angler on that day. The broad shining sides of the fish gleamed through the water, and vigorous play was kept up until strength failed, and the basket was crammed till it could no more. Then a forked elm stick used as a string was filled, and over three hundred and forty speckled beauties were taken to mine inn at the close of that day—a much more appropriate load for two men than one.

Boniface, of the "Oleona House," had watched a deer-jack on the night of the third, and had slaughtered a big buck of seven points, and had the entire saddle roasted in anticipation of our coming. A few patriotic friends, Dutch, Irish, Norwegian, Danish and live Yankee assembled, lagerbeer had been sent from Germania, and there was wine from the Fatherland, and we celebrated the remainder of that glorious Fourth so. It was the last before the war. The next was celebrated in camp.

At another time I may tell you about rock fish and black bass fishing in the Potomac.

Jacksonport, Ark., July 4, 1877.

## SALMON HATCHING ON THE COLUMBIA RIVER.

COLUMBIA RIVER SALMON HATCHING STATION,  
Oregon, Sept. 15, 1877.

EDITOR FOREST AND STREAM:

Dear Sir—Two years and a half ago I came to Oregon under the auspices of the United States Fish Commission to carry out Prof. Baird's instructions to select a suitable place for hatching the eggs of the Columbia River salmon. I reported in favor of some point on the Clackamas River, a tributary of the Willamette.

On arriving in Oregon this spring, however, and making known this fact to the Oregon and Washington Fish Propagating Co., who had sent for me to conduct operations for them in hatching these salmon, I was met by the objection, that the Clackamas River salmon were "Steel Heads" (*Salmo gairdneri*), and not Chenook salmon (*Salmo quinnat*), which the Company wanted for their purposes of canning. I was accordingly instructed to find some other suitable place where it was known that the true Chenook salmon ascended to spawn. In pursuance of these instructions I spent the next five weeks on the Columbia and its tributaries, traveling by rail, by steamboat, by stage, on horse-back, or in small boats nearly 3,000 miles, going over in my investigations all the available ground between the ocean and the limits beyond which it was unequivocally dangerous for white men to go, on account of hostile Indians. The result was decidedly unfavorable. Strange as it seems, not a single place in this famous salmon river basin could be found suitable for erecting a large salmon hatching station. At some points otherwise suitable the stream was too large to be controlled, or others too small to answer the purpose. Some places were too remote, some too inaccessible, and all possessed some feature which made them unfit for our purpose. As a last resort the Company gave their consent to a further investigation of the Clackamas River. The result confirmed in every respect my examinations of 1875. The Clackamas was found to be one of the great natural spawning grounds of the true Chenook salmon (*Salmo quinnat*), and on the 18th of July I bought and located for the Oregon and Washington Fish Propagating Co., a station on that river at the mouth of Clear Creek which probably combines more advantages for hatching salmon on a large scale than any other place in America. Work was immediately commenced, and has since progressed so rapidly that in a few days, unless some unforeseen accident happens, we shall have a splendid salmon breeding establishment in perfect running order with a hatching capacity of twenty million (20,000,000) eggs.

Unfortunately there are now no laws in this State restricting the catching of salmon. Indeed there is at this moment, a trap extending entirely across the mouth of the Clackamas River, which shuts out every salmon from entering it, and this together with the fact that two hundred miles of drift nets were run incessantly this summer at the canneries on the Columbia, makes it out of the question to take salmon eggs to amount to anything this season. But public opinion is strongly and universally in favor of the hatching operations begun here, and as soon as the legislature meets it will enact laws prohibiting the destruction of salmon in this river, and when this is done vast quantities of salmon will unquestionably be hatched at this place every year. Very truly yours,

LIVINGSTON STONE.

## RAPID GROWTH OF TROUT.—Editor Forest and Stream:

Early in the month of March last, after having carefully distributed a consignment of 30,000 trout fry from the State Hatchery at Mumford in several of the streams hereabouts, there were left over about 400 of the fry, which were delivered to a couple of angler friends to place where they might think proper, provided the waters were public. The little fellows were carefully distributed in small allotments throughout the best looking pools of a wild mountain brook in this locality, as far as the small stock would go. The stream in question had once upon a time, as your correspondent well remembers, in the days *consule planco*, abounded with trout, but of late years not a trout or in fact any fish of any kind was to be seen in it. It has been surmised that a rascally poacher of this locality, now deceased, once lined the stream throughout its entire length, and thereby completely destroyed every living thing. I think the supposition not unreasonable, for I can conceive of no other method that could have wrought so complete an annihilation. But to my story: Last Sunday afternoon, in company with one of the gentlemen who assisted in putting the young fry in the stream last spring, I explored carefully several of its pools. We found our trout, and in one large, long, still place, counted over a dozen. But what amazed us, and is the point of this communication, was the size the fish had attained. None of them were less than four inches, and two or more that were very carefully observed as they quietly lay in the still, clear water, were over seven inches long. This growth in so short a time is to me something remarkable. It serves to show, however, the rapid growth of trout under favorable conditions, and may encourage many of your readers to try like experiments, and with your correspondent's hope, that they may meet with like success.

Yours very truly,

W. H. HASBROUCK.

P. S.—I should have added that all of the brook trout received from the State Hatchery and distributed in this locality have thriven.

W. H. H.

Ellenville, N. Y., Oct. 4, 1877.

The fishermen of California are exercised, and justly so, over the systematic violation of the fish laws of that State by the firms engaged in canning salmon upon the Sacramento River. This is one of the most aggravated forms of law-breaking, and should not for one moment be tolerated. It cannot for an instant be pretended that the firms engaged in canning are ignorant of the laws in question, or that they have erred through inadvertence. The facts, too, as reported,

wholly negative any such subterfuge, as they are represented as capturing fish under the cover of night only, thereby showing that they know they are feloniously engaged. The general complaint is much the same as in New York—that Fish Commissioners and District Attorneys seem to have no interest in the enforcement of the laws, exhibiting the utmost apathy toward their violation. One journal boldly asserts that the people of a single "cannery" have so depleted the waters "that not one-tenth the usual number of fish have succeeded in making their way to the spawning ground this season." The result of the neglect of the proper authorities to protect the public interest will be that the fishermen of the Upper Sacramento will follow the example of those of the lower, when the salmon will speedily become a thing of the past. There seems but one way of correcting these abuses and that is by the ballot box, removing the inefficient officers and replacing by other and more conscientious servants. May the Golden State set a glorious example.

✓ THOSE DAMS IN THE SUSQUEHANNA.—We invite the attention of the Pennsylvania Fish Commissioners to the following communication which has been received from an active worker in the cause of game protection, and whose statements are worthy of their consideration:

EDITOR FOREST AND STREAM:

This item appeared in the local columns of the Sunbury (Pa.) Gazette, Sept. 28:

Sheriff Strine has completed the work of removing the fish dams in the Susquehanna that were unlawfully constructed by fishermen who hold the fish law in contempt. There were 69 in the river from this place to the Dauphin county line, and 4 between this and Lycoming. The baskets were torn out and the walls demolished. The Sheriff had seven or eight deputies employed in this work. They met with no resistance at any point. Now, since these destructive nuisances have been removed, the Fish Wardens should see that they are not rebuilt.

Think of this, sportsmen, anglers and citizens! Seventy-three dams destroyed within a space of twenty running miles on the broad Susquehanna! Think how well this honest sheriff has assisted the Fish Commissioners of Pennsylvania in carrying out the law, and preserving for the people and for their use the results of the stocking of this noble river with black bass and other fish a few years ago. Ye gods and little fishes! Well might we rejoice with you at this fell blow at the dark damnation of your taking off—if the paragraph above quoted were true. But there is hardly a word in it which is not false. Miles—absolutely miles—of dams exists and only a few stones in any were removed, and those could be easily replaced. The baskets at the apex of the cone-shaped, artificial channels were mostly only lowered, or a small hole knocked in them, requiring but slight repairs. No wonder that no resistance was met with at any point! The majesty of the law must be respected, and besides, who would wish to give unnecessary trouble to so considerate a sheriff?

On Thursday a storm raged in the valley of the Susquehanna as well as here. A rise in the river was anticipated, and the industrious residents along the stream immediately set to work to make repairs, with the result that, on Saturday morning last, they were rewarded with an immense catch of fish, one dam alone yielding over a hundred dollars worth at ten cents per pound. It has hitherto been claimed by the opponents of the law that black bass could not be caught in baskets or nets. The experience referred to conclusively proves the contrary.

Comment is unnecessary. I call your attention to the facts, however, as one having authority and influence, and in order that, if the Pennsylvania Fish Commissioners wink at those outrages on the law, that the sporting world at least may know of their derelictions. The mountains, fields and valleys of Pennsylvania are grand and fair to look upon, but civilization, in some parts of the State at least, is far behind the times.

New York, Oct. 4.

WARREN.

PENNSYLVANIA.—Bass are to be placed in Chest Creek, Clearfield County.

The Fish Commissioners, having examined the dam on the Susquehanna, at Columbia, and found it insufficient, now propose to extend the Tide Water canal to the point opposite Cheekkill's rock.

At the State hatching house, which is under the supervision of Mr. Seth Weeks, there will be hatched, the coming season, 8,000,000 salmon. There are 600 salmon in one of the ponds, and several ponds are devoted to brook trout. Black bass are to be introduced into Little Shamokin Creek.

NEW HAMPSHIRE.—The work at the Livermore Falls State Hatching House is now nearly completed; 400,000 or 500,000 California salmon eggs will arrive about the 5th of October. In addition to several thousand brook trout, about 20,000 land-locked salmon will be hatched this season, and ready for distribution in May next.

## SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

—[Adv.]

CONROY, BISSETT & MALLESON,  
Manufacturers, 65 Fulton Street, N. Y.

The mean mid-day temperature at New Smyrna, Fla., for the month of September was 85 deg.; the maximum, 92 deg.; the minimum, 78 deg.

AMERICAN INSTITUTE.—The American Institute is now holding its forty-sixth annual exhibition on Third Avenue and Sixty-fourth st., and thus far the attendance has been very satisfactory to the managers. Ellwanger & Barry of Rochester, make a fine display of pears and apples, W. S. Carpenter, of apples and F. J. Kicketts, of native grapes. The entries included every imaginable invention, and the whirl of the machinery and the crowds of visitors forcibly remind one of Machinery Hall at the Centennial Exhibition. The list of premiums offered is large and liberal, and the managers look forward to great success this season.

## Natural History.

## INSECT WINGS.

ANIMALS possess the power of feeling, and of effecting certain movements by the exercise of a muscular apparatus, with which their bodies are furnished. They are distinguished from the organizations of the vegetable kingdom by the presence of these attributes. Every one is aware that when the child sees some strange and unknown object he is observing, start suddenly into motion, he will exclaim, "It is alive!" By this exclamation he means to express his conviction that the object is endowed with animal life. Power of voluntary and independent motion and animal organization are associated together as inseparable and essentially connected ideas by even the earliest experience in the economy and ways of nature. The animal faculty of voluntary motion, in almost every case, confers upon the creature the ability to transfer its body from place to place. In some animals the weight of the body is sustained by immersion in a fluid as dense as itself. It is then carried about with very little expenditure of effort, either by the waving action of vibratile cilia scattered over its external surface, or by the oar-like movement of certain portions of its frame especially adapted to the purpose. In other animals the weight of the body rests directly upon the ground, and has, therefore, to be lifted from place to place by more powerful mechanical contrivances.

In the lowest forms of air-living animals, the body rests upon the ground by numerous points of support; and when it moves is wriggled along piecemeal, one portion being pushed forward while the rest remains stationary. The mode of progression which the little earthworm adopts, is a familiar illustration of this style of proceeding.

In the higher forms of air-living animals a freer and more commodious kind of movement is provided for. The body itself is raised up from the ground upon pointed columns, which are made to act as levers as well as props. Observe, for instance, the tigre-beetle, as it runs swiftly over the uneven surface of the path in search of its dinner, with its eager antennae thrust out in advance. Those six long and slender legs that bear up the body of the insect, and keep still advancing in regular alternate order, are steadied and worked by cords laid along on the hollows and grooves of their own substance. While some of them uphold the weight of the superincumbent body, the rest are thrown forward as fresh and more advanced points of support on to which they may be pulled. The running of the insect is a very ingenious and beautiful adaptation of the principles of mechanism to the purposes of life. But in the insect organization a still more surprising display of mechanical skill is made. A comparatively heavy body is not only carried rapidly and conveniently along the surface of the ground, it is also raised entirely up from it at pleasure and transported through lengthened distances, while resting upon nothing but the thin transparent air.

From the top of the central part technically termed thoracic of the insect's body, from which the legs descend, two or more membranous sails arise which are able to beat the air by repeated strokes, and to make it, consequently, uphold their own weight as well as that of the burdens connected with them. These lifting and sustaining sails are the insect's wings. The wings of the insect, however, are of a nature altogether different from the apparently analogous organs which the bird uses in flight. The wings of the latter are merely feathered fore-legs. Lift up the front extremities of a quadruped, keep them asunder at their origins by bony props, fit them with freer motions and stronger muscles, and cover them with feathers, and they become wings in every essential particulars. In that insect, however, the case is altogether different. The wings are not altered legs; they are superadded to the legs. The insect has its fore-legs as well as its wings. The legs all descend from the under surface of the thoracic piece, the wings arise from its upper surface. As the wings are flapping above during flight the unchanged legs are dangling below in full complement. The wings are, therefore, independent and additional organs. They have no relation whatever to limbs, properly so called; but there are some other portions of the animal economy with which they do connect themselves both by structure and function. The reader will hardly guess what those wing-allied organs are.

There is a little fly called the May-fly, which usually makes its appearance in July and August. They visit the districts in France watered by the Seine and the Marne in such numbers that the fishermen of these rivers believe they are showered down from heaven, and accordingly call these living clouds manna. Reanmur once saw these flies so thickly descend in this region that it resembled a dense snow storm, and the step on which he stood by the river's bank was covered to a depth of four inches in a few moments.

The insect itself is very beautiful; it has four delicate, yellowish, lace-like wings, freckled with brown spots, and these singular hair-like projections hanging out beyond its tail. It never touches food during its mature life, but leads a short and joyous existence. It dances over the surface of the water for three or four hours dropping its eggs as it flies, and then disappears forever.

Myriads come forth about the hour of eight in the evening, but by ten or twelve o'clock not a single straggler can be found alive. This answers to the description of our commonly called "June-bug." From the egg which the parent May-fly drops into the water, a six-legged grub is very soon hatched,

This grub proceeds to excavate for himself a home in the soft bank of the river below the surface of the water, and there remains for two long years, feeding upon the decaying matters of the mould. During this aquatic residence the little creature finds it necessary to breathe, of course, and in order that he may do so comfortably, notwithstanding his habits of seclusion, and his constant immersion in fluid, he pushes out from his shoulders and back a series of delicate leaf-like plates. A branch of one of those air tubes of his body enters into each of those plates and spreads out into its substance. The plates are in fact gills—that is, respiratory organs, fitted for breathing beneath the water. The little fellow may be seen to wave them backward and forward with incessant motion as he churns up the fluid to get out of it the vital air which it contains.

When the grub of the May-fly has completed his two years of probation he comes out from his subterranean and sub-aqueous den and rises to the surface of the stream. By means of his flapping, and his somewhat enlarged gills, he half leaps and half flies to the nearest rush or sedge he can perceive, and clings fast to it by his legs. He then, by a clever twist of his little body, splits open his old fishy skin and slowly draws himself out, head, body and legs, and, last of all, from some of those leafy gills he pulls a delicate crumpled up membrane, which soon dries and expands and becomes lace netted and brown fretted.

The membrane which was shut up in the gills of the aquatic creature was really the rudiment of its now perfect wings. The wings of the insect are then a sort of external lungs, articulated with the body by means of a moveable point, and made to subserve the purposes of flight. Each wing is formed of a flattened bladder, extended from the general skin of the body. The sides of this bladder are pressed closely together, and would be in absolute contact but for a series of branching rigid tubes that are spread out in the intervening cavity. These tubes are air vessels; their interiors are lined with with elastic, spirally rolled threads that serve to keep the channels constantly open, and through these open channels the vital atmosphere rushes with every movement of the membranous organ. The wings of the May-fly flapping in the air is a respiratory organ of as much importance to the well being of the creature, in its way, as the gill plate of its grub prototype is when vibrating under the water. But the wing of the insect is not the only respiratory organ, its entire body is one vast respiratory system, of which the wings are offsets. The spirally lined air vessels run everywhere, and branch out in every direction. The insect in fact circulates air instead of blood. As the prick of the finest needle draws blood from the flesh of the back boned creature it draws air from the flesh of the insect. Who will wonder then that the insect is so light? Its arterial system is filled with the ethereal atmosphere as the more solid creature is with heavy blood.

If the reader has ever closely watched a large fly or bee, he will have noticed that it has more of the respiratory movements that are so familiar to him in the bodies of quadrupeds and birds. There is none of that heaving of the chest and out and in movement of the sides, which constitute the visible phenomena of breathing. In the insects economy the air enters by the usual inlet of the mouth. It all goes in by means of small air mouths placed along the sides of the body, and exclusively appropriated to its reception. Squeezing the throat will not choke an insect. In order to do this effectually the sections of the body where the air mouths are must be smeared with oil. In the vertebrate animals the blood is driven through branching tubes to receptacles of air placed within the chest; the air channels terminate in blood extremities, and the blood vessels cover these as a net work. The mechanical act of respiration merely serves to change the air contained within the air vessels.

In the insects this entire process is reversed; the air is carried by branching tubes to receptacles of blood scattered throughout the body; the blood channels terminate in blood extremities, and a capillary net work of air vessels is spread over these. Now, in the vertebrate creature the chest is merely the grand air-receptacle, into which the blood is sent to be aerated; while in the insect the chest contains but its own proportional share of the great air system.

In the latter case, therefore, there is a great deal of available space which would have been, under other circumstances, filled with the respiratory apparatus, but is now left free to be otherwise employed. The thoracic cavity of the insect serves as a storage for the bulky and powerful muscles that are required to give energy to the legs and wings. The portion of the body that is almost exclusively respiratory in other animals, becomes almost as exclusively motor in insects. It holds in its interior the chief portions of the cords, by which the moving levers and membranes are worked, and its outer surface is adorned by those levers and membranes themselves. Both the legs and wings of the insect are attached to the thoracic segments of its body.

The extraordinary powers of flight which insects possess are due to the conjoined influences of the two conditions that have been named—the lightness of their air-filled bodies, and the strength of their chest-packed muscles. Where light air is circulated instead of heavy blood, great vascularity serves only to make existence more ethereal. Plethora probably takes the insect nearer to the skies instead of dragging it toward the dust.

The hawk-moth, with its burly body, may often be seen hovering gracefully on quivering wings over some favorite

flower, as if it were hung there on cords, while it rifles it of its store of accumulated sweets by means of its long unfolded tongue. The common house-fly makes six hundred strokes every second in its ordinary flight, and gets through five or six feet of space by means of them; but when alarmed it can increase the velocity of its wing strokes some five or six fold and move through thirty-five feet in the second.

Kirby believed that if the house-fly was made equal to the horse in size, and had its muscular power increased in the same proportion, it would be able to traverse the globe with the rapidity of lightning.

The dragon-fly often remains on the wing in pursuit of its prey for hours at a stretch, and yet will sometimes baffle the swallow by its speed, although that bird is calculated to be able to move at the rate of a mile a minute. But the dexterity of this insect is even more surprising than its swiftness, for it is able to do what no bird can do; it is able to stop instantly in the midst of its most rapid course, and change the direction of its flight, going sideways or backward without altering the position of the body.

As a general rule insect wings that are intended for employment in flight are transparent membranes, and the course of air tubes marked out upon them as opaque nervures. These air tubes, it will be remembered, are lined by spires of dense cartilage, and hence it is that they become nervures so well adapted to act like tent-lines in keeping the expanded membranes stretched. In the dragon-flies the nervures are minutely netted for the sake of increased strength; in the bees the nervures are simply parallel.

Most insects have two pairs of these transparent membranous wings; but in such as burrow, one pair is converted into a dense leather-like case, under which the other pair are folded away. In the flies only one pair of wings can be found at all, the other pair being changed into two little club shaped bodies, called balances.

Butterflies and moths are the only insects that fly by means of opaque wings; but in their case the opacity is apparent rather than real, for it is caused by the presence of a very beautiful layer of colored scales, spread evenly over the outer surface of the membranes. When these scales are brushed off, membranous wings of the ordinary transparent character are disclosed.

The scales are attached to the membrane by little stems, like the quill-ends of feathers, and they are arranged in overlapping rows. The variegated colors and pattern of the insects are entire due to them. If the wings of a butterfly be pressed upon a surface of card-board covered with a solution of gum-arabic to the extent of their own outlines, and be left there until the gum is dry, the outer layer of scales may be rubbed off with a handkerchief, and the double membranes and intervening nervures may be picked away piecemeal with a needle's point, and there will remain upon the card a most beautiful representation of the other surface of the wings, its scales being all preserved by the gum in their natural position.

If the outline of the wings be carefully pencilled first, and the gum water be then delicately and evenly brushed on just as far as the outlines, a perfect and durable *fac-simile* in all the original variety of color and marking is procured which needs only to have the body sketched in to make it a very pretty and accurate delineation of the insect. KROOK.

✧ **RANDOM NOTES.**—Our correspondent R, of Ferrisburgh, Vt., sends us the following notes, which contain a great deal that is interesting. They are, the author tells us, scattered through parts of two years. We could wish that the observer's note-book had been more constantly in use. To have a lasting value such observations should be connected, and as far as possible extended:

May 30, 1876.—A party of us fishing for bass in Lewis Creek saw in a pool in that stream a curious spawn. The eggs inclosed in a long, transparent, glutinous covering, about the size of an ordinary clay pipe stem, the whole looking like a string of small dark-colored beads in a glass tube. There were many yards of it lying in the still, shallow water. What was it? [Evidently the spawn of some Batrachian frog or toad.—Ed.] Black bass on their beds.

June 4th.—Bullpups preparing to spawn, but biting a little yet. Rather late for them, I think.

June 7th.—Saw seventeen wood ducks, one flock of seven. They are undoubtedly breeding here.

June 29th.—With Dr. M. C. Edmunds, found a young black bass 1½ inches long. The little fellow was chasing minnows as large as himself.

July 8th.—Blackbirds flocking.

Aug. 1st.—Heard upland plover (*Bartram's Tattler*) flying southward in the evening.

Aug. 8th.—Hear orioles again.

Aug. 11th.—Bobolinks about again.

Aug. 27th.—Saw a muskrat house, apparently finished. According to believers in Musquash foreknowledge this indicates early cold weather.

Sept. 2d.—Saw two upland plover in meadows near Little Otter.

Sept. 5th.—Saw eight or ten upland plover in same meadow, very wild and killed only one.

Sept. 6th.—On the same ground saw only two plover.

Sept. 31st.—Heard a ruffed grouse drumming, which I think is quite unusual so early. Shot one running on the ground, which flew vigorously about ten rods, and then fell stone dead. In its crop were bits of what looked like toad stool. In the crop of another shot same day was a quantity of clover leaves, apple leaves, beech nuts, wild grapes, small seeds and buds. For several evenings past, till 9 o'clock or later, I have heard the notes of some apparently small birds migrating southward. Last night and to-night a great many were passing. The note is a single "weeep!" quite distinct but not loud, and not very frequently uttered. What are they?

Sept. 29d.—Ash ripened (no frost yet) to its first grape-bloom color. A good many trees beginning to change; soft maple, hickory, sumac and white ash.

Sept. 27th.—Many hickories quite golden. Ash has more gold with its purple. Sugar maple but little changed. Black and white oaks still hold their dark green. This day I found on a high rocky ridge a little colony of gray or scrub pine, the first and only I ever saw.

Oct. 8th.—Most of the oaks still wear their dark green, but some have changed a good deal. The elms are yellowing, the beeches green and gold; some basswoods, butter nuts and ashes are naked.

Oct. 11th.—Saw a flock of blue snowbirds in a pine thicket near Lewis Creek.

Oct. 15th.—Flushed two Wilson's snipe on bank of East Slang. A very cold, windy day; wind west.

Oct. 17th.—Found a few snipe in same place. A sharp west wind, with bright sunshine. Killed three snipe and one yellow leg.

Oct. 20th.—Killed two snipe in East Slang, and three yellow legs there. Also killed several birds which some one says are marbled godwit. A warm sunny day. Joe Birkett reports having seen a great many snipe this day on Little Otter Creek marshes, just below the lower falls. The next day, Oct. 21st, we beat the same grounds and flushed but three birds, and those very wild. A cloudy day, with south wind.

Nov. 17th.—Saw a flock of snow buntings, and a hare with his white water jacket on.

Nov. 22d.—In a ruffed grouse's crop found birch tags and round-leaved pyrola leaves.

Dec. 14th.—Found in crop of ruffed grouse birch tags, and in the gizzard a mass of woody stuff, which we decided was composed of the twigs of these tags.

Feb. 21, 1877.—A crow seen.

Feb. 24th.—Crows about every day.

March 4th.—A flock of more than twenty-five crows seen flying north. Have seen very few snow buntings this winter, none at all for at least two months past.

March 22d.—A robin reported this morning.

March 26th.—Heard bluebird this morning, and robin at noon.

March 27th.—Heard and saw several robins this morning, and heard sparrows.

March 31st.—Phebe-birds came. Frogs seen about creek.

April 2d.—Saw meadow lark. Found a liverwort blossom (*Hepeleca*). Lake Champlain seems to be broken up. From 2d to 8th or 9th, picked on the marshes.

April 9th.—Saw a swallow at creek, and heard a ruffed grouse drum.

April 10th.—Saw swallows about buildings.

April 13th.—Saw a butterfly, a striped snake, blood-root flowers, and heard frogs "peep" (the *Hylas*).

April 17th.—A purple linnet singing on one of the locust trees.

April 24th.—Flushed two snipe near Little Otter. From appearances they had tarried there during the day. Heard bittern booming. Found two fox holes cleaned out.

May 3d.—Looked in same place for snipe, but found none, nor any signs of them. Saw wind-flowers, violets and wild strawberries in bloom.

May 5th.—I saw barn swallows for the first time, but Mrs. R. is sure she saw them a week ago.

May 6th.—A few dandelions in bloom.

May 8th.—Heard the long drawn "whee-ip-whee-u" of a Bartram's tattler.

May 14th.—Baltimore orioles came, R. R. M., and I caught four black bass in Lewis Creek. Saw king-fish. Some bass on their spawning beds.

May 15th.—Bobolinks came.

May 19th.—Heard first great-crusted fly-catcher and night hawk.

May 22d.—Cuckoo came.

May 23d.—Our first brood of robins leave their nest.

May 29th.—Saw a ruffed grouse and her just-hatched brood, July 24th.—A still, moonlight night. We heard upland plover moving southward—apparently a good many birds. A few male bobolinks still wearing the motley. Many young birds flocking, and quite strong on the wing.

Aug. 3d.—Beat the meadows and pastures for upland plover but found none.

Aug. 7th.—No bobolinks to be seen now.

✧ **A CUTE SPARROW.**—The following story, for which the Hartford *Times* is responsible, will probably prove a rich morsel for those who argue that, besides being useless and an impostor, the sparrow is totally depraved:

A curious story, illustrative of the intelligence and reasoning power—and perhaps of the characteristic masochism also—of the little twittering mis-called "English sparrow," now so common in all our principal towns and cities, is related by a friend, who had it from the witness himself who saw the occurrence. The gentleman, who resides in New York, had erected, last spring, in his back yard, a large box for sparrows' nests. It was divided into three rows, each containing four compartments. These were all speedily taken possession of by a dozen pairs of sparrows, and the business of making nests proceeded amidst the customary chattering din of these fussy and pugnacious feathered colonists. Sitting idly at the window, one Sunday, watching the birds, the gentleman saw one cock-sparrow come flying to his place with a fine, soft white feather in his bill. The box was so placed that he could see into the apartments, and he saw this bird fix the feather into an incomplete nest, and then fly away. No sooner was he out of sight than a female sparrow from the adjoining compartment, who had evidently seen that proceeding, hopped into her neighbor's house and pulled out and carried off the coveted feather. Becoming interested, the observer watched the performance, expecting to see the little thief carry her stolen prize to her own nest; but no, she knew a trick worth two of that, and here is where she displayed an undeniable reasoning process, and acted on a clear perception of cause and effect, making a prudent use of her knowledge of the character and disposition of her plundered neighbor. She flew off with the feather to a neighboring tree, where she securely fastened it in an inconspicuous place upon and between two twigs, and there left it. Pretty soon the bird she had defrauded came back with a straw to add to his nest. Discovering his loss, he came out with an angry chirrup that boded no good to the despoiler of his hearth and home, if he could only find the rogue. His first demonstration was to visit his next-door neighbor without any search-warrant. In that abode of peace and innocence he found no trace of the stolen feather; and as for the actually guilty party, she was hopping innocently about, and loudly demanding—as far as bird-tones could be understood by the man at the window—what was

meant by this ungentlemanly and very impolite intrusion into a lady's bed-chamber, and insisting that she was no such kind of a woman. The cock-sparrow was evidently puzzled. Unable, after a minute search, to find the lost feather, he at length apparently gave it up, charged it to profit and loss, and flew away in search of another. The thief demurely waited till he had got well off, and then flew to the tree, secured the stolen feather, and took it in triumph to her own nest.

This story we are assured is a true one. It certainly shows the power of reasoning by a bird, just as conclusively as any logical process that was ever employed by David Hume or Jay Gould. Whether it also furnishes another argument to sustain the modern theory of the innate superiority of the female sex depends somewhat upon the point of view from which such smart but reprehensible conduct is regarded.

**HOW BIRDS FLY.**—Kites and buzzards glide round in circles with expanded, and apparently motionless, wings; hawks or harriers fly low over meadows and stubble field, beating the ground regularly; crows and jays labor along as if hard at work, and herons are still more clumsy, having their long necks and longer legs to encumber them. The woodpecker's progress is a series of long undulations, opening and closing the wings at every stroke. Finches and sparrows have a short, jerky flight, accompanied with many bobbings and flirtings. Warblers and fly-catchers fly high up, smoothly and swiftly. Swallows and night-hawks seem to be mowing the air with scimitar wings, and move with surprising energy. On the ground most small birds are hoppers, only a few truly and gracefully walking.

**THE VINAGRENE.**—Of this curious insect, described and figured in F. and S., of Aug. 30, by Dr. Pope, I have a specimen taken at Halifax Inlet, East Florida, where it is common and is known as the mule killer or grampus. Another writer in F. and S. says that this insect is well known as *Thelyphonus giganteus*—Lucas. The only work in which I have been able to find this species is the new edition of the "Encyclopedia Britannica," where a cut and description of *Thelyphonus gig.* is given, but this wants the peculiar and remarkable antennae springing from behind the last pair of legs, which are found in my specimen and Dr. Pope's drawing. My specimen measures  $2\frac{1}{2}$  inches without the tail. It also differs from the cut in the Encyclopedia in having little or no hair on the legs and tail. May not this be a new species? In Florida it is considered poisonous. S. C. C.

**A GOOD PLAN TO BANISH INSECTS.**—At a conference of agriculturists lately held in London, in which many noblemen and other large proprietors took part, it was resolved to urge upon the British Government the necessity of legislating for the protection of cultivation against the injury done by insects. It was urged in the first place that in order to effectually rid a district or a country of an injurious insect, any attempt to do so must be simultaneous and combined, for to what purpose would it be if one man cleared his farm if his neighbor did not clear his; or if the one cleared his one year and the other cleared his another? A central authority, therefore, is needed to secure united action. Proceeding on the basis then of united action, it was clearly shown that an easy remedy for the evil lies in the rotation of crops. Most vegetable-feeding insects, *c. g.*, wheat insects, can only live on one kind of plant, and most of them are annual. Therefore by entirely desisting for a year from the cultivation of a certain plant in a certain district, the insect infecting that plant would be banished entirely, or until re-introduced. This plan of course can only be effectual by means of simultaneous action over considerable districts, hence the determination of the Conference to endeavor to obtain government aid rather than rely on the efforts of agricultural societies.

**SIBERIAN NATURAL HISTORY.**—Dr. O. Finsch, lately returned from a scientific expedition to Siberia, has opened at Bremen an exhibition of the ethnographic and natural history collections made by him during his travels. The specimens have been duly classified by Dr. Finsch himself, and, according to *Die Natur*, whose account of these valuable collections we follow, give a good general idea of the kind of life led by the inhabitants of Western Siberia. In this respect they surpass even the Imperial Museums of St. Petersburg and Moscow. The inhabitants of the whole region of the Obi, lying north of the confluence of the Irtysh with that stream, live exclusively by fishing, hunting and reindeer breeding. The reindeer is the principal source of their wealth, but the herds have been ravaged during the last forty or fifty years by Splenditis, and thus the people have been reduced to great straits. For instance, we are informed that Ivan Vaisin, Prince of Oddorsk, who, twenty years ago, owned 7,000 reindeer, now has only 700.

**KING BIRDS AND BEES.**—W. H. White, in the *Country Gentleman*, asserts that careful observation has determined that the king birds are most insatiable devourers of bees. In examining a nest which contained three well feathered birds, and by watching the parents he estimated that each was fed from thirty to fifty bees per day. A neighbor who was so far a disbeliever in the taking of bees by this bird as to offer a reward for every bee found within it, was convinced of his error by dissection.

**THE INDIAN BRAVES AT CENTRAL PARK.**—Spotted Tail, Red Cloud, Little Big Man, Man Afraid of His Horses, Touch the Clouds, and the rest of the twenty-three chiefs who have been on a visit to the Great Father at Washington, were conducted last Thursday through Central Park, New York. They were stolidly indifferent to the various works of art there displayed, but when they came to the menagerie their admiration knew no bounds. Little Big Man, remembering that there were more animals than he had names for. They were particularly pleased with the brilliant hues of the tropical birds, the baby elephants and the lions. But the greatest source of amusement was found in the antics of the monkeys. The chiefs laughed heartily, and Lieut. Clark explained that part of their enjoyment arose from their pointing out to each other the resemblance they found in the monkeys' faces to those of various friends on the reservation.

—A strange collection of sea gulls was lately witnessed on the Clyde at Glasgow. Between the Union Railway Viaduct and the Albert Bridge scores of so-called laughing gulls were seen fluttering above the water, and paddling about in flocks. Along the shore were seen little groups of starlings, and three species of wagtail running nimbly, picking their steps. The sparrow and rook were also represented, while a small company of the large gray gull were seated on rafts of pine logs. The most curious feature observable as regards the gulls was that among the whole congregation of them not a single one had attained its full plumage. All were young birds of this season's hatching, mottled with gray on the back, the white tail tipped with black—the beautiful black head and dark crimson bill and legs of the mature bird being in no instance visible. The old birds are now gathering by themselves in the lochs and bays of the Western Highlands.

**SIMPLICITY.**—A Scotchman once took his wife to see the wonders of the microscope. The various curiosities seemed to please the woman very well, till the animalcule professed to be contained in a drop of water were shown off. This seemed to poor Janet not so very pleasant a sight as the others. She sat patiently, however, till the "water tigers," magnified to the size of twelve feet, appeared on the sheet, fighting with their usual ferocity. Janet now rose in great trepidation, and cried to her husband, "Come awa', John!" "Sit still, woman, and see the show," said John. "See the show! Gude keep us a', man, what wad come o' us if the awfu'-like brutes wad brak' out o' the water?"

**A BIG DEVIL-FISH.**—New York has just received a huge devil-fish or cuttle-fish, recently captured on the coast of Newfoundland. This is the largest specimen ever captured; the total length from the termination of the outstretched arm to the tip of the tail is more than forty feet. A full description of this marine curiosity and the account of its capture we shall give hereafter.

**ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING, TUESDAY, Oct. 2, 1877.**—One robin, *Turdus migratorius*, pre-ated; one garter snake, *Bufo terrastris*, presented; two white rabbits, *Lepus cuniculus*, presented; one common red squirrel, *Sciurus hudsonicus*, presented; two opossums, *Didelphys virginiana*, presented; three barn owls, *Stroz flammea* var. *americana*, purchased; one yellow billed cuckoo *Coccyzus americana*, presented. Very truly, ARTHUR E. BROWN, Gen'l Supt.

"His life was gentle; and the elements  
So mixed in him, that nature might stand up  
And say to all the world—'This is a man,'"  
writes Shakespeare in "Julius Caesar." So are the elements mixed in B. T. Babbitt's Toilet Soap, that he can say to all the world—"This is the soap." Frankly we are compelled to admit the supreme excellence of this new luxury of the toilet on account of its delicious purity and agreeableness to the touch.

—AMERICAN STANDARD SHOT—of superior finish; also, lead pipe and sheet lead, Colwell Lead Company, No. 63 Centre street, New York.—*Advs.*

## Woodland, Farm and Garden.

### PRESERVATION OF AUTUMN LEAVES AND FERNS.

THE autumn of the year, the most lovely and enjoyable of all the seasons, is now advancing with firm and rapid steps, and soon will verge into drear and icy winter. That in our northern climate means all disappearance of the beautiful ferns, vines and brilliant-colored leaves, that at this time greet one's eyesight upon every wooded hill and in every valley, especially where the swamp maple, sugar maple and sumach abound—the bright scarlet of the former, the clear, yellow and rich deep crimson of the latter, intermingled with the fresh-looking green foliage upon every side, and the vivid colors of the American ivy, glowing in the sunshine, and twining about the gray rocks, or hanging in graceful festoons from the dark green cedars, form a picture upon which one can never tire of looking. This brings the wish that we might, for a time at least, retain some of the lovely leaves for home decoration during the chill winter months, when flowers, heretofore used for that purpose, are both scarce and expensive. It has been an oft-tried experiment how to keep the natural look as well as the color of the leaves, and in many cases has proved a failure, and all because a little care and attention were required in preserving them. How many times do we see the bright autumn leaves robbed of their beauty and naturalness by a coating of varnish, or their lustrous colors dimmed by covering them with oil? If, instead of so doing, those wishing to preserve leaves that shall appear as beautiful as when just gathered, will try the following plan, they will be agreeably surprised, both at the easy method and the result: First, procure from any stationer some sheets of blotting paper, and place the leaves to be preserved between—taking care that they do not touch each other; then at intervals of about a half dozen of the papers lay either a folded newspaper or a piece of cardboard. When all the leaves are arranged, place the papers containing them upon a smooth board, with another board on top, and upon that a heavy weight; let them remain in a warm room for a day, then replace them in dry fresh papers. Do this for a few times with autumn leaves, but obtain with ferns, etc., as there is more moisture in the latter, and you will have fresh-looking ferns and leaves as natural as if just gathered. Mrs. W. J. DAVIDSON.

**THE LEAF OF LIFE, OR LIFE PLANT,** of which there is a notice in the last *FOREST AND STREAM*, as a native of Jamaica, grows also in Florida, where it stands the winter. Goss describes it as follows: Thick, succulent leaves, with rounded segments; a spike of greenish flowers, three feet high. Remarkable for the tenacity of its living principle. A leaf hung up in the air or thrown into a drawer, will develop into a plant. He calls it *Vereca orenata*, and puts it in the order Crassulacea.

**SKELETON LEAVES.**—"Mollie," in the *New York Times*, gives these directions for the preparation of skeleton leaves. The leaves and grasses thus preserved, arranged in tasteful designs and framed with a black back ground, are among the most beautiful of home decorations:

Handle very carefully, and have patience. July and August are the best months to gather leaves for this purpose, though later will sometimes do. Get perfect ones; place them in glass jars; fill with water; add 10 or 12 drops of muriatic acid for every pint of water. Keep the jar covered and in the sun. If the water evaporates, add more, with acid; it must be kept full. It will do no harm if the leaves are crowded a little. Look after them often, and when the fibre seems loosened take out the leaf, place it on a piece of glass. If the leaf is a frail, thin one, use a tiny soft brush to remove the pulp; if the leaf is thick and strong rub the pulp off between the thumb and finger; work carefully. Delicate thin leaves require much less time than thick ones in the acid water. Four months is the usual time, often longer. After removing the pulp place the skeleton in cold water; add about one dram of chloride of lime and five drops of acetic acid for every pint of water. Let them remain in this until they are a fine white; then press them in a large book; keep heavy weights on top.

**QUEENS CO. FAIR.**—The thirty-sixth annual exhibition of the Queens County Agricultural Society was held on the Society's ground at Mineola last week. The displays in the different departments were unusually fine, and reflected great credit on the exhibitors. William A. Burgess of Glen Cove, made a splendid display of Roses, Dahlias and Phloxes. A. Wayne of Queens had a beautiful lot of ornamental and variegated foliage plants and Gladioli. B. K. Bliss & Sons, 84 Barclay St., N. Y., made a wonderful exhibit of Potatoes in endless variety, several of their new varieties looking very tempting. The C. L. Allen Co. of Queens, had a collection of exotics and two immense floral designs. Grapes (foreign) were shown by Thos. Messenger, Great Neck, and very fine they were, as were also the fine collection of native grapes from Messrs. Geo. R. Underhill & C. J. Copley. Peaches from Geo. Lucas, and figs from V. Frost, Glen Cove. A together it was a most creditable exhibition, and we are glad to add, one of the most successful ever held by the Society.

**THE COLORADO BEETLE IN EUROPE.**—The English journals are full of the Colorado Beetle, which they seem to think is about to depopulate their little island. The potato bug has never had the opportunities for making a sensation that he has at present, and if he is a sensible bug he will surely make the most of it. He is lithographed, photographed, pantographed and illustrated on every hand, while all the societies entomological are running riot over his body. Old England is fairly howling over the probabilities, wrangling over his scientific status, and "blawsting" the Yankees, whom they seem to think have invented the "beast" expressly for their annoyance. New England coolly awaited the onslaught of the pest with shingles, old cans and Paris green, making no complaints, and in consequence is harvesting an unusually large crop of potatoes, so much so as to have materially reduced the market price—to 30 cents per bushel. It strikes us that this is the most philosophical way, for we have never heard of the beetle being frightened by scientific titles or long-winded discourses, though perhaps when he becomes cooped up in the narrow quarters of the United Kingdom too much learning may make him mad. Seriously, it is highly improbable that the potato bug will flourish in England sufficiently to become the pest that it is here, for it is rare that a continental scourge succeeds when transferred to an island; and even if it should, labor is cheap, and hand-pick bug and Paris green are efficacious if practiced thoroughly, and the care bestowed, which otherwise would not have been given, affords most excellent return when the crop is harvested.

**THE POULTRY WORLD.**—This excellent little journal has issued a series of chromo-lithographs, twelve in number, illustrating the most celebrated breeds of fowls which are furnished subscribers at the nominal price of 75 cents per set. Poultry breeders will find this monthly a useful adjunct to their efforts. H. H. Stoddard, Publisher, Hartford, Conn.

**THE AGE OF TREES.**—The longevity of various trees has been stated to be, in round numbers, as follows: Deciduous cypress, 6,000 years; baobab tree of Senegal, 5,000; dragon's blood tree, 4,000; yew, 3,000; cedar of Lebanon, 3,000; olive, 2,500; oak, 1,600; orange, 1,500; Oriental plane, 1,200; cabbage palm, 700; lime, 600; ivy, 600; ash, 400; cocoanut palm, 300; date palm, 300; larch, 300; pear, 300; apple, 200. The Brazil vine palm arrives at the age of 150 years; the Scotch fir gets its growth in about 100 years, and the balm of Gilead in about fifty years.

**THE FIRST FOOD FOR CHICKENS.**—Just before the chick breaks from its narrow cell, the last of the yolk is taken into the stomach, which gives it the strength to make its own grand effort for freedom. This food will certainly last twelve, if not twenty-four hours after it is free. During that time no other food is needed; only rest is required for the little stranger after its exhausting labor.—*Poultry World*.

**WEATHER WISDOM.**—Many persons are predicting an early, long and severe winter. The indications are: the unusual abundance of pine cones, the big piles of dirt the gophers are making about their holes, the unusual thickness of the corn sheaves, the industry of the woodpeckers in laying up stores of acorns, the early rising of the springs in the mountains the mildness of the weather last winter.

—The discovery of an immense cave in Josephine county Oregon, is announced. The exploration is by no means complete, yet over five miles of galleries have been seen.

## The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

**DOGS AS FRIENDS.**—An English writer, in musing upon the companionship of animals, writes, that having moved to the country the occasion seemed propitious for cultivating canine friends:

I began modestly by entering into society with a young sheep-dog, who received the professional name of Blister, for which the familiar term is Bliss. Bliss was a happy young dog of full growth, with eyes like jewels, teeth like a shark's, and all a puppy's ecstasy in using them on anything that could be bitten through. Every morning, when I first appeared before him, he flew at me with barks of affection, fixed his teeth firmly in a skirt of my dressing-gown, to pull at it and shake it as a fiercely cordial man might shake you by the hand. How many days I had enjoyed my Bliss might have been ascertained at any period by numbering the rents in the tail of my dressing-gown, as clearly as men ascertain the age of trees by counting the rings in the wood. Having breakfasted with me, my friend sat on his tail at the door of my lodging till he saw me mounted. Then no ingenuity could stay him from joining all my rounds, and making it his business to preach to the sheep of the whole country-side, gathered by him together on the hills in crowded and excited congregations. One morning, however, when there was a round of almost forty miles for us, he was not indulged with any slackenings of pace for his particular convenience. He came home very tired, and after that day satisfied himself with the courtesy of walking out to see me off, but steadily declined to follow.

This active creature went astray and was a lost dog. Then it became necessary to supply his place, and as it appeared probable that a less boisterous comrade was to be desired as his successor, I bought with gold the friendship of a mild old lady, a thin spaniel with glossy black hair. She had answered for years to the hereditary name of Fan, which is among dogs what Smith is among men.

Now, therefore, I was blessed with a four-footed being who would never go out with the horse, but was content only to follow me on foot, and visit the sick in our little town of Somerset. She had a good appetite, enlarged in flesh, panted a good deal when our way was up-hill, ran to and fro within bounds of a very strict discipline, and gave me nothing but the simple flattery of her canine affection. She was a steady every day person, who had even a sense of Sunday in her nature. When I went out on Sunday morning without offering to follow me as usual, she jumped into the window-sill, and from that post of observation watched for my return from church. But a time came when having bought a promising lot of patients, I left the far west, and traveled to the centre of the earth (within Great Britain). Fan went with me, and being unused to the punctualities of traveling, was lost upon the way at Bristol.

Dark visions of an unprotected female in distress haunted me all the way to this old house at Ortemly, in which I have grown gray. I knew only one man in Bristol, a long, lank, rambling bawker, who had reached sometimes even the distant Somerset. He might be at home or abroad; at any rate, to him I wrote, as to the one possible helper. By him the forlorn damsel was found under the protection of a backney coachman, and in a few days she reached me in a hamper, labeled "A Live Dog, with Care."

The house I took was haunted. For a black terrier who had once lived there, it was a Yarrow constantly to be revisited, and to be explored daily in every corner. The terrier lost no time in declaring his affection for the mature beauty from the west, his love was returned, and blessed with a litter of four puppies. Puppies are not born to be drowned. These were, moreover, very handsome. So they were allowed house-room until they were of age to be sent out into the world. When they were all of age to run with ease, the sedate Madam Spaniel, with her four little ones behind her, and the terrier ghost usually at her side, waited for me outside the doors of all the patients I had in the village, and dogged my heels in all pedestrian excursions. But the tender puppies required sometimes to be carried. Three of these puppies established themselves in other homes. The mother suddenly died in the midst of her dinner. There remained to me, therefore, only one dog—my last dog, Master Squeak—in doors; while out of doors there was a friend on all tours in the stable—my first horse.

The dog Squeak was my last friend on all fours. Upon his being shot, I married. He grew to be the handsomest and busiest and merriest dog in the world. The quickness of his sympathy met every shade upon the face he watched. In doors, his mind was his master's; out of doors he was his own master, and it was for him always to appoint, and for nobody to dicate whether he should be put of doors or in. As a puppy, he was a devourer of literature, and ate most of the corners from my books and journals. So he became wise. As to his other meals, he was not to die with me, forsooth! A tyrannical housekeeper, if he were heard to be near me at dinner time, dragged him away by the neck. Very well. He had only to take care that he was not heard. He announced his arrival by a sly scratch at the door, audible by no ears beyond mine, and ate his meat as still as a stuffed dog—which he always was when he had finished. He was not to sleep of nights at the foot of my bed, forsooth! A tyrannical housekeeper resolved to lock him out. Very well. He had only to scramble up to the kitchen roof, whence it was an easy leap into my bedroom through a window-pane. He was a bold dog who did not regard that window as any obstacle to his advancement. Before I understood him well, I shut him up once or twice in a room, when I did not wish him to go out with me; but as he always came after me with a flying leap through a clatter of glass, and broke the window-frame itself sometimes, he had his way left open for him. He was a right fellow to make his way in the world. The bedroom window I allowed to be mended seven

times. Money was spent on glaziers' and walking-stick on admonition. Soon tired of beating my dog, I allowed him to beat me. He was still remorselessly to be locked out; I had therefore the prudence to leave him the seventh smash in my window as an entrance hole. The only difference made by the housekeeper's discipline was that the dog had a run in the mud every night to give him a new relish for his corner of the counterpane. As for tying him up, nobody thought of that. He was such an incarnation of determined freedom that nobody short of a King of Naples could have thought of putting him in chains.

Once, indeed, he was in bondage; caught in a poacher's wire during his independent rambles through adjoining game preserves, where trespassers were rigorously to be prosecuted and all dogs were to be shot. We lost our comrade for two days, and then he came home, dirty, starved and haggard, with the wire about his neck; he had broken it after some thirty hours of struggling. But there was a twinkle of roguery in his eye even then, and he was off to the preserves again, certainly none the later for his lesson.

We had a farmyard near us, from which my friend upon all fours, when he stayed at home, would hunt me up a fowl or the old cock himself sometimes, fetching in the indignant bird unhurt between his teeth, and depositing him in triumph at my feet upon the study floor. What man could quarrel with his generous and fearless nature? He never feared and never hurt any one in his life, except some other dog who challenged him to fight. He simply disregarded pain. If a dog, not smaller and weaker than himself, insulted him, he fought and would fight. Beat him who might, he meant to have his fight out, and he always finished it to his own satisfaction. For the weak he had heroic tenderness. A little kitten used to nestle on his clean warm coat when he lay sleeping, and regarded him as a feather bed. If he awoke and found the kitten asleep on his back, he would lie still like a kind-hearted gentleman. The sight of a bone itself would not induce him to leap suddenly up and throw her off.

Yet he liked bones. He has disgraced me by following me out of a patient's house with a large piece of bacon in his mouth. He was bold enough, when tempted by the savor of a knuckle of veal boiling in the pot, to put his fore-feet on the side of a patient's kitchen fire, and jerk the meat out of the pot upon the kitchen floor. And he made friends with those whom he thus persecuted. To some he boldly gave his confidence, visiting at their houses on his own account, not as a mean haunter of back doors, but as a friend of the family. If he liked people, he visited them fairly, walked in to their drawing-rooms, and sat down with them for half an hour or so, by their fireside. He was the cleanest of true gentlemen, for he swam twice a day across a broad and rapid river; he was not the dog to let himself be conveyed with me ignominiously in the ferry-boat over the water that ran through the middle of my rounds. Of course there could be only one end to the life of such a dog. He was shot by a gamekeeper.

**HARTFORD DOG SHOW.**—The bench show at the Charter Oak City last week proved even a greater success than was anticipated. Owing to the fact that the close season had but just expired, sporting dogs were comparatively few in number, though by no means inferior in quality. Mr. Burrall of Springfield, had a fine collection of red Irish, and liver and white setters, one of the latter with a litter. There were also several handsome pointers. Mr. J. Quin exhibited some fine cockers and collies, while in the St. Bernard class was seen Mr. Arthur Nichol's Jack, who saved his master's life while in Switzerland; but the most attractive animal was a diminutive black and tan owned by A. E. Lines of Bridgeport, which though two and a half years of age, weighed but two pounds. The following are the awards:

Native English Setters—First prize, dog, to Jack, S. J. Pierce, Springfield, Mass.; bitch, Cossey, Ethan Allen, Pomfret Centre, Conn. Irish Setters—1st Best dog, Tyler, G. S. Merritt of Hartford; bitch, Stella, W. E. Hudson, N. Manchester. 2d Dog, Bluff, C. S. Davidson, Hartford; bitch, Gipsy, S. J. Pierce, Springfield.

Native Setters—1st Arful Dodger, Chas. Denison, Hartford. 2d Pat, John Johnson, Manchester. Best puppy, Red, O. S. Kelsey, Hartford; bitch, Ella, Clarence Lester. Gordon Setters—1st Nell, D. P. Atwood, Southington; Dog Max, W. E. Hudson. 2d Maggie, W. E. Hudson; Pup, Duke II, E. S. Brewer.

Pointers over 50 pounds—1st Best Dog, John Warburton, New Britain; 2d Rip, John M. Burke.

Pointers under 50 pounds—1st Mort, H. T. Jones, Hartford; Bitch Nell, J. L. Woodbridge; Queen, W. R. Tefft; Duke, S. G. Phelps. Pointer puppies—1st Gungachgoog, J. L. Woodbridge; 2d E. S. Brewer.

Cocker Spaniels—1st Ned, R. H. Ashmads; 2d Charles I. Mills, Jr. Fox Hounds—1st Loring Loomis, Hartford.

St. Bernards—1st Jack, Arthur Howard Nichols, Boston; 2d Leo, Charles Herold, Hartford.

Newfoundland—1st Major, Frank E. Hastings, Hartford; 2d Major, A. K. Brocklesby.

Coach Dogs—1st Fan, James Ferris; Spot, Dr. H. O. Bullock. Black and Tan—1st Gyp, A. E. Lines, Bridgeport; 2d Daisy, Mrs. Kirk, Bloomington, Ill.

Skye Terriers—1st Tatters, A. W. Rood, Hartford; 2d Posey, Warren Barr.

Miscellaneous—1st St. Bernard pup, Bruno, Frank E. Hastings, Hartford.

Bull Terriers—1st Beauty, G. D. Phelps, New York; 2d Crib, H. L. Frary, New Britain.

**THE TENNESSEE FIELD TRIALS.**—In response to the applications of numerous correspondents we give below a copy of the rules to govern the Field Trials to take place next month at Nashville, Tenn. As now amended and corrected, they admit of little criticism:

Rule 1. Managers of field trials must advertise the names of the judges at least thirty days before the trials take place, and in the event, from any cause, that any judge or judges are prevented from acting, then the executive committee shall elect a judge or judges to fill all vacancies.

Rule 2. Two dogs shall be run at a time, to be drawn by lot in the usual manner, except that no two dogs which are owned or trained by one person shall be run at once. When two such dogs are drawn together, one shall be run only, and he with another dog which shall be immediately drawn, and the dog which was drawn and left over shall be drawn for again. If, at the latter end of a trial, it be found impossible to avoid running two dogs together which are owned or trained by the same person, it may be permitted.

Rule 3. In this class if dogs do not drop to shot but remain quiet in a manner not liable to do any harm, it shall not be considered a demerit.

Rule 4. If in the opinion of the judges the day is such that a dog running from 12 to 3 p. m. runs under disadvantages owing to the weather, the judges may, if the owner demand it, give such dogs another trial.

Rule 5. Each dog shall have the opportunity of making five points on game. Having made five points they shall be taken up and their positive totals for merit shall be reckoned according to the scale of points in rule 6. The privilege is granted the judges of ordering any dog up when the score of such a dog is such that he cannot win.

Rule 6. Positive points for merit: For each point, 5; back ing, 0 to 5; staunchness, 0 to 7; retrieving, 0 to 5; quartering and ranging, 0 to 7. Quartering and ranging is understood to embrace ranging far or near as the necessity of the case may require. Style, 0 to 5; pace, 1 to 12. Negative points for demerit: Each false point, 3; each chase, 3; breaking shot, 3; flushing counts a lost opportunity to point; failing to back counts a lost opportunity to back. Dogs to have one opportunity to back; the score to count for or against the dog, as the case may be. Two chases on birds to put a dog out of the stakes.

Rule 7. In case of running off ties, each dog shall have the opportunity of making three points on game. Ties can be divided by the consent of all the owners of dogs making the ties. Should it be impossible to run off the ties the same day, they shall be run off the day following.

Rule 8. No spectators are allowed nearer the handler of dogs than seventy-five yards to the rear. No spectators or others shall make any remarks about the dogs or judges in hearing of the judges; such persons so offending shall be expelled from the grounds by the judges, who shall order the special police to eject such persons offending. Should any handler of dogs annoy the judges in any way, the judges shall order such handler of dogs to desist; should he still annoy the judges, the judges shall order such dogs as he is handling up and out of the race. The privilege is granted the handler of dogs to ask the judges for information or explanation that has a direct bearing on any point at issue; pending such question the handler of dogs shall order his dogs in, and cease to hunt until the judges have rendered their decision.

Rule 9. Pointing hares, stink birds or turtles shall not be considered a false point; but pointing any bird but those generally considered game birds shall be deemed a false point. Any dog making a false point and discovering it to be such himself, without encouragement to go on, shall not be penalized for making a false point.

Rule 10. Under the head of retrieving, the judges will only allow those dogs the maximum number of points who do their work without the handlers going with them to show them the bird, and without mouthing or mutilation.

**PUPPY STAKES.**  
Rule 1. Dogs over eighteen months old shall not be eligible for the puppy stakes.  
Rules otherwise same as above.

**BRACE STAKES.**  
The rules shall be the same as those for all aged pointers and setters, except that two dogs owned or trained by the same person may be run together; and that in case one dog of the brace retrieves, and the other does not, only one half of the number of points for retrieving shall be allowed.

Next week we hope to announce the judges. Exceptions have been taken to their appointment so long before the trial, but we cannot think it will in the least influence the decisions as with the above rule the best dog only can win. The trials open November 2d.

**SALMON FATAL TO DOGS.**—The *Portland Bee* says salmon, when eaten by dogs, invariably proves fatal, and many valuable dogs are lost in this way, the owner being ignorant of the cause of death. Hunters avoid accidents of this kind by feeding salmon to the nursing puppies, and it does them no harm to eat the fish afterward. This is an important item when valuable dogs are kept near streams frequented by salmon.

This is by no means the first time the above statement has appeared in print, and it seems needless to say that the yarn has no foundation on fact. The story evidently originated from the death of dogs after eating canned salmon, their decrease not being due to salmon, but to the canning, by which a large quantity of lead is incorporated with the fish. Whole families have been thus poisoned, but the difficulty is easily obviated by placing the can in hot water and heating thoroughly, raising the temperature to the boiling point.

The dogs of Siberia and Alaska live almost entirely upon salmon, and a hardier race of mongrels rarely exist; fish also constitute almost the entire food of the Labrador dogs. The bones that may lodge in the *Prima via* only are to be feared. With nursing puppies the chances would then be far greater for the death of the dogs, as their alimentary apparatus at this time is entirely unfit for the digestion of fish.—Ed.

**AN INTELLIGENT DOG.**—We hear much of the intelligence of dogs, and the many wonderful and well vouched instances that are recorded can scarcely cause surprise at any new proof of sagacity. The following from Belgium has been commented upon severely, but there seems no reason for doubting that dogs are capable of all the reasoning faculties here implied:

A certain Monsieur N—, going on foot from Leuze to Lessines, in Belgium, took with him his dog, which he was anxious to get rid of; but as he was unwilling either to drown him or to shoot him, he resolved to lose him on the way. The dog, who, instead of kind words and caresses, received nothing but threats, seemed to understand his master's project; he kept quite close to his heels, and would not leave him for a moment. N—, obliged to sleep out for that night in order to finish his business, went to the inn, and said to his four-footed companion, instead of good night: "To-morrow, you rascal, I shall take the train, and you will have to walk about here." He then went up to his room and went to bed.

The next morning, great was N—'s surprise to perceive when he got up that one of his socks and his waistcoat were missing. The landlord when questioned maintained that no one could have taken these articles as no other stranger had been lodged in the inn. They were all searching and wondering, when they found in a corner of the house the dog, who had been so threatened the evening before, lying upon the stocking and waistcoat of his master. The poor animal seemed to have wished in this way to prevent his master from starting without him. N—, admiring the sagacity of his dog, no longer tried to get rid of him.

**GUN-SHYNESS.**—It is sorely discouraging to the sportsman, after purchasing a setter or pointer puppy, apparently well-bred and of good points, and successfully bringing him through the many ills the young dog is heir to, to find the pupil gun-shy, when that portion of his education where the gun is used, is reached. No definite cause can be assigned for this weakness, and we are fain to believe it to be more or less inherent—due to heredity. To enter upon a full discussion of this subject and the various causes assigned, would demand a volume.

Another not improbable cause is breeding from either broken down or worn out animals, or from those whose extreme youth renders it impossible for them to beget perfect offspring. Too close inbreeding is also objectionable for the same reasons. Many fine bred puppies are, however, too high strung, having an extremely sensitive nerve organization, and to the carelessness with which such are handled may be largely attributed their gun-shyness. This is especially the case with setters, who are much more liable to cerebral or brain affections than is generally supposed. If the causes of these attacks were known, we could the better suggest a cure. A friend, an army surgeon and a thorough pathologist, desiring further light upon this subject, obtained a notoriously gun-shy animal for anatomical purposes. He was unable to prosecute his researches as thoroughly as desired, but discovered sufficient disorganization of nerve material to lead him to believe gun-shyness to be but a symptom of disease. If the animal is gun-shy merely as the result of alarm or some transient impression, it may be corrected with care and the exercise of patience. The treatment must accord with the peculiar temperament of the animal, and will depend largely upon the astuteness of the owner. Moderately gun-shy animals have been cured by discharging fire-arms slightly loaded, or but capped to begin with, in their presence, before feeding, causing the dogs to associate the report with the pleasure of satisfying their hunger. This may be used to advantage, oftentimes, even with old dogs, by bringing them to the verge of starvation. But, as before remarked, this is a problem the solution of which, each must work out to his own satisfaction. As "an ounce of prevention is worth a pound of cure," so too you will find that the earlier you indoctrinate your puppies with a love for the gun in some such method as stated the less frequently will you have to complain of gun-shy animals in your kennel. At all events, if you are so unfortunate as to have such an animal, do not give it up as incurable without an earnest attempt at eradicating the habit. Moreover, we pay some respect to the theory that dogs become gun-shy after a certain age, those periods varying with the different species of dogs. Just as with old people, so do the nerves of old dogs become weak and sensitive. Setters and pointers become gun-shy after reaching their fourth to sixth year.—*Hall's Sportsman's Gazetteer.*

**DOGS THAT EAT EGGS.**—Mr. Wakeman Holberton writes: "In reading over your valuable paper to-day, I find the heart-rending complaint of F. G. S. I have suffered myself from the same trouble. After a few smart floggings I thought I had cured my dog, but a few mornings afterward my youngest informed me that Shot had just stolen another egg 'and his mouf was all covered with it.' I remembered the advice I had seen somewhere about giving the offender an egg hot out of the water, so I said I would try it; and so I proceeded to do so notwithstanding the opposition of the entire household. The egg was put in boiling water, and when considered sufficiently hot I took it in a napkin out on the back porch, followed by my anxious family, who came to witness the agonies of the poor victim. I caught the puppy by the neck and crammed the egg into his mouth. He gave a howl, the egg, smashed, and he ate up even the shell and licked the remains off of the floor with evident delight. I have since, by a vigorous application of the whip, cured him completely, but have no more confidence in the hot-egg cure."

**STOIC OF A SKYE.**—A skye belonging to a friend in Bos, ton deliberately committed suicide a few days since, by throwing itself from a third story window. He had been in the habit of standing on the balcony and watching the passers-by. On the day in question he seemed mumpish, paying no attention when spoken to. After occupying his usual station for some time, he returned through the window to the further side of the room, wheeled, and rushed out, leaping the railing, and falling into the street beneath. This is by no means the first case of suicide by a skye that has come to our notice, all of the breed seemingly being so disposed. One voluntarily drowned himself by holding his head under water, while another leaped from a wharf and sank, making no attempt to save his life, though a good swimmer.

**TO BREEDERS.**—We would call the attention of breeders of fine stock, generally, to a work published by Lindsay & Blackiston of Philadelphia, entitled "Acton on the Reproductive Organs." To dog breeders it is more than valuable, embodying many physiological principles to be found nowhere else. Though written with reference to the human subject, its applicability is apparent to any one; and the language, while refined and chaste, is at the same time a miracle of simplicity. Price \$3.00.

—The municipal dog tax of Paris is estimated at \$133,860 for 1878. It has increased in thirteen years fifty-five per cent. While the love of dogs thus grows greater, the love of sport seems, to judge by the revenue from shooting licenses, to abate.

—A constable of Washington, Connecticut, was fatally shot by a tramp whom he sought to arrest. The officer's dog instantly sprang upon the tramp, dragged him to the earth, and held the rascal until assistance came, and he was secured.

—A dog in Sierk, France, returned good for evil. His master, a peasant, attached a stone to his neck and threw him into the Moselle. The poor brute sank but the cord broke, and he rose to the surface and made desperate efforts to get into the boat. His master pushed him repeatedly with an oar, and, at length stood up and endeavored to strike him a violent blow. In the attempt the man fell into the water. The dog swam to him and held him up by the clothing until aid arrived.

**A DOG'S FATAL ENTHUSIASM.**—The Dayton (Ohio) *Journal* of the 4th inst. contains the following: "Dan, an intelligent black-and-tan dog at the Arlington House, committed an indiscreet act yesterday that cost him his life. He was up in the third story of the building when two dogs on the street below engaged in a fight. Dan sprang to the window and looked down on the combatants, his indignation rising to fury as he watched the struggle. At last his excitement went beyond control, and with a leap he cleared the window and bounded into space. He fell on the stone pavement with a slight whimper, unable to rise, both fore-legs being broken by the fall. There was a wistful look in his eyes, but there was no hope, and the report of a pistol signaled the end of poor Dan's career."

A man stole a dog in Cookstown, Ontario recently. The theft being detected he promised its return to the owner the following day. At the appointed hour a package was received by the victim, on which was written "Here is your dog;" but on opening it the astonished man discovered ten pounds of freshly made sausages! He was an editor, and so accepted them.

—Prince Bismarck possesses a dog which is lean and black, inseparable from its master—evidently a familiar; will not follow him to the Emperor's presence, or when the prince wears his helmet; and on hearing the word "Reichstag," lowers its head, drops its tail and flies forthwith. It can't bear French poodles, and always howls when it sees an English newspaper!

—At the kennels of John M. Niall, Esq., Killalee, Ireland his red Irish bitch Sal, whelped on August 1 nine (five dogs and four bitches), sired by the dog Derg, lately imported by B. W. Jenkins, Esq., Jr., Baltimore. Six of these puppies are without white, like their sire, three having small stars on forehead; all are a very deep chestnut red.

**SAN FRANCISCO BENCH SHOW.**—The proposed show promises to be a success, if we may judge from the able committees selected for its management, and which includes the names of Mr. J. B. Pond, Mr. Wm. B. Barton and Mr. Wm. A. Andoe.

An Exchange that seeks to be funny says "The only certain cure for fleas on dogs, is to soak the dog for five minutes in benzine, and then light him."

There it is! the old story of the frogs and the boys. Supposing some one should light the paragrapher when he is soaked in benzine?

## Sea and River Fishing.

### FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*,  
M. nigricans. Bluefish, *Pomatomus saltatrix*,  
Mascalonge, *Esox nobilior*. Spanish Mackerel, *Cybinus maculatus*,  
Pike or Pickerel, *Esox lucius*.  
Yellow Perch, *Perca flavescens*.  
Sea Bass, *Sciaenops ocellatus*.  
Striped Bass, *Morone lineatus*.  
White Perch, *Morone americana*.  
Cero, *Cybinus regale*.  
Bonito, *Sarda pelamys*.  
Kingfish, *Menticirrhus nebulosus*.

**FISH IN MARKET.**—There is a noticeable scarcity of fish in market, owing to the heavy storms of the past week, and a consequence rise in prices.

Our quotations are as follows: Striped bass, 25 cents per pound; smelts, 20 cents; bluefish, 10 to 12 cents; salmon, frozen, 80 cents; mackerel, 15 to 18 cents; white perch, 15 cents; weakfish, 12 cents; Spanish mackerel, 30 cents; green turtle, 15 cents; terrapin, \$15; frost fish, 8 cents; halibut, 15 cents; haddock, 8 cents; king-fish, 25 cents; codfish, 8 cents; black-fish, 15 cents; native herrings, 6 cents; flounders, 8 to 10 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; scallops, \$2. per gal.; soft clams, 30 to 60 cents per 100; Salmon trout, 18 cents; black bass, 15 cents; sheephead, 25 cents; whitefish, 16 cents; pickerel, 15 cents; yellow perch, 10 cents; hard shell crabs, \$3 per 100; soft crabs, \$1.50 per dozen; frogs, 45 cents per pound.

**MAINE.**—Naples, Oct. 8.—Land-locked salmon are abundant at Edes Falls, flowing into Sebago Lake. They average 10 and 12 pounds.

**MASSACHUSETTS.**—Gloucester, Oct. 5.—The schooner Herman Babson caught last Sunday, off Cape Elizabeth, a trunk turtle measuring seven feet across the back and six feet in length, and weighing 600 pounds. It differs from other species of turtles in having the carapace overlaid by a leathery skin instead of horny plates, and this skin is easily punctured by a sharp instrument. The head is large, narrowed in front of the eyes, with small circular nostrils and large eyes, with lids opening nearly vertically; jaws apparently very strong and sharp-edged; neck short and thick, and the anterior limbs are twice as large as the hind ones.

**Winchendon, Oct. 4.**—Postmaster E. S. Merrill has returned from his Maine fishing trip, and as a proof of his success has on exhibition at the post-office a nine-pound trout. This is the second one of that size he has taken in Maine waters.

**Plymouth, Oct. 5.**—Large numbers of black bass have been caught here the past season, they run larger than any previous year. Mackerel (halves) numerous off here, but not biting readily; they have been fished for with smelt rigs lately, biting these when they wouldn't look at jigs.

**New Bedford, Oct. 5.**—This week the Pasque and Cutty-chunk Clubs close their houses for the season after a rather unfavorable season, although for the past two weeks bass fishing has been quite good among the islands of our bay. Willie Nye caught twenty-one bass in a two days' cruise, the largest weighing 13 pounds. In fresh water fishing the black bass are now in favor. Several have been caught in this vicinity weighing 3½ to four pounds each. Our ponds are becoming well stocked with them.

**MOVEMENTS OF THE FISHING FLEET.**—112 fishing arrivals have been reported at this port the past week, 10 from the

Banks, 32 from Georges, 1 from the Bay of St. Lawrence, 11 from shore fishing trips, and 58 from mackereling trips offshore. A few of the mackerel fleet report good fares, but the stock on the market is small and prices remain good. The receipts of fish the past week have been 310,000 lbs. Bank codfish, 550,000 lbs.; Georges codfish, 300,000 lbs.; halibut, 330 bbls. Bay, and 1,600 bbls. shore mackerel.—*Cape Ann Advertiser, Oct. 5.*

**PENNSYLVANIA.**—Bristol, Oct. 4.—Black bass fishing in the canal is good, though the fish average small, few being over four and six inches.

*McCall's Ferry Oct. 4.*—Black bass bite freely in the Susquehanna. A party of Philadelphians have had excellent success.

*Glen Hope, Oct. 3.*—Pike are abundant in Little Clearfield Creek. Fine catches are made.

**MICHIGAN.**—Port Huron, Sept. 29.—Messrs. J. H. N. P. and J. M. White, W. and H. Botsford, and Lieut. Duif, have just returned from a fishing and hunting excursion along the Au Sable River. The excursion commenced at Osego Lake, from whence the party floated down Au Sable River to its mouth, camping on the shore at night, the trip occupying three weeks. The party caught an immense number of grayling, and shot one deer, with a large number of duck, and partridge. At the main stream they were joined by Mr. Geo. Crane, of Port Huron, and Mr. N. J. Krusen, of Imlay City. They report having had a very enjoyable trip. Mr. J. M. White made a large number of views along the river.

**Detroit, Oct. 8.**—September 25th, Lewis Hallock and a couple of friends made a string of 40 black bass. On the same day Jabez Geer landed a muscalonge that weighed 23 pounds. On the 2d inst. Eugene Robinson, J. E. Sexton and Marshall Godfrey caught 25 black bass. Oct. 3. H. M. Dean caught 10 fine bass; same day Messrs. Godfrey, Robinson and Sexton caught 22 black bass and three pickerel. On the 3d inst. Frank Martin came in from a four days' cruise with 220 black bass and a wagon load of pickerel. One of the bass weighed six and a half pounds, which was the largest caught in that vicinity this season.

**Mackinac.**—Fishermen are busy, making good hauls. Less trout are seen, however, though whitefish are more abundant. The season is over for tourists; cold weather has set in, and we will soon be out of the world; and the boarding-house keepers will no longer furnish young herring with docked tails fried in meal for brook trout. Have just heard of great numbers of "gray perch" being caught over at Point of Ignace. [Gray perch means black bass I presume.]

**CANADA.**—Kingston, Ont., Oct. 6.—The Collector of Customs at this port has posted a notice that any party from the United States who shall enter Big Bay and other places on Wolf Island, or any other place on the Canadian side with boats, skiffs, guns, decoys, nets or otherwise, for the purpose of shooting or fishing, and shall fail to report and enter the same at a Custom-house in Canada nearest to the place where they are going, shall have such boats, skiffs, guns, etc., seized according to the law.

**EELS AND MILL-WHEELS.**—The Passaic, N. J., mills were compelled to suspend operations last Friday, by the stoppage of the turbine water-wheels. When the water was drawn off the wheels were found to be choked with eels, which had been washed in by the froshet. More than four bushels were removed, and the mill-hands had a supply of food for two days.

**CORAL FISHING.**—France, as is well known, provides the world generally with coral. The *Sicel* gives some valuable information as to Mediterranean coral fishing, which furnishes employment to a far greater number of people than is generally supposed. The process employed is exceedingly simple, consisting of two long beams of wood forming a square cross, in the centre of which a heavy weight is attached to sink the machine into the sea. To each of the four arms of the cross are attached fibres of hemp or rope yarns, all of which are united by a rope, so that when the apparatus is put in motion by the movement of the vessel, it catches, loosens and retains all the fragments that come within its reach. When impeded headway gives evidence of sufficient harvest the boat is stopped, and the hard labor begins. Now the capstan is manned, and with difficulty the heavy cross, laden with booty, is lifted from the water, and hoisted to the deck. The work is incessant, the fishermen laboring on an average of eighteen or twenty hours each day, and when the weather is unpleasant, as is often the case on the African coast, they have not a moment's rest, as the ship lies in port only sufficiently long to unload.

## Rational Pastimes.

**UNION ATHLETIC CLUB.**—Boston, Oct. 9.—The second annual fall games of the Union Athletic Club of the Y. M. C. A. took place on the Boston Base Ball Grounds. Gold and silver medals were awarded. The programme was as follows:

Putting the Heavy Shot—Six entries. Won by P. Johnson, 55ft 2in, and G. A. Walker, 32ft 9in.

One Hundred Yards Run—Five entries. Won by F. S. McQuinn, of Waltham, in 11s.

One-mile Walk—Five entries. Won by E. C. Holske, of New York, in 7m 49s; C. P. Daniels second in 7m 51½s.

Throwing the Sixteen-pound Hammer—Won by P. Johnson, who made 76ft 5in; W. W. O'Connell, of Br. Okline, second, 72ft 5in.

Three Jumps—Won by J. Travitt, of the Pawtucket Boat Club; G. A. Walker second.

Half-mile Run—Six entries. S. Crebore won in 2m 25½s; J. T. Williams second, in 2m 29s.

Running Broad Jump—Won by P. Johnson, who made 20ft 6in; W. T. Livingston, of the Harlem Club, second, 20ft 2in.

Three-mile Walk—Eight entries. E. C. Holske, of New York, took first prize in 24m 49½s; O. C. Woback second, in 25m 44½s.

Quarter-mile Dash—Six entries. Won by C. C. Alen, of Watertown, in 55½s; A. L. Brackett second, in 59½s.

Running High Jump—G. H. Carver won by jumping 5ft 2in; A. L. Brackett second, 5ft.

One-mile Run—Won by G. F. Klingman in 5m 15½s; T. C. Riley second, in 5m 31s.

**MYSTIC BOAT CLUB ATHLETIC GAMES.**—The first annual games under the auspices of this club were held at Waverley

## A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[Post Office Box 2882.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

## Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

\*\* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 11, 1877.

## To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

Business Manager.S. H. TURRILL, Chicago,  
Western Manager.

## CALENDAR OF EVENTS FOR THE COMING WEEK.

**Friday, Oct. 12.**—Trotting: Frederick, Md.; Leavenworth, Kan.; Columbus, O.; Beacon Park, Boston. Base Ball: Hartford vs. Rochester, at Rochester; Alaska of N. Y. vs. Chelsea, at Union Ground.

**Saturday, Oct. 13.**—Running meeting at Jerome Park, N. Y. Base Ball: Monticello of Jersey City, vs. Jefferson, at Carlstadt; Crystal vs. Alaska of Staten Island, at West Brighton; Lowell vs. Fall River, at Lowell, Mass.; Athletic vs. Alert, at Philadelphia; Boston vs. Buffalo, N. Y.

**Monday, Oct. 15.**—Trotting: Point Breeze Park, Philadelphia; Albany, N. Y. Running meeting at Nashville, Tenn. Base Ball: Hartford vs. Alaska of Staten Island, at West Brighton; Alaska of N. Y. vs. Quickstep, at Centennial Grounds; Boston vs. Chicago, at Chicago.

**Tuesday, Oct. 16.**—Trotting as above. Mystic Park, Medford; Cincinnati, O.; Massillon, O.; Fleetwood Park, N. Y. Base Ball: Boston vs. Chicago, at Chicago, Ill.; Alaska of New York vs. Quickstep, at Centennial Grounds.

**Wednesday, Oct. 17.**—Trotting as above; also at Princeton, N. J. Running meetings at Nashville, Tenn. and Raleigh, N. C. Base Ball: Alaska of N. Y. vs. Orange, at Centennial Grounds. Regatta: Metropolitan Rowing Association, at Elm Park, Kill Von Kull; Single sculls, free to all, at Owego, N. Y. Cricket match, under auspices of St. George's Cricket Club.

**Thursday, Oct. 18.**—Trotting as above. Running meetings as above. Base Ball: Alaska of N. Y. vs. Alaska of S. I., at Centennial Grounds. Cricket as above.

—We hear many complaints from subscribers, who find that post masters and their assistants remove the FOREST AND STREAM from the wrapper, and read it before delivery. We have the names of several offices where this is carried on. A repetition will cause a complaint to the Post Master General. Post master or clerk may obtain the paper gratis by procuring us a club of five.

**CLERICAL SPORTSMEN.**—Dr. Henry M. Field, editor of the *Evening Post*, has some sensible comments on ministerial hunting and fishing. The annals of sporting show the names of many prominent clergymen who have proved themselves no mean adepts with the rod and gun, and we appeal to the parishioners of the hundreds of pastors who have been off this summer to the woods and streams, if their sermons have not gained something from their vacation sports.

## A NOBLE AMBITION.

THERE is now in New York a young man who has lately attained a most creditable fame as a scientific explorer, and who is preparing for another departure to South America, the field of his former operations. We refer to Mr. Ernest Morris, who, by his zeal and intrepidity, is fast winning the admiration of the whole country.

Ernest Morris is a native of Indianapolis, Indiana, where his enthusiasm in natural history and desire to be a discoverer manifested itself in earliest boyhood, and, fortunately, was fortified by his parents. At seventeen, with two companions, a man and a boy, Morris embarked on White River for a summer voyage; but the boat soon upsetting, the interest of his companions in the project was quickly lost, and they turned back. Morris, however, picked up the boat, baled it out and paddled down stream alone. On reaching the Ohio he went down to the Mississippi, and so on to its mouth, and, with only a few dollars in his pocket, made his way to Florida to explore the everglades. The collection of shells and insects that he brought home with him he sold for a considerable sum, and devoted himself for some time thereafter to study.

A year or two later, however, he left his home again and sailed for South America—a boy of nineteen, poorly equipped, uninitiated, but filled with intense enthusiasm and made of the right stuff. This expedition was, however, mainly a preparatory experience. He traveled up and down the Amazon, made valuable collections, learned to speak Portuguese and Spanish fluently, became acquainted with the natives and collected information for future use.

Returning to this country for a brief visit, he again departed for South America, something over a year ago, landing in Brazil with \$15 in his pocket, and started upon an exploration of the Tapajós, one of the larger southern tributaries of the upper Amazon, traversing a region totally uninhabited except by Indians, and almost entirely unknown to geographers. It was a most noteworthy undertaking, and carried forward in the midst of a life of peril and romantic adventure in the most creditable manner. He reached a point to which no white man had ever before penetrated, and proved both his skill and endurance. Upon this trip also the young explorer made as large records and collections as he could bring away, and among other things obtained a number of heads of Indians, preserved in a singularly perfect state by a process of smoking known only to the tribes among which he lived. These heads serve as trophies of victory, like the scalps of our Northern red-skins, and have attracted much attention. He was offered \$150 for each one before bringing them to the United States, but did not wish to dispose of them at that time. Now, however, he is anxious to sell them to some museum in this country. If they can be sold during the next few weeks he will be able to prosecute his explorations independently; if not, he is desirous of acting as collector or agent for some museum or society, and many such an institution will no doubt be glad to avail themselves of this opportunity.

The plan Morris intends to pursue in his proposed expedition, is as follows: He will sail from this city early this month of October, and, having made his way up the Amazon, will ascend the Xingu, one of its largest tributaries, which is utterly unknown beyond the rude accounts of Indians and half-breed traders. Even the Jesuit missionaries, who have penetrated further than any other white men, have been deterred from its ascent by the chain of turbulent and dangerous rapids in its stream and the known ferocity of the dwellers on its banks.

Morris describes the Xingu, at its junction with the Amazon, as "a broad black river, flowing between precipitous banks, heavily wooded with tropic vegetation." He intends to organize a large party of Mandurica Indians to carry his boats past the rapids, and beat back the hostile natives if they should attempt to oppose his passage. In his last expedition he reached the head waters of the Tapajós, and ascended one of its main tributaries, the Cururu, for some distance. The natives told him that the Cururu was only a canal connecting the Tapajós with the Xingu, and he proposes to determine this point definitely. He believes, however, that the Cururu does not join the two rivers, but rises only a few days' journey from the Xingu, so near perhaps that the waters of the two streams may mingle during a heavy flood. On the banks of the Cururu, his friends the Campanaries live, and he feels certain that they will assist him in his new undertaking. After exploring the unknown region through which the upper Xingu flows, he intends to go down the Cururu to the Tapajós and then ascend the branch called the St. Manuel, which the natives allege to be the continuation of the main stream. He thinks, however, that the Juruena is the largest upper tributary of the Tapajós, and he may decide to go up this stream instead of the St. Manuel. In either event he intends to penetrate to the great water-shed which lies between the headwaters of the Tapajós, Xingu and Tocantins, and the Paraguay River, the last the main stream of the Rio de la Plata. The region of this water-shed has never been explored, and if Morris succeeds the results of his exploration will be of undoubted value. After having made an examination of this region Morris intends descending the Paraguay and the Rio de la Plata to Montevideo and then sail from that port to this country, carrying with him the fruits of his expedition. He is determined to start on this tour of exploration poorly equipped rather than not at all; and we bid him good speed. It is a worthy ambition and one which ought to excite emulation everywhere.

## GAME PROTECTION.

THE GAME LAW IN CONNECTICUT.—Sportsmen in Connecticut are now improving the limited time which the law allots to them for shooting. There are few localities more prolific of small game than certain sections of Connecticut. That State is apt to be overlooked by outside sportsmen, who generally travel much farther for their game and fare worse; but for rabbits, ruffed grouse, snipe, ducks, and that comparatively rare bird the woodcock, we know from long experience that it is a locality to delight the soul of the gunner. A valued correspondent sends the following timely notes and comments:

HARTFORD, CONN., Oct. 1, 1877.

To-day the game law is off for this State, and for the coming three months the field is open to sportsmen to enjoy their tastes to their hearts' content. But the few weeks of the close season were made memorable by the exertions of the game clubs in the State in the enforcement of the law, and a lesson has been so thoroughly taught this season that we look forward to happy results in the coming years. Since my last letter on this same subject, giving the results of the week ending with September 22, the good work has been steadily pushed. Monday, September 24, the attorney of our game club and his detectives left on the early train for Williamstown, where a carriage was in waiting which took them over to Danielsonville, where a breaker of the law was arrested, tried, convicted, and made to pay a fine of \$22 and costs, but he afterward appealed to the Superior Court of the State.

The towns of Brooklyn, Plainfield and Norwich were visited in their order, and the game law made a reality to the violators of it, and not a myth as it has been in past years. As was stated in my last letter, no true, honorable sportsmen were found among those convicted, but the men were of the most lawless kind—a dread to farmers at all times and seasons, and their inability to move in the matter before was tempered by the chances of having their crops destroyed and their barns burnt.

An underground railroad seems to have been established throughout the State, and the birds were shot out of season for gain, packed in boxes labelled "butter" or "cheese," "keep cool," and thence transported to Providence, Newport or New York markets, a firm in Norwich being the collectors of the game and most interested parties. In fact a letter in the game club's possession, in answer to a decoy from one firm in this State, stated in the first part of their note "that although the game laws of Connecticut strictly prohibit the shooting of woodcock, quail, partridge, etc., before October 1, we will give you such and such prices per dozen for the above goods," showing their perfect acquaintance with the laws, but desire to break them nevertheless. Next spring we propose to handle the laws on the netting of brook trout in like manner, and woe betide the unfortunate victim who is captured. The good done by our attorney and his detectives can hardly be measured to day, but their results will be of lasting benefit to the State of Connecticut.

T. S. S.

—Mr. E. C. Bradley, of Dunkirk, N. Y., informs us that since the boys have sown wild rice in the vicinity, large quantities of rails have made their appearance over there, where they have never been seen before. Rails are found in Detroit, and as far west as the rice lakes of Minnesota; but they are not now considered by the gunners game enough to shoot. Perhaps, one of these days, they will be as glad to make a bag of these delicious birds as the Delaware pushers are. We must say, however, that the rails of the West are not generally in good condition except when found in the rice fields.

**VIRGINIA.—Tappahannock, Oct. 5.**—A Fish and Game Association has been organized with the plans and purposes of similar clubs elsewhere. Virginia sportsmen are taking steps in the right direction, and numerous sections are at last awakening to the necessity of efficient action.

**FLORIDA.**—A new game protective club has been organized at Tallahassee. The organization promises to accomplish much good for Florida, and the name of Judge Westcott, as its president, is a sufficient guarantee of its success.

**CALIFORNIA.**—The attempt to introduce English pheasants from New Zealand, which has not met with success heretofore, has again been made by some San Francisco sportsmen. The new birds which arrived the other day have been placed on Goat Island, where it is hoped they will thrive.

## "VIRGINIA VIGILANTES."

[FROM OUR SPECIAL CORRESPONDENT.]

VIRGINIA CITY, Montana, Sept. 10, 1877.  
IT is, I think, no injustice to most readers, though well-informed, to ask them to turn to a map of the Territories, and refresh their memory as to the location of this enterprising little town, which a decade ago was all there was of Montana. The southeastern corner of the Territory is continued into a triangular portion jutting southward between Wyoming and Idaho, the Rocky Mountains forming the boundary. In the centre of this corner the town is situated among the hills in which the Missouri takes its rise. The little creek at the town is a tributary of the Stinking Water River which flows into the Jefferson, the valley of which is not far west of the town; while a range of high hills only separates the village from the Madison Valley. The Madison and Jefferson both flow north and unite about fifty miles above Virginia City, where the Gallatin River comes in from sources a few miles east of the Madison's. The three streams together make the Missouri, and their point of confluence is known as the Three Forks of that mighty stream. It is the county seat of Madison County—a county four times as large as the State of Rhode Island, containing 60,000 acres of improved land, 40,000 head of cattle and sheep, 5,000 horses and mules, and \$500,000 of other property, and casting about 1,200 votes. It is the depot of supplies for the whole county, and the entrepot for the gold and silver produced in the region, nearly \$500,000 worth of which was shipped from here last year. As for the town itself, it contains eight or nine hundred people, is miserably situated in a narrow ravine, and has few beauties, being little more than a mining camp perpetuated. Such, hastily, is the Vir-

ginia City of to-day; but its history is full of exciting interest.

All the information the world had of this region until 1863, was that derived from the story of the explorations of Lewis and Clarke, who passed along the Jefferson in 1805. Trappers and hunters in the employ of the fur companies were its only visitors. But in 1863 prospectors from California entered the edge of the Territory, and finding gold on Grasshopper Creek, one of the western sources of the Jefferson, established a mining camp which they called Bannack, after the Indians in that vicinity, and went to work. There is now a town of considerable importance and good promise there, and the mines are still productive. But some of the men were restless, and a party under the lead of James Stewart started on a still longer trip, pushing clear over into the Crow country on the Yellowstone, where the Indians "traded" with them until nearly all their property was gone, and then came very near "purchasing" their scalps.

Controlled by fear of the Crows, defeated in their designs, and robbed of their horses and provisions, the party started back, little thinking that their calamities were blessings in disguise, and every step of their slow retreat was one pace nearer Fortuna's golden boon. They chose a more southern route than they had followed on the advance, the Indians following them out of the Crow country, and on May 27, crossed the divide between Virginia City and the Madison, halting to eat their dinner at the head of the gulch, which was filled with a dense growth of underbrush, and was named Alder Gulch forthwith. After lunch one of the men, William Fairweather, walked over to the side hill to watch the horses, and there found the rim-rock standing above the gravel. He began to dig with his belt-knife, and soon saw upon its point a flake of gold. Then he dug deeper, filled his pan, washed it out under the eager eyes of his brother Argonauts, and found \$1.75 in golden grains! It was the reward of five hundred miles of patient prospecting. What had seemed a disastrous failure became a glorious victory, and the fortunate explorers slept that night surrounded by beaches of gravel loaded with the precious mineral. They staked their claims, and named the district Fairweather, in honor of the man who first panned gold in Alder Gulch, whence forty millions of dollars have since been coined. The news reached Bannack, fifty miles distant, and a stampede began. Everybody who could get away came, seizing a horse, a few blankets and little provision; while many a man too poor for that tramped over the mountains afoot. It was a race all the way, and when the main body would stop for the night, a few men would steal away and travel into the new El Dorado before morning in order to be ahead in selecting a claim. Thus it happened that before the first two weeks of this June, of 1863 were gone, the boulders of the new gulch were ringing to the blows of three hundred picks, and the pretty rivulet was feeding half as many rockers. But the news traveled further—and, in truth, fared worse—than Grasshopper Creek. Emigrants to Oregon turned aside through the Deer Lodge Valley; a party came up the river from Minnesota, another great company known as the "Fisk Outfit" marched across from the east under government escort; and many drove in from Utah and California. All roads led to Alder Gulch. A town was built just off the bar, a long, straggling street of log huts, and the hillsides were dotted with cabins and dug-outs. It was called Verona, after Jeff. Davis' wife; and after the miners, poured in traders, whiskey-sellers, desperadoes, gamblers, thieves and prostitutes, and the crowd doubled and multiplied itself until ten thousand persons eddied about the places in a feverish haste for wealth. No one had time to build houses then. Those who had covered wagons to live in were aristocratic. The majority were content with wickiups of alder boughs or caves in the hillside. They were thoughtless of comfort, of health, of the future. Here was gold! Gold in the mud that clogged their boots, Gold in the dust that blew into their eyes, Gold beneath every pebble that glistened under the summer sun. For seventeen miles the bed of the river concealed a broad, gray streak under a blanket of boulders and soil, and a thousand claims were taken up. The weather during the first two years was favorable to the busy gold-diggers, and there were slight interruptions to this realization of a miner's dream. The shovel and pick were an Aladdin's lamp and ring that called boundless wealth from the vaults of Alder Gulch. "Verona" was soon changed to Virginia City, but no post-office was established until late in 1864, the mail being brought up from Corinne previous to that by the Express company—Wells-Fargo, of course—each letter or newspaper costing about one dollar. There were at that time stage-lines to Salt Lake and Bannack, and wagon roads were gradually becoming worn between Virginia City and the outlying mining camps that explorers were incessantly forming.

With the starting of the coaches, and the passage of treasure out in the pockets of passengers, began the reign of terror which for months made Montana a scene of outlawry, and resulted in the administration of the Vigilantes. The country was filled with desperadoes from California and outlaws from the East who reveled in murder and rapine. Crime was rampant; iniquity organized; no man's life was safe for a moment. Men were shot not alone for money, nor in the heat of quarrels; not alone in a spirit of revenge which followed and assassinated them in secret; but in broad daylight and surrounded by their friends—shot by men who did not even know their names—"Just for luck," the ruffians used to say. It was a common occurrence for a desperado to enter a dance hall with a whoop and a yell, and "turn loose" into the crowd just to see them scatter, or to shoot at the coal-oil lamps in the chandeliers till all the lights were out.

One morning a slight argument as to the merits of the meal arose between two men at breakfast, and was settled by one shooting the other across the table. A young stranger had just entered, and started to run back when the revolver came down to a rest, with the stern command, "Sit down and eat your breakfast, you —, or I'll kill you, too. The boy's appetite was not good, but he obeyed. A guardian was one day correcting his boy for some mischievous pranks, when an unknown man stepped up, and remarking, "I don't like this," presented a derringer. The boy escaped further punishment. Two men would conceive a dislike to one another, and one would send word that he would kill the other on sight. Such a compact existed between Ives and Carhart in '64. Carhart, pistol in hand, passing Ives' cabin, one day, saw the owner standing in front of it with his back turned. Waiting until his antagonist wheeled, the men caught sight of one another simultaneously, and both let drive at the same instant, one missing fire and the other his opponent by an inch! Carhart's second shot flashed right in Ives' face, and just missed again, while Ives' shot struck the ground. Then, both men jumped into cabins, and fired at each other across the street until Ives' revolver was empty, and Carhart had one ball left. As Ives walked off to make his escape, Carhart shot him in the back, the ball passing through and knocking up the dust ahead of him. The man was not at all dead, and cursing Carhart for a coward, ran to get another revolver, but his enemy escaped. Then they made up their quarrels, and lived on a ranch together all winter.

Two or three unprovoked murders and the massacre of a band of friendly Indians, merely for the fun of seeing them jump and run, caused an attempt at arrest and trial of some of the ruffians, but the whole thing was a miserable farce, and encouraged rather than checked crime. The leader of lawlessness at this time was Henry Plummer, a man of pleasing address and gentlemanly manners, making friends wherever he went. It was only when under the influence of liquor or anger that his demoniac passions appeared, and he became the terror of the neighborhood. Beginning his career as a citizen of Nevada, California, and becoming the sheriff there, his first murder was of a German named Vedder, whose wife Plummer had seduced. Hearing Vedder's footsteps approaching the house on one occasion, he ordered him to leave, which Vedder naturally declined to do under the circumstances—and died right there. For this Plummer was sent to the penitentiary for ten years, but was soon pardoned out. Then he went back to Nevada, and the next we hear of him was on the occasion of his beating a man on the head with his pistol, in a house of ill-fame, so that the man died soon after. No arrest being made for this, Plummer went over to Washoe and joined a band of highway robbers, who in the West are always called road agents. Attempting to rob a bullion express, his gun was at fault, and the driver lashed his horses into a speed that carried him out of reach before he could shoot again. For this he was tried, and escaped on technical grounds. Returning to Nevada City, he very soon got into another brothel quarrel, and shot a man dead, for which he was locked up, but walked out with a revolver in each hand, supplied to him through bribery. Next he helped a murderer to break jail, and, stealing horses, the two fled to Oregon, where they killed the owner of a dancing saloon, and then "went upon the road," for the purpose of baffling pursuit, sending word to the California newspapers that they had been hanged at Walla Walla. His comrade, seducing a man's wife in one of the villages of Oregon, met death at the hands of the husband; while Plummer started for the Missouri, intending to go to the States. On his way the news of the fabulous riches of Montana reached him, and joining the ferocious set of villains that followed the crowd thither, Plummer diverged to Bannack, killing a man at Orofino on the way. A former partner of Plummer's was Jack Cleveland, but the men had quarreled about a young woman, and were only waiting an excuse to fight. One day Cleveland entered a saloon where Plummer was, and got into a dispute with a stranger. Plummer instantly took sides against his former partner, and settled the debate by shooting him several times. Most of the persons in the room discovered that they had errands outside, but a man who was being shaved sat quietly, and the barber never ceased. One can get used to almost anything. Cleveland was not quite dead, but no one dared go near him, except a powerful miner named Hank Crawford, who comforted his dying moments. Coming out he met Plummer, and the two men looking at one another knew that a deadly enmity existed from that moment. At the mock trial of Plummer, where he was honorably acquitted, on account of Cleveland's threats, Crawford was sheriff. This increased Plummer's hatred, and it was only a short time until a shooting affray occurred, wherein Plummer's right arm was disabled, and his marvelous skill and quickness with the revolver ruined. However, he learned to shoot very well with his left hand.

Plummer was Sheriff of Bannack, and afterward of Virginia City, securing his election by a very potent method of "bull-dozing," and using his official character as a cloak for his misdeeds. He gathered about him a choice company of miscreants, and they made a business of stopping and robbing the stages, shooting the occupants if they offered the least resistance or were likely to prove troublesome afterward. Their arms were a double-barreled shot-gun, loaded with buck-shot, and two revolvers, and their method was to surprise the stage in some canyon, order every passenger to hold up his hands by a formula garnished with oaths, and then one of the robbers would search the pockets and disarm the vic-

tims, while the rest held loaded pistols at their heads. Finally they began to murder miners in their cabins, shoot them on their claims, stab them in the dark, for the chance money that might be in their pockets. No one was safe for an instant. It was not known who was in league with the road agents and who was innocent. A word of threat against them, or a movement toward investigation, only invited assassination. Law was null, justice was powerless. The revolver was the arbiter of all disputes. Something must be done.

That which aroused the community to this necessity at last was a rapid series of circumstances, beginning with a cold-blooded murder near Virginia City by George Ives, a miner, who had not always been a criminal, but had lately devoted his whole strength to robbery and shooting. As soon as Ives' hiding-place was known, a party of men surrounded it in the gray dawn of the morning, and at the muzzle of the rifle took Ives from the rest and carried him to town. He was tried before a jury, defended by lawyers, hung in the moonlight from the end of a pole.

The turbulence and illy-restrained resistance of the mob at this execution, and some terrible outrages, involving the massacre of whole companies of men, roused honest citizens to form themselves into a secret society for punishment. The idea was not an original one. Similar organizations for the preservation of law and order, whose tribunals were presided over by Judge Lynch, had purged California of lawlessness, and from them the Committee of Safety in Virginia City borrowed the name "*Vigilantes*."

The Vigilantes were made up of all classes of citizens—merchants, miners and professional men. Everybody who possessed any activity or had suffered any grievance were counted among these retributors. They had signs—a code of telegraphic signals—passwords and vouchers as to each other's faithfulness. The whole order-loving community recognized the necessity of their terrible vengeance, and supported them in sympathy if not in deed. In general the members of the committee were not known, and details, chosen by the general body, were assigned to the making of certain arrests and conducting the inevitable execution in as quiet and disguised a manner as possible. The effort usually was to hang their captive before he suspected that he was a prisoner, allowing no time for any plan of rescue or escape to mature. If their justice had the terror and swift surprise of a lightning-stroke, their work was guided by fair judgment and restraint on the whole; and when one thinks how many lives were at their mercy, and richly deserving their punishment, and considers how few comparatively were sacrificed, he will believe that more moderation than could be expected characterized their proceedings.

When the hand of the Vigilantes began to be felt in Virginia City, the desperadoes were alarmed. Here was a determined check to their lawlessness, against which their fury was wasted. They fled, and news came of the plague of their presence in other camps. The Vigilantes were not thus to be foiled, and "scouts" of determined men started in all directions after the miscreants. An armed police patrolled the territory, and no mining camp or isolated ranch or mountain cabin was obscure enough to hide these wolves of society. They suspected every man to be a Vigilante, were always prepared, and often were shot dead at last in defending themselves. But, if possible, the pursuers captured and hung them—hung them from limbs of trees, all seizing the rope together and running the condemned men twice their height off the ground; standing them on barrels and kicking the barrels out from under them the instant the noose was adjusted; balancing a plank over a stone and playing a short game of see-saw, with a road agent for counter-poise; suspending them four and five at a time from the rafters of new cabins, the gate-posts of corrals and the wheels of huge freight wagons; standing them on the tail-board of a wagon and driving out from under; seating them behind a Vigilante on horseback and putting spurs to the pony, who sprang away with but one rider; holding them high in their arms and letting them drop as far as the hemp would allow. Such were some of the methods of hanging, but the same irrevocable fate resulted from all.

Sometimes the ruffians would tremble, and plead and threaten in crazed and incoherent despair; prayer and menace alike unheeded by their stern captors. But ordinarily they died as they had lived, reckless of present or future, and profaning every sentiment which men deem worthy of respect. "Launch your — old boat; it's only a mud-scow anyway," ordered one as he stood on the shore of eternity. "Gentlemen, I'm green at this business, never having been hung before. Shall I jump off or slide off?" Being told to jump he leaped into the air, as one steps from his carriage after a morning ride.

The road agents rarely buried their murdered victims; the Vigilantes usually left the malefactors hanging where they put them, allowing friends to bury them where they pleased. Usually quiet and seriousness attended all executions. Spectators were always many, and sympathizers not a few; but a guard of Vigilantes stood about the gallows with cocked revolvers, and a movement in the crowd meant instant death. Once an outsider pressed against one of the guard, at the same time putting his hand in the bosom of his shirt. "Take away your hand, please," remarked the Vigilante, pleasantly, "I want to shoot just through that middle button." The hand came down, and the man kept his distance very carefully.

On one occasion, however, the hangmen were enraged beyond control. They went to the cabin of a Mexican named

Joe Pizantbin, known and feared everywhere as the "The Greaser." His crimes were numberless and bloody. Concealing himself in his hut, he shot the two men who first entered the door, killing one—a very popular citizen—instantly. The Vigilantes retreated. They could see no mark, and were sure of death if they approached. A mountain howitzer was not far away, and while some guarded, the rest brought the canon, and with shells and round shot soon demolished the building—no reply coming from the concealed foe all this time. Two men ventured near, and at last inside the house. From under the ruins of the chimney, knocked to pieces by a cannon ball, peered the Greaser's boots and by these they pulled him out. He was fatally hurt, but his six shooter was by his side, and as soon as he was free from the debris of masonry he reached for it. It was his last move. The man whom he had wounded at the door sat there waiting for him, and the Greaser's body was filled with bullets before his head had been dragged out of the hole. It was like killing a snake, and it was little better than a snake they were killing. But this was not retribution enough. They hung the body up, drawing all together on the rope as though the soul was still in the mangled, inanimate form and could appreciate its agony, and fired hundreds of bullets into the riddled corpse, swaying there so dreadfully. Then these were madmen cut it down, and setting a fire the ruined cabin cast the body on the blaze with savage glee, and loud laughter at inhuman wit, as they joked about his fate. The pyre and body were consumed together. The smoke of the dreadful revenge was changed to azure mist in the purity of the upper air, and, sun-gilded, like the wreath curling from your own loved hearth. The avengers washed the blood from their hands in a limpid brook, which strove for miles to free itself of this stain cruelly imposed upon it. The sun sank gloriously behind the purple mountains that seemed to blush at the memory of the sanguine sight they had looked upon. Darkness mercifully threw its mantle over the blood stained valley, seeking to hide forever the scene the day had witnessed, and soften men's hearts with its sweet influence. But the end was not yet. The morning sun cast his first glances on the last scene in this awful tragedy; and the worst, for it saw women washing the dead man's ashes in the pans from which to-morrow they would smilingly offer draughts of milk or crisp and snowy biscuits, to save the gold he might have in his pockets.

Drop the curtain. The incredible drama is ended.

Just how many persons the Vigilance Committee at Virginia city and neighborhood found it necessary to put to death I do not know. There were several scores, and the rest of the villains fled. When Slade was hung the last support of outlawry gave way, and the reign of terror was over. The Vigilantes slowly disappeared from view, but never disorganized, and every year since, even to the present week, has witnessed the assertion of their determined power in the form of secret warning to bad men whom the law would not or could not reach, which warnings, if not heeded, were followed by sudden and merciless administration of justice—justice, not in the technical construction of statutes; nor, on the other hand, as a name to hide malicious vengeance, but in fact, and as a protection to a widely-scattered and weak population, for whom theegis of government and law affords utterly inadequate shelter from the assassin and thief.

ERNEST INGERSOLL.

## OUR WASHINGTON LETTER.

THE EXTRA SESSION OF CONGRESS—PENDING MEASURES FOR THE PRESERVATION OF GAME AND FISH—THE GREAT FALLS FISHING CLUB—PROTECTION OF GAME IN VIRGINIA—RUFFED GROUSE SHOOTING, ETC., ETC.

[FROM OUR OWN CORRESPONDENT.]

WASHINGTON, D. C., Oct. 6, 1877.

As the time approaches for the meeting of the extra session of Congress, Washington begins to have a more lively appearance, but, as the columns of FOREST AND STREAM are not given to politics, I do not propose to say anything about the work of the session or the anticipated wrangling over passing events. These beautiful autumn days bring too much pleasure to the sportsman's heart to have him waste time in studying useless political schemes. The object of this journal is to encourage health-giving out-door sports and exercises, instead of devoting valuable space to praising or condemning politicians and their measures. There are, however, two or three matters stowed away in the pigeon-hole in the capitol building in which sportsmen are interested. I refer to the bill to prevent the useless slaughter of buffaloes within the territories of the United States; another for the preservation of game; for the protection of birds, and in relation to dogs in the District of Columbia; petitions from the Legislatures of Maryland and Virginia favoring an appropriation for the erection of a fishway at the Great Falls of the Potomac; resolution of the Senate instructing the Committee on Commerce of that body to inquire into the extent and condition of the salmon fisheries on the Columbia River in Oregon, and Washington Territory, and to report such measure as may be expedient and proper for the regulation of such fisheries and the artificial hatching of salmon in that river. These, with various other measures of a kindred nature which have from time to time been brought to the attention of Congress, were referred to in detail in my previous letters, but I am sorry that I have not been able to note the passage of a single act to carry any

of these propositions into effect. As the coming session will be a long one, there will be plenty of time to consider these matters, and it is to be hoped that persons interested in the passage of good and wholesome laws, having in view the multiplication of fish, protection of game in the Territories and District of Columbia, over which the National Legislature has supreme control, will urge upon Congress the necessity for such laws.

### THE GREAT FALLS FISHING CLUB,

an organization of gentlemen formed for the purpose of enjoying the bass fishing of the Upper Potomac, having plenty of boats and ample facilities for the sport, have had poor success this season, although it numbers among its members some of the most expert anglers of this vicinity. One drawback has been the muddy condition of the river which has prevailed during a greater part of the summer. Mr. Oppenheimer, one of the oldest members of the club, who has probably taken more bass during the past ten years than any other angler of this district, in a recent conversation with your correspondent, expressed the opinion that the bass bite slowly now on account of the great abundance of minnows in the river, upon which they feed, and therefore are not tempted by the sight of a live minnow on a hook. The largest fish taken by him this season was with a crawfish bait, but there is great difficulty in obtaining bait of this character. This gentleman also declares that experience has taught him that bass feed extensively on moonlight nights, and are not apt to bite ravenously upon the days succeeding such nights. At the Point of Rocks, one of the most desirable fishing places on the river, he only captured three during one day, and he attributes his poor success to the bright moonlight night which preceded the day's fishing. On another occasion, in company with Mr. John Hancock, also an experienced angler, he fished at a less desirable point during a cloudy day succeeding a dark night, and the two captured seventeen bass, some of them weighing three and a half pounds. The club now has its headquarters at the seven locks, about a mile above Cabin John Bridge, and eight miles above Georgetown. Their favorite fishing place is at the foot of what is known as Stubblefield Falls, and in the waters for a mile below. Within the past ten days the bass began to bite more lively, and our anglers were anticipating fine sport this month; but the very heavy rain of Thursday last has caused a freshet in the Potomac, and there is no prospect of any fishing for two or three weeks yet.

### GAME PROTECTION IN VIRGINIA.

During the approaching Virginia State Fair, which opens at Richmond on Tuesday, Oct. 30, a convention will be held in that city for the purpose of securing concert of action throughout the State toward the enforcement of laws for the protection of fish and game. I notice the Alexandria Gazette recently published the new game law, prefaced by the statement that information had been received from numerous correspondents in different sections of the State, and from several in the counties adjacent to that city, that, either from ignorance or a bold contempt for the authority of the State, it was a dead letter and its provisions were utterly disregarded, and that in consequence thereof game of all sorts in Virginia will soon be classed among the things that were. The Fish and Game Protective Association has been in existence about one year only, and, through its efforts, wholesome game laws were passed by the Legislature at the last session. It is to be hoped that the approaching convention will arouse an interest in these laws throughout the State, and adopt such measures as will secure their prompt enforcement. In an address issued by the association to the people of Virginia, they first speak of the public mind having become quiet through the restoration of good local government to the several States of the South; the universal desire throughout the Old Dominion to get the State in a shape to be attractive to other people as well as valuable to her own citizens, and say:

"The space of a single generation, or century in fact, is a trifling element in the life of a people; yet we, in Virginia, but three hundred years old as a community, have dealt with the bounties of nature as if a posterity were wholly denied to us. Our timber has been wasted in the most reckless manner, and no care taken to preserve our oysters, fish and game. As to fish, ex-Governor Seymour, of New York, was not far wrong when he said: 'There is more nutritious food in an acre of water well stocked with fish than in the best wheat-growing farm in the State of New York.' And as to game, aside from the pleasure of hunting, it is impossible to estimate fully its value in the destruction of the insect enemies to our cultivated crops."

The people are urged to form game protective associations in their respective counties for the purpose of aiding in the enforcement of the laws, as the work must be done by associated action to be effective. The association does not presume that the laws now in force for the preservation and protection of fish and game are perfect; nor can they be made so without an interchange of opinion representing all portions of the State. They express the hope that the creation of associations working together will go far toward an arrangement of these laws on a basis that will insure the greatest good to the greatest number; and in conclusion say:

"When we consider, aside from the reasons set forth in the foregoing address, the additional attraction to immigrants, presented by woods well stocked with game and streams with fish, we at once see how worthy the objects herein exhibited are of the very best efforts we are able to put forth to compass them."

As many sportsmen of this city, Baltimore and Philadelphia do their fall shooting in Virginia, it will be well for them to remember that partridges cannot be shot from and after the 15th of October as heretofore. The close season under the

new law does not expire until the first of November. It is made unlawful to kill, capture, offer for sale, or buy, any partridge (*Ortyx virginianus*) between the first day of February and the first day of November, under a penalty of \$10 for each offence, the offender to be imprisoned until the fine is paid, providing the term of imprisonment does not exceed a period of thirty days. The close season for ruffed grouse (*Bonasa umbellus*) expires on the first of August, and they can be killed from that time until the first of February. For woodcock (*Philohela minor*) it expires on the first day of July. Water-fowl cannot be killed between the first day of April and the first day of September, except the summer duck (*Aiz sponsa*) and sora (*Porzana carolina*). Wild turkeys (*Meleagris gallopavo*) cannot be killed between the first day of February and 15th of October. The law also forbids any one killing or capturing deer within the State between the 15th day of December and 15th day of August.

In Alexandria a game protective association has recently been formed and is now doing good work. One of the papers of that place in speaking of the association says:

"The number of pot-hunters from Washington, who invade the fields and marshes of this county, have made the organization of this society necessary. It proposes to see that the same laws are strictly enforced."

### PHEASANT OR RUFFED GROUSE SHOOTING

In Virginia frequently affords good sport, as they are quite plentiful in some portions of the State. Being exclusively a woodland bird it finds many localities in that State congenial to its habits. As an article of food it cannot be surpassed by any other bird of this section, and just at this time they are in excellent condition. Under the new game law above noted the close season expired on the 1st of August, though they have not yet been hunted to any extent. Like many other game birds ruffed grouse are known by different names in various districts where they are found. In the New England States it is always called a "partridge," while in this section it is known as "pheasant." Along some portions of the Alleghany Mountains where it is plentiful the latter appellation prevails. I think it is found to a limited extent only in the south and west. It is a constant resident of the places which it frequents, always seeking the interior of forests and being exceedingly fond of the rocky sides of hills and mountains in many cases inaccessible to the sportsman. It is said that the bird sometimes frequents low lands, but I have very seldom noticed them in such places. Late in the fall, after cold weather had been experienced, I have found them upon hillsides with a southern exposure, especially when thickly covered with trees and bushes. They evidently seek such places for winter quarters, as the cold blasts of that season cannot reach them there, and it is in such localities that they often build their nests and breed. The flight of the pheasant when disturbed is very rapid, and it requires an expert marksman to bring them down. It is not often that a shot can be had at them in the open, and the dense undergrowth of their favorite haunts frequently obscures them from view after they have taken wing, the whirring sound made by the bird in its flight being the only knowledge the sportsman has of its presence. They fly somewhat similar to our partridge by a continued beating of the wings, and then sail along balancing the body in the air. The loud whirring sound produced by the ruffed grouse, partridge and some other kindred birds, when they arise, is only heard when they are frightened and forced to fly, but is never made when the birds move of their own accord from one place to another, as they can take wing on such occasions as gently and quietly as any other member of the feathered tribe. The sportsman always has his best chance to drop the bird when he first puts it up. Though it flies but a few hundred yards before alighting, when forced to take wing the second time it flies more rapidly and higher, besides the bird has a habit of hiding, and I believe it only takes wing when it can find no convenient place to hide, as I have marked well the spot where the bird alighted but failed to put it up the second time after the most strenuous efforts. In this section the female makes her nest about the latter part of April or first of May, always on the ground by the side of an old log or at the root of a bush, and in this she deposits from six to twelve eggs. Like our partridge the young birds are able to run about almost immediately after leaving the shell, and when a week old they can fly a short distance. I have heard that the nest of the ruffed grouse or pheasant is frequently raided by crows during the absence of the old bird, and all the eggs eaten. No doubt it is the case, as they are always on the lookout for such dainties. Foxes, weasels and hawks are all enemies to the bird and oftentimes destroy the mother and brood.

The "drumming" of the ruffed grouse is a subject which has elicited a good deal of discussion among ornithologists, and I believe the question is yet unsettled as to how the bird produces this sound. Audubon states that it "beats its sides with its wings in the manner of the domestic cock, but more loudly and with such rapidity of motion after a few of the first strokes as to cause a tremor in the air, not unlike the rumbling of distant thunder." Wilson, in his American Ornithology, substantially corroborates the account of Audubon, but does not say the bird strikes its body with its wings, though he probably means to convey that impression. Nuttall's description is similar to that of Audubon, and he distinctly states that the bird "beats his sides with his wings with such accelerating motion after the first few strokes as to cause the tremor described which may be heard reverberating in a still morning to the distance of from a quarter to a half a mile." These statements were the accepted authority upon this subject until

within a few years past, and it is now claimed by several writers that the noise is produced, not by the wings striking the body, but by their rapid motion just as those of the humming bird when hovering over a flower. Others argue that the noise is caused by the backs or exterior sides of the wings striking each other as they are forcibly raised over the back of the bird. I have never been fortunate enough to observe the movements of the bird when so engaged sufficiently to say which of the above theories is correct. The drumming, which beyond a doubt is the love call of the male, often leads to his destruction, as it enables those who have no conscientious scruples against killing birds during the breeding season to mark well their location, and often kill them. It is during this season that the males become so pugnacious, and often have severe encounters caused by their jealousy.

The recent disastrous fire at the Patent Office building, which destroyed so many valuable models exhibited there as a monument to the inventive skill of the American people, did not reach those relative to fire-arms, gunpowder, fishing implements, etc., which fortunately were arranged in the East Hall, which was saved from the flames. There are great numbers of models pertaining to fire-arms, ordnance, etc., which form an interesting exhibition, and their destruction would have been an irreparable loss.

R. F. B.

## OUR LONDON LETTER.

LONDON, ENGLAND, Sept. 12, 1877.

GRIM old London, with its fogs and smoke, is deserted by the *beau monde*. The main streets and thoroughfares wear a tame, lifeless aspect; the Park makes scarcely an effort at style and *ton*—in short, "the season" is over. And where has all this gay life disappeared to? The numberless country seats have received the greater portion by far, while numbers of rich families, without this luxury, have, for the sake of fashion, sought the continent, there to sojourn for the dull London months, and to return again at the approach of spring. The titled gentry and Honorable M. P's. are at present engaged in waging indiscriminate war upon the grouse and partridges o'er woodland and lea, and the reports incoming from the different game counties indicate good sport and fair shooting. Perhaps a short review of out-door sports in England, culled from the columns of *The Field*, may be of interest to the patrons of FOREST AND STREAM three thousand miles away. *The Field* is the best of London sporting chronicles, and is not devoted to the turf only, but yields some space to almost every branch of manly exercise. "Bell's Life" is authority on matters pertaining solely to the turf, and wastes little space on minor matters.

Glancing over a copy of the *Field*, the last issued, Sept. 8, we notice few items of interest to the American reader. Going back a week, we find much readable matter, and a more attractive sheet than the present issue.

The first thing that strikes the eye is a short article on Falconry, descriptive of a "stud of hawks" now on exhibition at Alexandra Palace. The revival of falconry in England and the placing of the sport upon a secure footing, seems to be taking a definite shape. Efforts have been made in years past to this end, and in 1871 an attempt was made to establish a "Central School of Falconry." This plan has of late been re-agitated, and the sporting journals are doing all they can to aid in the revival of this delightful, but till lately, obsolete, sport. We append a short account of the present exhibition clipped from the *Field* of Sept. 1:—

"The recollection of the efforts then made seems now to have been revived, for at the Alexandra Palace at the present time there is on view as fine a stud of hawks as one could wish to see. The stud consists of two Norwegian jersfalcon, four Norwegian goshawks, three French goshawks, two lanners, sixteen peregrines (seven young and nine old birds), three hobbies, three sparrow-hawks, and ten merlins, besides nine cormorants trained for fishing. The quarters assigned to them in the grounds of the Palace are not only very picturesque, but are very fairly suited to their requirements; and when it is stated that they are under the care of the experienced Scotch falconer, John Barr, it will be understood that they are properly looked after. The owner, a well-known amateur falconer, in allowing the birds to be 'on view' for some weeks, has, we believe, made it a condition of their loan to the Palace management that there shall be no attempt at exhibiting falconry, strictly so termed, within the Palace grounds. He has consented, however, to their being publicly 'down to the lure'—a very pretty sight, to which we shall allude anon, in which the marvellous quickness and power of wing of these noble birds are thoroughly displayed. To those who are at all curious to see trained hawks, and examine and compare the various species which are employed for taking different 'quarry,' a visit to this collection will prove most instructive.

"Leaving the terrace and walking down to the Japanese Village, a group of picturesque wooden buildings and verandas in the Japanese style, the visitor passes through a wicket gate, and straightway finds himself in view of the birds, the majority of which are on their blocks upon a sloping grass bank, enjoying, without their hoods, the afternoon sun. The larger birds, as the peregrines, lanners, and goshawks, are on wooden blocks, to which they are secured by a leash through their jesses (the short leather straps which are fastened to their legs); but the smaller kinds, as merlins, hobbies and sparrow-hawks, are perched upon favored flower pots, which answer the same purpose and are much more portable than the heavier blocks. Some are dozing on the perch, others are disporting themselves on the cool grass at the full length of their tether, or 'tring,' it may be, on a pigeon's wing; while in the background, under the shade of the trees, sit nine cormorants, grim and weird-like as we have seen them on the rocks at sea, watching intently with their keen and cruel eye every movement of the approaching visitor. The *coup d'œil* presented by this group of fifty odd birds, posed in every conceivable attitude, and clothed in various shades of soft gray and brown plumage, is picturesque in the extreme, and even those who are not ornithologists cannot fail to admire the sight.

"Among the peregrines the visitor will notice two Irish birds, others from Lulworth on the Dorsetshire coast, and the rest from Falconers' waerd in North Brabant, a locality long celebrated in the annals of falconry for its hawks and native falconers. A noteworthy bird is 'Rim-

press,' a magnificent old peregrine, whose brilliant performances at the lure before many thousands of people in the French capital, in 1875, formed a frequent topic in the newspapers at that time. Her owner considers that she is almost, if not quite, the finest and fastest peregrine ever known in modern times.

"The 'quarry' down at with these peregrines may be partridges, wild ducks, plovers, and rooks, and when opportunity serves, and the hawks have been properly entered, a good fight may be had at a heron. Partridges, says an enthusiastic modern falconer, are the modern game-hawker's principal quarry, and are down at in the same manner as grouse. They have, however, an awkward habit of taking refuge in hedges, banks, or the slightest possible covert, and very cleverly too, so that it is most desirable to meet with them on open ground. Ground whereon stone walls take the place of hedges in these days of inclosures, is therefore not to be despised; but for English partridge hawking there is no place like the glorious arable downs of Berkshire and Wilts."

Turning again to the last edition of the paper we see much space devoted to angling. The devotees of the rod are having grand salmon fishing in the north; fancy killing a 36 pound fish with a rod! The unusually severe weather in the north of Scotland is putting a damper upon the ardor of many of the gentlemen, however, and they are returning disgusted. It is nearly a fortnight ago that the snow covered the Grampian hills, and this is very unusual, as the fleecy mantle holds off generally until the middle or later October. Great complaint is heard on all sides of the scarcity of partridges. The season opened on the 1st inst., but only moderate bags have as yet been made. This is owing to two things: they say the continuous wet weather of the spring and summer has killed innumerable quantities, and then again the harvesting in England is so late this year that much of the corn is still standing, thus preventing the sportsman from working out many other-wise fine stubbles. But what do the English call "moderate bags?" 130 grouse and two snipe! A fair week's shooting is thus recorded, 1,233 grouse and nine snipe. Grouse-shooting opened on the 1st ult., and pheasant shooting is yet to be inaugurated on the 1st prox. By the way, *en passant*, there is, in this connection, something which may be useful for your wealthy readers to know, namely, that in certain shooting localities of Scotland extensive moors with shooting box and every-thing complete may be hired for the "season"—six weeks or more. You become sole possessor during your tenancy, and the rent in most cases is a mere song. I shall not have an opportunity just at this time, though pressed with numerous invitations, to give you an account of your correspondent's own experience upon the English and Scottish moors, but on my return from the Continent may have something of interest to say about pheasant shooting. Referring again to what was said above about hiring a moor, we may add that Banffshire, Scotland, is an excellent locality for this, as there are many fine moors and the rents are low.

The sporting papers here also fill their columns with reports of archery matches, lawn tennis (a very popular game with the ladies), golf (a game which the writer but imperfectly understands), cards, chess, etc. Besides these, they give pages of cricket matches, turf notes, and other minor matters of which the American reader knows little or nothing about. Lack of space forbids the completion of this letter at present, and, with a sincere hope for the continuance of your present prosperity, I subscribe myself

RAMON.

## The Rifle.

THE GILMORE'S GARDEN PRESENTATION.—There has been a great pother made over the money received from the proprietors of Gilmore's Garden by the National Rifle Association as its share of the receipts taken on the night of the presentation of the prizes. The daily papers have sought to turn it to sensational uses, and talk very loudly and very ridiculously about money paid to the American team, failing meantime to give a complete and intelligible account of money matters between the team of the National Rifle Association and the public. So far as Gilmore's Garden went the team did not receive one cent of the money there collected. Small sums, we understand, had been paid to members of the team as part payment of their expenses of practice at Creedmoor, but this was entirely distinct from any question of success or failure. For several years past it has been the practice of the National Rifle Association to hire Gilmore's Garden under the same conditions, and why it should now raise so much indignation on the part of the press it is difficult to understand.

DEARBORN RIFLE CLUB MEETING.—A three days' tournament of the Dearborn Rifle Club of Chicago, at Stony Island near that city, occupying Thursday, Friday and Saturday of last week, gave the Western riflemen an opportunity of showing their skill before the target, and affording gratifying proof of the hold rifle practice is taking in various parts of the country. The programme was a good one, and drew probably as able a concourse of riflemen, shooting under the modern system, as it is possible to gather in the Northwest. The weather was favorable, though doubtless there was liberal grumbling on this point. Besides a good array of local talent, the international match was recalled by the presence of several members of the Imperial British Rifle Team, as well as by the attendance of a member of the American team.

The first contest on the programme was the Inter-State match, open to all teams. Distance, 800, 900 and 1,000 yards. Only three teams entered. Illinois was represented by J. A. Schaffer, George Willard, R. S. Thompson and Walter Burnham, all of Chicago. J. W. Roberts was captain of this team. Wisconsin was represented by a team from the Milwaukee Rifle Club, which consisted of J. M. Johnston, captain; David Hill, E. Fielding and J. C. Wells. Michigan was represented by a team from the Jackson Club, consisting of G. H. Wolcott, captain; J. T. Harrington, S. S. Levy and R. J. Haire.

The 800 and 900-yards shooting was not up to the standard of our long-range experts, nor do we think it represents the full skill of the men taking part; but for this poor shooting the gusty character of the wind, which prevailed during the shooting, must be held responsible. At 800 yards the Wisconsin men secured a good lead, but a bad break in the 1,000 yards allowed the home team to carry off the honors of the match, Wisconsin falling in the second place, and Michigan steadily in the rear. The full scores were as follows:

| ILLINOIS TEAM.       |                              | B. S. Thompson.              |     |
|----------------------|------------------------------|------------------------------|-----|
| J. A. Schaffer.      | 3 5 3 5 4 3 3 5 4—41         | 3 5 5 4 4 5 4 3 5 5—44       |     |
| George Willard.      | 5 5 3 3 3 3 3 5 2—37         | 4 4 5 4 5 5 5 3 5—45         |     |

| Total.....           | 121                          | Total.....                   | 157 |
| IRISH-AMERICAN TEAM. |                              | R. J. Haire.                 |     |
| S. S. Levy.          | 5 4 4 2 3 3 2 2 4—33         | 0 3 5 3 3 6 4 2 4—35         |     |
|                      | 3 3 5 4 5 4 3 2 0—29         | 4 5 5 3 3 4 3 2 4—38         |     |
|                      | 4 2 2 5 2 3 3 2 4 3 0 3 3—40 | 0 0 5 2 5 0 0 3 2 3 4 2 0—31 |     |
| Total.....           | 101                          | Total.....                   | 101 |

The other match of the day was at 600 yards, individual shooting, two sighting and ten scoring shots, open to members of regular rifle clubs and associations. Two prizes were offered, the first being a silver pitcher, and the second a silver cup. The entries contained several notable names, including Sir Henry Halford, the captain of the British team; J. K. Millner and R. S. Greenhill of the Irish team, and F. Hyde of the American team. These crack shots were, however, defeated, the first prize falling to D. Hill of the Milwaukee team. The wind, which had troubled the shooters so badly on the long ranges, had somewhat subsided, and the scores were correspondingly better. The following are the scores:

|                        |                      |  |  |
|------------------------|----------------------|--|--|
| D. Hill.....           | 5 5 5 5 5 5 5 5 5—50 |  |  |
| E. Fielding.....       | 5 5 5 5 5 5 5 5 5—49 |  |  |
| R. S. Thompson.....    | 5 5 5 5 5 5 5 5 5—49 |  |  |
| J. K. Millner.....     | 5 5 5 5 5 5 5 5 5—48 |  |  |
| George Willard.....    | 4 5 5 5 5 5 5 5 5—48 |  |  |
| F. Hyde.....           | 5 5 5 5 5 5 5 5 5—48 |  |  |
| Sir Henry Halford..... | 4 5 5 5 5 5 5 5 5—47 |  |  |
| A. C. Alford.....      | 5 5 5 5 5 5 5 5 5—47 |  |  |
| John Johnston.....     | 5 5 5 5 5 5 5 5 5—47 |  |  |
| R. S. Greenhill.....   | 3 4 5 5 5 5 5 5 5—44 |  |  |

It being a tie between Fielding, of Milwaukee, and Thompson, of Chicago, for the second prize, they shot off, the former winning by the following score:

|               |            |               |            |
|---------------|------------|---------------|------------|
| Fielding..... | 5 5 5 5—20 | Thompson..... | 5 5 5 4—19 |
|---------------|------------|---------------|------------|

The second day of the meeting saw more long-range shooting in the contest for the Dearborn Club Challenge Cup. The wind was steadier and less strong; the sky cloudy, but light good. Four teams were made up for the match. The Dearborn Rifle Club impressed Sir Henry Halford into their ranks, making up what they styled a British-American team. The "Irish contingent," of the Imperial team, united with Frank Hyde in forming an Irish-American team, while the Wisconsin and Michigan teams stood as on the day previous. The result was an easy victory for the Irish-Americans on the following score:

| IRISH-AMERICAN TEAM.   |                                | R. S. Greenhill.             |     |
|------------------------|--------------------------------|------------------------------|-----|
| J. K. Millner.         | 5 5 5 5 4 4 5 5 4 4 4—66       | 2 5 4 4 2 4 5 3 4 5 3 3 5—56 |     |
|                        | 5 5 5 5 4 4 5 2 3 5 4 4 3—60   | 2 4 0 5 5 4 5 4 3 4 5 2 5—54 |     |

The weather was more favorable for the third and closing

generally called by the farmers, and The Vagabond were emptying cartridges with a rapidity equalled only by the Turkish fire at Plevna, the elders were trying to find a stick with which to lick some sense into their dog. But enough of this; the result of the afternoon's tramp was only thirty-four chickens, mostly brought down at very long range. The elders discoursed something in this wise:

"That was a mighty pretty shot I made near the corner of that first cornfield, wasn't it, Cowles?"

"Yes; and do you remember the old hen I knoeked over going past at such a long range?"

"Oh, yes; that showed skill."

But when The Young Man and The Vagabond came in with the greater number of chickens, the elders struck up a regular chorus about what "luck" those youngsters had. So the latter started a mutual admiration society of their own, and got so excited in bragging about their crack shots that Cowles couldn't stand it.

"Look here," said he, "I've kept count of the chickens you say you've killed by most marvellous shooting, and, according to that tally, you ought to have forty-seven. Now, as you brought in only eighteen, I'd like to know what you've done with the other twenty-nine."

It is always disgusting to have a mathematical man along on a hunting or fishing trip, for he is sure to spoil the best stories told at the camp fire by bringing a lot of confounded figures to bear on the subject. It is not well to be too particular at such times.

That evening the party returned to New Ulm. This town was settled in 1854 by the German Society of Turners, mostly from Cincinnati. The founders, desirous of avoiding church quarrels, tried to exclude all churches. The early deeds contained the condition that the property should never be sold nor leased to any church member; but it was found that these restrictions were impracticable, and they have long since been abandoned. A number of churches of different denominations are firmly established in the town.

In 1862 the town was the site of the well-remembered Indian massacre, in which a large number of settlers were unexpectedly attacked and slaughtered. Among the fearful incidents of the massacre, the inhabitants tell a story of a merchant named Merrick, at the lower Sioux Agency, who was said to be very avaricious. The Indians, believing that he had cheated them, were particularly bitter toward him, and took a striking and horrible revenge upon him. His mouth was cut from ear to ear, his jaws pried open, and he was then choked to death with his own money, gold pieces being thrust down his throat until death relieved him. They said, "Now eat gold; you love it so much—eat all you want; fill yourself with it." It will be remembered that about thirty Indians were hanged for these outrages, and a large number of others punished in other ways.

In the vicinity of New Ulm there are few chickens and no ducks, owing to the long-continued drought. Sloughs which are ordinarily several inches deep all through the summer, were now wholly dried up, no rain having fallen for two months. Finally, by going down the Minnesota River, seven miles below old Fort Ridgely—now abandoned—game was found in abundance. The river bottom was filled with partridges and the prairies were alive with very wild chickens. They had already broken up their coveys and were running in immense flocks, some containing as many as two hundred birds. Earlier in the season, before the coveys were broken up, the shooting would have been unsurpassed anywhere in the world. At the present time, by means of their sentinels, they are able to keep at long range all the time, and only a quick, accurate shot with a long-range gun could get them. And here, all joking aside, the skill shown by Mr. Turrill was exceedingly interesting, his shots being remarkably successful, but apparently so neat and easy that his shooting was an object of admiration to the whole party. Mr. Cowles was an excellent second, while the youngsters had plenty of fun, even if they did miss a good many birds.

The party stopped at Mr. Newton's, who was one of the early settlers, a whole-souled host, a hearty, strong-voiced Methodist, and a very shiftless farmer, with an indescribable faculty for mis-using long words. Indeed he out-Parlingtonged Mrs. Parlington, until the party laughed till they ached, over interminable stories, which would have been wholly devoid of interest but for his absurd misapplication of words. He owned a span of immense horses which were, if possible, even lazier than himself, and, while driving, his time was divided between singing hymns and prodding up his off horse, "John," into a jog trot. Whatever there was about the farm or buildings lacking or out of repair was accounted for by Newton in one comprehensive word, "Grasshoppers." While some men are in the habit of attributing the misfortunes entailed upon them by their own laziness to "hard luck," he had a much more tangible excuse, and the grasshopper served him as a sort of scapegoat upon which he could lay all his troubles and retain a calm, untroubled mind.

About seven miles north of the Minnesota River at this point is a beautiful sheet of water called Clear Lake, about three miles long by two wide. At one end, where a smaller lake adjoins it, there is a natural duck pass, which in season must be one of the finest spots for shooting water-fowl in Minnesota. Indeed, this lake is a sportsman's paradise, for, in addition to fine shooting, he can have gamey fishing—black bass and pickerel being quite abundant and eager. Here, in spite of the drought and warm weather, which combined to keep the ducks away, the party bagged about three dozen plump mallards without stirring away from one spot, the ducks falling on the narrow isthmus between the two lakes every time.

After a day and a night at Clear Lake, passing the night in a hay mow, the party returned to Mr. Newton's, where Mrs. Newton was awaiting them with an excellent supper, which was heartily appreciated after a hard day's hunt and long ride. Mrs. Newton was a bright, intelligent Swede, with more energy in her little finger than her husband had in his whole body; yet she was very proud of his book learning and conversational powers (such as they were) and probably considered him vastly her superior.

One more day's hunt among the chickens and partridges yielded about one hundred birds, and the party were then reluctantly obliged to turn their faces eastward and leave this splendid hunting ground before the water-fowl shooting had fairly begun; yet they had learned enough to pay them for their trip, to say nothing of the fun they had had. It is a country swarming with chickens which are seldom shot at, and, during the covey season, two such shots as Messrs. Turrill and Cowles, with such an admirable dog Bob as the former owns, could bag two hundred birds without any trouble whatever; while later in the year the duck and goose shooting at Clear Lake will be perfectly fascinating.

As the party of four left the cars on their arrival at Devil's Lake, the Young Man and The Vagabond played their last joke by repre- s-enting to the visitors at the Cliff House, who

thru-ough out to welcome them back, that the quantities of game which had been shipped back daily during their absence had been the trophies of their guns.

"But didn't Turrill and Cowles kill any birds?" they were asked.

"Oh! yes," replied the Vagabond with a commiserating look, as if he did not wish to be too hard upon the elders; "yes, they did kill some, enough for our own meals. Don't mention it to them, please, for they are naturally sore about it."

It is to be hoped that if Mr. Turrill and Mr. Cowles should chance to read this letter they will appreciate the kindness of the above remark and remember gratefully

THE VAGABOND.

Chicago, Sept. 1.

MASSACHUSETTS, Salem, Oct. 5.—Gunning has been, owing to dry hot weather, rather scarce of late. Some coots have been seen off Emersons' Rocks, Ipswich Bay, the past week, and the first, a cripple, was seen in Salem Harbor last week. Geo. Stone killed eight out of eleven blue-wing teal in Mill Pond this a. m. Pitman and Brother of Swampscott lately shot twelve black breast plover, with some other birds, on Lyon marches.

TEAL.

Salem, Oct. 8.—Reports from various parts of Essex County give the gunning as dry in the woods. Coots may now be found almost any day in the Bay. Some winters are around. Reports from the Cape, i. e., Chatham, for the past two weeks have given but scanty returns. Small birds were numerous and are at present, and some large birds came along last Saturday.

TEAL.

Plymouth, Oct. 5.—Coots not very abundant as yet. But few have been killed. Ruffed grouse and quail are abundant, however, and good sport is had.

C.

A STRANGE ACCIDENT.—On Oct. 4 an accident happened Mr. Edelbert Finney that doesn't often occur. He, with Mr. Ansel Bartlett, of Wellingsley, Mass., were off Manomet, cooting, each having a boat. While waiting for their game, they saw a fine duck while playing seaward of them, which finally struck Mr. Finney's dory just forward of amidships, throwing it into the air. When it struck the water, bottom up, Mr. Finney found himself sprawling on the whale's back, gun in hand, where he rode about a minute, when the cetacean made a dive, drawing Mr. F. down with him. On rising he was rescued, after some difficulty, by Mr. Bartlett and a Mr. Holmes, who was an eye-witness of the whole scene. Having Mr. F. safe, they put for the shore, fearing his whaleship might take a notion to repeat his joke on them.

QUEENS COUNTY HOUNDS.—The experimental meet of the hunt took place at Garden City, L. I., Oct. 4, and proved very successful. The first regular meeting was held yesterday, and others are appointed for the Wednesday and Saturday of each week in this month and November.

—General G. E. Spinner, late of U. S. Treasury, has been hunting in the Adirondacks. Notwithstanding his seventy-five years he climbs mountains, walks, camps out, and hunts with all the energy and vigor of youth.

—The woods along the Delaware are teeming with partridges and small game. Deer in that vicinity are more numerous than they have been for several years.

PENNSYLVANIA.—Sharon, Oct. 3.—The best bag on the opening of the grouse season was made by Frank Davis—eight ruffed grouse, three woodcock and one gray squirrel. Great numbers of ruffed grouse were killed here last August.

J. R.

Corry, Oct. 8.—Grouse and woodcock are abundant in the vicinity.

Port Clinton, Oct. 7.—Teal shooting fine; good bags of woodcock are made.

MARYLAND.—Chincoteague Island, Oct. 6.—Ducks are making their appearance, and there is every promise of a fine season along the favorite resorts of the eastern shore of the State.

VIRGINIA.—White Sulphur Springs, Oct. 6.—The outlook for sport about here this season is most excellent. The mountains afford good turkey, deer and bear shooting; pheasants plenty.

Winchester.—Mr. W. H. Calvert, during the last winter, bought and fed some partridges, which were freed at the approach of warm weather. The other day one of them came back, entered Mr. C.'s window, popped around, and bas-evilently returned to stay in his winter quarters. He is well treated, and seems perfectly at home.

Blacksburg, Oct. 3.—On Sunday last a covey of partridges (quail), seven in number flew into an open window of the office of the Va. Agricultural and Mechanical College at this place, and struck the opposite wall. Five were killed, and two appearing unharmed were set at liberty. They were fully grown, but the game law protects them until Nov. 1. Quail are very abundant. There is an extraordinary migration of common gray squirrels, extending along the Alleghenies for about 150 miles, moving from west to east; in some places appearing suddenly in vast numbers, and very destructive to corn fields. They seem to move at night, and do not regard rivers.

E.

Quogue, Va., Oct. 6.—General and Ex-Gov. Dix the other day proved that he was still able to "shoot 'em on the spot," by killing six out of seven teal on the wing at one shot.

NORTH CAROLINA.—Poplar Branch, Oct. 4.—The shooting in this vicinity is now good, and promises to improve until the approach of the coldest weather. Mrs. Caroline Van Slack, whose estate embraces more than 10,000 acres, has accommodation for sportsmen, and they will here find deer, turkeys, snipe, quail, ducks and geese in abundance.

KENTUCKY.—Louisville, Oct. 7.—Col. T. W. Thompson killed ten blue-wing ducks on the river last Thursday. George Woerner was out on Friday, near the "wet woods," and brought back a number of wild pigeons and squirrels. The sudden change during the past week has had the effect of bringing ducks to the vicinity of the falls, and a number of blue-wings and mallards have been shot.

—The Louisville Sunday Argus has a well edited Rod and Gun column.

GOING TO FLORIDA FOR THE WINTER.—Our friend, Maj. Alden, of New Smyrna, Fla., is kind enough to tender to sportsmen the following information, as well as inducements to visit Florida the coming winter. What he says will prove

of service to those desiring to camp out at least possible expense:

NEW SMYRNA, Fla., Sept. 21, 1877.

EDITOR FOREST AND STREAM:

I have had several letters from readers of your paper asking me as to the best route to take to this section, and when to camp and how to live at least expense. First, come via C. H. Mallory's line to Jacksonville, via Fernandina; cabin passage from New York to Jacksonville, \$35. Buy lumber to build a house (same size as U. S. A. hospital tent) in Jacksonville, or wait until you get here, then send for what you want. Ten dollars will buy all you will need for house to live in, and cook and servants' room. The roof can be covered with palmetto leaves which make a light and impervious roof and cost nothing but gathering. Buy a camp stove with fixtures. Buy what groceries you may want in Jacksonville, or they may be sent for after arrival here, and can also be brought here at a slight advance of Jacksonville prices. With rod and gun, a good cast net, and flat bottom boat, you can live as well as you may wish for less than four dollars per week. Boat can be bought here. Bring your cast net (six foot English net best), your fishing tackle, etc. I will give to gentleman sportsmen a place to camp on the beach ridge opposite New Smyrna, or if they wish to combine fishing and hunting, I will give them localities where they can get plenty of wood and water without cost at my place, six miles south of New Smyrna, from which point they can get fish and oysters, or deer, bear, turkey, snipe or ducks. Game law is off, with plenty of good shooting now. The steamer Border City will be put on the line between here and Jacksonville or Fernandina on or before Nov. 1, 1877, without fail. Arrangements will be made for through tickets from New York. GEO. A. ALDEN.

TEXAS.—The slaughter of buffaloes still continues without abatement; one firm alone, at Fort Concho, has bought and shipped during the past season over one thousand hides.

Henrietta.—Buffalo hunters report deer and antelope plenty fifty miles West of Henrietta.

Ohio.—Ashtabula, Oct. 6.—Deer are occasionally seen in the county. Partridge plenty, and afford good shooting.

Missouri.—Osage, Oct. 4.—Thousands of squirrels are slaughtered all about here and in the vicinity of Gasconade.

ILLINOIS.—Champaign, Oct. 3.—Chicken shooting in this part of the State has been very poor, but quails are very plenty. We anticipate good sport among them very soon.

B.

MICHIGAN.—Olivet, Oct. 4.—The late drought affected the duck crop, but since the great storm birds have become quite plentiful. Last night the belated traveler on the Marshall Road must have been astonished at the unearthly noises proceeding from Pine Lake. 'Twas ducks, only ducks! Woodcock are abundant; more so than usual. Can it be that the southern migration has set in thus early, that causes this sudden eruption of these birds? Ruffed grouse, hares and turkeys are had by seeking. Quail scattering. The College is in full blast, and the youngsters have furnished up all the old muskets, pot metal shot guns, etc., available, and neglect prayers for ducks.

B.

WISCONSIN.—Hebron, Oct. 6.—Game in this section has been somewhat scarce for the past months, but ducks and snipe begin to come in from the North, and the prospects are brightening. We have an abundant crop of rice, which doubtless, will be very enticing to waterfowl.

AMATEUR.

CALIFORNIA.—Clear Lake, Sept. 29.—Wild ducks and geese are flocking to the lake, and there is promise of excellent shooting.

Tulare Lake, Sept. 29.—Geese are abundant; the duck shooting poor.

Santa Cruz, Sept. 29.—Ex-Centennial Commissioner Ben. P. Kooser, of the Sentinel, had fine success, while hunting in Napa County the other day. Among the trophies of his chase he exhibits the antlers of a deer weighing 120 pounds.

CANADA.—Quebec, Oct. 7.—Wild geese in large flocks are winging their way overhead toward their winter quarters.

Sarnia, Ontario, Oct. 8.—The majority of our sports are off to the St. Clair Flats after ducks. Reports say that wild fowl are less plentiful there than usual. This is due to the lawless way in which our neighbors across the line behave, they seeming to think a game law of no earthly use but to talk about.

## PIGEON MATCHES.

CHAMPAIGN (ILL.) SHOOTING CLUB, Oct. 2.—Conditions of match: Six single and three pairs of pigeons; 25 and 20 yards rise; 80 yards boundary.

|              | Single. | Double. | Total. |
|--------------|---------|---------|--------|
| Scott.....   | 5       | 5       | 9      |
| Britton..... | 6       | 6       | 12     |
| Conley.....  | 5       | 6       | 11     |

FOUNTAIN GUN CLUB.—Brooklyn, Oct. 5.—Monthly contest for the champion badge of the club, shot for at seven birds each; 80 yards boundary; handicapped distance; ties shot off at three birds each. The high winds caused the birds to charge at their best, and prevented good marksmanship. Following are the principal scores:

|                 |         |   |   |   |   |   |   |
|-----------------|---------|---|---|---|---|---|---|
| Madison.....    | 23 yds. | 1 | 1 | 1 | 1 | 0 | 6 |
| C Williams..... | 28      | 1 | 1 | 1 | 1 | 0 | 6 |
| Akins.....      | 25      | 0 | 1 | 0 | 1 | 1 | 3 |
| Bogart.....     | 21      | 1 | 1 | 1 | 0 | 0 | 3 |
| Hausen.....     | 25      | 1 | 0 | 1 | 0 | 0 | 2 |
| Byrne.....      | 21      | 1 | 0 | 1 | 0 | 0 | 2 |
| Dr Race.....    | 25      | 0 | 1 | 0 | 1 | 0 | 2 |
| McMahon.....    | 25      | 0 | 1 | 0 | 1 | 0 | 2 |
| DeFrance.....   | 25      | 0 | 1 | 0 | 1 | 0 | 2 |
| Crook.....      | 25      | 1 | 0 | 1 | 0 | 0 | 2 |
| O'Connor.....   | 25      | 1 | 0 | 0 | 0 | 1 | 2 |
| Cutts.....      | 18      | 1 | 0 | 0 | 1 | 0 | 2 |

In the shoot off, Madison won.

MICHIGAN.—Detroit, Oct. 6.—The Detroit Gun Club held their shoot for the State medal Oct. 3. The medal had another narrow escape from becoming the individual property of one of the club, having been won twice in succession by Eldridge. The following is the score; 11 birds each, 30 yards rise, English rules, every-bird to be gathered before it was scored as dead:

|                     |   |   |   |   |   |   |   |   |   |    |
|---------------------|---|---|---|---|---|---|---|---|---|----|
| J V D Eldridge..... | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 0 | 1 | 9  |

—The New Haven steamers have discontinued for the season their landings at Twenty-third street, E. R. Steamers leave Pier 25 E. R. (Peck Slip), as usual at 3 and 11 p. m., connecting with special trains to points North and East.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

## RUSHTON'S HUNTING & PLEASURE BOATS AND CANOES.

The LIGHTEST sporting boat in the world. Weight, 25 pounds and upward. The smallest size will carry two persons. Cedar, slung, oak keel, etc., (do not fold up). CANOES, open or decked, weight 35 pounds to 60 lbs. Send stamp for new illustrated Circular. J. H. RUSHTON, Manufacturer, Canton, St. Lawrence County, N. Y.

## Folding Pocket Mosquito Bar.

A most ingenious device for camping purposes. It is very light, easy to carry and can be put up or taken down in half a minute. Pronounced by sports men to be the most complete thing of the kind ever offered to the public. Price only \$1.50. Lawn covered, expressly for Florida travel, \$3.50. Sent post paid on receipt of price. Liberal discount to the trade.

A. A. COWING,

Watkins, N. Y.

W. HOLBERTON, 102 Nassau St., N. Y. Agent.

## H. L. LEONARD,

BANGOR, MAINE,

Manufacturer of every variety of  
FINE RODS FOR SALMON, BASS AND TROUT  
FISHING.

## Split Bamboo Rods a Specialty

Great reduction in prices. Trout rods, full mounted, \$30, formerly \$50; other rods in proportion. Every rod bearing my name is six strands from butt to extreme tip, and mounted with my "patent" waterproof ferrule, and warranted against imperfections in material and workmanship.

Any style of finish, hexagonal or round, as may be desired. Rods of Greenheart, Ash, or Lancewood. MADE TO ORDER.

I was awarded a MEDAL and DIPLOMA at the Centennial for my Split Bamboo Rods.

Also manufacturer of Patent Reels for Salmon and Trout fishing. The lightest, strongest, and handiest. Reels ever made.

Full line of FISHING TACKLE always on hand.

Send for circular and price list.

107

## NEW YORK SHOOTING COAT.

A stylish, handsome Coat. First-class in every particular. Pleasant to wear, durable, and in the end the cheapest.

### MADE OF BROWN VELVETEEN.

Pockets and lining made to take out, so that it may be worn for early fall and winter shooting. (Horace Smith, Esq., says: "It is my idea of a shooting coat. I have worn them for several years, and would have none other.") Price for Coat, \$25; Vest, \$6.50. Also the best brown corduroy pants at \$10 per pair. I make only the one grade, as the cheapest goods do not turn briers and will not give satisfaction.

Also, in addition to the above, I am making a Waterproof Canvas Suit, cut same style as the Velveteen; goods, not stiff and hard, but soft and pleasant to wear; guaranteed to turn water. Sportsmen who have seen it say it is The Best Yet. Coat, \$60. For full suit, \$140. I also make the sleeveless Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

F. L. Sheldon,

RAHWAY, N. J.

For Sale in New York by

H. C. SQUIRES, 1 Cortlandt St., N. Y.,

CREEDMOOR PARLOR RIFLE.

Finely finished, carved stock. Loads at breech with small percussion cartridges. Will shoot 250 feet with accuracy and force. There is scarcely any report, and no smell from this Rifle, making it very appropriate for parlor use, picnics and fairs. The shell extractor is on the hammer, pulling out the old shell every time the hammer is raised.

Price, \$10; cartridges for rifle \$3 per thousand, or \$1 per box of 250. Iron bell target, with numbers, \$5, sent C. O. D. or on receipt of price. Send for price list of Revolvers, Skates, Novelties and Sporting Goods.

FISH & SIMPSON,

182 NASSAU STREET, NEW YORK.

## A VICTORIOUS INVENTION The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape.

It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

No. 1.—For fishing and all kinds of small game and animals, sent by mail..... 35 cents.

No. 2.—For catching Mink, Muskrats, Raccoons, Large Game, Fish, &c..... 75 cents.

No. 3.—For Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 lbs. \$1.00.

All goods sent, charges paid, to any address on receipt of price. Address

Stent & Co., Gen'l Agents,

132 Nassau St.,

NEW YORK.

P. O. Box 2997.

## THE LAST GREAT BATTLE.

TUESDAY EVENING, OCT. 16.

## GRAECO-ROMAN WRESTLING.

MILLER VS. BAUER.

In a match for \$500 a side.

Made with articles signed and money deposited Wednesday last, Oct. 8, in the office of the New York

SPIRIT OF THE TIMES.

Beginning 8 1/4 and ending 11 1/4. Providing either party wins two falls in three, no draw.

BREECH-LOADING IMPLEMENTS, at MARSTERS, 125 Nassau street, New York, and 55 Court street Brooklyn.

## DECOYS.

M. C. WELD, Manufacturer of Decoy Ducks, Blacks and Mallard, 10 inches long; 50 cents each; nice ones. 57 MANHATTAN ST., Rochester, N. Y.

## Gunpowder.

## Warren Powder Mills,

MANUFACTURERS OF

BLASTING AND MINING, SHIPPING AND SPORTING GUNPOWDER.

SPORTING BRANDS—Eureka, Continental, "Border Rifle," Snap-Shot, and Warren Sporting Cannon and Musket, U. S. Standard. The above can be had of the dealers, or at wholesale at the office, 27 Doane street, Boston, Mass., and of the agents, JOHN P. LOVELL & SONS, corner of Washington, Cornhill and Rattle street, Boston, Mass. July 19

THE  
HAZARD POWDER CO.

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting." Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." EFFG, PFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/2 lbs, and cans of 5 lbs. EFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The EFFG and PFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER. ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office, 83 WALL STREET, NEW YORK.

THE  
New Dittmar Powder.

THE CHAMPION POWDER OF THE WORLD. For all off-hand shooting at short and long ranges. Unsurpassed for Cleanliness. Pleasant to shoot on account of little recoil and report. Desirable for hunting on account of little or no smoke. Unequalled for rapid firing, as it does not foul and heat up the barrel as black powder. Great accuracy, penetration and good pattern. Safer than black powder. Address

## Sportsmen's Goods.

## BOSTON

## SHOOTING SUIT.

Manufactured only by

## G. W. SIMMONS &amp; SON,

BOSTON.

Each article—coat, trousers, vest and hat—have the name and manufacturer's address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We make but one quality, and that is the VERY BEST. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest, and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are riveted, and nothing is neglected to make the whole suit complete in every way.

## OUR PATENT DECOYS

have entirely superseded the old-fashioned cumbersome, wooden decoys. The birds are hollow, and six of them occupy about the space of one wooden decoy. The Duck Decoys of all kinds are \$12 per dozen: geese, \$3 each; yellow leg, \$4.25 per dozen; black breast plover, \$3.75 per dozen; red breast plover, \$3.75 per dozen; golden plover, \$3.75 per dozen; turnstone, chicken plover, etc., \$3.75 per dozen; sandpipers, \$3.50 per dozen. We are now making standing geese for field shooting.

## THE HUNTER'S TENT

is made of tan-colored duck; light, easily transported. Size, 7 ft. by 8 ft. Price, \$10 complete, made on the umbrella principle, folding into a neat roll 3 feet long.

In the judges' report at Philadelphia they were commended for excellence in every part. Very novel and practicable; adapted to all out-of-door purposes where lawn, beach, hunters and camp tents are used; quick folding; all sides strongly fortified; enables them to stand against wind and rain. Rev. F. B. Savage, of Albany, N. Y., who camps out in Florida in winter, and the Adirondacks in summer, writes this about the tents:

ALBANY, July 31, 1877.

Sirs—I have just returned from a three-weeks' camping expedition in the Adirondack, and have had the three tents bought of you put to the severest tests of exposure both as to wind and storm, and I do most unhesitatingly say they are the most complete thing of the kind I ever used.

1st. They are easily put up or taken down.

2d. They are perfectly waterproof.

3d. They are a good height, and all the room I available.

Our party asked for no better. They were admired by all who saw them, and one party insisted on buying one of ours that was to spare. Rev. Dr. Duryea, of Brooklyn, and the Rev. Dr. Irwin, of Troy, both endorse what I say about your tent. With kind regards, yours truly, F. B. SAVAGE.

Tan-Colored Leather Pliable  
Waterproof Suits.

In Shooting Coats, Jackets, Breeches, Vests and Hats at following prices: Coats, \$23; Breeches, \$15; Jackets, \$18; Vests, \$12. These form the most elegant shooting equipment known. They are indestructible.

A recent notice in the FOREST AND STREAM from a correspondent, says:

Whenever a sportsman, or even one who does not claim the distinction, finds a really good and useful article, it is no more than fair that he should let others have the benefit of his knowledge. For this reason we would call attention to the Tan-colored Leather Shooting of Fishing Suits, made by G. W. SIMMONS & SON, of Boston, Mass., the manufacturers of the famous "Boston Shooting Suit."

I saw these goods advertised in your paper, and wrote to the parties for samples. I found the material as soft and pliable as a piece of kid. I tested it by soaking in water twelve hours, and found it as nearly waterproof as one could desire, and after drying was happily surprised to find it had not stiffened in the least. I have since then received a full suit—coat, vest and breeches—ordered by letter from measure taken by myself.

The goods are splendidly made, well lined with flannel; in fact I do not see how they can be improved.

My friends are unanimous in their verdict that G. W. Simmons & Son's leather goods cannot be excelled in quality or beaten in price.

For every kind of sportsmen's goods address

THE Sportsman's Gazetteer

AND GENERAL GUIDE,

WITH MAPS AND ILLUSTRATIONS.

896 pp., Price \$3.

Tinted Paper, 4 bound Morocco, \$5; Tinted Paper, Muslin, \$4.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM," AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST AND STREAM" PUBLISHING CO.

Sent by mail post paid on receipt of price.

This book is a complete encyclopedia for sportsmen. It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America. It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish. It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. It describes 27 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each. Every kind of dog used for sport is designated, and his points for bench judgment fully given. It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any person can administer the prescriptions with perfect confidence in their safety and efficiency. It contains very useful recipes and remedies for wounds, bites, poisons, illness and emergencies of all kinds; for cleaning, repairing and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen, and a directory where to buy outfitting goods. It instructs in Taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

INDORSEMENTS.

SPORTSMAN'S GAZETTEER.—Geo. Bird Grinnell, of the Peabody Academy of Science, New Haven, writes: "I have to thank you for a copy of the Sportsman's Gazetteer received a few days ago. I have looked it over with great interest, and I must say that I have learned a great deal from it. It is a book that every sportsman should have. It is a book that is up to date, and it is a book that is full of interesting and useful information. I have looked it over with great interest, and I must say that I have learned a great deal from it. It is a book that every sportsman should have. It is a book that is up to date, and it is a book that is full of interesting and useful information."

THE SPORTSMAN'S GAZETTEER.—The Gazetteer duly came to hand, and to say that I am delighted with the book only faintly expresses my appreciation of it. How you have been able to gather so much valuable matter together is almost a mystery to me. I certainly speak well for your industry and knowledge of the subjects discussed. For the size and valuable information contained, the price, I think, is remarkably low, and I would not be without it for double the price. Every sportsman and everybody interested in sportsman matters should have a copy, and I shall take great pleasure in recommending it to my army friends.

H. C. YARBROW, M. D., U. S. A.

THE GAZETTEER.—The Sportsman's Gazetteer was duly received, and myself and many of our best judges in sporting literature have critically examined the book, and all unite in pronouncing it the most valuable work ever issued from the press on kindred subjects. It is a wonder to all how so much valuable information could be so intelligently crowded into a book of its size. The task must have been very great, but has been accomplished in a remarkably concise, intelligent and pleasing manner. Every page demonstrates the fact that the author was a master of his subject. No sportsman or tourist can afford to be without the book, and it ought to be, and no doubt will be, recognized generally by all, and certainly by all interested in the study of natural history.

DAYFIELD—The Great Health and Pleasure Resort of the Northwest. Beautiful Scenery, Pure Atmosphere, Delightful Climate, Fishing, Boating, Sailing and Shooting. The Island House at Bayfield, Wisconsin, situated on Lake Superior, surrounded by the Apostle Islands, twenty-two in number, offers to persons seeking health and pleasure advantages rarely found. The climate is pure, cool and bracing, and a sure cure for hay fever. It invigorates the whole system, creates appetite and induces sleep. The water is pronounced by scientists the purest in the world, jly12 if

Sportsmen's Routes.

THE "FISHING LINE."

Brook Trout, Grayling and

Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Blackhawk, Grand Rapids & Cincinnati Short Line.) Sportsmen who have cast a fly or trolled a spoon in the waters of the Grand Traverse Region will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein the fish named above, as also Muscullunge, Pike and Pickerel, abound.

In no other streams east of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout Season opens May 1st.

Grayling season opens July 1st. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, 150 N. 5th St., N. Y. City.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarest of birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

Terms—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

## W. W. Greener's CHOKE-BORE GUNS, Tried on Game in America.

Supplied by H. C. Squires, 1 Cortlandt St.,  
NEW YORK.

## See the Following Testimonials:

SIR—It is a pleasure for me to inform you of my high appreciation of the 10-lb. Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling-pieces since the introduction of the percussion cap. It gives the maker complete control of the pattern, and greatly increases penetration. To prove this, I will give you the performances of this gun. The 32-inch 10-gauge barrel, charged with 4½ drachms of powder and 1½ oz. No. 6 English chilled shot, gave patterns ranging from 255 to 350 pellets in 30-inch circle at 40 yards. The same charge of powder and 1½ oz. No. 4 American shot gave 120 to 175 pattern, with penetration which kills ducks at 50 to 75 yards like a stroke of lightning. It is a characteristic of the choke-bore to show its greatest superiority in the large sized shot. When I am about to say to you perhaps surprise you as much as the performance surprised me. On trial of the 12-gauge 28-inch modified choke-bore barrels, with 3½ drachms of powder and 1½ oz. of shot, I got about the same pattern and spread of shot at 25 yards as with the full choke 10-gauge barrels at 40 yards, with tremendous penetration. This is just the performance required of a gun for thick cover, in which you generally find ruffed grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 25 yards.

COL. JOHN BODINE.

DEAR SIR—The guns arrived all right. We think these last guns you have sent us will place the Greener guns ahead of any other in this country, as guns of other makers don't compare in shooting qualities with them. We unhesitatingly recommend the Greener as far superior to any gun of foreign or domestic manufacture that we have seen. We say this after seeing and using guns of all the most celebrated makers.

CARLISLE, JONES &amp; CO.

SELMA, Ala.  
The Greener gun presented by Mr. Squires for the best pointer, and awarded to me, is a close, clean, hard hitter, killing its game at very long distances. It is the second Greener that I have owned and they cannot be beaten. I will win with them at the trap or in the field.

S. B. DILLEY.

LAKESIDE, Minn.  
SIR—I have a pair of W. W. Greener's breech-loaders (bought of H. C. Squires, of New York), modified choke-bore. I have had an opportunity to test these weapons on birds heavily feathered, and where great penetration was essential to success. I have repeatedly made long shots, always killing the game clean. At a target both guns made a very even distribution of the shot, with extreme penetration.

SIR—The Greener breech-loader I purchased of you is very fine indeed, and gives great satisfaction.  
WARREN, Pa. ROBERT DENNISTON.

## TO SPORTSMEN IN GENERAL!

Headquarters Bohemian Glass Works,  
214 PEARL STREET, NEW YORK.

MAKE THE FEATHERS FLY WITHOUT KILLING THE BIRD—SOMETHING MUCH  
NEEDED.

The Bohemian Glass Works having made a specialty of the manufacture of Glass Balls for Trap Shooting for the past year, and having facilities for manufacturing cheaper and better than other establishments, have secured the service of that well-known Sportsman,

IRA A. PAINE,

to take entire charge of the production of his new patent Feather Filled Ball, which we hold the exclusive right to make and sell.

In offering this new ball to the public it will require very little introduction, as in no instance where it has been exhibited has it failed to take the place of all others, and is to-day the only perfect substitute for a bird in use.

The following is from the New York Herald, Sept. 1:

THE BRITISH VISITORS RECREATING AT ELM PARK—A TRIAL AT GLASS BALL SHOOTING.—The visiting riflemen, accompanied by Judge Gildersleeve, Col. John Bodine and Mr. L. M. Ballard, all of the American Team of 1875, arrived at the Park a little before eleven o'clock, and practice shooting was at once commenced. The shooting at glass balls sprung from a steel trap, instead of live pigeons as in Europe, was a novelty for the Englishmen. Mr. Ira Paine, who has invented the "feather balls," furnished them for the occasion as a compliment to Judge Gildersleeve and his friends. This style of balls gave during the afternoon such satisfaction that after the shooting was over the West Side Gun Club held a special meeting to adopt them, ordering 1,000 of them forthwith.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300 or boxes of 500. Send for price list. We intend offering special inducements to the trade.

## Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many  
thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL—The only Ball that will break sure  
when hit by shot. Use none but the best. Every ball marked. Patented  
April 10, 1877; Traps, March 13, 1877.

Geo. E. Hart &amp; Co.,

NEWARK, N. J.

TRADE SUPPLIED.

HUBER &amp; MERWIN'S CHAMPION BALL TRAP.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP, for durability and perfection of its operation, superior to them all, and take pleasure in recommending the "Champion" to sporting clubs and my friends. (Signed)

### FAREWELL.

SUMMER is fading; the broad leaves that grew  
So freshly green when June was young, are falling  
And all the whisper-haunted forest through  
The restless birds in saddened tones are calling  
From rustling hazel copse and tangled dell,  
"Farewe! sweet summer,  
Fragrant, fruity summer,  
Sweet farewell!"

Upon the windy hill, in many a field,  
The honey bees hum slow above the clover,  
Gleaning the latest sweets its bloom may yield;  
And, knowing that their harvest time is over,  
Sing, half a lullaby and half a knell,  
"Farewell, sweet summer,  
Honey-laden summer,  
Sweet farewell!"

The little brook that babbles 'mid the ferns,  
O'er twisted roots and sandy shallows playing,  
Seems fain to linger in its eddied turns,  
And with a plaintive, purring voice is saying,  
Sadder and sweeter than my song can tell,  
"Farewell, sweet summer,  
Warm and dreamy summer,  
Sweet farewell!"

The fitful breeze sweeps down the winding lane  
With gold and crimson leaves before it flying;  
Its gusty laughter has no sign of pain,  
But in the lulls it sinks to gentle sighing,  
And mourns the summer's early broken spell,  
"Farewell, sweet summer,  
R-s-y, blooming summer,  
Sweet farewell!"

So bird, and bee, and brook, and breeze make moan,  
With melancholy song their loss complaining:  
I, too, must join them, as I walk alone  
Among the sighs and sounds of summer's waning;  
I, too, have loved the season passing well—  
So, farewell summer,  
Fair, but faded, summer,  
Sweet farewell!

GEORGE ARNOLD.

For Forest and Stream.

### Quail Shooting.

WHEN dying nature, like the dolphin, begins to array herself in her brightest colors, memory plays over by-gone scenes of happy autumn days, and there comes stealing over us an intense and irresistible yearning for the field. Our brute friends feel it too. Old Jack 'no longer casts a sleepy eye upon us and taps out a lazy welcome with his tail on the stoop as we come out. He sits up in monumental importance, watches us with a deep whine of anxiety, cocks his head on one side and the other, as his glistening eye tries to fathom our intentions, and when he sees us take down the gun or the old shooting coat he races, barks, dances and nearly jumps over our head with joy.

I imagine that the longed-for first of November is at last at hand. By sunrise we are in the field. The morning is bright, fresh and frosty, and our nerves all tingle with happy anticipations as we enter a buckwheat stubble bordering a piece of tangled wood. The moment we cross the fence the dogs strike for the leeward side of the field, and take a slow canter back and forth, crossing each other's path at almost regular intervals so as to pass within scent of every particle of ground, but moving steadily ahead. Their eyes flash with excitement, and the tips of their tails lashing rapidly from side to side. See them slacken occasionally to a trot and then to a walk as they fancy they smell something suspicious, and give a sniff of extra caution as they approach a clump of briars or patch of weeds.

Jack suddenly stops in full career, raises his nose and falls into a slow walk. His tail, sympathizing with its corporeal attachment, slackens also to a slow, wavy motion. Now he stops a moment, takes a few delicate sniffs of the spicy breeze, looks cautiously about him and then at us with an expression which says as plainly as could human tongue, "O. K." Meanwhile Dash is at the other end of the field, tearing about like a lunatic on the fresh trail of that prince of nuisances, the detestable little cotton-tailed hare. When they will often make a fool of an old and sober dog what else can be expected

Selected.

of a young one on the first day of his second season? An affectionate fondling with a very impressive pocket black snake restores him to his senses, and he begins to watch Jack with intense interest and almost imitates his motions as he once more moves slowly on.

Jack stops again. This time he drops his head, raises one foot and stops the light, wavy motion of his tail, which now becomes stiff and straight as a ramrod, but quivers faintly at the tip with excitement. Dash stands a few yards behind looking on with gently swaying tail and sparkling eye, but with no other sign of life. All around us is still as death, except the autumn breeze sighing along the ground, the patter of nut shells which the squirrels fling from the old yellow hickory in the wood, the piping of the robin, squeal of the highholder in the old red gum tree, or the melancholy cry of the bobolink in his altered coat, bidding farewell to his summer home. Few moments of our weary lives are more delightful than this, with every nerve strung to its utmost tension, we are excited in spite of, our long experience and our pulse bounds in spite of our effort to be cool and collected. But oh, shame! Our thoughts are earthly and sensuous. We want meat, "and think only of our tooth and the market value of our birds!" Alas! how

"One by one, in turn, some grand mistake  
Casts off its bright skin yearly like the snake."

But a few months ago we cherished the fond delusion that we were gentlemen enjoying one of the divinest of earthly pleasures. But we awoke from our pleasant dream to find ourselves ruthlessly consigned to the vulgar herd of meat hunters by that immortal hand that, disdaining the butcher's weapon, slays with the long bow in true godlike style, woodpeckers when "young and fat" and "juicy and sweet," poor little larks for their "exquisitely enjoyable" thighs and unweaned squirrels for their "deliciously toothsome" flesh.

As we slowly advance, fourteen or fifteen quail suddenly spring from a few feet ahead of Jack with simultaneous burst and spin like bullets for the brush. Quick as a flash your eye settles upon a single one; the gun comes to your shoulder; you catch a dim glimpse of the barrel lying in the bird's direction; in a twinkling there is a shock, a report, smoke, feathers flying, something whirling downward. The gun shifted and another bird comes down, bouncing along the ground within ten paces of the first one. And all done in a second! As handsome a double shot as ever was made. I tried the same thing; but my two went buzzing away to the woods without leaving a feather floating on the air.

The dogs remain in their tracks until we load, when we send one for the dead birds and then move on to the woods where our little friends disappeared. On arriving there Dash comes to a point. Just ahead of him, from under a knot of tangled cat briars, darts a brown, whizzing streak and vanishes in the thicket. But your eye catches his direction; the gun comes like a flash to the same line; the charge sweeps through to the green briars and dead leaves, and a dull, heavy fall is heard. A fine snap shot that—not done, as some suppose, without any aim, but by an aim, dim and indistinct indeed, and quick as thought, but still an aim; a shot requiring the highest perfection of both natural and acquired skill. But no; we are again mistaken, for the lord of the mighty bow has made the discovery—back seats, Newton, Galileo, Columbus and others—that any fool must necessarily hit a quail every time with a wholesale murder dispensary that covers the enormous space of two feet.

Dash brings the bird, and we move on. The dogs beat the ground closely over and over again, but can find nothing more. Can we have mistaken the place, or have the rest gone further on? No, they are probably here, but holding their scent. There is but one way to beat them on this trick—to wait. We will spend about half an hour among the saplings down by the little spring run after woodcock. We do so, and bag five full-grown, strong-winged, whizzing beauties that make us feel ashamed for having killed those feeble little wretches last summer.

As we approach a thicket along the brook Dash begins to draw; and before he can get close enough for a point out bursts two splendid ruffed grouse. Their hoarse, roaring, wings carry them like arrows from our sight before we get our guns fairly raised. We catch their course; however, and follow them. Soon Jack draws. Lively now! Have your gun at the hip and your finger on the trigger. Up they spring

like a flash about twelve yards from us. Both guns crack together, and down comes one within ten feet of the place from which he sprang. The other darts ahead some two hundred yards and lights in a tree, a thing they sometimes do even when not chased or barked at.

Going up to the tree we discover him standing erect and still as a statue near the trunk on a limb about ten feet above us. What a thrill such a chance would send through the gastronomic appointments of the great modern revolutionist! Imagine the wild tumult of tender emotions in his salivary glands as he draws the weapon of the gods at the "rich, white, tender, sweet, luscious, toothsome, delicious, etc.," breast, and with marvellous skill pot-shoots him with an arrow at ten feet distance! Well, let us try him with the unscientific blunderbuss that must necessarily kill in the hands of any bungler. I shy a piece of dead stick at him accompanied with an imitation of his noisy flight. Off he goes with a downward curving rush like the swoop of a falcon. Bang, whang, whang, bang, go our four-barrels, and through the smoke and flying leaves we catch a glimpse of a dim streak fading away in the distance without even a feather for a souvenir.

But it is now time to return to our quail. We will try and make a sure thing of it now. Stopping about one hundred yards from where we think they are, we sit down and I commence the "Autumn call," or more properly, perhaps, the female's call. After giving it a few times at intervals of three or four minutes between every three or four notes, we suddenly hear, right from the place we hunted so closely, the tender, sweet "Kloi—ee—ee, kloi—ee—ee, kloi—ee—ee." Our answer is soon followed by another and soon by several more from the same direction. They are moving now, and we will try them in a few moments.

We do so; and in less than two minutes both dogs are pointing on ground they hunted so carefully about an hour ago. Dash has his head low down and turned toward a clump of dead grass and briars, while Jack is a few yards off, all screwed up in a heap as if on a fall and he had struck an invisible stump and stuck fast to it. Let's attend to Dash first, and you take the shot. Nothing stirs as you walk in ahead of him; but he moves in a step closer, and crawls around to the other side, faintly wagging his tail, crouching low and trembling all over with excitement. You give a kick at the clump; but all is still again except Dash, who this time crawls up until his nose is within six inches of it, and looks nearly crazy with expectation. Another vigorous kick, and Dash, unable to contain himself any longer, jumps in at the same time. Out comes a quail from between his fore paws, twists around your head and buzzes away behind you. But just as he vanishes behind a thick little scrub oak your shot shivers its dead leaves and down he comes.

After Dash brings it we go to Jack who is still keeping his point with the serene composure of a two-pound bull frog on a sunny mud bank. Dash backs him at once. Away go two birds almost from under Jack's nose. No wonder the old chap stopped so quickly. One falls to each gun. On ordering Jack to bring them he does not move, but only turns his head slightly.

"What, still another there?"

It looks like it, certainly. Most any good steady dog will do that sometimes. On kicking around in the direction of Jack's nose another starts from the dead leaves almost under our feet, and wheels quickly upward to the left, while three barrels harmlessly turned the thick brush behind him. The rest of the birds are soon found. As they have all been moving, a little the dogs find them at once. While hunting up the last Dash strikes a trail which, from his actions, is evidently that of another bevy that have run in from the stubble where we found the first. On he goes, followed cautiously by Jack, now winding around fallen tree tops, now crawling through cat briars without a whimper, now faster, now slower, now stopping, now creeping on again. On he goes, one hundred yards, two hundred yards, a long trail, but a fresh one. A ruffed grouse bursts with a shivering rush from before him, but he pays it no attention. A dirty little hare flirts up from behind a stump in his path, and makes him give an involuntary start, but with a wistful look in the direction of the little woolly-tail he moves straight ahead. On he goes, scarcely moving now, step by step he crawls, with the stealth of the midnight thief, down toward the brook.

Hello! there they are about thirty yards ahead on that lit-

the sand bar in the brook, drinking. There are over a dozen. These they see us now. Hear their little soft, musical "tee-tee-tee-tee" of alarm as they huddle into a beautiful medley of blue tails, white and yellow collars, mottled breasts and rosewood colored backs. What a chance for a pot-shot! The mercenary wretch who could fire into them now, would smush up the Venus de Medici for soda water.

As we gaze upon them in admiration they steal gracefully away into the grass along the bank and disappear. We soon start them however and they scatter in a grove of scrub oaks and saplings further up the brook. Here we have a high old time. Every second or third point of the dogs is on a grand old woodcock, who goes whistling up through the trees on a rapid cork screw course that tries our utmost skill. As we swing from time to time toward the thickets of black haws, and thorn apple along the water, a ruffed grouse suds away on whizzing wing. Nothing but the liveliest kind of motions will do here. Sometimes we have to drop suddenly on one knee to get even a glimpse of the bird and shoot instantly in that position. A woodcock darts upward to the top of the tree, and just as we think the gun is on him he drops down at a sharp angle. A quail wheels around our heads, and as we whirl quickly around, he darts off through the leaves at a tangent, leaving us to recover our balance as best we may. A grouse goes with so rapid a rush and start at such a distance that the gun must go off the instant it touches the shoulder or it is of no use. But still we are nearly equal to the emergency. Many a charge goes tearing harmlessly through the brush and scattering flying leaves in vain; but all the greater is the satisfaction when we do hit.

God bless the man who invented quail shooting. Who does not say Amen?  
T. S. VAN DYKE.  
*Miner's Rancho, San Diego Co., Cal.*

## THE UPPER MAGALLOWAY RIVER.

IT is the prevailing custom with most visitors to this region to take from home all the paraphernalia for camping out, including a tent, cooking utensils, canned meats, etc., etc., which make a formidable array of boxes and bundles, and necessitate much trouble and expense in transportation. At the falls of the Magalloway the entire load and party are usually placed in a small boat with one guide to work them up the river. When a party of four or more are intending to spend several weeks at one spot, this may prove the most economical, but for a party of a less number it is far more pleasant and also cheaper to depend on the different camps that have been built; and where experienced guides can always be engaged to pilot to hunting or fishing places not generally known to the "dwellers in tents." Having given both plans a thorough trial, I must give the preference to the latter, and will mention some of its advantages.

There are two seasons of the year for making this trip, both of which may be equally enjoyed, free from flies, midges or mosquitoes. The first is from the middle of May to the first of July; the second from the first of September until cold weather drives you home. During July and most of August, insects of great variety, from the "mosquito" over half an inch long, to the midge, with its minuteness, infest the entire region. Then, too, the chub is more eager for your cast than the trout, and there can be but little genuine sport or comfort attained. In June the trout are in their best activity, eager to rise, and often splashing water into your boat in their endeavors to free themselves—they are also in better condition for food than at any later season. After the early fall rains, trout weighing from three to six pounds can be taken in the eddies of the river above the meadows and also at their spawning grounds in the lakes, but no honest sportsman will take them after the first week in October. The early season is best adapted for rod, while the gun will be required in the fall.

In Farrar's "Guide to Richardson and Rangely Lakes," a route is given to the Magalloway River, viz., Upton, Me. This necessitates a night ride of twenty-six miles by stage, or the loss of one day by waiting over at Bethel until the next morning; then from Upton to Errol Dam Landing by stage, from whence a little steamer makes tri-weekly trips to Wentworth's Location, N. H. There you are transferred to a wagon to make the carry to Azizcoho's Falls, thus making five changes from cars to head of falls. A more pleasant and less expensive way of making the Magalloway trip is one recently taken by the writer, North Stratford, on the Grand Trunk Railroad, being the point we desired to reach by rail. Having fixed upon the time for starting, we packed in one box easy to handle, such clothing and articles as would only be needed after our arrival at the falls; this was sent via express to Colebrook, N. H., there to await our arrival. What was needed otherwise was taken in travelling bags and shawl straps. Arriving at North Stratford at 8:20 P. M., we were conveyed to Colebrook fully an hour in advance of the regular stage. Having arranged for an early start, the next morning we were awakened at half-past 4 o'clock, and by half past 5 had started for Azizcoho's Falls in a light two-seated top-wagon, in which were placed our box, travelling bags and bundles. The road to Errol Dam is in excellent condition and passes midway through the celebrated Dixville Notch. At Errol we turn to the north, enter the forest and soon reach the lower Magalloway above its junction with the Androscoggin, and by noon arrive at Mr. Flint's, in Wentworth's Location. The few scattered houses in this valley are called "The Settlements." Mr. Flint, whose post office address is Wentworth's Location, N. H., is the leading spirit in the section, and his geniality and hospitality are unbounded. He has several sons, who are active, muscular men, perfectly familiar with the mountains, lakes and rivers for many miles around. To secure either one of them as your guide is the *sine qua non* for rare sport and plenty of game. The two eldest, T. S., or "Spoff," as he is familiarly called, and Frederick, have excellent camps on the river. The one built by Fred this season at the head of the falls is a large substantial house containing several rooms with nice beds and all the comforts to be found at the settlements, showing evidence of a woman's taste and care, for Mrs. Flint assists her husband here in providing for the guests who are constantly arriving. Her cooking cannot be excelled, and one will be surprised at the amount of food they can eat at her table. There is no dyspepsia here.

We reached this last evidence of civilization about 4 P. M., distant from Colebrook thirty-eight miles. The last three miles, called the Carry, is quite rough, but will soon be put in good order. Passengers can avoid this by taking a foot-path through the woods, while the team conveys their baggage around. We secured a boat, and also the services of a man to accompany us up the river and bring the boat back, as we were bound for Spoff's Camp, thirty miles above, and he had light boats at all the places where we should need one. We thus avoided the expense of keeping the boat when not in use, and the trouble of taking it across the carries. We were up early next morning, and donned our rough clothing. At half past six A. M. we commenced to ascend the river, using one set of oars and one paddle. As there were three of us, one could be resting while the others were at work, each in turn doing their share at oars or paddle. The weather was all that could be desired, with no ripple on the dark placid water, and all nature seemed to be in repose. I will not enter into the romance of this singular river, with its tranquil water and picturesque effects, as I could not do the subject justice, but I recall what my friend Thad. Norris, in "Dies Piscatorie," said of the Magalloway: "This river is crooked beyond description; it is a practical exemplification of the ways of the Evil One. One minute the sun is behind you, the next ahead; then right and left, across the middle, up and down in every imaginable position. You have to row three miles to get anywhere, if it isn't more than twenty rods off." Mr. Norris had at that time been only a short distance above the falls. Through the meadows the river is far more crooked than below; in fact there are 239 decided bends between the falls and mouth of the Little Magalloway, where the distance by river is thirty miles, and by air line about ten. It generally requires a camping party over twelve hours to reach Spoff's landing—just above the mouth of Little Magalloway—but it was accomplished by us at this time in seven hours and a half without blistering our hands. This was said to have been the fastest time in going up this season. I had been down the river with a party of six in seven hours, assisted, of course, by the current.

Spoff's Camp is half a mile from the landing, on the carry to Parmachenee Lake, which is three miles distant. His camp fronts on Sunday Pond, the shore of which is formed like an Indian bow. The water is clear as crystal, and fed by numerous cold springs. Here is as lovely a spot as one could desire, in which to secure rest and quietness, or to make headquarters, for now we are within easy distance of all the best fishing and hunting grounds of this region. The pond contains nothing but trout; some of them have been taken weighing as high as six pounds, and visitors to the camp are privileged to cast for them whenever they chose.

Mr. Flint never tires in his endeavors to give his guests all the sport they want. No Indian can excel his skill with the paddle, and his services are consequently much in demand for sail or jack hunting. He is acknowledged to be the best guide in all this wilderness, so that a party with him need never return unsuccessful. There are a number of large ponds within a few miles of this camp, where the flies have never yet been cast. It is only a year since Lincoln Pond was known to contain trout of any large size. Farrar refers to it in this year's Guide as "stocked with small trout weighing from a few ounces to a pound each," while I have never seen a trout caught with a fly from that pond which weighed less than one and a half pounds, and I have taken them weighing from three to four pounds. One that I took at sunset near the outlet was twenty-two inches long. Mr. Flint has a camp and boat at this pond, and by next season he will probably have the same accommodations at Hunter's Pond, which has not yet become known to the public. To the lovers of the gentle art I can assure a spot of surpassing loveliness, where those who love to be quiet can "go angling."

W. C. E.

## AN OCTOBER MEMORY SKETCH.

THE day is one of those bright golden gleams of the past and faded summer. Early morning finds the ground covered with the grey, glittering hoar frost, which the warmth of the noon-day sun disperses. The face of nature is bewitchingly brilliant in her autumnal dress. Ash, oak and maple vie with other for the mastery. The air is clear and bracing. Off we plod for a day with the fall snipe. We have been keeping a sharp lookout for these unreliable fellows, and only yesterday, which was Sunday, we found the meadow well populated. Still there is no certainty of catching them to-day. They may have stopped over Sunday only. Perchance they had religious scruples against traveling 'o' the Sabbath. Still a few tardy stragglers may have lingered and we shall try to stir them up. We are accompanied by our young Irish setter Dash. A tyro is he in simple hunting, barely fifteen months, having passed over his heat, but he has shown excellent qualities during the summer cock-shooting, and our disappointment will be great if he falls short of the mark on the snipe.

We have reached the river—one of those New England streams celebrated for its picturesque beauty, whose valley and that of its principle tributary afford illimitable scope for the artist's brush and the pen of the romancer. The immediate confines of the stream are often extensive meadow lands which are occasionally overflowed by the high tides of spring and fall. These wet lands present to the snipe their favorite haunts for feeding, and here they stop in considerable numbers during their migrations. But the Wilson's snipe is proverbially an unreliable bird, spending to-night with us and to-morrow a hundred miles away. Thus its successful pursuit is largely a matter of chance.

As we row up the river various birds sail swiftly by us on their long journey to the sunny South. The industrious osprey is seen perched high on the overhanging pine, his keen eye ever watchful of the funny tribe below, while myriads of small birds fill the air with their musical calls and the shadows of their wings. At no season is nature so lavish of her bounty as during this golden era, when, crops harvested and garnered, she takes a brief respite from her long labor.

As we touch the opposite shore of the stream a bunch of wood ducks spring from the mouth of the creek near by. How they cleave the air with their wings, seeming to use even their feet in their frantic efforts to escape. Recovering our first surprise the guns roar simultaneously and one of the handsome birds falls lightly on the water. In a moment Dash is

overboard and the duck retrieved. We now drag our craft high and dry on the meadow and having secured all our impedimenta we start for the other end of the marsh in order that the breeze which is lightly blowing from the south may be at our backs as we beat the ground. Dash trots behind at our heels full of enthusiasm, but not looking for game in the open meadow. Chancing to glance around, after having traversed a hundred yards or so, we notice that the dog has stopped quite a way back and is making furious game close by the path we have been following. Before we reach him he has come to a half point, but looks rather confused and nervous, both head and tail slightly. The bird had evidently been lying close by our path within a few yards of us as we passed, and the scent coming to Dash warm and fresh sent him searching for the cause of it. The bird was, after some trouble, flushed and bagged and proved to be only a rail (*P. Carolinensis*) which had been running in front of the dog and had perplexed him not a little. We were disappointed, of course, for we had confidently expected a jack snipe to skitter up and away.

Having reached the southern limit of the meadow we turn and allow Dash to go in. At first he seems a little in doubt as to what is required of him, but his experience with the rail has taught him that there are birds in the grass and weeds, and he blunders along, sniffing here and there until suddenly he seems to take a livelier interest in his occupation. He hesitates for a moment, then slackening his pace crawls slowly forward. The tail, which had been beating his flanks at the rate of a mile per minute, vibrates more and more slowly and finally becomes rigid as a bar of iron. Surprised no less than delighted that a dog so young should stand so staunch we stop to gaze upon the fascinating picture. What a subject for Landseer. There Dash stands all trembling with suppressed excitement his head well in front, the forefoot poised and the beautiful tail with its hanging fringe of feather so exactly in a line with his back. Having held the good fellow for a moment we walk forward and from under his very snout, with a hoarse squeak, the first snipe of the day darts up, but pitches forward at the report of the gun which cuts him down at thirty yards. Dash makes a wild plunge in, as the bird flies up, but comes to charge at a sharp call. We proceed to chastise him for his misdeed. As the whip descends it is followed by a cry from D. S. H. The noise starts a second bird from the grass within three feet opens. The whip is dropped, the gun seized from the ground where it had been placed for a moment, and snipe number two drops with a broken wing. Fresh cartridges are slipped into the empty chambers and Dash retrieves birds number one and number two in fine style. They are found to be in excellent condition.

We start again. Dash having learned where to look for his birds works superbly and beyond our most sanguine hopes, and we find the birds moderately plenty. As we approach a small creek winding through the meadow a solitary blue-winged teal springs from the water and is dropped with No. 10 shot at a good fifty yards. Within one hour we have secured four snipe, four rail and two ducks. We cross and recross the meadow; the birds get up just often enough to keep us comfortably employed.

As the day advances the snipe lie remarkably close and Dash has some trouble in finding them. One of his points calls for special mention. We were going slowly and trying to do every inch of ground. Dash was quartering to our right when he was seen to stop short half across a bog and, with his forelegs far apart and his head held downward and a little to one side, he came to a stiff point. The bird proved to be under the edge of a tissock almost directly beneath him and when flushed got up under his body and whirled away in great fright. We continued to hunt the meadow, which was extensive, and by three o'clock when we returned to our boat and lit our pipes, prior to pushing off, we had a bag of thirteen snipe, eight rail, or mallard, teal and woodcock, besides having had a glorious tramp under the warm October sun.

RAMON.

For Forest and Stream and Rod and Gun.

## A SPORTING REMINISCENCE OF THE WARWICK WOODLANDS.

IT was in July, 1876, that my friend, Clarence, proposed to me that we take a trip to the country and have a "bang" at the woodcock, the prince of all game birds and the tit-bit of the American table. The wamps in the vicinity of Warwick, N. Y., were settled upon for our campaign—not that they afforded superior sport, but because it was easy of access from New York, and my friend had shot many a woodcock there in days gone by. It did not take a days to prepare us for the field, for Clarence and I have shot for several years together, and are always ready at a moment's notice to start with clean guns and fresh dogs—generally too fresh for much comfort the first day.

We arrived at Warwick the next evening, and, after seeing our dogs well cared for, we partook of a light supper and turned in for the night. The sun was just commencing to peep through the window blinds the next morning, when turning over in my bed I was surprised to see Clarence half dressed. I was not long in making up for lost time, and soon we were both prepared for the field.

Everything bid fair for a hot, sultry day—too warm to shoot with any comfort. But our stay was limited, so we went forth without a murmur. Our drive down the valley was very pleasant, and we soon reached the first cover, and after tying our horse in the shade gave the dogs the word, "Hi-on!" An escaped convict could not have been happier than those two dogs were the moment they were released. Bounding through the thickest cover, crawling under fallen trees, sniffing and snorting at every step; why, I thought that they would go half crazy, and it was not until we had done considerable scolding that they took well to their work. Clarence and I watched with pleasure the young pup imitate every movement of the old dog, for this was her first hunt on woodcock.

On and on we trudged, our dogs working faithfully and beating every foot of ground. No birds! But see; the bottoms are full of "borings!" "Yes, sure enough; but look there, and there!" said Clarence, at the same time pointing out numerous dog tracks, and the ponderous foot print of a small boy. We knew very well that we were two weeks behind time, but really three or four weeks too early to enjoy

the sport in a manly way. The poor little fledglings had been well looked after long before our arrival, and there were but few, if any, left. With a long face we turn sharp to our right and beat our way back to the wagon. "Look out, Clarence, my dog is drawing." Away went Mr. Cook, which I very cleverly missed, but he was nicely taken by my friend. This gave us renewed vigor, for, as a rule, when you find one bird you will find at least two. In this case it was too true; for before we reached the end of the cover my dog "spiked" one which fell an easy prey to my piece.

I picked up all that was left of this little thing, for his soft, pliable bill and scant covering of feathers showed too plainly that he was the only mourner of a late brood. Although we retraced our steps not another bird did we see, and after breaking through into the bright sunshine, almost exhausted from the heat, we tumbled into our chaise and rolled off for fresh cover. Our next stopping place was a swamp on a quiet little stream called the "Wa-wa-yanda River," but more familiarly known as "the creek." Here we decided to separate, Clarence going down on the northern side of the stream while I struck out southward. I placed two fresh shells in my gun and sallied on, my dog occasionally taking a swallow, which seemed to refresh him exceedingly. Soon I found myself in a mighty forest, far away from the fields of waving grain and the bright rays of the summer sun.

Feeling quite tired, I sat down on a log to take a little rest. After wiping the perspiration from my brow, I began to take a general survey of the surroundings. I found on every side long swales of black-looking earth, quite thickly covered with a strong growth of ferns and wild grass—a perfect paradise for the woodcock and as bountiful a cover as you could wish to shoot in. I spent some little time on this log, for I was alone—not even a leaf seemed to yield to the gentle breeze, and the occasional rapping of a woodpecker, who sat perched upon a dead limb, was all that broke the silence.

"And in that lonely solitude, overtaken

By some spell midwifing,

Their cares shoo from them, like needles shaken,

From out the gusty pine."

This is the scene of the Warwick Woodlands. Here Frank Forester used to roam in quest of that game bird he loved so well. Here ranged dogs without a fault under the skillful hand of their master. Here, at every step, woodcock rose, only to fall to the fire from a true eye and a cool hand, and a man who put all his heart into his work. Is it possible, thought I, that some of these great trees in their youth shaded Forester?—Reader, stop for a moment and think of the shooting on these grounds quarter of a century ago. Think of it to-day. Is it not another sad reminder that this noble bird is slowly but surely being exterminated? But I have been dreaming my time away and must press on.

I spent some time in this swamp, thoroughly beating all the available swales, and returned to the wagon with but two birds. My friend had been waiting for me some time, having gone all over his ground, and with about the same success. It is now about noon, and it will be useless to hunt any more until about sundown. Old "Roan" is taken from the shafts and led back to the wagon, where he seems to wonderfully enjoy the new mown grass brought purposely for him. Our lunch is soon through with, and after lighting up a weed, we roll in the shade of the wagon and enjoy solid comfort.

We have a long drive to the next cover and must be off. Roan reluctantly takes the bit in his mouth and stumbles clumsily into the shafts.

The modest, though enterprising little city of Warwick, nestled cozily at the foot of the Wa-wa-yanda Mountains, was soon reached. At the upper end of town we chanced to meet an old gentleman, considerably past the sunny side of life, whom we stopped to ask a few questions about the roads. We found him to be a pleasant old fellow, well posted on local matters, and quite ready to answer any questions put to him. Noticing our outfit he seemed to become interested in us, and we found him to be an advocate of out-of-door sports, and I asked: "Did you ever know Frank Forester?" The old gentleman's whole face seemed to glow with delight as he replied: "I did, my lads, but it was many years ago when I knew Herbert. Look! do you see that long house up town? Why, that's where Herbert used to stay when in town. Do you see that mountain way yonder, lads? There old fat Tom Ward (Tom Ward), on many a cold winter's day, used to stand on the warm side of a tree and watch his hounds running like 'kildrums' after the foxes, and he used to get 'em, too, boys. Yes, I did know Forester."

Of course we set out toward the house just pointed out, and, halting in the shade of a maple, we gaze upon the dwelling which, though old-fashioned, has the appearance of solidity and comfort. The house stands at the junction of two roads, and at the extreme upper end of town. Along the entire front runs two roomy porches, one above the other, and from appearance it would be safe to say that at some time it had been a hotel, and I have since been told that, though long known as the "Old Stage House," it is now occupied as a private residence. I will not tire the reader by taking him through another swamp where the birds were few, and whence, after securing another brace of birds, we turned our faces homeward. As a woodcock shoot the trip was not a success, but the pleasure this trip afforded me I shall never forget.

C. W.

## INTRODUCTION AND SUCCESSION OF VERTEBRATE LIFE IN AMERICA.\*

By O. C. MARSH.

PRESIDENT OF THE BIOLOGICAL SECTION OF THE AMERICAN ASSOCIATION.

SIXTH PAPER.

The order *Toxodontia* includes two very peculiar genera, *Toxodon* and *Nesodon*, which have been found in the post-tertiary deposits of South America. These animals were of huge size, and possessed such mixed characters that their affinities are a matter of considerable doubt. They are thought to be related to the Ungulates, Rodents and Edentates, but, as the feet are unknown, this cannot at present be decided.

*Macrauchenia* and *Homalodontotherium* are two other peculiar genera from South America, now extinct, the exact affinities of which are uncertain. *Anoplotherium* and *Palaotherium*, so abundant in Europe, have not been found in our North American Tertiary deposits, although reported from South America.

Perhaps the most remarkable mammals yet found in America are the *Tilloodontia*, which are comparatively abundant in the lower and middle Eocene. These animals seem to combine the characters of several different groups, viz.: the Carnivores, Ungulates and Rodents. In the genus *Tillotherium*, the type of the order, and of the family *Tillotheridae*, the skull resembles that of the Bears; the molar teeth are of the ungulate type; while the large incisors are very similar to those of Rodents. The skeleton resembles that of the Carnivores, but the scapoid and lunar bones are distinct, and there is a third trochanter on the femur. The feet are plantigrade, and each had five digits, all with long pointed claws. In the allied genus *Stylinodon*, which belongs to a distinct family, the *Stylinodontidae*, all the teeth were rootless. Some of these animals were as large as a Tapir. The genus *Drylodon* has been found only in the *Coryphodon* beds of New Mexico, while *Tillotherium* and *Stylinodon* occur in the middle Eocene of Wyoming. *Anchippodus* probably belongs to this group, which may perhaps include some other forms that have been named from fragmentary specimens.

The Rodents are an ancient type, and their remains are not unfrequently disinterred in the strata of our lowest fresh-water Eocene. The earliest known forms are apparently all related to the Squirrels, and the most common genus is *Sciuravus*, which continued throughout the Eocene. A nearly allied form, which may prove to be the same, is *Paramys*, the species of which are larger than those of the older type. In the Dinoceras beds, the genus *Colonomys* is found, and five specimens preserved point to the *Muridae*, as the nearest living allies. A peculiar genus, *Apatemys*, which also occurs in the middle Eocene, has gliriform incisors, but the molars resemble those of Insectivores. All the Eocene Rodents are of small size, the largest being about as large as a rabbit.

In the middle and upper Miocene lake-basins of the West, Rodents abound, but all are of moderate size. The Hares first appear in the Oreadon beds, and continue in considerable numbers through the rest of the Tertiary and Post-Tertiary to the present day. In these beds, the most common forms belong to the *Leporidae*, and mainly to the genus *Palaeolagus*. The Squirrel family is represented by *Ischyromys*, the *Muridae* by the genus *Eumys*, and the Beavers by *Palaeocaster*. In the upper Miocene of Oregon, most of the same genera are found, and with them some peculiar forms, very unlike anything now living. One of these is the genus *Altomys*, possibly related to the flying Squirrels, but having molar teeth somewhat like those of the Ungulates. In the Pliocene, east and west of the Rocky Mountains, Rodents continue abundant, but most of them belong to existing genera. Among these are *Castor*, *Hystrix*, *Cynomys*, *Geomys*, *Lepus* and *Hesperomys*. In the Post-Tertiary, the gigantic beaver, *Castoroides*, was abundant throughout most of North America. *Hydrochoerus* has been found in South Carolina. In the caves of the island of Anguilla, remains of large extinct Rodents belonging to the *Chinchillidae* have been found.

The early Tertiary Rodents known from South America are the genera *Megomys*, *Theridomys*, and a large species referred to *Arvicola*. In Brazil, the Pliocene Rodents found are referred to the existing genera *Cavia*, *Kerodon*, *Lagotis*, *Ctenomys*, *Hesperomys*, *Oryzomyia*, *Arvicola* and *Lepus*. A new genus, *Cardiodon*, described from this horizon, is a true Rodent, but the peculiar *Typhotherium*, which has been referred to this order by some authorities, has perhaps other affinities. In the Post-Tertiary, the Rodents were very abundant in South America, as they are at present. The species are in most instances distinct from those now living, but the genera are nearly the same. The *Canidae* were especially numerous. *Cercolabes*, *Myopotamus*, and *Lagotis* are also found, and two extinct genera, *Phyllomys* and *Lonolophomys*.

The *Cheiroptera*, or Bats, have not been found in this country below the middle Eocene, where two extinct genera, *Nyctilestes* and *Nyctitherium*, are each represented by numerous remains. These fossils all belong to small animals, and, so far as they have been investigated, show no characters of more than generic importance to distinguish them from the Bats of to-day. No other members of this group are known from our Tertiary. In the Post-Tertiary, no extinct species of Bats have been found in North America, but from the caves of Brazil quite a number have been reported. These all belong to genera still living in South America, and most of them to the family *Phyllostomidae*.

The Insectivores date back, in this country, at least to the middle Eocene. Here numerous remains occur, which have been described as belonging to this order, although it is possible that some of them were insect-eating Marsupials. The best known genera are, *Hemiacodon*, *Centelodon*, *Talpavus*, and *Eutamias*; all represented by animals of small size. In the Miocene, the bones of Insectivores are comparatively abundant, and the genera best determined are *Idopos* and *Leptictis*. A few specimens only have been found in the Pliocene and Post-Pliocene, most of them related to the Moles. No extinct Insectivores are known from South America, and no member of the group exists there at present.

The *Carnivora*, or true flesh-eating animals, are an old type, well represented in the Eocene, and, as might be expected, these early forms are much less specialized than the living species. In the Coryphodon beds, the genus *Limnocyon*, allied to the *Pterodon* of the European Eocene, is abundant. Another genus, apparently distinct, is *Protomys*, and several others have been named from fragmentary fossils. In the middle Eocene, Carnivores were still more numerous, and many genera have been discovered. One of these, *Limnofelis*, was nearly as large as a lion, and apparently allied to the cats, although the typical *Felidae* seem not yet to have been differentiated. Another Carnivore of nearly equal size was *Oroyon*, which had short, massive jaws and broad teeth. *Dromocyon* and *Mesonyx* were large animals, allied to *Hyenodon*. The teeth were narrow, and the jaws long and slender. Among the smaller Carnivores were *Vulpavus*, *Vicerravus*, *Sinops*, *Thiacoyon* and *Lophacodon*.

In our Western Miocene, Carnivores are abundant, and make an approach to modern types. The *Felidae* are well represented, the most interesting genus being *Macrauchenia*, which is not uncommon in the Oreadon beds on both sides of the Rocky Mountains. An allied genus is *Dinetis*, and several smaller Cats are known from about the same horizon. The *Canidae* are represented by *Amphicyon*, a European genus, and by several species of *Cania*, or a very nearly allied form. The peculiar genus *Hyenodon*, found also in Europe, and the type of a distinct family, is abundant in the Miocene east of the Rocky Mountains, but has not yet been found on the Pacific Coast. In the Pliocene of both regions, the *Canidae* are numerous, and all apparently belong to the existing genus

*Canis*. The genus *Macrauchenia* is still the dominant form of the Cats, which are abundant, and for the most part belong to the genus *Felis*. The extinct *Leptacetus* is supposed to belong to the *Uroidea*, and if so, is the oldest American representative of this family. In the Post-Pliocene, the extinct *Felidia* include species nearly as large as a lion, and smaller forms very similar to those still living. Bears, Raccoons and Weasels have also been found.

In the Pliocene of South America, *Macrauchenia* represents the *Felidae*, while the genera *Arctotherium* and *Hyenacetus* belong to the Bear family. Species of *Mustela* and *Canis* have also been found. In the caves of Brazil, the fauna of which is regarded as Post-Pliocene, one species of *Macrauchenia* is known, and one of *Synalurus*. *Canis* and *Urocyon*, still living in Brazil, and the extinct genus *Speothos*, represent the *Canidae*. *Mephitis* and *Galictis*, among the Weasels, were also present, and with them species of *Nasua* and *Arctotherium*.

We come now to the highest group of Mammals, the Primates, which includes the Lemurs, the Apes and Man. This order has a great antiquity, and even at the base of the Eocene we find it represented by several genera belonging to the lower forms of the group. In considering these interesting fossils, it is important to have in mind that the Lemurs, which are usually regarded as Primates, although at the bottom of the scale, are only found at the present day in Madagascar and the adjacent regions of the globe. All the American Monkeys, moreover, belong to one group, much above the Lemurs, while the Old World Apes are higher still, and most nearly approach Man.

In the lower Eocene of New Mexico, we find a few representatives of the earliest known Primates, and among them are the genera *Lemuravus* and *Limnotherium*, each the type of a distinct family. These genera became very abundant in the middle Eocene of the West, and with them are found many others—all, however, included in the two families, *Lemuravidae* and *Limnotheriidae*. *Lemuravus* appears to have been most nearly allied to the Lemurs, and is the most generalized form of the Primates yet discovered. It had forty-four teeth, forming a continuous series above and below. The brain was nearly smooth, and of moderate size. The skeleton most resembles that of the Lemurs. A nearly allied genus, belonging to the same family, is *Hyopodius*. *Limnotherium* (*Tomitherium*) also is related to the Lemurs, but shows some affinities with the South American Marmosets. This genus had forty teeth. The brain was nearly smooth, and the cerebellum large, and placed mainly behind the cerebrum. The orbits are open behind, and the lacrymal foramen is outside the orbit. Other genera belonging to the *Limnotheriidae* are, *Notharctos*, *Hipposyops*, *Microsyops*, *Palaeoconodon*, *Thinolesites* and *Telmatolesites*. Besides these, *Artiacodon* (*Anaptomorphus*), *Bathrodon* and *Mesacodon* should probably be placed in the same group. In the Diplocodon Beds, or Upper Eocene, no remains of Primates have yet been detected, although they will doubtless be found there. All the Eocene Primates known from American strata are low generalized forms, with characters in the teeth, skeleton and feet that suggest relationships with the Carnivores, and even with the Ungulates. These resemblances have led paleontologists to refer some imperfect specimens to both these orders.

In the Miocene lake basins of the West, only a single species of the *Primates* has been identified with certainty. This was found in the Oreadon Beds of Nebraska, and belongs to the genus *Laopithecus*, apparently related both to the *Limnotheriidae* and to some existing South American Monkeys. In the Pliocene and Post-Pliocene of North America, no remains of Primates have yet been found.

In the Post-Pliocene deposits of the Brazilian caves, remains of Monkeys are numerous, and mainly belong to extinct species of *Callicebus*, *Cebus* and *Jacchus*, all living South American genera. Only one extinct genus, *Protopithecus*, which embraced animals of large size, has been found in this peculiar fauna.

It is a noteworthy fact, that no traces of any Anthropoid Apes, or indeed of any Old World Monkeys have yet been detected in America. Man, however, the highest of the Primates, has left his bones and his works from the Arctic Circle to Patagonia. Most of these specimens are clearly Post-Tertiary, although there is considerable evidence pointing to the existence of man in our Pliocene. All the remains yet discovered belong to the well-marked genus *Homo*, and apparently to a single species, at present represented by the American Indian.

(To be Continued.)

[NOTE.—Through an error, the closing paragraphs of this address were added to the Fifth Paper. They will appear hereafter in their proper place, and with the explanation that the Sixth Paper should follow the paragraph, page 163, devoted to Proboscidiens (closing with the sentence: "The last of the American Mastodons and Elephants became extinct in the Post-Tertiary), we hope that Prof. Marsh's address may lose none of its value.—ED.]

## SPLIT BAMBOO RODS.

To Our Customers and the Public: In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,

—[Add. Manufacturers, 65 Fulton Street, N. Y.

—The site of the petrified forest of California is about 1,000 feet above the sea level, and lies in the same trend with the Geysers, Mount St. Helena, and the thermal springs of Calistoga. A recent visitor says that, geologically, it is one vast lava bed, in which the trees lie as they were thrown, probably thousands of years ago, by some convulsion of nature. The trees are in fragments, many of which have been converted into charcoal, others into lignite, and others into beautiful specimens of jet. Where the heart of the tree had decayed, the cavity is filled with opal, a form of lustrous uncrystallized silica containing water. Chalcedony, another form of the silica, but clear and limpid, is found in other cavities. No top has been petrefied, and only here and there a root.

—A remarkable bargain in rifles! Messrs. Turner & Ross, the well known dealers, offer a big bargain in breech-loading rifles for \$5 00. The guns are brand new and are exceptional bargains.—[Add.

\* Delivered before the American Association for the Advancement of Science, at Nashville, Tenn., Aug 31, 1877.

Those thirty feet arms, shooting about almost with the rapidity of lightning, will arrest the flying prey, as a cat arrests a mouse, and with even more certainty. Suppose that these giants move about in "schools" like their poor relations, the small squids, what havoc they must make among the cod fish on our fishing grounds, and what terror and destruction they must spread around. It is not impossible that they may have something to do with the failure of our fisheries, of which we have so often to complain. When the codfish suddenly disappear from some fishing-bank it is not impossible that their sudden flight in some cases at least, may be caused by an invasion of some wandering band of these vampires of the deep. The common squid is said to deposit 40,000 eggs annually; and if these giants approach them in fecundity, there must be myriads of them in the depths of the sea. But why, then, are they so seldom seen? Since 1873 only one was found at Grand Bank, in Fortune Bay, in 1876. It must be remembered that, like the whale, they keep to the deep sea, for the most part, and only when driven in by storm or currents do they approach the land. Besides, in swimming, they do not lift their heads or bodies above the surface, their hydraulic apparatus working noiselessly in the water; so that a shoal of them might pass a ship unnoticed. They possess a tube or funnel which is connected with the bronchial or breathing organs. The expansion of the mantle admits the water; and when it has communicated its oxygen to the blood, the mantle contracts and drives the water with great force through the funnel, the jets thus expelled by their reaction, driving the animal in the opposite direction. This funnel can be so bent as to direct the jet in any direction, and thus enable it to vary the motion at will. By turning the opening of the funnel to ward the tail forward motion is produced. The tail I suspect acts chiefly as a rudder, though it may also aid in locomotion.

Professor Verrill considers that the discovery of these giant cuttle fish warrants the expectation that the sea-serpent will one day cease to be fabulous as the Kraken has done. He says, "The 'pen' of our Archicentis seems to resemble that of the ancient genus *Tendopsis*, found fossil in the Jurassic formations, and contemporaneous with the huge marine *Saurians*, *Ichthyosaurs*, *Plesiosaurs*, etc., the sea-serpent of those ancient seas. May there not also be huge marine *Saurians* still living in the North Atlantic, in company with the giant squids, but not yet known to naturalists. Such a belief seems quite reasonable, when we consider how many species of great marine animals, both among cephalopods and cetaceans, are still known only from single specimens, or even mere fragments, generally obtained only by chance."

M. HARVEY.

[The monster referred to can now be seen at the Aquarium in Thirty-first street, New York, where it is on exhibition, preserved in immense tank of alcohol. The engraving which we republish to-day will not use any of its value, because it was first brought to notice in 1873. It is the one referred to in the body of Mr. Harvey's letter herewith published.—Ed.]

## HON. J. D. CATON'S DOMESTICATED WILD TURKEYS (*Meleagris galopavo*).

OF late years the Hon. J. D. Caton, of Ottawa, Illinois, has devoted much attention to the propagation of the wild turkey, the finest game bird of America, and the finest in the world except the capercaillie of Great Britain. This species of fowl is now extinct in many sections where it was once abundant, and every effort to restore it or extend its species is entitled to thankful commendation. But to propagate wild turkeys requires that they should be first domesticated to a degree. Money would be thrown away in simply capturing wild birds and letting them loose in the woods. They will "light out" in less than no time. We have tried the experiment ourselves in Blooming Grove Park, Pa., and never heard of our *protégés* after once bidding them adieu. Judge Caton, by long study, has acquired the knowledge of how to tame a wild turkey, and after he has tamed him, make him wild again. He has now on his premises at Ottawa something over one hundred. We are gratified to state that the Judge has promised to present the Blooming Grove Park with several pairs of them at any time when he may receive the shipping order, and we have no doubt that the result will be much more encouraging to the Association than the first experiment proved to be. He has also been kind enough to send directions for shipping them and caring for them, which we take the liberty to print herewith, as they may be of benefit to others who may perchance be engaged in the same laudable enterprise. He says:

"In transit, the cocks must be in separate apartments, else they are liable to kill each other, but two hens will generally go safely in an apartment. I think it will be well to select from stock well domesticated, as they will be more likely to remain around the premises, which I think they will do if carefully treated and well fed at least for a few generations till the park gets pretty well stocked, though no doubt their tendency will be to resort to the wild state. During the breeding season the hens will go to the woods till they can find dense cover and perfect seclusion, and by the time the young broods come out corn should be scattered in their supposed neighborhood, and by careful management the young ones may be considerably tamed at least for a time. After the park is well stocked they should only be allowed to be shot in remote parts, and they will learn that they are safest near the lodge."

However, breeding turkeys is not altogether so easy a job as it may seem. Sometimes a strange distemper attacks the young birds and carries off twenty per cent. of them, and does not always spare the old ones. It seems to recur periodically

at intervals of eight years, and there is no apparent cause for it, as the broods have always the same care and treatment. It seems to occur only in very dry seasons.

**A RARE FISH.**—On Wednesday, October tenth, Mr. Eugene C. Blackford, of Fulton Market, received from Gloucester, Mass., an unknown and curious fish, which was identified by Mr. Brevoort of the Astor Library and other scientists as an *Alepisaurus ferox*.

This is such a rarity, that even the British Museum has no specimen, and no European naturalist has ever seen one, and but two specimens have been captured in the last three centuries. On August 26th, 1679, a Dutch sea-captain on a voyage to America, caught the first specimen known, and made a rough sketch of it, an account of which, with a fac-simile cut will be found in Vol. 1 of the "Memoirs of the Long Island Historical Society" on page 69, and page 2 of the Appendix. He says: "Although we had hitherto caught no fish, one caught itself during the night. It was not only dead, but the belly was all burst open by reason of the quantity of water that had been forced in it, for the mouth was wide open with the hook and line in it. It was almost like an eel or rather a geep. It was so hideous and looked so savage that my companion inquired if it were not a sea devil. Its flesh, when it was cooked, was quite good, tasting almost like mackerel's."

The next account we have of the fish is from the pen of Reverend R. T. Lowe, A. M., in a letter addressed to the Secretary of the Royal Zoological Society, in 1833, which was also accompanied by a drawing. We quote: "In its habit, shape of body, smoothness of skin, compressed head, wide gape, and long, formidable teeth, *Alepisaurus* agrees with *Trichiurus* and *Lepidopus*; but in the former of these genera, the vertical fins are wanting, and in the latter they are rudimentary only, and pectoral. *Trichiurus* is also destitute of a caudal fin. In both of them, moreover, the anal fin is abnormal, and the dorsal is single. The two dorsal fins of the *Alepisaurus* are remarkable among the fishes with which it is most nearly related, and the small adipose second dorsal evidently indicates a curious relation of analogy to the *salmonide* among the *Malacocephali*."

"The characteristics of the genus are: compressed head, long drawn out, with wide mouth, extending back behind the eyes; teeth uniserrated, strong, some very long ones recurved; body long, thin, scaleless, as is also the head. Of the two dorsal fins, the first is high and prolonged from the neck all along the back; second, small, triangular and adipose, both ventrals and abdominals. Pectorals, elevated; tail, large, furcated, membranous, with bony branches and six or seven rays."

In his catalogue of *Acanthopterygian* fishes of the British Museum (Vol. 2, p. 860), Gunther says: "*Alepisaurus* (Lowe) has been considered as a fish most closely allied to the family of *Sphyrnidae* (baracanta), or *Trichiuridae*. The similarity, however, is merely external, and its natural affinity is decidedly silurid, i. e., belonging to the catfish family. The rays of the dorsal fin are soft, composed of joints; there is a large adipose fin on the back; the ventrals are abdominal, composed of one toothed spine and nine rays. The suboperculum is absent, and the margin of the upper jaw is formed entirely by the intermaxillary bone; the maxillary bone is rudimentary, and the pyloric appendages are absent."

The specimen sent to Mr. Blackford was upward of five feet in length, the head having been sadly mutilated, the fish having been caught with a trawl. Its exact length could not be determined within two or three inches. The teeth are very curious, many being extremely long, recurved and sharp as razors, and instead of fitting in an alveolar process, were part and parcel of the jaw itself, showing no articulation whatever, but appeared to be merely projecting from the maxillary. This fish has been donated by Mr. Blackford to the Smithsonian Institution, where it now is.

—Mr. James F. Marsters is in receipt of a couple of fawns (*C. virginica*) captured by Harry Shipman in Minnesota. They are to be sent to Stonybrook, Long Island, to Mr. Shipman's brother.

**PARASITES IN THE NECK OF HARES.**—A correspondent sends us an "unknown animal found in the neck of a live, healthy fat rabbit. A similar specimen was found last year." All animals have parasites, not even man being exempt. Hares usually have them in July and August, and up to the middle of September, but rarely later, and there are often two, one on either side of the neck. They do not interfere in the least with the health of the animal they inhabit, neither do they injure it for food, having no connection whatever with the flesh, but are enclosed in a sac formed between two layers of the integument. If, before the larvae reach maturity the hare should die, the parasites speedily make their way out into the world, when they die also from lack of the animal heat necessary to their sustenance.

—The New York *World* suggests the name *Hippocynophila tholichthoides mississippiensis* for a monstrosity recently discovered in the Mississippi River, and which is said to combine the head of a bull-dog and the beak of a pelican with a shiny neck, a serpent-like body and tail. The H. M. travels at the rate of eight miles per hour, with its head and neck twenty feet above the waves, and giving forth terrific howls.

—Hedgehog raising is encouraged in England because they are formidable enemies to all vermin.

**AGES OF DEER, AND "CASTING OF HORNS."**—In "Antlers" interesting articles on "Habit of Deer" in your last issue, I see he speaks of killing those that must have been over a year old, from the fact that no "spawn spots" were visible. I have raised many fawns, but never have known one to retain its spots till six months old, and hardly ever until four months old. He says he never saw a deer that had shed its horns before February. I have an old buck that has been in my flock several years, was full grown when caught in New Hampshire, and he always drops his horns in December. Another buck now five years old that came from Ohio does not drop his horns till February. The horns cease the growth-shedding of their velvet in September. M. W. CLARK.

Danville Junction, Me., Oct. 8, 1877.

**ARRIVALS AT THE NEW YORK AQUARIUM FOR THE WEEK ENDING, OCT. 16, 1877.**

**FRESH-WATER VARIETIES.**—Eels, black bass, gar-pike, white perch; cat fish seventeen pounds weight, brown cat fish, wall-eyed pike, straw berry bass, white bass, *Pomoxis aureus*.

**SALT-WATER VARIETIES.**—Striped bass, toad fishes, king fish, gurnards skates, flounders and a large number of shell fishes.

Of birds there are crown pigeons from New Guinea, Sultan's chicken from Africa and South America, buzzards, and a large boia constrictor dukerbocks; the smallest kind of antelope, from South Africa, with leg as thin as a lead pencil.

## Woodland, Farm and Garden.

### SELECTION AND CULTIVATION OF HYACINTHS.

THERE is no better time for potting hyacinths intended for spring display than in October and November. As a matter of course, such early blooming kinds as the early white Roman, and also the single red L'Ami du Cœur, the white grand Vainqueur and the light blue Charles Dickens, together with a few early flowering scillas, tulips, crocuses and narcissi should be potted the first or second week in September, and so on till the end of that month; but for common hyacinths there is no better time than the present. Generally they are potted too early—before the bulbs have recovered from the effects of the long, close confinement during their transit from Holland, and ere they have become thoroughly matured. It often happens that early potted Hyacinths rot, owing to their being placed in contact with the soil too soon after being imported, and, after all, nothing is really gained by such early potting, except in cases where it is intended the bulbs shall be forced. We would, however, always impress on cultivators the necessity of obtaining their bulbs early from the dealers, not only because the finest bulbs are invariably selected for the earliest orders, but also because they can look better after them, preparatory to potting them, than the dealers can. Among the newer varieties there are now some very fine kinds, such as Princess Helena, Garibaldi, Howard, Kohinoor, Pellisier, Prince Albert, Victor, etc., in the pink and red classes; Blondin, Czar Peter, De Candolle, General Havelock, King of the Blues, and Sir Henry Havelock in blues, and Ida and Bird of Paradise in yellows. Among pure white flowers may be mentioned La Grandesse, a magnificent variety, Innocence and Snowball, a variety with immense bells of great substance. Some of the above bring rather high prices, and are indeed difficult to find in this country, but happily for those who cannot afford to purchase comparatively new hyacinths, there are many old varieties of excellent quality that can be obtained at a cheap rate, though they lack the rich and varied coloring to be found in the newer sorts. In the red class, including rose and pink flowers, there are Lord Wellington, Fabiola, Le Prophète, Norma, Princess Helena, Susanna Maria, Lord Macaulay, Robt. Steiger, etc. Among pale blue flowers may be found such well known varieties as Couronne de Cello, Grand Lilius, Orondatus, Leonidas, Van Speyk; and among the dark blues, Albini, Argus, Baron Von Tuyl, Laurens, Koster, Minosa, Shakespeare, etc. Of white varieties, there are Alba Superbissima, Mad. Van der Hoop, Mont Blanc, Grand Vainqueur, Anna Paulowna, Elfrida, Lord Grandville, Seraphine, etc., all standard sorts; white in yellowish colored flowers, Alida Jacoba, Anna Carolina, Duc de Malakoff, Haroïne, La Citronnière, etc., may always be depended upon. Hyacinths should be placed singly in six-inch pots, a little moss in each for drainage, and over it about an inch of well decayed cow manure. In a light compost of good loam, leaf mould and manure, with a liberal addition of sand, all bulbs will grow and luxuriate. Tulips, crocuses, jonquils, etc., may be planted as fancy or demand dictates. The bulbs should be about half buried, a good sprinkling of water given to settle the soil about them, and then place in a cool cellar, cold frame, or any cool place, where they can be conveniently got at in winter, and covered over to a depth of six inches or so. It sometimes happens that hyacinths are unskillfully planted, and unless some covering be laid on the surface of the pots, the bulbs, in the act of rooting, will force themselves out of the soil in consequence of its being too hard pressed at the base of the bulbs. In six weeks or two months the covering should be removed, and the bulbs placed in some cool light place or greenhouse, where they can develop their foliage in their own time. For window culture they can also be grown in glasses with water or in pots with bog moss or sphagnum, such as is used so extensively by florists, care being taken to have the roots well developed before exposing them to the light. Nine-tenths of the failures to grow hyacinths properly are due to this cause alone. When the days lengthen and the sun gains power they can be brought on into growth as far as desired, but we would again emphasize the importance of securing the early growth as strong as possible, for then is laid the foundation of a noble spike of bloom.

For Forest and Stream.  
THE POISON SUMACHS.

THE Sumachs are a useful, handsome family of trees, which we should greatly miss from our waysides, woods and rocky nooks; but it is well to note that they are also a baleful family. Chiefly natives of tropical regions, where their genera and species are abundant, they are represented in the United States by the genus *Rhus*, which is named, perhaps, from the ancient Celtic *rhudd*, red. Now, in the time of autumn leaf seeking and gathering, it is well to be warned against plucking the brilliant, handsomely-formed foliage of at least two common varieties, which are of such tempting beauty every fall, to uninformed and unwary people.

Everybody has heard that the dogwood—which is the common name for *Rhus vernata*—is poisonous; but how few distinguish it in its native home, and mark its appearance sufficiently to avoid it when its luxuriant leaves are crimsoned?

Go to some abundant swamp, where many of our native shrubs are most fine and various, if you would easily find this poison sumach, and in such luxuriant growth that you can easily mark its whole aspect, and retain the memory wherever you may meet it again. Swampy and wet woodlands are its favorite home, but it grows upon the wood edges of roadsides, very frequently, if rather moist, and there travelers are frequently tempted to pluck its glowing autumn foliage. It is a small tree or shrub of fine appearance, bearing quite a tropical air in summer, with its long, glossy, green pinnate leaves of many pairs, the leaflets from seven to thirteen, oval, and abruptly acuminate, entire. The petioles are long, roundish, smooth; the partial ones very short. It loves to cluster in clumps or groups where soil best suits it, growing ten or fifteen feet high, spreading its branches above their small trunks profusely, and contrasting richly with other foliage surrounding.

The effluvium of this shrub is a violent poison to many constitutions, producing a distressing cutaneous eruption when handled, or even approached. On others, and, perhaps, the majority, it exerts no influence. It is even said by eminent authority that the latter class may rub, chew or swallow its leaves with impunity, but perhaps we may be pardoned should we hesitate to try the experiment. The taste of the leaves is found to indicate no unusual quality, being simply herbaceous and astringent.

Another poisonous sumach, and one perhaps more frequently plucked for its variegated and reddened leaves, is the poison ivy, *R. radicans*. This is very frequently mistaken through the autumn for the beautiful and harmless Virginia creeper, *Ampelopsis quinquefolia*, which crimson so exquisitely in varying shades through late and lovely days. We all know its vigorous, shrubby vine, draping walls and fences with a network of large, brilliant leaves and berries of purple peeping from scarlet footstalks. But probably few casual observers—and such are too often autumn leaf seekers—could remember how its leaves grow. Let us count their bright divisions. They are five parted or quinate—whence its specific name—they are also called digitate, or are arranged somewhat like the fingers of the hand into the ovate leaflets, whose edges are notched, and whose tips are pointed, or acuminate. Make a note of this.

Now, to our climbing poison ivy, ascending lofty trees by throwing out myriads of thread-like rootlets (which grow quite differently from the radicating tendrils of the Virginia creeper) all along its length of gray, scaly bark, and which become nearly buried in the back of its support as it climbs on high and never wearies. But its leaves will be its sure distinction; they are thick, glassy and ternate, or in leaflets of three; ovate, smooth, with entire edges, and never serrated—the lowest rarely angular; and if a close look be given, we shall see its foliage is cut smaller than the *Ampelopsis*, while its habit differs strikingly.

Many other descriptive distinctions of the Sumach family could be noted, both interesting, useful and instructive. But will not our limited examination be sufficient to teach us how necessary is some botanical knowledge of our native trees and shrubs? A little attention to plants and flowers, as we consider their characteristics, soon becomes a delightful study, fascinating in its pursuit. The waysides, fields and forest take on a new aspect when we may single here and there some interesting or harmful shrub, some rare or lovely flower, some modest useful plant, and be sure of their place in the vegetable kingdom.

S. P. BARTLETT.

SHEEP HUSBANDRY.

FERN BANK, Ohio.

*Friend Hallock*—In an editorial note of yours to a recent article of mine on sheep husbandry, you truly remark that the Blue Ridge Mountains are peculiarly well adapted to wool growing. You may be pleased to learn that some of the most eminent men of the South concur with you in this opinion. Col. Edward Colston, of Berkeley county, Virginia, in an address delivered at Martinsburg, makes the following statement:

The western part of our county, containing perhaps 30,000 acres, is mountainous. I have ridden there for ten miles without seeing a human habitation, and although from its abundant herbage it might sustain for its owners 20,000 head of sheep, not a single one is to be found grazing on its surface. In this region may be found also much land fit for cul-

tivation, with fine meadows and abundant water; yet all this is worthless to our community, and a dead capital to its proprietors. There is territory and grass enough here to be divided into three or four sheep walks, each sustaining from 3,000 to 4,000 sheep during the summer, with meadow and arable land enough, at a small expense, to provide amply for winter sustenance. The Hon. Andrew Stevenson, who, while U. S. Minister to the Court of St. James, made sheep husbandry, as practiced in Great Britain, a special study, and who sent home some of the finest bucks and ewes to be obtained in that country, in a letter to the late John S. Skinner, published in the "Farmers' Library," says: "Virginia has many advantages for sheep breeding not surpassed in the United States. The middle part of the State, and especially the whole range of the Southwest Mountains and Blue Ridge, afford the greatest facilities for fine sheep walks—hills covered with fine herbage, abundance of running water, and well sheltered by trees from the heat and sun of summer." In the same publication (the "Farmers' Library") I find a communication from the Hon. W. L. Goggin, then representing the District he describes in Congress, as follows: "Bedford county, in which I reside, is bounded on the south side by the Staunton River, on the north by the James River, while its western extremity, the whole length, reaches the top of the Blue Ridge. These mountains afford an unlimited range for stock, and the advantages for sheep walks (wild as is the climate, combined with the productiveness of the soil,) are nowhere equalled, it is believed, except by similar situations in the neighboring counties. . . . Ranges for sheep may be had at a very reduced price on the mountains, and where, too, could be produced all the grasses in which they delight, such as the red and white clover, the meadow fox-tail, short blue meadow grass, lucern, eye-grass, etc. These advantages, and then the beautiful clear streams which abound in all the mountain regions, invite a pastoral life. . . . Many of the mountains to their very summits are covered with the richest verdure." Of Madison and Greene counties he says: "Here, too, are abundant ranges, and the wonder is that sheep husbandry is not introduced."

I may add that the statements of these three eminent men, all of whom were practical farmers, will apply with even greater force to the Blue Ridge, as it extends southward through the two Carolinas into Georgia; but there is one remarkable and enviable peculiarity of these mountains, which, though mentioned by Mr. Jefferson in his "Notes on Virginia," seems to have escaped the notice of these gentlemen. It is that, with the commencement of the warm weather in the spring, the ridge is blessed with a sea and land breeze as regular and distinctly marked as in the West India islands. Between 9 and 10 A. M., as the eastern slope of the ridge becomes warmed by the rising sun; the air current sets in steadily toward the mountain, and as the sun declines in the West the current is reversed.

To the above I will add some observations of my own, made during a residence of many years in Rappahannock county, in the very heart of the Ridge. In Rappahannock the eastern slope of the mountain only is inhabited to any extent, the western sides are too precipitous; and this, I presume, is the case through the whole length of the chain. The mountaineers proper are mostly squatters, and their methods of cultivation are of the rudest kind. Their corn is general y worked with the hoe, and the man who can scratch the mountain side with a bull tongue, or shovel plow is looked upon as a capitalist. But what is remarkable, is that these steep hillsides, covered with loose rock, have been in cultivation for nearly a hundred years in that most exhaustive of all crops, maize, and they still produce living crops year after year, without an interval of rest or a particle of manure; and any acre of this land when dressed with a single bushel of gypsum becomes clothed with white clover within a year of the application. But a still more remarkable fact is to be noted as regards these hills. At a certain elevation, commencing with the base of the ridge proper, and extending near to the top, they are completely exempt from the ravages of the curlew and comparatively free from the early and late frosts, at times so calamitous to the lower country. These facts, together with the geological formation of the ridge, combine to make the eastern slope of the ridge the finest fruit-growing region east of the Alleghenies. Even now, without the aid of horticultural knowledge, the apple, the pear, the quince, the peach and the plum grow as naturally as do the native oaks and chestnuts.

But the object of my first communication was to urge the spread of sheep husbandry in the old Southern States, more with a view to improve the worn out lands than to the production of wool and mutton. But the subject grows as I write, and I find myself monopolizing too much of your valuable space. Permit me to stop here with the promise to continue the subject further in your next issue, should you wish it.

F. G. S.

INDIA-RUBBER PRODUCING PLANTS.—These trees belong to the three following families—1st, Euphorbiaceae, comprising especially the genera *Hevea* and *Siphonia*, different species of which are indigenous to the warm and damp portions of Amazon basin as well as the Brazilian province of the Rio Grande. The two trees which are the most used for this purpose are the *Hevea guianensis* and the *Siphonia elastica*; 2d, Artocarpaceae, a natural order to which belong the tree named *Ule* (*Castilleja elastica*) which grows in the Gulf of Mexico as far as Guayaquil, and several fig trees indigenous to India, Java, and the north of Australia; 3d, Apocynaceae, a family in which we find representatives in the South of Brazil, Equatorial Africa, Madagascar, Malacca and Borneo. The best india-rubber is that from Para, in which country the harvest commences in the month of August, and is continued in the month of January or February. The milky juice of the *Hevea*, which is the chief source of the rubber, becomes too watery during the rainy season for being then collected; in

the fine season this juice, as soon as it runs from the incisions made in the trees, has the color and the consistency of cream; the caoutchouc proper soon becomes hardened, and separates itself so as to be suspended in an opaline liquid. It is in the evening, as a rule, that the incisions from which juice is to run are made in the trees, and it is on the following morning that persons go to collect the juice which has flowed out. The Para caoutchouc is more tenacious, purer, and more durable than other kinds; thus it is especially employed in the manufacture of articles which should unite strength with elasticity. Among the trees which yield caoutchouc of second quality, the most useful is the *Ule* (*Castilleja*), which grows in abundance in Central America, and in the western parts of South America, as far as Peru. This india-rubber tree flourishes particularly well in forests with an undergrowth of brushwood, which are at the same time hot and damp. It arrives at its greatest perfection in the basins of Lakes Nicaragua and Managua. The juice of the *Ule* runs during the whole year, but is best in April. A tree of 60 centimetres, or nearly 20 inches in diameter, properly managed, is capable of yielding 20 gallons of juice, which gives about 25 kilograms (55 lbs) of India-rubber. As a general rule, the coagulation of this milk is effected by the addition of certain vegetable juices. The caoutchouc becomes separate in the form of a brown and soft substance, with the odor of fresh cheese. In the district of Saint John, in Nicaragua, there are 600 to 1,000 persons engaged in drawing off the caoutchouc; about 2,000 may be reckoned in the neighborhood of Panama, where the reprehensible practice prevails of felling trees to obtain the milky juice. The worst caoutchouc is that of Guatemala, as it is more or less mixed with resinous substances. The Guatemala india-rubber is, besides, of unequal quality; the best is whitish and the worst spongy. The south of Brazil, between 18 deg. and 16 deg. of S. latitude, produces a good caoutchouc, known under the name of Pernambuco rubber, which is derived from several species of the *Hancornia*. These trees, about the size of our apple trees, have pendant branches with narrow leaves, which give them the appearance of weeping willows. In Asia the principal india rubber tree is the *Ficus elastica*, which is found especially in Assam, India (on this side of the Ganges), in Java, Sumatra, and other places. This is the species which especially produces what is called the Singapore rubber; but under this name is also sold that of the *Ureola elastica*, a climbing species, which attains an immense length. To obtain the juice of this plant it is cut in logs, one end of which is heated; the caoutchouc is of very inferior quality. The Madagascar rubber, obtained from a creeping shrub, is very good, and is worth nearly as much as that of Para; this kind is especially used in France. Equatorial Africa is rich in trees and climbing shrubs which produce caoutchouc; but it is drawn from the wood and prepared so carelessly that the product is of a very bad quality. Although the trees which yield caoutchouc are very numerous and widely spread over different countries, the method of preparation is often so primitive and wasteful that there is every reason to fear that, in a not far distant future, this substance, which it would be impossible to do without, will become more and more scarce, and ultimately fall altogether. It thereby becomes a matter of the highest importance to place the preparation of india-rubber under proper regulations, strictly enforced, or to plant and cultivate young trees in place of those of spontaneous growth, which are destroyed in large quantities every year.—*Journal de la Société d'Horticulture, France*.

CUTCH AND GAMBIE.—Cutch, or catechu, and gambier, or *Terra japonica*, are two important tanning substances—the first imported from India, and the second chiefly from Singapore. Cutch is produced by cutting up the wood of *Acacia catechu* into chips, boiling them, and evaporating the fluid, so as to form an extract, which is made into blocks or lumps, and packed in bags or mats for exportation. As it appears in commerce it is a brown, somewhat resinous-looking substance, breaking with a dull fracture, and having a strong astringent taste. Its use chiefly is for tanning purposes, and it is also used in small quantities in medicine as an astringent. The quantities of this product imported in different years varies much, but in the years 1874-5, 191,891 cwt. were sent from India. Its average value when exported is said to be about \$4 per cwt. About three-fourths of the whole quantity comes from the Burmah port, and a large proportion from the forests beyond the frontier in Upper Burmah. Reserves of catechu-producing forest have been formed in Pegu, but outside these reserves the destruction of these trees goes on unchecked as before. From the fact that the demand for cutch is increasing, and from the certainty of a decrease in the supply from beyond the frontier, it is urgently necessary to demarcate extensive tracts of catechu-producing forest in Burmah, so that a permanent supply of the article may be insured. The tree is stated to grow in all parts of India proper, from the Indus in the Punjab to Ceylon, and cutch is manufactured in many places in South and Central India, and in the sub-Himalayan forests, as far north as the Ganges, but not much of the cutch produced in India proper is exported. Gambier is a very similar product to catechu, having much the same appearance, and being used likewise for tanning and dyeing. It is produced by boiling the young shoots of *Uncaria gambier*, a large climbing shrub with hard woody hooks, or recurved spines. It is cultivated largely in the Straits of Malacca, the product, gambier, fetching about the same price in the English market as catechu. Considering the outcry that has been made lately on the scarcity of tanning materials it is satisfactory to know that in India the more general cultivation of the *Acacia catechu* for the purpose of furnishing increased and continued supplies of catechu is occupying some attention.—*Gardener's Chronicle, London*.

—The Philadelphia Academy of Natural Sciences have been discussing the advantages of promoting the growth of the lacquer tree in this country. The varnish obtained from this tree in Japan is used for the beautiful lacquer-work of that country. The tree is of the *Rhus* family, and the varnish when new is poisonous, causing a rash. Dr. Thomas mentioned an American family all of whom were poisoned by some newly lacquered furniture sent from Japan. Prof. Rollrock told a plain unvarnished tale of an instance where a full company of soldiers was sent to Cape Cod to drill, and ninety-five per cent of them were poisoned by a plant of the *Rhus* kind, probably poison sumach.

A HOGG FROGUS—*Ferrisburgh, Vt., Oct. 9*.—Found a "puff-ball" yesterday, and although I am not in favor of puffing up the products of "old Vermont," I must send you dimensions, namely: circumference, 58 inches; weight, 22 pounds. Perhaps this is not a sporting item, but game is so scarce this fall, we have to take up with a good many curious substances.

YEND MONT,

**FORESTS AND RAINFALL.**—The relation between woodlands and rainfall and other climatic conditions has of late been the subject of much dogmatic theorizing. A comparison of maps in Walker's "Statistical Atlas of the United States" shows that the forests of Washington Territory and in regions having an annual rainfall of sixty inches and upward. The magnificent forests found from Minnesota to Maine have a rainfall precisely identical with that of the nearly treeless prairies which extend westward from Chicago, viz., from twenty-eight to forty inches. The northern part of the Michigan Peninsula, with its heavy timber, is marked with precisely the same rainfall as large portions of Southern Minnesota, lying in the same latitudes, and nearly treeless.

**FINE SPECIMENS.**—It is always a pleasure to notice, and more particularly to receive, anything in our way really superior. We therefore wish to notice an exceedingly fine and well grown cockscomb from Mr. Segnitz, gardener to C. F. Erhart, Esq., Brooklyn, measuring thirty-one inches in circumference, and from Mr. J. Coupland, 161 Pierrepont street, Brooklyn, two magnificent specimens of the Late Melocoton Peach, weighing together one and a quarter pounds. This is a very fine late peach, though in unfavorable seasons inclined to be rather acid. It is a noble looking peach, however, on the table; and a few trees of it ought to be grown by all who can find room for late varieties.

**SYMPHYTUM OFFICINALE VARIEGATUM.**—This is a very strikingly beautiful variegated variety of the old and well-known Comfrey. Its large lanceolate leaves are broadly and distinctly marked with creamy white. It is a very effective plant for planting in mixed borders, and is no less so in ribbon borders; indeed it is one of our very best plants for this purpose, keeping its variegation till frost comes. It is not nearly so well known as it ought to be.

**FALL FLOWERING HERBACEOUS PLANTS.**—Many of our autumn-flowering herbaceous plants are now in full beauty, and are well deserving of more attention than they generally receive. At Messrs. Veitch & Son's, New Haven, we lately saw a plant of *Helianthus orgyalis*, a native of Kansas, about eight feet high, every stem being clothed with its graceful recurved leaves, and the whole plant covered with its graceful golden yellow blossoms. In the setting sun it appeared one of the most lovely plants imaginable. Numbers of *Asters* are now also in flower, as is also the beautiful and effective *Anemone japonica*, which, beautiful as it is, is greatly excelled in size of flower, height and robustness of growth by its compeers, *A. japonica alba*, and *japonica intermedia*. These also do well in pots, giving abundance of flowers all through early winter, and seems to have been specially designed to gratify the modern passion for variety in cut flowers.

## The Kennel.

**TO CORRESPONDENTS.**—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

**CUPID.**—Mr. Chas. H. Raymond, of Morristown, New Jersey, whom every one knows as the importer of many of the finest setters in this country, has again shown his appreciation of the efforts of his friend, Capt. C. D. Viele, 10th U. S. Cavalry, to introduce prize sporting dogs into the State of Texas, where his regiment is stationed, by presenting him with that splendid half Laverack dog Cupid, by Pride of the Border, out of Horace Smith's Fanny. The dog is a trio color and two years and a half old—black, white and tan. It will be remembered that Mr. Raymond last Spring presented to Capt. Viele some of his finest stock to take to Texas, which was duly recorded in this journal. Capt. Viele is about to close his leave of absence, and will return to his regiment on the Mexican frontier next week, from which we expect to hear a good record in regulating the difficulties on the Rio Grande. Capt. Viele is a nephew of Gen'l. Egbert L. Viele.

**DOG PORTRAITS.**—Mr. P. H. Morris has placed on exhibition in our office, a handsome oil painting of his champion native setter Lark. It was painted by Mr. E. Sanguinetti, of 28 West 22d street, and is a truly life-like portrait of this magnificent animal, so well known as the peer of the "blue bloods." The artist has taken "Lark upon a point," as the subject of his painting, and has produced a work of art which challenges criticism, every feature being distinct, and totally devoid of that stiffness so common in animal portraiture.

**THE LURCHER.**—The Lurcher is almost, or entirely, unknown upon the American continent, and in England is an animal of considerable ill repute, which has been obtained entirely through the fact that it is seldom seen except as the companion of poachers and other disreputable characters. This is a matter of considerable regret, for the animal is by no means unhandsome in appearance, and is eminent for speed, scent and intelligence. A cross between the greyhound and collie, he combines all the excellent qualities of his parents,

even excelling them in some particulars. A lurcher is supposed to be most valuable when bred from the Scotch greyhound and Scotch collie. His sagacity is something wonderful, readily learning to obey the unspoken commands of a master, and hunting with a quietude and stealth unknown to other dogs. For this reason he is the favorite of the poacher, as he appreciates quite as fully as his master the necessity for lying concealed when foes are near, and even pioneers the way, giving him timely warning of hidden enemies. The poacher seldom owns any one dog long, for the game keeper is the sworn foe of the lurcher, and is sure to shoot him at the first opportunity. That punishment generally falls on the wrong shoulders is proverbially true, and holds good in this instance; for the poor dog, with perfect self abnegation to the will of his master, is but doing his duty when engaged in capturing or marking game, and should not, by right, be subjected to so severe a penalty for obeying the orders received. Yet there is some excuse, for so admirably is the animal adapted for the pursuit and capture of game, that with his assistance a single poacher is able to secure twice or thrice as much as could any two men unaided by dogs.

Destructive of all game, whether of fur or feather, the lurcher is especially obnoxious in the rabbit warren, or in any localities where hares abound. Its extremely acute olfactory powers and great speed enable it to discern its prey at long distances, and to pounce upon hare or rabbit before it can be by any possibility shelter itself. As a retriever, too, it is unexcelled, bringing its prey as soon as caught to the hand of the master. Even birds are sometimes caught by this crafty and agile animal.

If, as sometimes happens, this animal develops an unexpected taste for mutton, he becomes an intolerable nuisance to the farmer, as it devotes its whole time and energy to the pursuit of the flocks, committing sad havoc among them.

As the lurcher causes such suspicion in the mind of the game-keeper, owners of these dogs frequently dock their tails, in order to strengthen the resemblance between them and their honorable cousins, the sheep dogs, and also to escape the tax which is levied upon all dogs used for sport. It can take upon and acquit itself with credit the character which the cropped tail is intended to indicate, keeping the sheep in order, watching the fold, or conducting them from one place to another with all the fidelity of the true sheep dog from which it sprang. It can also be entrusted with the guardianship of the house, and watches over property committed to its care with vigilance and fidelity.

There are many breeds of the lurcher, owing to the numerous dogs from which the parentage is formed. As before remarked, the greyhound and sheep dog are the original progenitors, but their offspring is crossed with various other races in order to obtain the desired qualifications. Thus the greyhound is used on account of its swiftness of foot and silent tongue, the sheep dog for its hardiness, sagacity and readiness to obey commands. The spaniel and setter too are often made to take part in the pedigree in order to give its well known predilection for hunting game, and the hound is sometimes employed for a similar purpose. Yet in all these crossings the greyhound must morally predominate, although its form is barely to be traced under the rough lineaments of the lurcher.

**A RAKE DOG.**—Our friend E. D. Swasey, of Covington, Ky., has received a pup of the famous breed known as the St. Walert Scotch stag hound. It is a very rare specimen, about four feet high, and is a gift from the Earl of Dundreith.

—San Francisco holds a bench show during the week commencing Oct. 29, under the auspices of the California Kennel Club. The rules of the National American Kennel Club will be followed, and premiums amounting to \$5,000 will be distributed.

—Capt. Jno. M. Taylor, of Nottoway, Virginia, will go to Europe next year, and attend the Paris Exposition, where he hopes to purchase some fine dogs for friends.

Capt. John M. Taylor of Virginia, informs us that Jno. Epps, Esq., of Nottoway, Va., has just purchased a couple of fine fox hound pups out of the old Higgins stock of Michlenburg, Va. This breed has invariably thrown handsome working dogs, not particularly fast, but with plenty of bone, muscle and bottom. He has named them Moody and Sankey. In color they are black, white and tawney.

**DOG FIGHTERS CONVICTED.**—The Newark (New Jersey) Courts have found Elly Mockridge and James Coyne guilty of being engaged in a dog fight. The jury were out seven hours, and the sentence was two years in State Prison, or a fine of \$1,000. It is to be hoped that this will be a check upon the brutal amusement so common to certain localities.

**QUEENS COUNTY HOUNDS.**—The Queens county hounds met yesterday at Garden City Hotel at one o'clock. Another meet will be held at New Castle Wood at one o'clock Saturday, Oct. 20th.

**JUDGES FOR THE NASHVILLE FIELD TRIALS.**—In the county field trials which are to take place next November 13th, to which we have made frequent reference, the following capital selection of judges has been made. We endorse it unanimously: D. C. Bergenthal, Indianapolis, Ind.; Dr. Rawlings Young ("Guyon"), of Jackson, Miss.; and G. Jeff. Clarke, of St. Louis.

## Sea and River Fishing.

### FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*; M. nigricans. Bluefish, *Pomatomus saltatrix*. Muscalonge, *Esox nobilior*. Spanish Mackerel, *Cybinus maculatus*. Pike or Pickerel, *Esox lucius*. Yellow Perch, *Perca flavescens*. Cero, *Cybinus regale*. Sea Bass, *Sciaenops ocellatus*. Bonito, *Sarda pelamys*. Striped Bass, *Roccus tinnectus*. Kingfish, *Menticirrhus nebulosus*. White Perch, *Morone americana*.

**FISH IN MARKET.**—Large quantities of fish from the Great Lakes. Bluefish are heading southward, and will soon disappear from our waters.

Our quotations are as follows: Striped Bass, 12 to 20 cents per pound; smelts, 18 cents; bluefish, 10 to 13 cents; salmon, frozen, 30 cents; mackerel, 13 to 25 cents; white perch, 15 cents; weakfish, 12 cents; Spanish mackerel, 30 cents; green turtle, 15 cents; terrapin, \$15; frost fish, 8 cents; halibut, 15 cents; haddock, 8 cents; king-fish, 30 cents; codfish, 8 cents; black-fish, 10 to 15 cents; native herrings, 6 cents; flounders, 6 to 10 cents; porgies, 10 cents; sea bass, 18 cents; eels, 15 cents; lobsters, 10 to 12 cents; scallops, \$1.25 per gal.; soft clams, 30 to 60 cents per 100; salmon trout, 18 cents; black bass, 15 cents; sheepshead, 25 cents; whitefish, 18 cents; pickerel, 18 cents; yellow perch, 10 cents; hard shell crabs, \$3 per 100; soft crabs, \$1.50 per dozen; frogs, 45 cents per pound.

**MOVEMENTS OF THE FISHING FLEET.**—The weather has been unfavorable, most of the time for the past week, for fishing operations or fish curing, and the market is substantially without change. The Shore mackereling fleet are mostly off Cape Cod, taking a few barrels daily when the weather will allow, but the season will soon close, with a very light stock on the market. There have been 65 fishing arrivals at this port since our last issue—24 from the Banks, with 960,000 lbs. codfish and 550,000 lbs. halibut, 23 from Georges, with 320,000 lbs. codfish, 4 from the Bay St. Lawrence with 750 bbls. mackerel, and 14 from Shore fishing trips.—*Cape Ann Advertiser*, Oct. 12.

✓ **NEW YORK—Schenectady, Oct. 13.**—Black bass fishing still fine. Parties are coming in with strings of from thirty to forty; this is about the average day's catch. Eels are also caught in large numbers in the Allapeans Creek, a small creek about two miles below this city. Mr. J. White came in this morning with a string of twenty, the largest weighing eight pounds. This is the largest eel ever caught in this vicinity. C. W.

**North Bay, Oct. 12.**—Fishing is better now than at any previous time this season.

✓ **Glens Falls, N. Y.**—I send you a photograph of two bass caught in Long Pond, August 1st, 1877. The largest was eighteen and one half inches around the body, twenty-two long, seven broad and three and one-fourth thick; weighed seven pounds and fourteen ounces. The mouth opened three inches. This is the largest bass ever caught in Warren County. The other weighed six pounds and four ounces. On dressing, the stomachs of both fish were empty. How is this for high? M. H. C.

[These were certainly very large bass. The largest ever caught in Lake George, from which Long Pond was stocked eleven years ago, weighed just one pound less than the largest of the above.—Ed.]

**PENNSYLVANIA—Norristown, Oct. 10.**—Trolling for bass is the favorite amusement here now, the late freshets having cleared the river of grass.

**Sunbury, Oct. 12.**—Bass, sunfish and pike-perch fishing improves as the cold weather comes on.

**Harrisburg, Oct. 10.**—Bass fishing is excellent at McCormick's Island. Several of our fishermen have made good catches at the head of the island.

**Muncy, Oct. 16.**—Bass fishing at the dam affords abundant returns.

**Hummels'own, Oct. 14.**—Large and young bass are rewarding anglers who visit the Swatara.

✓ **WEST VIRGINIA—Berkeley Springs, Oct. 15.**—I have noticed while reading the FOREST AND STREAM, that some of your anglers are not very successful in taking bass in the Potomac.

I am not able to say much about the fish below Hancock, only from there up to Dam No. 6. I went over to the Dam the 10th of July, and caught 16 by dinner time, averaging 1½ lbs. One fellow weighing over two pounds, on being cleaned, was found to contain something unusually hard in its maw, which had the appearance of a chicken's gizzard, but on pressing it, it appeared to be in halves. On opening it, what was our surprise to find a live turtle, 2 inches in diameter. How it ever swallowed it is a mystery.

**August 2d.** Went over to the Carapou River, a tributary of the Potomac, and camped out all night, so that we might get the early fishing, 6 A. M. to 2 P. M. Took 66, averaging from three-quarters to one pound. August 14, went to same place, and before 9 o'clock, had taken 40 bass, averaging one pound. This was considered the best of the season. My friend, Nat P., who was not to be outdone, went over the same ground a few days later, and captured 60. I think no one need wish for better fishing than that. I do not remember what my catches were last year, but one day I caught a good number of fair size, and one from below Dam No. 6, which weighed 4½ lbs.; at another time one that turned the scales at 5½ lbs. Visitors at these springs always find good fishing, even in early summer. Our favorite bait is a minnow. J. P.

**FLORIDA—St. Augustine, Oct. 10.**—Fine large trout are caught from off the sea wall.

**LOUISIANA—New Orleans, Oct. 11.**—Green trout fishing is good at Chef Menteur and Lookout Stations. Large numbers of striped bass and sheepsheads are caught in Lake Pontchartrain in the vicinity of Mandeville. Fishing cruises to the Chandelour Islands are now in order, and the sport there is magnificent.

**MICHIGAN—Detroit, Oct. 13.**—At St. Clair flats, Tuesday last, A. C. and Thomas McGraw caught thirty black bass.

averaging four pounds. Same day Judge Rand, of Indianapolis, made a string of twenty. Wednesday Judge Rand caught twenty-three, and on Thursday caught twenty-six. A. B. Miner caught fourteen black bass in four hours. S. H. Turill, of Chicago, Ill., beamed on your humble servant this afternoon. He is on his way to St. Clair Flats for a two weeks' fishing and shooting. W.

**PIPER, Nassau St.**—The double cut on one of our advertising pages, to which you refer as having seen in our paper last week, appears also this week. It does not represent a pair of Indian Clubs, as you infer but two bottles of the celebrated Piper-Heldsick Champagne, of which Mr. John Osborn, 45 Beaver street, is agent.

## New Publications.

**ANTELOPE AND DEER OF AMERICA.**—This is the title of a new work, edited by Judge J. D. Caton, LL. D., of Ottawa, Illinois. Probably no one has had better opportunities for observation than Mr. Caton, who has for many years kept all the species enumerated in his work in domestication, the moose and caribou excepted. Moreover, he has ever been an ardent hunter, a close observer, and has made natural history the by-no-means secondary feature that it frequently is with sportsmen. The first division of the work is devoted to the Antelope, prong-horn or cabri (*Antilocapra americana*), in which the doubts regarding the deciduous character of the horns of the animal are set at rest. Its horns constitute one of the most remarkable features which distinguish it from other ruminants. This animal, observes the author,

"Has a deciduous hollow horn which envelops a persistent core, which is a process of the skull, like the core of the persistent horns of other ruminants. This shell is true horn, and has the same general system of growth as other horns, although it is cast annually like the antlers of the deer, and so reveals to us an intermediate link between those ruminants which have persistent, and those which have deciduous, cornucopious appendages. Only the lower part of this horn is hollow, the core extending up scarcely half its length. When the horn is matured, the portion above the core is round and well polished, and is black, except that the top is frequently of a white or dull yellowish shade. The lower part, which is hollow, is flat, thinnest anteriorly, is striated and rough, with more or less hairs on the surface till they are worn off. No annular ridges, as is usually observed on the hollow horns of other ruminants, are observed. These ridges result from the growth of the horn being principally at the base, while the growth of the horn of this animal commences at the top and proceeds downward to the base."

Much light is also thrown upon the habits of the animal, and its capacity for domestication as observed in the author's parks; and we are told of the faculty it possesses of weeping when in affliction. When domesticated the antelope becomes very affectionate, following his master, and evincing in behavior as much sagacity as a dog.

Of the deer, eight distinct and well-defined species are enumerated, viz.: The moose (*Cervus alces*), the wapiti (*C. canadensis*), woodland, and Arctic caribou (*C. turandus* and *C. turandus arcticus*), mule deer (*C. macrotis*), Columbia black tail (*C. columbianus*), the common deer (*C. virginianus*), and the Acapulco variety (*C. acapulco*).

Of the moose and caribou, Mr. Caton derives his information from the observations of others, notably the interesting work of Capt. Campbell Harely; but of the remaining varieties he speaks from careful personal study of live specimens observed in his own grounds. After describing the habitat, aliment, chase, form, size, coat and habits of each, considerable space is given to the comparison of the species; but the most attractive pages are those devoted to subjects but little treated of by naturalists, particularly the effects of emasculation upon the growth of the antlers.

Although the Lapps have long practiced castration of their reindeer used for draught purposes, no appreciable effect of the operation on the antlers seems to have been noticed by them; but in numerous instances we are led to believe they shed and renew their antlers annually, the same as the perfect animal. The author accounts for this phenomena from the fact that the operation is a very imperfect one, the glands being crushed instead of excised; as in some instances, where the operation was more complete, the antlers were not actually shed, but broken off above the pedicle when rendered brittle by being frozen through. Experiments revealed the fact that if the deer be castrated at any time after the antlers are so far matured that the velvet may be removed without injury, they will invariably drop off within thirty days; and that in this case, as well as when the buck is antlerless, new antlers will sprout at the usual time at which they commence growing on the perfect animal, progressing in the same manner until they have attained very nearly the same size as those cast off. These, however, never fully perfect their growth, and never lose their velvet, in which a moderate circulation continues. As the season returns for the renewing of the antlers, those of the emasculated deer take on new growth, which, however, is entirely expended in increase of diameter of the persistent horn, and in throwing out tubercles upon the same, which are, however, always covered by velvet. When, as in some instances, the cold froze through and caused the snapping off of these persistent antlers, it was found that in the spring the stumps gave out new shoots, smaller somewhat than their predecessors, which grew until the season for the losing of the velvet. Much valuable information has been put forth by Mr. Caton on the subject of hybridity of deer, and he is inclined to the belief that there are hardly sufficient differences between the wapiti and the stag to justify their being acknowledged as different species. This theory is strengthened by the experiments made by Prince Piess, in Silesia, in 1662, who introduced the American elk among his red deer herds, where they freely crossed, the progeny interbreeding, showing that fecundity of these hybrids was not impossible.

The volume closes with an account of the diseases peculiar to the cervine race, the methods of hunting, peculiarities of the flesh of each species, and the characteristics of their respective skins. The author has dealt with his subject in a most able and exhaustive manner, constituting a most important addition to North American zoology.

—Adulteration in wine is a minor evil, since comparatively few drink wine. But adulteration in tea and coffee is more dangerous, and a similar fraud in soap a positive sin. Therefore a new article, known as B. T. Babbitt's Toilet Soap, has been put on the market recently, unscented, except by the natural violet odor of the purest vegetable oils, so that the buyer knows he procures an article perfectly free from any evil element.

—**ENGLAND'S WHITE WHALE.**—The whale which was a short time ago transported from the Coney Island Aquarium, New York, to the Zoological Gardens, London, died there three days after being placed in the tank. The disease, as determined by a post-mortem examination, was pneumonia, the result of a cold contracted during the voyage. The contractors, in no way dismayed by this failure, have already contracted for another specimen. Moved by the sufferings of the captive as described in the London *Times*, Bishop Claughton has written a letter to that paper, deprecating "the repetition of so cruel an experiment as the exhibition of a live whale at the Westminster Aquarium."

**METROPOLITAN AMATEUR REGATTA.**—The first annual regatta of the Metropolitan Association of Amateur Oarsmen, came off on the Kill Von Kull course yesterday. The programme included six races, as follows:

Six-oared gigs—Argonauta R. A. Bergen, Point, N. J.—C. B. Greene, T. Taylor, R. V. R. Schuyler, C. E. Dunbar, Edward Smith, Walter Man, E. M. Benton (cox). Damless R. C. New York—F. Gillelan, G. E. Knapp, H. W. Walter, H. W. Peckwell, W. G. Demarest, D. Rosch. W. M. Knapp (cox).

Four-oared gigs—Carman B. A. N. Y.—V. G. Audubon, D. De Long, A. B. Wilson, I. Mangum, H. A. S. Martin (cox). Vesper B. C. Staten Island—H. S. Pratt, I. O. Henderson, T. H. Pratt, C. G. Dedrickson, J. W. Edwards (cox). Nereid B. C. Brooklyn—J. C. Bergen, E. T. Nichols, W. Fehr, Jos. P. Earle, J. C. Egerton (cox).

Four-oared shells—Argonauta—Walter Man, Ed Smith, R. V. R. Schuyler, C. E. Dunbar, Columbia College B. C. N. Y.—E. E. Sage, R. B. Colgate, C. B. Boyd, J. T. Goodwin.

Pair-oared shells—Atlanta B. C. N. Y.—John E. Enstis, W. S. Downs. Nautilus B. C. N. Y.—Wm. Walsh, Fred G. Levian.

Single-scutt, senior—Friton B. C. Newark, N. J.—George W. Lee, Vesper B. C. Yonkers, N. Y.—Thomas Fearon.

Single-scutt, junior—Nereid—Jos. P. Earle. Nautilus—Wm. Childs. Neptune, Staten Island—F. L. Rodwald. Argonauta—W. T. Taylor. Nassau, N. Y.—Walter S. Wilson.

We went to press before the races were rowed, and are therefore obliged to defer the particulars until our next issue.

**ANALOSTON BOAT CLUB.**—Washington, Oct. 13.—The fall regatta was rowed over the usual one and one-half mile course. The race for the president's medal was rowed by the shells Philadelphia, manned by Postal, Maunder, Robertson and Page, and the America, whose crew were Whiting, Paired, Marshall and Campbell. The former won in 10m 5s.

The race between the shells America, manned by Mosher, Douglass, Wyman and McKenney, and the gig Ganymede, manned by Jones, Maddox, Page, Simmons, H. McKenney, Slausbury and Burdette, was won by the Ganymede in 10m 40s.

The working-boat race, between Marshall and Postal and Page and Robertson, was won by the former in 11m 3s.

The race between the eight-oared barge, Falcon, and the ten-oared barge, Anniostan, was won by the latter in 11m 27s.

**YALE COLLEGE, Lake Saltonstall, Oct. 12.**—The fall regatta of Yale, which was rowed on Lake Saltonstall, Oct. 13, opened with a barge race of two miles, with a turn, which was won by the class of '79, in 13m. 1s.; '78, second; '80, third. The quarter-mile canoe race was won by A. A. Eddy and H. Livingston in 8m. 6s. The pair-oared race of one mile, with a turn, was won by H. Livingston and B. S. Keater in 8m. 2 1/2s. The barge race between first and second divisions of the senior class, one mile, was won by the former in 6m. 53 1/2s. The single scull race, two miles and a turn, was easily won by E. P. Livingston, in 14m. 42 1/2s.

**CORNELL'S FALL REGATTA.**—The fall regatta of the Cornell navy was rowed on Cayuga Lake, Oct. 13 over a course two miles straight away. The six-oared boat races between the classes for the Cluck cup and the University championship was won by the class of '78 in 13m 48s; '79 second, 80 third. The single-scutt championship race was won by G. M. Wells, '79, in 15m 45s. The six-oared gig contest, between the freshmen representatives of the Sprague and Tom Hughes' Clubs resulted in a victory for the former in 15m 45s.

**PRINCETON COLLEGE REGATTA.**—Burlington, Oct. 13.—The class crews were: '78—Hyne, Jr, Geer, Hess, Stevenson, C. O. Clark and Stewart; '80—Horton, Ballard, Livingston, Johns, Culls and McClaren, captain; '81—Lynde, Bradford, Mcalpin, Jr, Warren, McDermott, and Roberts, captain and

stroke. The race was won by '80, who went over the course of one mile and a half in 7m 50s.

**WESLEYAN FALL REGATTA.**—Middletown, Conn., Oct. 13.—The class crews were:

'78—E. A. Sumner, A. Kynett, B. A. Rich, F. Ingraham, D. Jack, captain, E. Mead, stroke.

'79—E. O. Wallace, J. A. Wright, J. M. Collins, D. M. Vail, A. Mann, Jr, E. A. White, stroke.

'80—J. A. Bailey, F. Greely, M. Griffin, G. Plimney, W. B. Hill, H. Warren, stroke.

The course of three miles was gone over by '78 in 20m 20s; and by '80 in 20m 30s.

**SHAWMUT ROWING CLUB.**—South Bay, Mass., Oct. 13.—In the annual regatta there were two races. Single-scutt race for gold medal, open to all, one and one-half miles, won by S. Gookin, in 10m 12s. Amateur race, for silver medal, same distance, won by W. Backman, in 10m 35s.

**VIRGINIA.**—Wheeling, Oct. 13.—The single-scutt race of three miles was won by Weisgerber, of Wheeling, in 22m 40s.

**LUTHER vs. MORRIS.**—The five miles race between Evan Morris and Patsy Luther, which was rowed near Pittsburg, Pa., Oct. 13, was won by Morris in 37m 4s.

**DAVIS vs. TEN EYCK.**—The three-miles sculling race between Michael Davis, of Portland, and James Ten Eyck, of Peekskill, was rowed at the latter place Oct. 13. Davis won in 21m 23 1/2s.

**THE HANLON-ROSS RACE.**—The five-miles sculling race between these competitors was rowed at Toronto, Oct. 15. Hanlon won easily in 88m. 9s., according to the official timekeeper, or 36m, according to timekeepers on the referee's boat.

**RHYME FOR YACHTSMEN.**—This is the seaman's maxim for wet weather:

If the rain comes before the wind,  
Always let the halliards stand;  
If the wind comes before the rain,  
Let the halliards fly again.

—The Seneca Farm, which is in another column advertised for sale, has long been famous among the ducking shores of the Chesapeake, and is a most desirable purchase for a club.

## Answers to Correspondents.

### No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

**HENRY L.**, Portsmouth, Mich.—Who is the agent of the Rawhore Crimper? Ans. Every house in the U. S. and Canada.

**R. McC.**, Elizabeth N. J.—Is there anything that will repair rubber boots so as to hold? Ans. Saturated solution of pure gum in bichloride of methylene.

**J. E. S.**, Poughkeepsie, N. Y.—What is the correct charge of powder and shot for squirrel and quail-gun, 30 in., 12 bore, pin fire? Ans. About 3 drs. powder and 1 oz. shot.

**F. G. B.**, Scranton, Pa.—Is there a three-barrel gun manufactured in Cortland, N. Y. Ans. Yes, the Baker gun, with a ride under the shot barrels. See our advertising columns.

**HARRY HARRIS**, Brooklyn, N. Y.—How long did Ben Johnson survive his friend and patron, William Shakespeare? Ans. Twenty-one years, dying in 1637, at the age of sixty-four.

**O. C. J.**, Leesburg, Va.—Where was the first theatre established in America, and when? Ans. The first theatre ever established in America was at Williamsburg, Va., in September 1752.

**F. H. W.**, Mashapang, Ct.—Will you give me the address of a reliable firm that deals in wild game in N. Y. city? What is Eugene G. Blackford's address? Ans. Knapp & Van Ostrand, Washington Market, N. Y. Blackford's address is Fulton Market.

**CAPT. E. F.**, San Antonio, Texas.—Can you recommend me to some reliable house in New York where I can obtain, prepared, the prescription's given in "Hallow's Gazetteer"? Ans. C. H. Pleasant & Co., 61 West Houston street, corner of Wooster.

**A. S. B.**, and others.—Is it your opinion that the game law of Illinois so reads as to make it unlawful for a non-resident to shoot game in that State? Ans. No. The enactment plainly states that no non-resident shall kill, snare, or entrap game for the purpose of shipping out of the State.

**PHARMACIST**, Falls City, Nebraska.—How can I remove indelible ink stains? Ans. Paint the spot with iodine, then soak in a solution of cyanide of potassium. When the stain has disappeared wash the fabric several times in cold water. Remember that cyanide of potassium is highly poisonous.

**H.**, Huntington, Tenn.—Has such a feat ever been performed in America as one man shooting an apple or potato from the head of another, at the distance of forty paces, with a rifle? Ans. Mike Shaw, of Kentucky, frequently performed the feat. We have seen the statement that the Austine performed similar feats.

**OPIN**, Denver, Col.—I have had a dispute. Can there be five Sundays in February? Ans. Yes. There were five Sundays in the month of February, 1852, and there will be five Sundays in the same month of 1850. Such, of course, can occur only in a leap year, and then only when the first of the month falls on Sunday.

**W. D. W.**, Philadelphia.—Will you inform me if the Steadman's flea powder advertised in your paper, is perfectly safe? Is there no danger from the dog licking his coat of the application? Ans. We will not vouch for any nostrum or remedy whose composition is unknown to us. We have never heard of any injury resulting from its use.

**H. L. H.**, New York.—I want to get a good turnspit dog and am at a loss to know where to look for one. Can you tell me where to procure a nice one in this neighborhood? Ans. The peculiar breed of dogs known as "turnspits," are not to be had in America. They are extremely rare in Great Britain, the race being nearly extinct.

**G. W. H.**, New York.—I am desirous of taking a day's shooting this fall, and write you to inquire of some locality of easy access, near the city, where one could go—a place that would warrant the trouble taken, in amusement if nothing else; it is immaterial what the game be. Ans. Go to Orville Wilcox's Bay View House, or Lane's, Good Ground, Long Island.

HENRY M., Port Huron, Mich.—What is the meaning of the word *Fama*, which is used so often in your paper; is it the same as *Flora*? Ans. No. The word is derived from *Fama*, a rural deity of the Romans. The *Fama* of any district or country, embraces their entire natural history, though it is frequently used to designate the animals and birds alone.

W. B. L. JR., Lawtonville, South Carolina.—Please let me know if you can give me a recipe for curing mange in a dog. Ans. Of some fifty or more skin diseases which afflict dogs, all are known under the general name of Mange, which is about as comprehensive as the word fever. If you can give us an intelligent description of the eruption, etc., we can prescribe.

F. B. P., Cleveland, O.—Will you please inform me if there is any paper published on the subject of stock raising, and where I can procure one? 2. Do you think the Winchester repeating rifle would be a good gun to take to Texas? Ans. 1. The *Country Gentleman*, published at Albany, N. Y., or *American Agriculturist*, fills the bill as well as any American paper. 2. Yes.

I. G. PECK, Sault Ste. Marie, Mich.—Both barrels of my gun occasionally go off at once when I pull the right hand trigger. What shall I do to it? Ans. The second barrel is discharged by the jar of the explosion of the first. Take to a gunsmith who will file the tumbler of the left lock sufficiently to make the catch perfect. If you have any mechanical genius at all, you could remedy it yourself.

CHILL, Polo, Ill.—Can you tell me a good receipt for Chili sauce. Ans. Twelve ripe tomatoes, four ripe peppers, two onions, three capfuls of vinegar, two tablespoonsful of cinnamon, two tablespoonsful of salt; chop the peppers and onions fine, and add the tomatoes; cook together slowly one hour. It is not necessary to chop the tomatoes if ripe, as they will cook soft and thus mix well.

O. L., Auburn, N. Y.—I want to go to either St. Clair Flats or Long Point this week for ducks. Will you kindly tell me which of the two places you consider the best this year and what a permit to shoot at either place costs and to whom to apply for it? Ans. Go to St. Clair Flats. No permits are needed except on Walpole Island. You will get full particulars at the Star Island House.

D. M. Y., Norristown, Pa.—Some weeks ago, in looking over some paper, I saw an advertisement of an appliance of some kind for copying manuscript. It is claimed to enable the user to make, say 500 copies, and was recommended, especially, for circulars, business letters, etc. Ans. Edison's Electric Pen. Full particulars may be had by addressing Thos. A. Edison, Newark, N. J.

J. K., Buffalo.—As the bores of double-barreled guns are farther apart at the breech than at the muzzle, it would seem to indicate that the line of fire from each barrel must cross that of the other, yet such, I believe, is not the case. How is this accounted for? Ans. The lines of fire intersect at a certain distance from the muzzle, depending some, what on the size and arrangement of barrels.

C. E. C., Hanover, Me.—How can I change a light gun stock to a dark color, nearly black? Ans. Scrape off the varnish and stain. If you will stain with a hot, saturated solution of permanganate of potash, you will have a dark walnut stock that will defy the inspection of any but the best of experts. Make several applications, drying each one; last of all wash well with cold water, then varnish.

A. R. R., Elk Rapids, Mich.—I have a puppy nine months old that is running at the eyes, the lids being much inflamed; seems all right otherwise. What can I do for him? Ans. Bathe the eyes with the following: Sugar of lead 4 grs., wine of opium 1 drachm, glycerine  $\frac{1}{2}$  drachm, rose water enough to make one ounce. Mix and filter until clear. If it enters into the eye, all the better.

E. B. P., Lakeville, Conn.—1. Did the Amercan Team load at the muzzle or at the breech? 2. Do they load the shell and put the ball down from the muzzle? 3. How does the Ballard Rifle have one-half less recoil than any other with the same twist? Ans. 1. Loaded at the breech? 2. No. Major Fulton used so do to, but we are not aware that any of the last team did so. 3. We do not know that it has.

J. N. M., Charleston, West Va.—Will you please give me the nature of some reliable work on ornithology? 2. Are there two under-lever actions for breech-loading guns? Ans. Wilson's and Audubon's are standard works, but "Balrd, Brewer & Ridgeway's North American Birds" is the newest and most reliable work out. 2. The Efecchaux, the side-snap, and Parker, are all under-lever actions.

PITTSBURGH.—The greatest diameter obtainable with six strips of the Malacca cane is 5-16 of an inch—too small, certainly, for an eleven foot rod. Is that cane generally used in rod making? If not, what is the proper kind and where can it be had? Ans. The Calcutta bamboo is chiefly used by the best rod makers. For two columns of information as to how to manufacture these rods, see FOREST AND STREAM of March 16, 1896.

ROB ROY, New York City.—Do you know any one who has a Rob Roy canoe for sale cheap; or which he would rent at reasonable rates? Ans. We know of none. The boats are built by J. H. Rushton, Canton, N. Y.; Waters & Balch, Troy, N. Y.; and Mr. Jarvis, Watkins, N. Y.; and cost, when new, from \$75 to \$100. Perhaps the writer of the canoe article, in another column, might give you the desired information.

F. S., Boston.—I have a highly bred pointer that when he is lying down, in doors or out, trembles, or shivers much as a human being does when cold or chilly. His nose is cold, feels well, and to me seems in perfect health. Have you any idea as to the cause? What can I put on his feet to keep him from getting foot sore? Ans. Your description is too meagre. For tender feet bathe in a weak solution of salt and alum.

MARFIELD & MASSIE, Chillicothe, Ohio.—The Dittmar powder is all right, provided used in a certain way, to our inquiry in regard to same, caves us in about the same fix you found us. Can't you give us, in your next issue, an idea as to how it should be used? Ans. Send to Carl Dittmar, Neponset, Mass., for one of his circulars of instruction how to use the powder. You will find it in full in Hallock's "Sportsman's Gazetteer."

H. S., West Philadelphia.—Dog has epileptic convulsions when over exercised. Ans. Place on low diet, and give fluid extract of *tritium repens*, one drachm every four hours. Pay strict attention to cleanliness, etc., giving moderate exercise. Use also the following: Solid extract of colchicum comp., 60 grains; solid extract of nux vomica, 10 grains; solid extract of belladonna, 5 grains. Mix, and make twenty-five pills. Give one at night.

C. S., New York.—1. At what age is a well bred pointer dog unfit for breaking? 2. Is a dog three years of age too old to break? 3. Is the area not good for tame work in dogs, and would it hurt a dog should he not have worms, as I may mistake the symptoms? What is a dose? Ans. 1. Not until upward of one year of age. 2. Yes, generally. 3. Area not produces a severe inflammation of the bowels, and hence should be used only as a *dermat* resort. Dose, twenty grains for an adult dog.

J. A. P., Williamsport, Pa.—1. Is the bass bait advertised in the F. and S. considered good? 2. Is it nearly as good as the genuine hell-granite which it represents? 3. Are crabs as good as minnow? 4. I am going to order an extra set of gun barrels expressly for heavy cover shooting. Will you give your opinion as to how many pellets should they put in 30 in. diameter circle at twenty yards? Ans. 1. Yes. 2. Is said to be. 3. Oftentimes better. 4. Depends upon the size of shot, and the amount used.

C. W. B., Westboro, Mass.—1. Is the Restigouche region of New Brunswick a good trapping region? 2. Is lumbering carried on about the head waters of the river? 3. Are Virginia deer found in that region? 4. How often do the mails arrive at the Grand Falls, on the St. John's River? Ans. 1. Yes, except for beaver, mink, sables, etc. 2. No, not at the head waters, but at least for eighty miles above the mouth. The river is 127 miles long. 3. No deer, only moose and caribou. 4. Daily mail.

H. A. K., Clyde, Michigan.—Can you inform me who was the inventor of the stocking-frame? Ans. William Lee, M. A., Fellow of St. John's College, Cambridge, England, invented the stocking-frame in 1599. Tradition ascribes the origin of his invention to a pique he had taken against a townsman, and who gained his livelihood by knitting stockings, in order to depreciate her employment. It is said that he worked for Queen Elizabeth, and not only manufactured stockings in his frame, but waistcoats, etc.

A. O., New York.—1. Which of two bullets would give the greater shock to a wild beast—No. 1, 44 calibre, 200 grains, flat front, propelled by 40 grains of powder; No. 2, 40 calibre, 290 grains, pointed, propelled by 50 grains of powder. 2. Would a barrel of only 18 inches be long enough to give a bullet the proper velocity for doing its work thoroughly at short range? 3. Would a large revolver, with shoulder at a cement and throwing an explosive bullet of 44 or 45 calibre, be better than a rifle on account of the rapidity of fire? Ans. 1. No. 1. 2. No. 3. We should prefer the rifle.

J. H., Boston.—1. Is the sugar of lead and alum solution for waterproofing a tent detrimental to health? 2. Is it practicable to have a rifle barrel to go inside the barrel of a ten bore/breech-loading shot-gun, to use at pleasure? If so how large will it be safe to have the calibre? 3. In the "Gazetteer" after the names of the trout files for each month are figures, what do they denote? 4. How would the artificial Dobson advertised in the F. and S. do for bass in Florida? Is there anything of that nature there? Ans. 1. No. 2. Yes, consult your gunsmith as to calibre. 3. Size of the fly. 4. Yes.

TAK HEEL, Wilmington, N. C.—Setter pup fourteen months old; lame in left fore-leg. Holds leg, when standing, with foot barely touching the ground. Limp when walking or running. Apparently no pain—no swelling, no bruise, apparently. First noticed lameness on returning from a hunt. I am satisfied that there is no thorn or briar in foot or leg. Slight shaking or tremulous movement of the leg occasionally, when foot is resting very lightly on the floor or ground. Ans. Look for sinus in claw. Better make another examination for thorn, examining carefully between the pads of the foot.

M. H. C., Clarksville, Tenn.—Our club sowed in our ponds, last fall and this spring, five bushels of wild rice; we could not learn that a plant was produced, and the seeds may have been roasted before they were sent us. The last FOREST AND STREAM speaks of the wild celery in Lake Koshkonong, Wis.; perhaps such would succeed here. It produces seeds, I suppose. Can you put us in the way of procuring them? Ans. Fred. Pond, of Montello, Wis., will tell you all about Lake Koshkonong and its wild celery. Why will not our old correspondent gratify many readers by communicating his knowledge through our columns?

DALTON, Pittsfield, Mass.—With a rifle—barrel-chambered for a long straight shell and, patched ball, shell  $2\frac{1}{2}$  inches long and the ball projecting an inch more—could reliable shooting at shorter ranges be depended upon by using shells of  $1\frac{1}{2}$  or 1 inch long, with naked lubricated bullets corresponding in size to the charge of powder burnt? 2. Will one turn in 10 inches give any greater recoil than one in 30? 3. Is the relative accuracy affected in either case, and if so, what twist on a 6 to 9 lb. barrel of 44 bore, would give the most accurate results? Ans. 1. No. 2. It should. 3. Other things being equal to a certain point, the greater the twist, the greater the accuracy.

MAC, Brookville, Ind.—My setter dog has a wart, or something similar to the same, growing from under the left upper eye-lid. It protrudes about one-eighth of an inch, and is the same in diameter, and has a wart-like appearance. The base of the same extends underneath the eye-lid a full quarter of an inch. Had not noticed anything of the kind troubling him till a few days ago. His general health is good. Please tell me what is best to do for him. Ans. Take him to a surgeon and have it dissected out. To remove with scissors will probably be of little use, it being likely to return. It can be removed by other methods, but they would be dangerous in the hands of non-professional men.

F. W. C., Boston.—Fishing in quick waters below the dam at Ship Pond, Eliotville, Me., last month, I caught a fish with all the colors and markings of a land-locked salmon, and in addition, the bright red spots of a brook trout. It was about 6 inches in length with bright silvery scales under, and black on the back, with bars or scollops down into the light. Was it the young of a land-locked or sea salmon, or a hybrid? Ans. Your fish was unquestionably a smolt, or second year salmon. By next summer, he will have made his first visit to the sea, and return weighing five to nine pounds. We congratulate your fish culturists on their success in introducing the salmon into your part of the State.

J. B. C., Albany.—Please prescribe for my dog. He is nine weeks old, scratches himself a great deal and sheds a little hair he had. Sores on him, but I have used carbolic soap and he is better. Eyes good; does not sleep well; he shakes and trembles most all the time; bowels are very bad, they are so loose it is almost clear water; color black and sometimes light brown. He has nothing to eat but milk, bread, potatoes and a very little cooked meat. He plays around lively about half of the day, but breathes hard and drinks a good deal of water. Ans. Leptandrin 1 grain, sulphate of cloacodol 1 grain, podophyllin  $\frac{1}{2}$  grain three times a day. Also liquor *Arsemealis* of Hydragryl 10 drops in water morning and evening. Feed on oat meal and lean fresh meat well cooked.

FLEAS, Brooklyn.—I have a setter pup, nine months old, that is troubled terribly with fleas. If they are killed off, they return as soon as he goes to his kennel. His kennel, a large box with no bedding, is scalded and washed out once a week, and is in the back yard, next the house in the corner. Ans. Build him a new kennel and have all the cracks painted up. Whitewash every week, or give a coating of turpentine after flushing well with hot water. Give him pine shavings to lie upon, which change often. Raise kennel from ground three or four inches, and place in a different locality. Perfect attention to cleanliness and hygiene of kennel will keep out fleas. Use powdered flowering pyrethrum to eradicate fleas from dog, and Juniper Tar Soap (Hogarth's) to wash him with.

GREEN, City.—Will you prescribe for my setter? Age, about four years; food, table scraps; medicine, none; eye, bright, but rather sad;

coat, hair dropping; tongue, dry; condition, quite thin, no bloating; respiration, natural; bowels, free, but have not been able to see them urine, more free than natural; appetite, variable; I cannot give temperature; kennel, has the run of the house and large yard, can go out when he pleases and come in, sleeps in a large, airy room. He has just come in from the country yesterday, where he has been since June. Vomits very frequently after drinking, sometimes after eating. If I could make an appointment with your Doctor, I would like to do so. Ans. Squibb's sweet spirits of nitre, 2 ounces; fluid extract of tritium repens, one ounce. Dose, a teaspoonful three times a day in water. The Doctor may be seen at this office at any time.

J. H. P., Augusta, Me.—1. Should the bottom of a rudder for a sail-boat be on a line with the bottom of the keel? I claim that it should, but a boat builder tells me that it should be rounded off on the after edge, as he says that the rudder takes effect on the water line only, and that the back lower corner makes more drag without doing any good. Which is right? 2. Please give me a recipe for getting a durable dark blue and black on a gun barrel without heat? 3. Is there any chart of the coast of Maine that is not very expensive? 4. Is there any kerosene stove made that is safe and convenient for camp use? All that I have seen are too heavy or take up too much room. Ans. 1st. The boat builder is correct. 2d. Gun barrels cannot be blued without heat. 3d. Yes. The U. S. Coast Survey reports can usually be bought for a mere nothing in old book stores. 4th. All that we have seen are either too heavy or too awkward to carry.

G. H., Philadelphia.—I own a small cocker spaniel bitch about a year and a half old; I have fed her, since she was three months old, on Indian meal mush with liver chopped fine cooked in it. Recently I took her for a walk, and when a mile from home she fell on the pavement and commenced kicking and choking with a slight frothing at the mouth, and a cramped appearance of her limbs, almost immediately she commenced yelping and barking and broke away and ran for several squares, when I lost her. On my return I found she had been home some time, and that immediately on her arrival she curled up and fell asleep; she appeared very weak and nervous for several days. I dosed her with raw linseed oil, as her breath was very offensive. Can you tell what ailed her? Ans. The dog had epileptic convulsions, probably due to the feeding of Indian meal. Feed on oat-meal, and give her 6 grains of the following powder three times a day: Rhubarb, powdered, 6 grs.; powdered white castile soap, 2 grs.; leptandrin and powdered cubbs, of each one drachm. Incorporate thoroughly and pass through a very fine sieve.

D. K., Syracuse.—Will you please inform me in regard to a fish found in the Seneca River, known as the white bass or sheepshead. It was my fortune to take from the Seneca River, near Jordan, last Friday, one of these fish weighing seventeen pounds, and, having an idea quite prevalent hereabouts, that they were only fit for a compost heap, I disposed of it to a lad, fishing near, for four black bass. There seems to be a difference of opinion as to the fish, some asserting that he frequents reefs and stony and gravelly bottoms, and, when properly cooked, is decidedly palatable and a different fish from the sheepshead. Is there a species of fish found in the Seneca River known as white bass? And if it is also called sheepshead, and is the same fish found in Lake Erie and called by that name? We have the silver bass with a dark stripe on the side, an entirely different variety. Ans. There is a fish found in the Seneca River and lake, and, in fact, in most of all the interior lakes of New York known as the white bass or white perch, and by some as a sheepshead; this is the *Corvina oscula* of DeKay, and is esteemed as food by many, though somewhat dry and tasteless. The sheepshead of the Great Lakes, or Malasheganay, is the *Corvina richardsoni* of Cuv. and Val., an entirely different fish, and is considered inedible by whites, though Indians like it. A peculiarity of it is, that the longer it is cooked, the tougher and more leathery it becomes. Your white bass is found in Lake Erie, and is sometimes known as sheepshead in those waters.

F. A. T., Pittsburgh, Pa.—My red Irish Gordon setter bitch, six months old, has had a bloody dysentery for a month, and all that I can do I cannot stop it. Nearly every passage is soft and streaked with blood; sometimes a jelly-like substance passes her. She is quite thin, and I would like to stop it, if possible. She averages six or seven passages every twenty-four hours; she urinates very often, the fluid being of a white color. She eats little or nothing in the morning, but at noon and night has a good appetite. Her kennel is in my back yard, clean, dry and warm—another dog, similarly situated, thrives splendidly. She has daily exercise around the parks and commons; her coat is glossy generally, but sticks up in one or two places; eyes are bright; belly slightly drawn up behind the breast-bone; her breath has that sickly smell which you will understand without description. Her treatment has been—first, areas not for worms—no perceptible good results; next, laudanum and ether, five drops each, three times daily—passages a little harder but same amount of blood; next, fluid extract of ergot, ten drops, twice daily, and cod liver oil, a tablespoonful three times daily—on this she fattened, but no abatement of blood; I am now giving ipecac, ten grains, three times daily—passages still bloody. As she cannot touch meat, I am feeding her on boiled beef or mutton alone, in moderate quantities. Ans. Your description is satisfactory! We wish all were equal to it. We suspect the areas not to be at the bottom of the trouble. Give the following three times a day: Quinine, 12 grains; cubbs, 16 grains; leptandrin, 13 grains; white castile soap, 4 grains; rhubarb, 6 grains; crystals of nitrate of silver, powdered, 1 grain; solid extract of conium, 2 grains. Mix, and make twelve pills. Dose, one pill three times a day. Give also, Bowditch's wine of pepsin, a teaspoonful every four hours, and use Iodoform suppositories.

THE WEDDAS.—Several interesting papers have been read before the scientific societies of Great Britain regarding this interesting tribe of men, inhabitants of Ceylon. The deductions to be drawn are, that the Weddas still depend upon bows and arrows for their subsistence, and that they pass their lives in the forests, without dwellings or any system of civilization. There is an entire absence of implements among them, even stone or flint, indicating a state of barbarism below that of the mound builders of America. They have no means of procuring fire other than by friction of two pieces of wood, and the use of water in ablution is unknown. The intellectual capacity of the race, too, is extremely low, as they are unable to count, do not distinguish between colors, and are totally devoid of any moral or religious sentiment. Mr. Harshorn declares these people are incapable of mirth or sorrow, and that they are noteworthy as being the only race in existence that speaks the Aryan language. Mr. Clark corroborates the fact of their being a truly aboriginal people, but holds that the use of the Aryan tongue is no positive evidence, that they are Aryans, though he believes them closely allied. Undoubtedly further research regarding this peculiar race, will throw important light upon the science of evolution and philology.

## A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2392.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

## Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

\* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 18, 1877.

## To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

## CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, Oct. 19.—Trotting: Mystic Park, Medford; Cincinnati, O. Massillon, O.; Fleetwood Park, N. Y.; Sharon, Pa. Running meetings: Nashville, Tenn.; Raleigh, N. C. Base ball: Alaska, of New York, vs. Chelsea, at Centennial Grounds; Boston vs. Cincinnati, at Cincinnati.

Saturday, Oct. 20.—Trotting: Fleetwood Park, N. Y.; Sharon, Pa. Base ball: Boston vs. Cincinnati, at Cincinnati; Alaska, of New York, vs. Princeton, at Centennial Grounds.

Monday, Oct. 22.—Running meeting at Nashville, Tenn.

Tuesday, Oct. 23.—Trotting: Dallas, Texas.

Wednesday, Oct. 24.—Trotting: Cythlana, Ky.; Dover, N. H.; Pittsburgh, Pa. Running meeting: Baltimore, Md. Base ball: Boston vs. Picked Nine, at Boston.

Thursday, Oct. 25.—Trotting as above, also at Meriden, Conn. Running meeting as above.

OUR ADVERTISEMENTS.—We are constantly in receipt of queries asking if this or that advertiser or his ware is reliable. We are possessed of as fair a share of knowledge perhaps as is allotted to man here, but we have not yet become so omniscient as to know all that passes in this world, or to be personally acquainted with every man, woman or child that may have a dog, gun, patent medicine, mineral water, orange grove, etc., to sell. While we do not willingly allow any fraudulent advertisement to appear in our columns, we can not be expected to stand as god-parents to our advertisers, therefore we may say that it is a waste of ink and paper to write us asking as to the reliability of any nostrum or patent preparation for man or beast that may appear in our columns. The very fact that any article bears the impress of secret composition is enough for the reader to judge from without invoking our aid.

—Several inquiries having been addressed to us with regard to the Southern estate, advertised for lease in our columns by "Sportsman," we are prepared to say that it is no less a place than Palmetto Island, formerly the Gibbs plantation, near Port Royal. It comprises three hundred acres, and is one of the most desirable winter resorts which we have ever had the pleasure of visiting. It affords fine wild fowl and quail shooting and good fishing, is very accessible by steamer, and used to be considered one of the finest sea-side places in the South.

## VACATION RAMBLES IN MICHIGAN, WISCONSIN AND MINNESOTA.

BY THE EDITOR.

OCTOBER 18th, 1877.

BRETHREN: On the 1st of August, nearly three months ago, when I reluctantly left our beloved journal in the care of those gentlemen who have since proved so capable, the midsummer sun was fervid in the West, ripening the golden grain, whose promise of abundance has been made more than good in these later days, gladdening the hearts of the long-suffering and much-grasshoppered grangers. All over the land of the Ojibewas, Winnebagoes and Dacotahs, (poetic license allowed by actual present occupants,) the cereal wealth lies garnered in barns, or piled in huge heaps, whose market value is \$1 per bushel, with buyers for all that is offered. And wherever the harvesters have raked, the gopher disports in the stubble and the prairie chickens come forth for their morning and evening meals. Yea, verily! and the Western sportsman is aware of the fact.

In the charming lake country of Michigan, and on the hardwood ridges of northern Wisconsin, the acorns and hazel nuts have long since shelled out from their cases, inviting the deer, squirrels and the timber grouse to the "free lunch" which the winds and the frosts have rattled down, and thither also the hunters have wended their blithesome way. There are ducks in the many lakes and sloughs, and the voice of the wild goose is heard in the fields, and overhead, going south. All through the Indian Summer, and into the grey and blustering months of the waning Autumn, until the water-courses and reservoirs are closed by ice will there be ample work for the gun, and abundant exercise for the dog. Happy the man who taketh advantage of his knowledge thereof.

The familiar apothem of the Philosopher Greeley—"Go West young man,"—has of too valuable and truthful significance to be cavalierly treated. The Western country is vast; its distances look short on paper, but they are long to travel over, and every mile traveled enlargeth a man's ideas, and increaseth his respect for his fellow men as well as for himself. When the wonderful cereals of the Kansas department of the great Centennial Exposition were displayed, the wise men of the East were astounded, and the wisdom that was in them became as naught in the stronger light of their new revelation. And yet we have tall corn in the East! So also have we game animals and birds; and the gunner goeth forth for the same, and scouring a township returneth at evening with a bag of two dozen brace, but the Western chicken shooter harnesses his two-horse team, and ranging over a hundred miles of prairie, bringeth home a wagon-load. [Just estimates are obtained only through comparisons.] Because the grasshoppers have ravaged portions of States at times it does not follow that they have become an engrafted and perpetual institution of the entire Western country. Maps of the United States are not made nowadays as they used to be a half century ago. The scale of miles is different. One man cannot live all over the Western country at one time any more. A single sportsman may have suffered disappointment by the scarcity of birds while the burning of the grass in springtime has destroyed, or midsummer drouth driven off to more favored places; yet the whole West should not be condemned as barren of game. Doubtless game has disappeared by various causes from localities where it once abounded; but, nevertheless, it exists in widespread abundance and in remarkable variety "all over." The woods, grass, lakes and streams are "full of it." Having myself gone through several States with the express purpose to spy out the land, every facility being afforded by the railroad and steamboat companies, I do not hesitate to repeat our frequent admonition to everybody to "go west," if with no other object than to see that new section of "our great and glorious country," and enjoy the intercourse of the high-minded and hospitable people who dwell there. If a man have health and contentment at the East, let him abide there and seek no permanent settlement elsewhere; he is most likely to find it beneath the skies of the Western sun. It is true I did not return from my expedition as full-handed as did Caleb and Joshua from Canaan; I brought no testimony of the grapes, but I did take many trout and grayling on the Jordan, and shot some game in the promised land, including one poor rabbit, the tragedy of whose death I may hereafter relate; and if our readers will only take my word for it, they may be as easily convinced that there is still some sport left in the West as the old time unbelievers were that some good could come out of Nazareth.

To reach the West are many and expeditious routes whose comforts are as numerous as their scenery is varied and charming, but of all those I have travelled, none are excelled by the grand old Pennsylvania Central, the great railway artery of the United States. It is grand in its construction, equipment and management; grand respects the wild mountain scenery which it traverses; grand in its far-reaching connections; grand in its vast pecuniary resources, and grand in its ability to withstand stupendous losses without wincing. To the traveler its inimitable road bed is a solid and continuous assurance of safety throughout the entire length of its extended line, just as the beds of its luxurious sleeping cars are of comfort to the body worn by wear and tear of protracted journeys. In its hotel cars excellently-cooked meals are supplied at not exorbitant rates by a civil steward and well-trained colored servants. Whatever objection may be made to eating, sleeping and living in the same apartment, I feel that the advantages outbid the disadvantages; and though sometimes taking the wayside eating house by

way of a change, or when they enjoy an exceptional reputation for the excellence of their tables, I usually stick to my post, and am fed, washed, shined, dusted and tucked into my little bed by my assiduous attendant, who "gets" to know us all before the journey comes to its end. One cook, whose name I believe is White, although he is very black, (perhaps it is Wright, but this spoils the antithesis) is not only a most excellent cook, but a most patient and pains-taking person. I never spoke to him, and he may never know his obliged admirer. Still the praise is due, and the man is worthy of the bestowal. I'll take future chances on my beefsteak being damaged by faint praise.

Possibly not one in ten of the traveling public is familiar with the construction of the hotel car, and so I may describe the vehicle briefly as a parallelogram divided into four sections by three bulkheads. One section contains a wash room, closet, and steam generator. The main section is, like any other sleeper, converted into seats by day and beds at night, and is additionally supplied with adjustable tables, where meals are served. The incidental conveniences of this room are numerous and grateful. The third section takes the ribbon off of any yacht's galley for compactness and convenience. It is divided into a cook-room, pantry, wine closet and refrigerator, and can easily supply sixty or more different orders *a la carte* simultaneously. The fourth section is a smoking room, with sofa and easy chair. The fuel for the cook room is carried in a box under the car. In this very comfortable car we travel from New York to Chicago without change.

As the route of this journey includes the States of New York, New Jersey, Pennsylvania, Ohio, Indiana and Illinois, and a distance of something like 900 miles (the road claims to be 61 miles shorter than any rival route) the objects of interest along the line are very varied and numerous, embracing every sort of commercial, manufacturing, mining and agricultural interest. It begins with the salt water commerce and manufacturing of New York, Jersey City and Newark, passing over alternate salt marshes and picturesque ridges of rock into the undulating and bucolic lands of New Jersey, where the strawberry, peach and sweet potato grow in their perfection; thence across several canals, pretty rivers and carefully tilled farms, to the great seaport of Philadelphia, with the picturesque scenery of its two tributary rivers; on through a somewhat broken but most charming and fertile farming country, to Harrisburg on the beautiful Susquehanna River. Then over and through the Alleghany range, with its vast mining interests and flaming forges, to smoky Pittsburgh, where the Alleghany joins the Monongahela to form the Ohio. The intermediate section contains the wildest scenery on the route, including the famous "Horse Shoe Curve" along the face of the mountain. Dense forests cover the sides of the mountain, and invite the sportsman to seek its sequestered recesses; but we are told that the sound of the pick and trowel, and the roar of the furnaces disturb the game. Yet we know of many a place off the main line where the ruffed grouse abound, and deer can be shot without much trouble. At Pittsburgh the Eastern man obtains his first view of the Western river steamboats and barges of varied and grotesque structures. Down the Ohio the railroad follows for many miles, and leaving it at Rochester, a great railroad centre, stretches across the broad State of Ohio and into Indiana, passing through an undulating agricultural country, interspersed with lakes and occasional prairies, whose very name and appearance suggest to the Eastern man that he must be very far from home by this time. The lakes generally afford good bass fishing, and woodcock and quail can be flushed on many a farm. As I stated in a former letter this section is generally posted, but with permission of the proprietors the sportsman can often fill his bag. Passing into Indiana the prairies become more frequent, suggesting "chickens." By this time the sportsman begins to talk dog and gun freely with newly made acquaintances, and possibly does not desist until the midnight train hustles him into Fort Wayne, where he must change cars if he is bound for Northern Michigan. If his destination be central or northern Wisconsin, he can take all rail *via* Chicago and Milwaukee, or to Grand Rapids and Grand Haven *via* Grand Rapids and Indiana and Detroit and Milwaukee railroads, and there take steamer across Lake Michigan to Milwaukee, a route to which I would give summer preference, as it enables the tourists to see very much of three cities which have a deserved reputation as points of interest.

As I am bound for the northern peninsula of Michigan, to the very end of the route, I shall leave the Pennsylvania Central here at Fort Wayne. I can lie over until the early morning train, or I can take a day to see the place and hunt up the boys. There is a "sleeper" in case one prefers to go right on through by the night train.

I have already told you something of my visit at Fort Wayne over Sunday, but I have not told you how I found out the boys. I had never lain over here before, and had omitted to bring a memorandum of their names. It was an omission that occasioned me much annoyance. An inquiry at the hotel office for the sportsmen's club elicited no information, except that it had disbanded and no one seemed to know who had been members of it. I got no assistance in this direction, therefore. Hunting the daily paper through, I failed to discover one single name that was familiar, and as a last resort I slipped into the shade of a second story verandah and began to search through the town directory, page by page, alphabetically, occasionally taking a look at the pretty open square in front of me and at passing church goers, quite interested in spite of my loneliness and the midsummer heat. Accidental

looking toward a gentleman's furnishing store, I saw a handsome orange and white setter on the doorstep. Now I have "a pretty good nose" and am staunch on "points." By the side of the dog stood a gentleman and over the door was a sign. I associated the three together at once. I did not know either, but, as the detectives say, I had a "clue," and so I walked over. I was informed by the gentleman that the dog did not belong to him, but that it was the property of the person whose name was over the door. He was waiting to see him, and if I would leave my address he would take pleasure in handing it to him. I placed my card in his hand. It was a masterpiece of strategy. In less than an hour I was in the midst of good friends, and was kept busy during the remainder of my stay. The person's name was Geo. A. Fowler, who is the owner of several fine dogs, and one of the best known sportsmen in the State. To him I have given the privilege of claiming the name of "Vidocq" for his next canine acquisition in remembrance of the circumstance. Vidocq, you know, was a noted French detective, and the name is not inappropriate for a setter or pointer. Besides, it sounds well, and is easily spoken.

I carry with me many pleasant memories of my sojourn in Fort Wayne.

From that place to Grand Rapids is an easy journey, the route passing through a charming agricultural country, interspersed with lakes and attractive summer resorts. There is nothing by the wayside that seems to me worthy of note as being of especial interest to the sportsman, so I will defer what I have to say of my journey from Grand Rapids to the northern part of the State of Michigan, until I publish my next letter.

Hereafter I shall make as minute mention as need be of all the facilities afforded by the transportation companies, and of all the comforts provided by the hotels, throughout the country over which I traveled, without fear of being charged with mercenary motives, or with being bought up by the parties to whom I shall refer. It is the especial province of the sporting journals to bring the game sections of the country to the attention of sportsmen, and to make them familiar with the routes that lead to the same. Pioneer railroads in particular recognize the value of inducing sportsmen to visit the regions they penetrate, for sportsmen invariably follow the lumberman, and precede the settler. As evidence of this recognition observe the advertisements of railroad and steamboat lines that fill a page of *FOREST AND STREAM*. It is natural, therefore, that these companies should provide every facility for the journalist to visit and explore the regions they traverse, and they have done so in my case. The policy of our journal has always been liberal toward these lines, and so is that of these lines toward the sportsmen, and of the sportsmen in turn toward this journal. The interest of the three are to an extent mutual and reciprocal. In the matter of dog transportation, once so vexatious to all concerned, the change of attitude of the railroads within a brief period is most conspicuous; and it is fair to say that I found every line throughout my journey of over 6,000 miles most considerate toward sportsmen in all things pertaining to their own comfort, or to that of their canine companions. They have found that gentility is part of the composition of both. Ordinarily working dogs are well trained, and, therefore, well-behaved, making neither noise nor dirt. Their estimable and docile qualities are rapidly coming to notice, and for that reason are the more respected, receiving the consideration they merit; so that, really, the pains and expense bestowed upon their education by their masters inures and reacts to the benefit of the masters themselves.

In traveling long distances it is customary to place the dogs in charge of a baggage-master, brakeman or other employee, whose fidelity is assured, the owner making frequent visits of inspection to see that their comfort is looked to. But for short trips the owner usually takes chances with the dog, and travels in the baggage or express car with him. On most lines throughout the country there is usually ample room, so that no one is inconvenienced; but on two or three of the great main lines the accumulation of baggage is excessive, and the vans are crowded. In this case the dogs are freely admitted to the smoking cars, where they lie quietly and do not make one tithe of the dirt that most of the bipeds do who flood the floor with tobacco juice and promiscuous litter. The careful sportsman will always carry some prepared dog food in his pocket, and a tin cup, so that he may be independent, if necessary, of unwilling services or short supply in other directions.

The whole study of canine physiology and mental character is interesting, and nowhere can it be enjoyed to greater advantage than in a van crowded with aristocratic dogs. Very little wrangling is attempted, and the creature that manifests a churlish disposition receives the contempt he deserves from his fellow travelers. They are not impudent or obstreperous to strangers whom they would at home keep off from their master's premises. While appreciative of approval, they despise abject flattery, and never permit their vanity to be excited by empty attentions to the extent of climbing on a man, and plugging his shirt bosom. Any sensible notice taken of them they gratefully recognize by a mild cock of one eye, and a gentle swing of the tail, once.

Each dog generally selects his corner by a general acquiescence, and having pre-empted his claim holds it throughout the journey, subject only to his master's behests. Tumbling about of heavy cases and trunks does not disturb their equanimity. When waited upon with food or water, each is polite to his neighbor, and complacently awaits his turn, often when distressed with thirst. When permitted to take a run at a way-

station they generally do it in a sympathetic way, stretching their limbs with lively satisfaction, but not romping or stopping to swear at the village curs, which often attempt to meddle with them. If the latter become too annoying, the others quietly circle around until they reach the side of their master, where they feel secure. But, "dog-on-it!" I find I am getting on to subjects that are rather beyond the scope of my letter, and so will pause here for the present. HALLOCK.

**A BIT OF A BLOW.**—We have several letters from Naval Line officers of various grades, which we confess contain very just complaints of one of a series of articles entitled "South American Reminiscences," which appeared in our issues of Sept. 20th and 27th and Oct. 4th among the miscellaneous contributions. Portions of this article were not only decidedly prejudicial to the Line of the naval service, and to the navy in general, but reopened old issues which delicacy on the part of honorable men would have prevented the slightest allusion to. The editor-in-chief, during whose absence these articles were presented, while responsible for what appears in the paper, claims some measure of grace and forbearance from those who have been injured. Personally acquainted as he is with many officers of the navy, and intimately with some; cognizant also of the personal issues to which the objectionable articles make reference; and aware that there are very many officers who are constant readers of *FOREST AND STREAM*, he cannot too sincerely express his regret that they should have appeared. Certainly they would not have been published had they passed under his supervision. At the same time it is just to the contributor of these articles to say that he wrote them many years ago, and thoughtlessly published them without revision or excision of the objectionable portions, which he had even forgotten had been written. As for our manuscript reader, who prepared the matter for the printer, he was not aware of their character, and is therefore blameless. We may say, too, that the author is not a Line officer, and has had no connection with the service for eight or ten years.

We do not think it advisable to print the strictures which we have received from indignant officers. Their publication would undoubtedly have the effect to make matters worse instead of better. We prefer to offer an apology as humbly as need be, and can only say that our own self-respect is increased by the evidences which they manifest of the high estimation in which this journal and its utterances are held.

**THE YELLOW FEVER AT PORT ROYAL.**—We have a statement from Mr. Charles G. Kendall, who occupies Palmetto Island, a mile and one-half from Port Royal, that the yellow fever was brought to that place by two steamers—one from Ferdinand and the other a Liverpool steamer from St. Thomas. The condition of some of the premises was very filthy, and being without sewerage of any kind, the town was in a condition to receive the seeds of disease. On Wednesday, Oct. 10, there was said to be no sickness of any kind in the place. At Beaufort, four miles up the river, there has been no yellow fever. Up to the 8th of the month the weather had been constantly damp and rainy, presenting conditions favorable to disease. With the return of bright, pleasant weather, it is thought, all traces of sickness will disappear.

**FAST TIME ACROSS THE ATLANTIC.**—The *Human* steamship, City of Berlin, which arrived from Europe on Saturday last, made the passage in the remarkably short time of seven days, fourteen hours and twelve minutes.

**PERSONAL.**—Sir Henry Halford arrives in the City Saturday, Oct. 20th, when he will sail for England, having concluded to forego his Western trip. The National Rifle Association will bid him godspeed.

On Friday our sanctum was brightened by the Hon. J. Shafter Hawks and lady, who propose to spend the cold month among the orange and palmetto groves of Florida.

**ENGLISH SPORTSMEN IN AMERICA.**—Another eminent English sportsman is coming to America soon. The Marquis of Ailsa, accompanied by Capt. Wade Brown, an old guardsman, and Capt. Boyle, intend starting the beginning of next month from England in his steam yacht on a sporting tour to Florida and Texas, and if possible will ascend the Mississippi. Any information which we possess, or any service which we can render, will be cheerfully given his lordship when desired. His Mississippi River trip would be very attractive if undertaken a month earlier, when the foliage is full on the trees of the upper stream.

#### GAME PROTECTION.

**MEETING OF THE STATE ASSOCIATION OF PENNSYLVANIA.**—The Pennsylvania State Association for the protection of game and fish met at Pittsburgh Oct. 10. It was recommended that there be but one close season for game birds, thus doing away with summer woodcock shooting, and the confusion of dates now so annoying to those who wish to enforce the laws.

It was proposed, too, that the Committee on game laws also take into consideration amendments proposed at the special meeting of the association at Harrisburg: One making it unlawful to kill wild geese and ducks between the first day of April and the first day of September, and another providing for granting of search warrant where good cause exists for sup-

posing game killed out of season is concealed. It is proposed that the open season for brook trout be from April 1 to August 1; that no person shall kill any trout; cutting out the penalty for having in possession; that the close season for yellow, willow, rock or black bass shall be from January 1 to July 1, and prohibiting the use of outline; that twenty fish wardens be appointed at a salary not to exceed \$50 per annum. Another proposed new section provides that fifteen days after the times mentioned in the act, so far as relates to the close seasons for shooting and fishing, no persons shall have in their possession any of the therein mentioned game or game fish, and the possession of the same shall be *prima facie* evidence of a violation of the act.

The following officers were elected for 1877-8: President, Robert Dalzell, of Allegheny; First Vice-President, D. W. Seiler, of Harrisburg; Second, J. B. Reno, of New Brighton; Third, B. W. Richards, of Philadelphia; Fourth, F. E. Blunt, of Sharon; Recording Secretary, B. F. Dorrance, of Wilkesbarre; Corresponding Secretary, A. M. Whistler, of New Brighton; Treasurer, J. A. Harper, of Pittsburgh. The Association then adjourned to the second of June, 1878, to meet at Wilkesbarre.

**Philadelphia, Oct. 13.**—To-day, Mr. J. E. Kingsley, proprietor of the Continental Hotel, was fined \$10 for violation of the game laws, he having "quail on toast" on his bill of fare, which was served to guests after the notification that such was contrary to the statute.

**Nashua, N. H., Oct. 7.**—Grouse are being snared in this State by the thousand the law not being capable of enforcement; for, as it now reads, owners of property may use snares and devices on their own premises, or permit others to do so. WEBB.

—At the annual meeting of the Genesee Sportsmen's Club at Irondequoit last week, the officers elected for the ensuing year were: President, Willett K. White; Vice-President, George H. Rudman; Secretary, J. H. Brown; Treasurer, W. A. Lyon.

**TEXAS—WACO GUN CLUB.**—This club, which was organized last spring, is composed of influential gentlemen and shows a good list of officers. The election for the ensuing year resulted as follows: Pres., C. C. McCulloch; Vice-Pres., John Thompson; Sec. and Treas., J. P. Garland; Board of Managers, W. T. Lane, W. T. Angell and S. A. Garland. The club are energetically taking action to secure proper legislation for the protection of game and for the enforcement of the existing game laws.

**PIPER HEIDSIECK.**—The appearance of the advertisement of this celebrated house in our columns, is an additional evidence of the confidence which the commercial public have in the efficacy of *FOREST AND STREAM* as an advertising medium. Yachtsmen and steamers fitting out for Florida will not fail to lay in a supply. There is no brand of champagne so reliable. It has withstood all tests from the beginning, and its reputation has never been dimmed by rival brands. Address John Osborn & Co., 45 Beaver street.

### The Rifle.

#### THE INTERNATIONAL TROPHY.

**THE** suggestion first published in our columns that a new trophy should be provided, and a new series of matches inaugurated, to fill the wish of the British riflemen for a distinctive British-American match, meets with a very emphatic approval by Sir Henry Halford in a letter written by him from Niagara Falls under date of Oct. 1. While regretting that his favorite project of affecting a change in the conditions of the Centennial Trophy match, he falls readily in with the idea of establishing a new competition in which the largest area of selection should bring out the strongest possible teams, of course it is desirable to have the new trophy fought for under the most exacting conditions, and the substitution of the 1,100 yards range for the now comparatively easy 800 yards shooting, will meet the approval of the long-range experts. Before our next issue Sir Henry's promised meeting with the Board of Directors, N. R. A., will have taken place, and we can speak more exactly on this new match proposition. In his letter the British team captain says:

I cannot write as fully as I wish on your proposal for a new prize for the International match for the championship of the world. Had it been possible, I should have preferred that the terms for shooting for the Centennial Trophy should have been so altered as to place that prize at the head of the list of prizes in the world for the future, as it was accidentally this year; but, failing such alteration, it gives me much pleasure to think that we shall have an opportunity of again meeting you in friendly rivalry at the butts.

You must not forget that I am only a single member of our Council, and that in anything I say I must not be understood in any way to commit the National Rifle Association of Great Britain and Ireland, but I will undertake to urge upon them the desirability of entering heartily into these friendly contests.

There is no doubt that this year, owing to the shortness of time, we labored under very great difficulties in getting together a team worthy to meet your riflemen, and I thoroughly appreciate your courtesy in taking such steps as will enable us to be better prepared next year.

On my return to New York I shall be glad to meet your Directors, to talk over the terms of the match, and, in the meantime, will mention what I feel sure will meet with the approval of our riflemen, viz.:

That it shall be open for us to select one team from Great Britain, Ireland, our Colonies and Dependencies, if we think fit; and that only one combined team from these be admitted to shoot for our country.

That all communications to us be made to our National

entrance money, and to the third 10 percent. The badge will become the property of the person winning it three times.

The second match is at the Running Deer, under conditions which will quiet the grumbling against repeating rifles. The distance covered will be 100 yards; any rifle may be used, but only one shot will be allowed in a single run of the deer; entrance fee 25 cents for four runs. The highest score will take the rifle, the second score 15 per cent., and the third 10 per cent. of the entrance money.

Saturday last was a slim day at Creedmoor, the usual crowd of National Guard shooters staying in town to witness the Seventh Regiment Armory corner stone laying. The Parker gun match at 1,000 yards, thirty shots, went, under a fluctuating breeze, to young Blydenburgh on a score of 123 in the possible 150, the leading scores being,

|                 | Total. | J. A. Harty.  | Total. |
|-----------------|--------|---------------|--------|
| C E Blydenburgh | 123    | J. A. Harty   | 90     |
| Homer Fisher    | 112    | A. Anderson   | 88     |
| J. S. Conlin    | 99     | E. H. Madison | 83     |
| W. M. Farrow    | 96     | T. E. Lamb    | 78     |

For the marksmen's badge there were but seven entries, scorings follows:

| Names.        | 200 yards. | 500 yards.      | Tl. |
|---------------|------------|-----------------|-----|
| W. Robertson  | 4 3 4 4-19 | 5 5 5 4 4-23-43 |     |
| N. D. Ward    | 5 4 3 4-19 | 4 4 5 5 4-22-44 |     |
| A. T. Decker  | 4 3 3 4-18 | 4 5 5 4 4-22-44 |     |
| B. Van Buren  | 4 3 4 3-18 | 5 4 5 4 4-22-44 |     |
| A. Anderson   | 3 4 4 4-19 | 4 4 3 3 2-17-30 |     |
| James Ross    | 4 3 4 3-20 | 0 3 4 4 2-12-34 |     |
| J. R. Grohman | 4 4 4 3-19 | 0 3 0 3 0-10-32 |     |

REGULARS AT THE TARGET.—The United States Engineers Battalion Rifle Club had their fifth monthly competition for the club badge on Friday, the 12th inst., at Willett's Point. Military rifles were used, at 200 and 500 yards, five rounds and two sighting shots at each range. The wind blew a gale from the northeast while the match was being shot, so that the scores suffered in consequence. Corporal Cavanagh made the best score, counting thirty-nine out of a possible fifty points.

NEW JERSEY—Rahway, Oct. 11, 1877.—Match for gold badge, open to all comers; 50 cents entrance fee, 200 yards off hand:

| J. T. Collins.   | 5 4 5 5 4 5 4 5 4 6   |

NEW JERSEY RIFLEMEN.—The first contest between the Rahway Rifle Club and the Ridgewood Sporting Club took place Thursday afternoon, the 11th inst., on the range of the former club, at Rahway, N. J., and resulted in a victory for the Rahway team. The score stood, at 10 shots per man: Rahway—F. L. Sheldon, 42; Charles Watson, 38; E. A. Vall, 43; Edward Squier, 43. Total 166. Ridgewood—G. W. Jones, 40; F. J. Walton, 39; F. M. Parker, 40; N. A. Calkins, 38. Total, 157.

The Jersey Schutzen Corps held its annual meeting on Friday, Oct. 12, at 136 Newark avenue, Jersey City. The following officers were elected for the ensuing year: Captain, August Ermsich; Secretary, Fred. Jacoby; Financial Secretary, John W. Schneider; Treasurer, L. A. Linan; Manager, Adolf Appel. This corps stands among the first of German shooting associations, and will no doubt make themselves felt in the grand national contest of German riflemen which takes place at Schutzen Park, Union Hill, in June next. Hereafter the Schutzen Corps will hold its meeting at Knapp's Harmonium Hall, on Hudson street, Hoboken. S. O. V.

ILLINOIS, Chicago.—The fall meeting, under the auspices of the Illinois Rifle Association, and the Dearborn Rifle Club closed on Saturday, Oct. 6. The first shoot took place Thursday, the 4th, fifteen shots each, at 800, 900 and 1,000 yards. The following are the scores of teams of four, representing Illinois, Wisconsin and Michigan—the teams of the northwest—ten shots per man at 800 and 900 yards, and fifteen at 1,000 yards.

| EIGHT HUNDRED YARDS RANGE. |   |   |   |   |   |   |   |   |        |
|----------------------------|---|---|---|---|---|---|---|---|--------|

Friday's programme opened with a shoot for the Dearborn Club Challenge Cup; open to teams of four at long range. Three members of the Irish Rifle Association—Messrs. Miller, Rigby and Greenhill—with Frank Hyde, of the American team, formed an Irish-American team.

Sir Henry Halford with Col. Thompson and Messrs. Willard and Blackburn made up a British-American team. Wisconsin was represented by its yesterday's team, as was Michigan. The attendance was good, but the wind very unfavorable. The following is the summary:

| IRISH-AMERICAN TEAM. |          |          |            |     |
|----------------------|----------|----------|------------|-----|
|                      | 800 yds. | 900 yds. | 1,000 yds. | Tl. |
| J. R. Miller         | 57       | 53       | 52         | 162 |
| Frank Hyde           | 57       | 53       | 53         | 163 |
| W. Rigby             | 56       | 50       | 51         | 157 |
| R. S. Greenhill      | 56       | 54       | 56         | 166 |
| Totals               | 226      | 206      | 212        | 644 |

| BRITISH-AMERICAN TEAM. |          |          |            |     |
|------------------------|----------|----------|------------|-----|
|                        | 800 yds. | 900 yds. | 1,000 yds. | Tl. |

The distribution of the prizes was made at the Palmer House Saturday night. The principal prize—the Dearborn Club Challenge Cup—was won in the second day's shooting by the Irish team, including Mr. Hyde. The prize was a large solid silver bowl and salver, beautifully ornamented and inscribed. The long distance prize, won by Frank Hyde, is an elegant gold badge, beautifully ornamented. The prizes for the military shooting were very handsome. The first prize, won by Walter Burnham, was a gold badge, suitably inscribed and ornamented. The second prize to Mr. Miller, a plain gold medal, with raised work.

The prizes in the short range match were in currency, \$25, \$10, and \$5. Mr. Miller won the first, Sir Henry Halford the second, and Col. Schaffer the third. After spending a season in social enjoyment the meeting adjourned.

ROVER.

PENNSYLVANIA—Titusville, Oct. 2, 3 and 4.—Competitive shooting among the military of Western Pennsylvania. The first day was devoted entirely to practice by the teams. On the second day was shot the State of Pennsylvania match, open to teams of five from any organized military in the State; distances, 200 and 300 yards, five shots each distance. First prize, silver water cooler and goblets, value \$75; second prize, silver pitcher, value \$40. Four teams entered, making the following score:

| Mount Lane Guards, Erie, Pa. |     |     |                | Oil City Grays, Oil City, Pa.   |     |     |                |

The Seventh Division match was held the third day, open to teams of five from any military command in the Seventh Division of Pennsylvania; distances, 200 and 300 yards, five shots each distance. First prize, prize cup, value \$50; second prize, silver fruit dish, value \$30; third prize, silver wine cooler, value \$20. Four teams shot in this match, making the following score:

| Mount Lane Guards, Erie, Pa. |     |     |     | Venango Grays, Franklin, Pa. |     |     |     |

In a sweepstakes match, distance 200 yards, 3 shots each, for ten prizes, aggregating in value \$140, the winners were as follows:

|                  |    |                  |    |
|------------------|----|------------------|----|
| E. Brewer        | 12 | J. A. Wiley      | 11 |
| W. J. Hayes      | 19 | J. S. Montgomery | 10 |
| C. E. Hall       | 11 | E. I. Ruffee     | 10 |
| C. C. Hardinburg | 11 | A. J. Lewis      | 10 |
| R. T. Hardinburg | 11 | F. T. F. Lovejoy | 10 |

—The Watertown, N. Y. Rifle Association have elected the following officers: President, W. F. Belknap; Vice-President, Capt. James R. Miller; Secretary, S. D. Andrus; Treasurer, A. L. Upham; Range Superintendent, Charles B. Fowler; Board of Directors, Col. George B. Wingate; Inspector of Rifle Practice, S. N. Y., Brig.-Gen. Winslow, Lieut. Col. A. J. Case, Lieut. Col. L. F. Phillips, Major H. D. Babbitt, Capt. W. L. Palmer, Capt. James R. Miller, W. F. Belknap, S. D. Andrus, A. L. Upham, B. B. Tuggart, John R. Palmer, Charles B. Fowler.

**Webster, Oct. 10.**—Ruffed grouse not at all abundant. Woodcock scarce, the largest bag yet made being ten. More pigeons this fall than before for years. Gray squirrels as hard to find and difficult to kill as usual. A few days since a friend killed an Arctic owl (*Nyctale nivea*), a bird decidedly rare in this neighborhood. Would like to have some one send in some notes concerning migratory quail and success in importing.

[Our correspondent has not read the **FOREST AND STREAM** carefully, or he would have seen full accounts of migratory quail in the U. S.—Ed.]

**CONNECTICUT—Hartford, Oct. 9.**—The first week of the shooting season has opened very propitiously, thanks to the rigid enforcement of the game laws. Many large bags have been made. Partridges are quite plenty, and large numbers are now exposed in the market. Woodcock are less numerous than usual, but wild pigeons are scouting the country in fine flocks, affording an opportunity for excellent sport. The snaring of game is now about the only drawback to sporting interests, and if some rigid measures could be enforced for its prevention, the gain in the end would be not inconsiderable. The snarer gives the game in his vicinity no chance of life, and generally captures everything that comes near his traps.

**NEW YORK—Hammond, Oct. 10.**—A competitive shoot between the sportsmen of this town resulted in the slaughter of over five thousand squirrels.

**GOOD GROUND, L. I., Oct. 16.**—There are plenty of ducks in the bay, but they bunch together in great rafts and keep out of reach. The weather is still too warm, and the first cold storm will drive them in. The chances are for unusually fine shooting this season—plenty of feed and all signs favorable.

**Saratoga Lake.**—Timothy Harrigan, the oldest hunter of Warren county, has been located the past season at the Peter Francis place, Saratoga Lake, and has shot over 500 partridges and woodcock in the woods and marshes around that and Round Lake. He says that game is much more abundant in that vicinity than in the neighborhood of Lake George and Schroon Lake.

**PENNSYLVANIA—Leroyville, Bradford Co., Oct. 9.**—Six miles from here in the Towanda Mountains is Sun Fish Lake, surrounded by a dense forest of hemlock and beech. For miles to the south stretches an unbroken wilderness which abounds with deer, ruffed grouse, pigeons and bears, and for those that may hanker after such game there is a fair sprinkling of wild cat. This region furnishes unusual facilities for the hunter and camper. Ten miles away in the wilderness before mentioned, is a region known as the dismal swamp, filled with windfalls, often so thick that one may walk miles upon them. In these tangled recesses, *Ursus americana* retires from his predatory excursions to the neighboring farms, and safely screens himself from the rifle of the hunter and granger.

**Elkton, Oct. 13.**—The Susquehanna flats are teeming with ducks.

**Lackawanna, Oct. 13.**—The season for large and small game has opened well, and promises to be a fine one. Several deer and a great number of partridges have been shot already. The former are unusually plenty; five were seen last Monday in Lord's Brook Swamp, and Arthur McCarthy surprised one, the other day, feeding in the pasture with his cattle.

**Blooming Grove Park, Oct. 11.**—John Avery, President of the Association, had an exciting chase after a buck the other day, and finally shot his game in Lake Giles, in front of the club house. A party will rendezvous at the club house next Saturday for the fall meet.

**Hornellville, Oct. 15.**—Excellent woodcock and ruffed grouse shooting here for the past two weeks; also a few snipe and rail.

**Sunbury, Oct. 12.**—Quail and turkey shooting promises fair sport.

**Sharon, Oct. 10.**—Woodcock afford good shooting. E. L. Ohl shot nine yesterday.

**Easton, Oct. 10.**—Ducks have made their appearance and sportsmen are preparing for the fall campaign.

**VIRGINIA—Richmond, Oct. 12.**—The partridge shooting, which begins the first of next month, promises to be unusually good. The weather last June and July was very favorable for the young broods; the protection laws have been generally well observed, and the birds are plenty.

**KENTUCKY—Louisville, Oct. 14.**—Game is abundant on Salt River.

**TENNESSEE—Tracy City, Oct. 11.**—Two bears have been killed within five miles of this city within a few days, one of them only two years old. Such game are more plentiful in the Cumberland Mountains now than has ever before. An elk was run into town a day or two ago, and killed. His antlers were so heavy as to inconvenience him, hence he was an easy captive.

**Clarksville, Oct. 8.**—We are happy to report game quite abundant. The season has been favorable, and many coveys of partridges were raised, though most of them are yet too small for sport, showing that it is ridiculous to make the open season commence on Sept. 1, as it does in this part of the State. Blue wing teal have appeared in small numbers. Wild pigeons began last week to show themselves two days ahead of the cool spell of weather. A brace of snipe were seen Saturday. These birds rarely show themselves here in the fall. Squirrels are abundant, and all the old shooting irons are in requisition.

**Clarksville, Oct. 8.**—Partridges and squirrels were never so abundant. The large increase in game is a result of the protective laws, which have been well enforced.

**LOUISIANA—New Orleans, Oct. 11.**—Some blue and green winged teal have been shot at the neighboring shooting grounds—Lafourche, Bayou des Allemands, Little Lake and other resorts. Snipe are few; have not come yet. The N. O. Gun Club has challenged the Montgomery, Ala., club to join in a grand competitive shooting match for a game dinner. An equal number of crack shots from each club are to start from this city Saturday afternoon and to meet again in Monday, with their game, which will be counted and turned over to a favorite restaurant, to be served up in a banquet, the losing club paying all the expenses.

**ARKANSAS—Jacksonport, Oct. 8.**—Game of all kinds in abundance, bears, deer, turkeys, quails, squirrels and ducks just

coming in. Any one wanting to spend a month or so hunting will do well to come down this way. The editor of the *Jacksonport Herald* will take pleasure in giving necessary information to parties desiring it.

**ILLINOIS—Farmington, Oct. 9.**—Ducks quite plenty on the Illinois River.

**MICHIGAN—Benzie, Oct. 12.**—Deer are so abundant in this neighborhood that they are destroying all the buckwheat.

**Midland, Mich., Oct. 13.**—A few days since a surveying party ran upon four black bears—a dame and three well-grown cubs—about one mile east of town. All hands, including the ursines, were a trifle startled. No accidents.

**Detroit, Oct. 13.**—Yesterday John E. Long and Ed. H. Gillman killed forty-two snipe. Oct. 11 Wm. Holland and George Avery bagged fourteen ruffed grouse, seven quail, nine woodcock and two rabbits. Oct. 10 Robert P. Toms killed eighteen, and Jerome Cannata, Michael Martz twenty-six snipe. Oct. 11, Charles Choje, four woodcock; four quail, and one ruffed grouse. The pigeon shooters had a shoot for the State Medal on the 6th inst., but made such poor scores that they are ashamed to have them published. A. L. Hatch and S. A. Warner made a bag of sixty fine mallard ducks at St. Clair Flats on the 10th inst.

Two noblemen were shooting ducks in the Bay last week, and, strange to say, the birds did not crowd around to be shot at any more than when Baby and the other boys are out. Only one person has been shot thus far during the season. With so many inexperienced and heedless boys carrying guns, this is wonderful. Some gentleman from the Michigan shore—name unknown—met with a mishap on the bay last week. He laid his gun down on the seats of the boat with both barrels cocked, and while paddling, managed to accidentally discharge them both, thereby blowing a hole in the bottom of his craft. A sail boat came to his rescue, just as he had become completely exhausted. He says he don't care about hunting any more, and any one who will find his Douglass is welcome to it.

**INDIANA—Huntsville, Oct. 12.**—Duck shooting is the attraction for sportsmen at present.

**IOWA—Pomeroy, Oct. 8.**—Game of all kinds, as ducks, geese, cranes and brant, with a few snipe, are to be had. Now is the time to come West, for the fall shooting is good.

**Ashland, Oct. 13.**—Antoine Peronier, of the Sportsmen's Club, killed thirty ducks in less than an hour's shooting in Fish Creek, one day last week.

**MINNESOTA—Rush City, Oct. 5.** Mr. McKenzie shot a monster moose within four miles of town. When killed he was feeding among a herd of cattle. He stood over six feet high and was nearly coal black. Such game used to be quite plenty in this neighborhood, but this is the first of the species seen for over seven years.

**MINNESOTA—Butternut Station, Oct. 8.**—This is a fine centre for sportsmen. The waters of Butternut Lake teem with fish, and the woods are full of grouse. Trout and muscalonge are plenty, and deer and bears to be found in all the surrounding country.

**CALIFORNIA—Clear Lake, Oct. 8.**—Wild ducks and geese are here in fair numbers.

**Los Angeles, Oct. 8.**—A trapper came into town the other day with 535 dozens of live quail, which he had trapped in the San Jacinto Mountains.

**Santa Cruz, Oct. 8.**—Quail are plenty all over the coast country about here and Pesadero.

**CANADA—Montreal, Oct. 6.**—The fox hunt of the Montreal Fox Club was held to-day. Some fine running and jumping was done, but the party returned without Reynard's brush.

**ABOUT GUNS, AMMUNITION, ETC.**—It is my purpose to give you a few rounds in sporting topics in general, and if my memoranda prove to be scattering, I hope the game fired at may be struck by some chance shot, as so often happens in the field. And this reminds me that any man who is too lazy to load up twenty or thirty shells with loads of different size, both powder and shot and try them at targets thereby determining the best load for his gun, deserves all the ills of mind and body which attend a bad shot. In fact, many a good gun is discarded and an inferior one purchased at a pecuniary loss just for want of such a trial; for a slight difference in the load often proves to be the difference between good and bad shooting. Another item in preparing ammunition for breech-loaders worth attention is the length of the shells. If the shells be too short for the chamber the load must be dislocated and knocked out of shape in passing the shoulder in the barrel, consequently bad shooting will result. Or if the shell be too long a part of it will be pushed into the smaller bore and again the load is injured.

Let me advise all who use metal shells not to lend them for use in other guns. In several instances that have come to notice the shells could not be used again, being too large to enter the chamber. The only reason I can give is, that the gun for which they were borrowed possessed a larger chamber than that of the gun they belonged to, and, upon firing, they expanded to the size of the larger chamber.

As to dogs and guns, I hold that the advice of old Polonius is supremely good: "Neither a borrower nor a lender be, for lending loatheth oft itself and friend, and borrowing dulls the edge of husbandry." Another item as to shells, I believe the principle of the conical base to be correct. But if those we have received are good specimens, some change must be made before they can be generally used. I think they require less powder than others, and the recoil does not appear as great, but the paper is too soft and thick. On this account I am compelled to use No. 12 wads in No. 12 shells, instead of No. 11, which I am satisfied give better shooting, owing to the greater resistance they give; but No. 11 wads expand the conical base shells so much that I cannot get them in my gun. Again, they are very uneven, some slipping in easily and others requiring a great deal of force. That the fault lies in the shell and nothing else is evident, because this takes place when inserting them before loading into the loading-block. The last indictment I have against them is that more of them miss fire than the common shells.

Connected with loading shells is the subject of loaders. Green's is a very convenient thing, but is only useful for inserting the wad, and it is also expensive. The cheapest and most convenient implement I have seen, one which can be carried in the pocket with comfort, and combines all the neces-

sary tools, except a measure for shot and powder, is the loader of Dudley & Co., advertised in your columns. The cost is small, and it does everything well that is claimed for it.

As for powder, we are all done with buying high priced articles, while we can get a good article at very small cost, to do the same work as the high flyers, and some of the cheaper powders clean out the gun after shooting, as thoroughly as can be wished for. Here endeth my scattering epistle, in which I have tried to give your readers a few of the results of observation, just what I wish to get from them.

**ON SUBSTITUTES FOR CHOKE-BORING.**—A communication published in your issue of Aug. 23, suggests a substitute for choke-boring. The idea was not entirely new, as I had tried like experiments with buckshot, but I determined to give it a fair test, following as near as possible the directions given by E. L. H. Mr. M. S. Alexander, assisted me. Every precaution was taken to make the test a fair one, but the result is totally at variance with what is claimed by "E. L. H." Could he have tested the method at mark? Reason seems to favor it, but below are facts which speak against reason. Size of pattern, 16x16 inches; distance, forty yards, Remington gun, (12-gauge) charge 3½ drs. powder, 1 oz. shot, number of pellets, without paper cartridge, 108, with; 85. W. & C. Scott & Son's gun (12-gauge), same charge, distance, etc., number of pellets, without paper cartridge, 98, with, 70. The above patterns are taken from a large number, and are an average result of the trial.

**ECLIPSE LOADERS.**—We are in receipt of one of these loaders, which seems to have been modeled largely from the articles on Loading Blocks that have appeared in our columns. It is very handy where one has a great number of shells to load, though it is unfortunately too bulky for carrying on a two-weeks tramp.

**A HANDSOME PRESENT.**—A silver plated and handsomely engraved crimper has been sent to this office, it being a present from the inventor and manufacturer, J. L. Rawbone, to our Western manager, S. H. Turrill. Certainly for neatness of workmanship and for rapidity in crimping shells, this little instrument is unsurpassed.

**FROM MCKENZIE RIVER.**—Half a dozen canny Scots passed through Duluth, Oct. 4, en route to Scotland, from the McKenzie River District of Arctic America, some 1,300 miles Northwest. They went to that barren country some ten years since from the Orkneys, coming by ship to York factory, Hudsons Bay, and thence to the McKenzie by canoe. Until their return, and on their arrival at Fisher's Landing, on the Northern Pacific R. R., they had never seen a railroad. They knew nothing of the Franco-Prussian war—in fact they had been practically out of the world. They had been engaged in hunting and trapping for the Hudson Bay Company. They report wood buffalo and moose as unusually plentiful in the Land River District this last year.

**Duluth, Minn., Oct. 6.**

**AN ELK ON THE RAMPAPE.**—The *Cheyenne* (Wyo.) Leader, Sept. 23, has this story account of an elk's raid on Fort Laramie:

A few days ago the military and civilians at Fort Laramie were astonished at the sight of a huge elk, which ran out of the underbrush in the Platte bottom and charged directly through the parade ground. The angered monster was pursued by a pack of dogs of all sizes, and after clearing the buildings one canine, bolder than his fellows, nipped at his heel, when the elk whirled, threw down his antlers, impaled three or four of his pursuers, then, lifting his handsome head quickly, he threw them many yards away. Two dogs were killed by the goring and fall, while two or three others were trampled to death. Not many minutes elapsed before a dozen officers, soldiers and civilians were mounted and in lively pursuit. Several hundred cartridges were expended, with no perceptible effect except to increase the speed of the forest monarch, and after wearing out their horses in a two hours' run the pursuers gave up the chase and returned to the fort, leaving the elk to seek some quiet grazing spot on the boundless plains.

**TIT FOR TAT.**—The *Springfield Republican* gives this humor of sporting life:

New Haven sporting men recently came a practical joke on a supposed green young man from this city. They took him out duck shooting with a gun loaded clear to the muzzle, and a decoy duck floating so naturally in the distance. Springfield, awarded first shot, of course, as a visitor, rose up in his canoe and blazed away. The duck didn't mind it much, but the visitor was fished out, clutching firmly to the worthless gun. He didn't say anything, but on the way home he just cut loose the game-bags and the party didn't have any game supper that night after a hard day's hunt.

**HE FIRED A GUN.**—Old Mr. Blanchard, who lives out on West Hill, took down his son's double-barrelled gun yesterday morning and went out into the backyard. "I have not," he said, "fired off a gun for thirty-seven years;" and then he pointed the gun at the barn and fired. It does not appear from the evidence which made the most noise—the bird man, who immediately emerged from the barn, carrying himself along with both hands, or old Mr. Blanchard, lying on his back between the ash barrel and the fence, trying to hold his jaw in his place, or the stranger on the other side of the fence, with a brick in each hand, his hat caved, and a black eye all over his cheek, calling out to know what "hoof-bounded, black-eyed, four-legged, turkey-trodden, shambling, croak-eyed, clod-hopping idiot hit me with that gun?" Mr. Blanchard has since been heard to remark that he didn't want to fire a gun for thirty-seven years more.

**NORTH CAROLINA—Wilmington, Oct. 8.**—I bagged first woodcock of the season Saturday. Two of our sportsmen bagged nine Wilson snipe same day. This is unusually early for the long-bills here. Four more killed to-day.

**NEW HUNTING BOOT.**—Thompson & Son, 301 Broadway, have designed a new hunting boot, which cannot fail to commend itself to sportsmen. It combines all the advantages of a top boot, with the ease and comfort of a laced shoe. It laces in front over a water-tight tongue, giving a perfect fit over the instep, holding the foot firmly in place, and preventing chafing. Directions for measurements will be mailed on application.

TAR HEEL.

## Rational Pastimes.

GUNS ON EXHIBITION, TUESDAY, Oct. 23.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

DUDLEY & CO.  
Poughkeepsie, N. Y. OCT 18 1t

## NEW YORK SHOOTING COAT.

A stylish, handsome Coat. First-class in every particular. Pleasant to wear, durable, and in the end the cheapest.

### MADE OF BROWN VELVETEEN.

Pockets and lining made to take out, so that it may be worn for early fall and winter shooting. (Horace Smith, Esq., says: "It is my idea of a shooting coat. I have worn them for several years, and would have done other.") Price for Coat, \$25; Vest, \$6.50. Also the best brown corduroy pants at \$10 per pair. I make only the one grade, as the cheapest goods do not turn briars and will not give satisfaction.

Also, in addition to the above, I am making a Waterproof Canvas Suit, cut same style as the Velveteen; goods, not stiff and hard, but soft and pleasant to wear; guaranteed to turn water. Sportsmen who have seen it say it is The Best Yet. Coat, \$6.00. For full Suit, \$14.00. I also make the Sleeveless Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

**F. L. Sheldon,**

RAHWAY, N. J.

For Sale in New York by

**H. C. SQUIRES, 1 Cortlandt St., N. Y.,**  
**CREEDMOOR PARLOR RIFLE.**

Finely finished, carved stock. Loads at breech with small percussion cartridges. Will shoot 250 feet with accuracy and force. There is scarcely any report, and no smell from this Rifle, making it very appropriate for parlor use, picnics and fairs. The shell extractor is on; the hammer, pulling out the old shell every time the hammer is raised.  
Price, \$10; cartridges for rifle \$3 per thousand, or \$1 per box of 250. Iron bell target, with numbers, \$5, sent C. O. D. or on receipt of price. Send for price list of Revolvers, Skates, Novelties and Sporting Goods.

**FISH & SIMPSON,**

132 NASSAU STREET, NEW YORK.

## A VICTORIOUS INVENTION The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.  
The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or, when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation. It is adapted for bait of any description, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

### PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail, 35 cents.  
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c., 75 cents.  
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 15 lbs. \$10.  
All goods sent, charges paid, to any address on receipt of price.  
Address

## A DESIRABLE Ducking Shore For Sale.

The undersigned offer for sale the known Seneca Farm, favorably considered among sportsmen as being one of the very best ducking shores on the Chesapeake Bay. It immediately adjoins Carvers Island. The river and coves abound in wild celery and other grasses, and is a favorable feeding ground for all kinds of wild fowl, including canvas backs, red heads, widgeon and black-heads. The farm contains 100 acres under good cultivation, two large peach orchards, apples, pears and other fruits, with a moderate amount of woodland. The club house is in perfect order, two double and three single bedrooms all furnished with beds, bedding, etc.; large parlor, dining room, green room, kitchens, out-houses and servants' quarters, all in order and furnished. Large barn, stable, carriage house, wood sheds, corn house, ice house and magazine. There is a new sunk blind at Malt Point, and stationary blind at Flying Point, with boats, decoys, etc., a good horse, wagon and harness; in fact everything complete for immediate possession, comfort and sport. Competent attendants are now on the place. This presents a rare opportunity for a club. I gentlemen who enjoy good duck shooting. From New York, noon train arrives early in evening; can leave at 10 o'clock P. M. arrive in New York at 10 o'clock P. M. Two trains daily from Philadelphia, three from New York, and three from Baltimore. Free from incumbrance. Price \$10,000 cash. Apply to WASHINGTON BOOTH, GEORGE SMALL, Baltimore; or to C. B. CLAGHORN, 116 Chestnut street, Philadelphia.

THE

## HAZARD POWDER CO.

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder,"  
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of  
strength and cleanliness. Packed in square canisters  
of 1 lb. only.

Hazard's "American Sporting,"

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and  
6½ lb. kegs. A fine grain, quick and clean, for  
upland prairie shooting. Well adapted to shot-  
guns.

Hazard's "Duck Shooting,"

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters  
and 6½ lb. kegs. Burns slowly and very  
clean, shooting remarkably close and with great  
penetration. For field, forest or water shooting, it  
ranks any other brand, and it is equally serviceable  
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle,"

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25,  
12½, and 6½ lbs. and cans of 5 lbs. FFG is also  
packed in 1 and ½ lb. canisters. Burns strong and  
moist. The FFG and FFG are favorite brands for  
ordinary sporting, and the "Sea Shooting" FG is the  
standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER;  
ALSO, SPECIAL GRADES FOR EXPORT, OF  
ANY REQUIRED GRAIN OR PROOF, MANU-  
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-  
pany's Agents in every prominent city, or wholesale  
at our office, 33 WALL STREET, NEW YORK.

THE

## New Dittmar Powder.

THE CHAMPION POWDER OF THE WORLD  
For all off-hand shooting at short and long ranges.  
Unsurpassed for Cleanliness. Pleasant to shoot on  
account of little recoil and report. Desirable for  
hunting on account of little or no smoke. Un-  
equalled for rapid firing, as it does not foul and heat  
up the barrel as black powder. Great accuracy,  
penetration and good pattern. Safer than black  
powder. Address

## BOSTON.

## SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS &amp; SON,

BOSTON.

Flexible. Water-Proof. Tan Color. Duck.

Each article—coat, trousers, vest and hat—have  
the name and manufacturer's address stamped upon  
it, and no suit is genuine without it bears this im-  
print.

The suit can be sent, securely packed, by mail to  
any part of the United States or Canada on re-  
ceipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We  
make but one quality, and that is the VERY BEST.  
The price of the suit complete is \$13.

The suit consists of coat, trousers, vest and choice  
of either cap with havelock, or hat.

The material is of the best quality of duck, water-  
proofed by a patent process. The color is that  
known as "dead grass shade."

The seams and pocket corners are riveted, and  
nothing is neglected to make the whole suit com-  
plete in every way.

## OUR HUNTING SHOES,

which are considered the best in use, are also sent  
by mail at an advance of 35 cents above the price  
\$5.50 per pair. These shoes are made to our special  
order to match our suits, and the design of the  
whole embraces the best points of the English and  
French equipments, combined with all necessary  
requirements for American service.

## THE SOLA TOPEE.

AN EAST INDIAN SHOOTING HAT, Helmet-  
Shaped. Ventilated. Of same Water-Proofed Ma-  
terial. PRICE, \$2.50. Those who prefer this to the  
ordinary hat or cap, can have the same sent with  
"The Boston Shooting Suit" at an added cost only  
of \$1.00.

Such a popularity as the "Boston Shooting Suit"  
enjoys, has never been attained by any other similar  
garment in this country. It is in constant demand  
from all parts of America, and orders have been  
filled for Canada and England.

"Shipping clothing to England strikes us very  
much like sending 'coals to Newcastle,' but the  
merits of the BOSTON SHOOTING SUITS have  
been heard of in the Old Country, and that land of  
sportsmen has sent an order to Messrs. Simmons &  
Son, which will doubtless be followed by many  
others."—Boston Paper.

The author of "Tales of the Adirondacks," the  
Rev. W. H. Murray, one of our most enthusiastic  
sportsmen, says of it:

"We were shown the other day a new waterproof  
suit, specially adapted for sportsmen, designed and  
made up by Simmons & Son, of Boston, and to which  
we call the attention of all brethren of the out-door  
and shore-shooting fraternity, because it meets the  
demand of personal comfort and convenience  
beyond anything of home manufacture seen by us be-  
fore. As a sportsman, we give it our unqualified  
endorsement, as combining the best points of the  
English suits, and in addition skillfully adapted to  
the necessities of the American service. It is a most  
agreeable and satisfactory contrivance in color,  
style, waterproof quality and capacity. The coat is  
a marvel in this latter respect."

THE FOREST AND STREAM SAYS:

THE BOSTON SHOOTING SUIT.—One of the most  
successful manufacturers of waterproof shooting  
suits is the firm of G. W. Simmons & Son, Oak Hall,  
Boston. We had one of their suits on duty at Hunt-  
er's Camp, at Philadelphia Centennial Exhibition.  
It has grown gray in service, but is good for use yet.  
This suit is known as the "Boston Shooting Suit," in  
contradistinction no doubt, from the garments which  
are manufactured out West and at Washington,  
each of which has a local demand of its own.

A letter from San Francisco, Cal., says:

G. W. Simmons & Son:

GENTLEMEN—I have this day received the "Boston  
Shooting Suits" ordered from you on the 16th.  
My object in writing is simply to say that they  
came to hand by mail in perfect order, and I am  
more than satisfied with each article. They are all,  
if not more, than represented in your advertisement  
in FOREST AND STREAM. They supply a want long  
felt here, and we have no doubt many will be  
ordered. I am obliged to you for sending by mail  
and thereby saving me several dollars. Enclosed  
please find the money to repay you for postage.

Yours very truly,

[DIRECTIONS FOR MEASUREMENT.

Around the breast. Inside seam of pantaloons.  
Around the waist. Size of head.  
Inside of seam or coat. Mention height and weight  
sleeve.

Price of Suit complete, with choice of hat or cap, \$13

Note again, the coat and vest are all double-seamed,  
each pocket being riveted at corners with copper  
rivets. French hunting buttons on coat and vest.  
Each button-hole made of leather. The whole suit  
as described above is made of 10-oz. army duck,  
water-proofed by a patent process, and colored to  
the shade of dead grass. Each suit distinctly marked.

For those who prefer, we make a hunter's coat,  
with sleeves attached to the vest. We make but one  
grade of suit, and that is the very best in every par-  
ticular.

An illustrated circular, containing full description  
of each garment, with sample of the material from  
which made, will be sent free on application.

SECOND EDITION.

THE Sportsman's Gazetteer AND GENERAL GUIDE, WITH MAPS AND ILLUSTRATIONS.

896 pp., Price \$3.

Tinted Paper, 1/2 bound Morocco, \$3; Tinted Paper, Muslin, \$4.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM," AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST AND STREAM" PUBLISHING CO.  
Sent by mail post paid on receipt of price.

This book is a complete encyclopaedia for sportsmen. It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America. It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish. It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. It describes 297 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each. Every kind of tug up for sport is designated, and his points for bench judgments fully given. It is in itself, the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any person can administer the prescriptions with perfect confidence in their safety and efficiency. It contains very useful recipes and remedies for wounds, bites, poisons, illness and emergencies of all kinds; for cleaning, repairing and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen, and a directory where to buy outfitting goods. It instructs in Taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

INDORSEMENTS.

SPORTSMAN'S GAZETTEER.—Geo. Bird Grinnell, of the Peabody Academy of Science, New Haven, writes: "I have to thank you for a copy of the Sportsman's Gazetteer received day before yesterday. I have delayed acknowledging it, in order that I might be able to speak intelligently of its merits. I have looked it over somewhat carefully, and I must say that I am delighted with it. It seems to be just the book that we have so long wanted in this country—an American 'St. Nehege' in fact. On the whole you have assured yourself that I am satisfied at the amount of material you have collected, and the happy method in which you have treated the group. The Dog and Disease of the Dog are admirably written, and will prove one of the most useful of manuals for sportsmen. The Art of Fly Fishing, and the hints and recipes are all that could be desired; in fact the book seems to be a complete success. I do not see how it can fail to have a very large sale."

THE SPORTSMAN'S GAZETTEER.—The Gazetteer duly came to hand, and to say that I am delighted with the book only faintly expresses my appreciation of it. How you have been able to gather so much valuable matter together is almost a mystery to me. It certainly speaks well for your industry and knowledge of the subjects discussed. For the size and valuable information contained, the price, I think, is remarkably low, and I would not be without it for double the price. Every sportsman and everybody interested in sporting matters should have a copy, and I shall take great pleasure in recommending it to my army of friends.

H. C. YARROW, M. D., U. S. A.

THE GAZETTEER.—The Sportsman's Gazetteer was duly received, and I wish and many of our best judges in sporting literature have critically examined the book, and all unite in pronouncing it the most valuable work ever issued from the press on kindred subjects. I wonder to all how so much valuable information could be so intelligently crowded into a book of its size. The task must have been very great, but has been accomplished in a remarkably concise, intelligent and pleasing manner. Every page demonstrates the fact that the author was a master of his subject. No sportsman or tourist can afford to be without the book, and it ought to be, and no doubt will be, read generally by the masses, and certainly by all interested in the study of natural history.

Dr. D. C. ESTES.

Lake City, Minn., Aug. 1, 1877.

Sportsmen's Routes.

THE "FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinac, Grand Rapids & Cincinnati Short Line.) Sportsmen who have cast a fly or trolled a spoon in the waters of the Grand Traverse Region will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein

The fish named above, as also Muscogone, Pike and Pickerel, abound.

In no other streams east of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout season opens May 1st.

Grayling season opens June 1st.

The sportsman can readily send trophies of his skill to his friends at "Club" at home, as ice for packing it can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region and attractive train facilities offered to tourists and sportsmen; also, on after June 1st, Mackinac and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on the route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address:

Ten Cents a Copy.

NEW YORK, THURSDAY, OCTOBER 25, 1877.

Volume 9.—No. 12.  
[No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun.  
**BRUNO.**

BY J. C. BURNETT.

"WELL, yes, stranger, he's getting rather old,  
He's not the sort of dog he used to be,  
But even now he's worth his weight in gold,  
And while he lives he has a friend in me.

"And will he fight?" A little now and then,  
Although he never hunts a muss on sight.  
He's mighty fair; but sometimes, like us men,  
He rather likes a rough-and-tumble fight.

"I've seen him look as if he'd give the odds  
To two or three, and take 'em turn about,  
Just to accommodate, and then, ye gods!  
He'd waltz in beautiful, and lay them out!

"You ought to see him climb a real wild cat,  
The savage ones that skimish round at night;  
Just like a black-and-tan goes for a rat,  
He'll snatch one bald, and that's his soul's delight.

"One evening yonder by that poplar tree  
He found a lynx, the worst old varmint here;  
I heard him bark, which meant a jamboree,  
And so I took my gun, and gave a cheer.

"There on the river bank I saw two eyes,  
Up in a sapling, looking mighty bad;  
I thought I'd take the fellows by surprise  
And so I fired, to give him all I had.

"The old gun missed and something seemed to drop;  
'Twas that there lynx, and down he came on me.  
I shook him, though, and Bruno got on top  
And flaxed him in a way 'twas good to see.

"But there's one fact, its singular to note,  
He'll tackle anything in thick and thin  
From bears to cats, excepting the coyote,  
He thinks that animal is kin.

"I've seen him join a hunt and take the trail,  
And skip ahead of all the rest a mile;  
But when it came to closing in he'd fail,  
As if he kind o'thought, he's not my style.

"But, stranger, have you been on Monument?  
The creek that comes out there by Castle Rock?  
In sixty-five we lived there in a tent,  
My wife and I, attending to our stock.

"One day I had to go up on the Range,  
And left the dog as I had done before;  
He knew the cause, and didn't think it strange,  
But went and curled himself beside the door.

"When nearly night my wife became afraid,  
For Bruno seemed to have bad news to tell,  
As if he knew there was an Indian raid  
And he could hear the Cheyenne whoop and yell.

"There was; and when the Indians saw the tent  
They just swept down like devils of their kind,  
On robbing and murder all hell bent  
And even worse when victims they could find.

"One old sca'-lifter with his knife in hand  
Rushed through the door, but Bruno with a grin  
Just took him by the throat, you understand,  
And with an ax my wife got her work in!

"Another red skin next came in to help  
With gun and knife to shoot and carve his way;  
But Bruno mounted him, and with a yelp,  
As much as if he said, 'You'll come to stay!'

"Two others now came yelling through the door;  
But dog and wife were there with teeth and ax,  
And there they piled the devil's up, all four!  
'The rest outside?' Well, sir, they just made tracks.

"He's splendid? Shake! And now he's getting old  
I love to think of what he used to be;  
That's why I say he's worth his weight in gold.  
And while he lives he has a friend in me."

For Forest and Stream and Rod and Gun.

## A Trip to the Middle Fork of Rock Castle River.

WHILST on the Castle in June, giving my nine-years-old hopeful his first practice with a reel, it was my good fortune to meet the Hon. Isaac J. Fanbus, who informed me that I committed a mistake in stopping so near the railroad terminus and coal mines, and cordially invited me to make his house on Middle Fork the objective point of my next trip. An enthusiast had excited me with accounts of a tyro's remarkable success in that vicinity during early spring, and corroboration by the judge insured prompt acceptance of his hospitable invitation.

When I repeated to Mack and wrote to Higgins the exhilarating accounts of prolonged contests with ten and fifteen-pound jack and salmon, and three to five pounds black bass, or "jumpers," as we familiarly call them, they readily agreed to join me in a week's excursion.

The train was on time, and we embarked well equipped for the jaunt, though literally "under a cloud," from which rain began gently pattering at nightfall and gradually increased to a regular waterspout before midnight, proving decidedly a damp upon anticipations and prospects. Hig., who is an authority on all matters of sport, declared that such a deluge would convert Lake Superior into a mud puddle, and our best policy would be to return with Capt. Sweeney on the morning train. Mack declared that he was off for a week, and sternly opposed the proposition. I voted no, and the matter was settled. We anticipated a horseback ride to the judge's, but failing to get a telegram to our host, there was no alternative but to employ Ben Salyers to take us up in his two-horse road wagon. He knew every foot of the twelve miles to Judge Fanbus's, "and there ain't a cleverer man in the State of Kentucky, fur I lived by him onst" and would take us there in his wagon as quick as we could ride it horseback. "Oh, yes! the road is good, except two little hills, and I can take you there in two hours." "No, you needn't walk a foot unless you want to, fur I can pull fifty bushels of coal over this country with my team, and my wagon rides easier than a spring wagon."

That was "spreading it on rather thick," but he was engaged to have his rig at the door next morning at 6:30 sharp, and it was there. The train had gone; clouds were lowering and prospects growing, but the "die was cast," and we hurriedly loaded our traps and started. Within the first half mile we were constrained to alight and walk down and up the precipitous banks of Round Stone, and two hundred yards along a muddy tributary, whose stony bed is the wagon road. There were no diamond rain drops glittering in morning sunshine; there were no delicious aromas of wild flowers, nor was there music to our ears in the songs of twittering bullfrogs and domestic geese, or the caroling kingfishers and blue-tailed jays.

The first mile brought us to one of Ben's little hills, which proved a small mountain, rejoicing in the euphonic cognomen of "Gauley," exulting in a summit a mile removed from its base by the most practicable route, and that so precipitous as to preclude all hope of being hauled up by anything short of a four-horse team. A glance at the span of crowbait precipitated Hig. and Mack from the wagon, and when the owner looked inquiringly at me I gracefully reached for the lines, with, "Hand me the ribbons, Ben, I'm as good as ever pulled a string over a couple of such fiery steeds, and it is your turn to walk, anyhow." When fairly upon the summit of Gauley the descent begins, but a shorter drive brought us to another rocky rivulet at the foot, where jolting is severe. "Three miles to the depot," greeted us, soon after the passage of Gauley had been successfully made, and our chronometers announced two hours out. We were to be taken through in three hours and a half by time cars, and nine miles were before us. The second little hill loomed up before us soon after we had passed the three mile post, nor were we surprised to find it a revised and enlarged edition of the first.

Ben's exercise in scaling Gauley reminded him just before attacking the second that he intended to get a pint before he started, but in his great haste to get an early start he forgot it. The transparency of the hint was amusing, but it fell upon

waste places, and the astute (?) John doubtless thought us a trio of the durndest ones he had ever seen from the bluegrass when assured that he had egregiously blundered in forgetting that pint, as he had charge of a party of Murphy admirers. Having clandestinely taken a revive on the side of Gauley whilst giving the team a blow, I repeated to Ben a few of the best reasons our last crusader urged against carrying a bottle when you go a fishing, in the meantime taking a sly side glance at my companions. Mention of the article caused Mack's mouth to water, and he nervously loaded his pipe and demanded a light, whilst Hig. desparingly tore a fresh quid from his plug by way of solace, his countenance wearing the expression of one who had just received a dispatch from a friend in distress. Satisfied that he had put his foot in it Ben rallied at sight of Hig's tobacco, and applied for a divide of that, with a make the best of it in the tone of his, "Give me a chaw please."

As I continued to engineer the craft from the beginning of the steep ascent, Ben enjoyed the luxury of walking up the second mountain also, before he was permitted to resume the driver's seat. When all were again seated in the wagon, humanely granting the horses a breathing spell, our conductor informed us that we would have a ride of nearly a mile before starting down the mountain, and would pass by a splendid spring of water, of which the quartette craved a draught.

Mack had dissolved in a flask of whiskey enough quinine to last him during his absence from home—to be used in event of a neuralgic attack—and when he produced it, took a sip and passed to the driver with a declaration that he carried only medicated spirits, which are rather bad to take till one becomes habituated. We readily comprehend his conclusion, that a pull at that bottle would satisfy Ben with our supply of the very joyful, and insure a "not any" when we tendered him a drink of the unadulterated from a counterpart of Mack's flask, in which a few lumps of white sugar had been deposited for convenient transportation. A smile of exultation spread all over the beneficiary's countenance as he grasped the treasure, and the alacrity with which the aforesaid was conveyed to his mouth is best expressed by the adjective charming.

A wholesome draught was swallowed before full benefit of the quinine was obtained, and a moment's reflection convinced him that he had enough of the nauseating mixture. The bottle was quickly returned to our benefactor, who, with the gravity of a Quaker, handed it back to Hig. and me. The sweetened medicine was successfully substituted, and, after a liberal dose, passed to Mack that he might "take the taste out of his mouth." The victim made no complaint of the peculiar flavor, as his curious scrutiny of our countenances while drinking failed to detect aught but relish of the supposed stuff; but, remarking "The road's good, and we'll make up for lost time," whooped up his steeds, till that splendid spring was reached, at a pace which made it lively for the passengers dodging overhanging boughs and briars, and doubtless suggested to the team that they were being goaded into a triple-quick retreat before an army of blood-thirsty buzzards. The descent of that second little hill was simply hazardous, so steep and rough is it. Both hind-wheels were locked, but the horses were taxed to their utmost to control the wagon and maintain a footing, as it gyrated as recklessly as a greenhorn on skates. At the bottom a sign-board was descried, which proclaimed "Four miles to depot," another mile to be traveled before the half-way point was reached, and time up. "Oh, the road is sandy, level and shady from here, and we'll soon be there, now," were meant as cheering assurances, but the remarkable facility with which he had reduced mountains to mole-hills, created grave doubts as to Ben's capacity to adequately pass upon good dirt roads, and the correctness of those doubts were established by the remainder of the drive, for the road was found to be in an infinitely worse condition than when he was last over it three years ago.

At the half-way place we crossed the North Fork, which is mentioned by the residents only by the name of "Horse Lick." It was both muddy and "on a high." We crossed immediately below an operating corn-mill of the most unique appointments it was ever the good fortune of our trio to see. The architecture of the dam is an infringement upon the beaver plan, but so happily offset by the originality of the remaining appointments there is little probability of prosecution for infringement of patents, should letters be held, and interested parties catch sight of that institution. Half a

CARRIER PIGEONS AS SMUGGLERS.—A carrier pigeon, in France, dropped exhausted into the Seine. He was rescued, and found to be heavily laden with tobacco. A police investigation ensued, and a regular system of smuggling ferreted out. Two dozens of pigeons per day, each loaded with from ten to fifteen grammes of the weed, were daily dispatched from Belgium. The savants are now discussing whether it was the overload or the absorption of the poison that dropped the unlucky bird.

dozen upright poles set in the ground, connected at their tops by saplings, which answer the purpose of rafters, constitute the frame of the (possibly intended) mill-house, and a patch of clapboards, about 6 by 9 feet over the hopper, complete the building(?). The undershot wheel and nether stone are attached to the same shaft, and the apparatus was industriously clattering away in its attacks upon one grain of corn after another as we passed. Half a dozen or more parties were sitting around awaiting their turns, and others passed and met, lugging in their sacks upon their shoulders. Soon after crossing Horse Lick we came to the main river, and were encouraged by evidences that it had not been materially affected by the rain; but a few hundred yards on, Hig cried: "I told you so," pointing to muddy water. The encouragement afforded us by sight of the cold water was momentarily banished, but Mack's observing eye soon took in the surroundings, and he correctly attributed it to drainage from a cornfield above.

By this time the clouds had dispersed and old Sol beamed upon us with a fervency which threatened to inflame, till our umbrellas were unlimbered and whirled into position. Two miles above Horse Lick we reached the confluence of Middle and South Forks, where appearance supported Hig's prophecy that the muddy water would greet us, for Middle Fork was concealed from view by an intervening chapparral, while along stretch of the South was visible thick with mud. No cornfield offered an explanation of that, and a repetition of that "I told you so" silenced the crowd, till round the next turn in the road was disclosed to our delighted vision a limpid little river whose charming features elicited from one of the party the unanimously approved exclamation, "The loveliest stream that I ever saw and the water just right."

Our spirits rapidly crept up to that graduation of the scale which is denominated enthusiasm, and the first experiment upon Ben with our supply of the spirit sustaining article was made. He declined, but Hig and I joined in a "here's to the Middle Fork." The team was severely blown, and we had no alternative but to drag slowly, wearily and perspiring along, cheered by Mack's monotonous hum of something about "Ben's level, shady road," which needed but a cornstalk fiddle accompaniment to bring his music up to a standard which would warrant its comparison in point of melody with the grasshopper. Just before "high twelve" we hove in sight of the Judge's farm, the most extensive in all that region. For nearly a mile nature has provided him a line of fence which fills every requirement of the Granger standard, it being a perpendicular bluff of rock, forty to sixty feet high, which is undoubtedly pig tight, horse high, and bull strong. However, the owner has met those requirements about the other three sides of his inclosures with worm fences of square white oak rails, and the evidence of neat, thrifty farming proclaimed the Judge a good liver.

At last from the crest of a small knoll Ben pointed out our destination, and the hay-harvesters were seen leisurely approaching the spacious farm house for their mid-day meal. We were recognized as the expected party of fishermen as soon as seen, and met at the stile with a cheerful greeting and cordial "Alight and make yourselves at home." There was little agility displayed in alighting, for our five and a half hours shake-up had about converted us into gelatinous masses of muscular rheumatism, but we made it on to the front porch, and left our Ben to unload the wagon, while we attended to the formality of introductions, and stretched our legs.

Discussion of fishing was the next thing after a refreshing, and the farm hands were divided in opinion as to our prospects of killing many fish, but all agreed that we need have no uneasiness about easily procuring an ample supply of minnows or about the waters becoming too muddy, for they had never seen it so. In fact, till two years ago the highest rises were perfectly clear and a catfish had never been caught. We were happy. A description of an extraordinarily large copperhead, which Hig espied coiled upon a bed of leaves within three feet of our wagon track, and translated to the happy crawling grounds of all good snakes, with a missile from a Smith & Wesson 33, would have suggested the antidote to a snake bite, had a reminder been necessary, but that toddy before dinner was assured. It was passed first to Ben. He informed the compounder that he rarely drinks anything just before eating, unless very tired, and as he had ridden the last two hours, believed he didn't want any. "You fellows hair-got much nohow," was his concluding apology for not joining us.

When mention was made that we should need some one to catch minnows for us, one of the harvesters volunteered the information that he hadn't out any hay before that morning for two years, and was about used up, which declaration was promptly classified with Ben's about the pint which he intended to get, and that weary scythe-slinger with approval of his employer, had soon bolted a hasty dinner, shouldered the seine, and started briskly for a neighbor a mile away, to handle the staves. After a hasty dinner, we leisurely rigged our rods while enjoying a post-prandial cigar under the old shade trees in front of the house, and discussed the programme. We left home prepared to purchase a canoe, and fish back to the depot; but were forced to abandon the cruise, from the fact that all the vessels which navigated those waters had been wrenched from their papaw and hickory-bark mooring, and carried off by icebergs, on a rise last spring; consequently, Ben was engaged to have his wagon at the Judge's at a certain hour, as we knew that nothing ornamented with springs lighter than a peddler's wagon could stand the racket of the road we had traveled.

Through necessity we agreed to make the Judge's headquarters, and content ourselves to put in the time bank-fishing principally.

Our host accompanied us to the river, about three hundred yards from the house, and we seated ourselves in the shade

—beside a little spring, whose waters needed no ice to make the teeth ache—to await the coming of the bait-catchers. They soon arrived with an ample supply of choice minnows, and we cheerfully followed our guide half a mile up stream to a celebrated hole. We passed many where the temptation to make a cast was almost irresistible, but plodded on till the favorite was reached; and soon half a dozen reel poles were set out at different points, and the entire party seated in a shade awaiting the announcement of a bite by the clicks of our "Mesks."

It was scarcely three p. m., and we were on the rise. The heat was almost intolerable at the margin of the water, and the first half hour without a nibble was most agreeably passed under a beach tree, in enjoyment of the Judge's narrative of numerous sporting incidents connected with his thirty-nine years residence upon that *aqua incognita* to fishermen who use a reel. We discovered that nearly every pool, ford and shoal of the river has received a name from some individual or incident connected with its local history, and that they are not only as readily recognized by residents by names, as are the streets of a city by its police, but as familiarly mentioned by name as are their neighbors.

The one at which we were located is the Parish Hole, named for an old pioneer angler, who long years ago sprang from his favorite seat upon a huge rock, a distance of ten feet, into the water and captured with his hands a twenty-five pound salmon which broke his line after he had succeeded in leading him almost ashore. The music of a click brought us all suddenly to a perpendicular and Mack rushed to his rod to find that the game had let go, and his minnow was dead.

That symptom was amazingly inspiring, and Hig nimbly waded to the opposite bank, whilst I pulled up and moved to a point below, where I knew there must be sport in store, leaving Mack and the Judge in *statu quo*.

Isaac Jackson Tussey, a nine years old, black-eyed, hatless native lad, whose features resembled a fox's, and whose suit of coarse black hair, closely shorn and admirable stair stepped, cut by mother, is certainly the thickest growth I ever saw upon a human head, accompanied me, carrying my minnow bucket in one hand and his short papaw pole and homespun line in the other.

As we proceeded, Isaac's tongue began its first wagging after our meeting, and his first remark was to the effect that he was the best fisherman for a boy in all that country. He declared that he had never missed a fish in his life, and had always wanted "one of them there things," referring to my reels, and knowing that he could ketch plenty of big fish if he had one. If Isaac meant that he would gratefully accept one as a present the hint wasn't appreciated. We inclined to suspect the juvenile, as not one of the natives approached us directly with a request, but in justice to them be it said a natural and easy politeness was characteristic of every one that we met. When I had arranged my rods satisfactorily I conducted Isaac Jackson to a safe distance, and encouraged him to go for the sunfish and little goggle eyes. A lively tug at his hook soon invited a jerk which sent it whizzing into the branches of a tree in his rear, and Isaac had, for the first time in his life, jerked without catching a fish. He appreciated the situation, and without an effort to loosen the hook, automatically turned and looked me squarely in the face with what I imagine the dazed expression of that youthful celebrity whom the calf kicked—presumably the same boy who let the bird go. I have not indulged very extensively in teasing children since I almost severed the left thumb with a keen-pointed barlow in imitation of a feint I had seen made of plunging a knife into a boy, and I aided Isaac in disentangling his line without an intimation that I remembered his introductory observations.

Isaac was himself, after half a dozen more ineffectual efforts to hook the bait stealer, and naturally referred his disgrace to the hook, in which I agreed, and proposed that he hurry to the spring and bring me a bucket of fresh water whilst I put on a good hook. The water was at my side by the time I had strung my first fish, a half pound goggle-eye, and looped a choice Kirby to his line.

A handsome sunfish rewarded Isaac's industry at next jerk, and "I knowed that I couldn't ketch nuthin' with that durned old fly-hook" was uttered with the exultation of Hig's first "I told you so." About an hour after we had taken position the Judge joined his namesake and myself, and informed us that Mack had a pair of fifteen-inch black bass on his string when he left him.

He confidently informed me that the vigor with which the first pulled out the line and made the click buzz, excited the old angler of 40 years' experience into a tremor, which culminated in a case of regular old fashioned buck ague when the game was hooked and began fighting valiantly for liberty; and that the second was transferred to the string at the expense of a recurrence of the ague in a modified form. As we were half a day's journey from an ice-house, and had before sunset captured as many as could be consumed at supper and breakfast, we "pulled up" and reached the house in time to dress our fish and have a dish served at supper. The hostess kindly inquired in what manner we preferred them cooked, but that was left to her convenience and discretion, and within half an hour of the time the first fish was taken from the strings, killed and dressed, we were summoned to a meal, whose appetizing features need no further elaboration to a Kentucky fisherman than mention of the dishes: Fish hot, literally "browned to a turn," warm, short, hot cakes; hot, amber-colored coffee, whose aroma would be favorably conspicuous in a collection of handkerchief extracts; firm yellow butter; cold sweet milk, whose relationship to cream was not traditional, and transparent mountain honey in the comb. The *tipse drink* of some responsible acquaintance who has been there, would scarce suffice to convince us that the fabled feasts of the gods were more deliciously tempting to a mortal than our first supper on Middle Fork. Oblivious of forenoon hardships, jolts and fatigue, the hours till ten o'clock glided by in enjoyment of the weed and our host's recital of numerous exploits of *fore* and *stream*.

In the early years of his residence there he not infrequently brought in a black bear as a trophy of the hunt, and deer were as plentiful as squirrels are now. The bear, beaver and panther are no longer found, but wildcats, foxes, raccoons and turkeys are plentiful; a deer can be started almost any day within two or three miles, and an otter is occasionally captured upon the river bank. Till the passage of our State fish law, and consequent removal of traps and nets, the natives relied principally upon them for their supplies of fish; but the law is scrupulously observed, and pole and pug-fishing are the only modes practiced.

Wednesday morning we were up with the dawn, good as new from a night's refreshing sleep on beds of down, between immaculate sheets, and the rising sun found us acting upon the early-bird theory, after paying our hosts the gratifying compliment to her breakfast of leaving little or nothing

for the cook and waiters. 'Twas eight o'clock before the first alarm was sounded, and Hig declared that he was convinced of the correctness of the Judge's advice to wait till the morning sunshine touches the stream before pushing off, and would certainly not outrage Somnus by springing from that feathery paradise next morning at the first cock-crow.

There were but two dug-outs within our reach, both of which were kindly placed at our disposal, but they were too clumsy to be hauled over all the shoals, and we hadn't a pair of wading boots in the party, consequently were compelled to get them into the most convenient position. The larger is as steady as a scow, but had not been completed, and its bottom of five inches in thickness rendered it laborious to paddle it on still water even, and impossible to float it out of the mile stretch of deep water upon which it had been launched. The smaller had been dug out of a comparatively small poplar tree, and the only labor in shaping the outside was the removal of the bark and rounding the ends; consequently the loss of a jaw-tooth from one side renders a landlubber's maintenance of its equilibrium, when afloat in that vessel, next to an impossibility. Mack and I had it brought up and ventured to cross in it, where we could see bottom plainly, but Hig declined the experiment. When tired of bank fishing we repaired to the big canoe and water, and began a cruise of exploration which disclosed indications that we thought could discount the pools from which we had taken many fine, gamy fish.

A large rock emerging from the water near a bank, on which were half a dozen saplings, which had been used for rods, encouraged us to "set out." While we walked up the river to a resident's well of limestone water, at which we proposed spreading lunch, we found that the reported distance had been computed by the coon skin standard, which is to "measure with the hide and throw in the tail," and Mack was the individual to both propose the walk, and before the house was sighted, to urge that we turn back, but that was one of chances to pay an instalment upon the debt he owed us for Hig's opposition to his various propositions, and he determinedly pushed ahead, crying "Come on, come on!" and we warily came. Three instead of one-half miles were walked before we found the house, but a quaff from the "old broken bucket" which hung in the well, made our hearts glad, and the addition to our supplies of a pitcher of cold sweet milk, on which the cream remains, and a plate of brittle onions that had been pulled from the bed that morning, and placed in a vessel of water, contributed largely to the inner man comforts. Realization that we were nearly two miles from about one hundred dollars worth of fishing tackle without a picket guard stimulated us to a speedy return. Everything was just as we left, except that one snail had been hopelessly entangled by the minnow, and was sacrificed to a speedy change of base. We moved quietly over a sunken drift, and hooked five salmon within fifteen minutes without succeeding in landing one. Hig brought one of about three feet in length plainly to view upon the surface. In his efforts to prevent entanglement in the network of logs we had discovered to exist a few feet beneath, but his rig was too light for the struggle, and the fish gained his haunts and his liberty. It was disheartening, but we lingered, despite conviction that to land even a three-pounder into a landing net there was impossible. After half-an-hour's waiting in vain for a renewal of the fun, Mack requested to be put ashore, that he might find a place where chances were equal, and Hig and I resolved upon adoption of the same, except we put Mack out and stuck to the canoe. We counted ourselves in luck, for scarcely had we located before Hig captured a valiant pound and a half bass, and Hig's supposed whale of the stream had seized my minnow and darted for the middle of the river. I paid out the line till there was apprehension that the 150 feet would be insufficient, but was soon relieved of the apprehension by discovering that he was making back. The line was cautiously pulled in till the float popped up within twenty feet of the canoe, danced about a few moments, and again disappeared, when Hig exclaimed "a jack! a jack!" from which I dissented, but was puzzled to conjure what was. Tightening on him a vigorous pull imboded the hook, and the fight began. His dropped his rod, seized the landing net, and moved to a convenient position to give aid, in the meantime offering valuable advice as to the management of what he clearly saw was a whopper. Just here I must add that my companion has given me my first lessons in angling for game fish, and his advice was recognized as valuable, though deemed superfluous from frequent repetition.

My nine foot Japanese nine-sixteenths in diameter at butt, seemed taxed beyond its capacity to keep him from the log alongside which lay the canoe, and for which the fish was struggling, but successfully without the strain, though the tip was frequently brought almost in contact with the butt. Hig still contended that it was a jack, but I argued from the comparative sluggishness of his runs that it could not be. At last he showed himself plainly, dropped off the hook, and disappeared. What was it? An infernal channel cat of about three inches length.

Hig fell back upon his seat and roared like a menagerie on a spree, till I was speechless from confusion, though I at first contended that it was a large eye runner with my minnow, and declared that it was not a jack whilst I was hauling him. Still I couldn't see just where the laugh came in. Within twenty minutes I enjoyed a repetition of the excitement of a good bite, and the luxury of taking the wind out of Mr. Higgin's sails by successfully leading a four pound bass into the landing net after a prolonged fight, without the slightest evidence that the fellow would ever give up. My companions declare that in all their long experience they never handled such gamy fellows as those of the Middle Fork.

After carefully unhooking and returning to their native element all the small fry, we daily took as many choice graylings and black bass as the large family could consume, deeming anything lighter than a half-pounder too small to go on a string.

As all our sport was near the "big road," we arrested the attention of every traveler, and enjoyed a confab with every passer-by. All expressed surprise that we should have chosen July to go fishing, and advised us to return after the first white frost if we wish to catch big jack and salmon, and being thoroughly imbued with that very wish, we made arrangements then and there for a return in October. Every fellow seconded a vow to make the trip from Livingston to the Judge's horseback or afoot, if the fates held in store for him the felicitous enjoyment of killing a few of those varieties of which even the nogerlings afford sport.

The day Ben was to return for us, Hig, and I left instructions that he be sent up the river with the wagon, as we proposed going nearly two miles from the house to put in the few remaining hours, whilst Mack took his favorite rod, a small bucket of minnows and fished down till he met our wagoner. Failing to get a bite at our salmon drift, we put a native youth at the paddle, and crept quietly along the bank

capturing a bass every few yards. Hig. was in the prow, and caught every fish that was taken, the undersigned not having occasion to use the second minnow that forenoon. As the clatter of the wagon could not be heard at noon, we concluded that Mack had persuaded Ben to put up and feed his horses and let us walk back—which we knew him capable—so we gave our catch to the oarsman for his services, hastily packed up and started back heavily loaded with traps picked up at points along the bank, where they had been left for convenience and remained uninterrupted except by our orders since the afternoon of our arrival. We were unjust to Mack, for the wagon was heard coming before we came in sight of the house, but met too near the yard fence to be of any service. We found dinner steaming upon the table, and discovered that Mack had killed enough good ones for that meal, and gotten in soon enough to have them served. Ben had the freight loaded, and steam up by two o'clock, and when he yelled "All aboard!" we had bidden adieu to our big hearted host and family, and were prepared for the jolt.

Thinking to surprise us by a wonderful improvement in seats, Ben had seriously-aggravated the abominations of that road by substituting chairs for the cross-plank seats on which we rode up, and the fearful recklessness with which we slipped about, jeopardizing legs, buckets and rods, demanded that a halt be called, bark procured, and those chairs secured to the sides of the wagon bed. Whether or not Ben was so imprudent as to come off again without a pint, was not ascertained; but he didn't forget to bring his diminutive boy of six years, "just to please him," and, as it turned out, to keep us in constant dread of unavoidably giving occasion for a first class funeral at Ben's, by crushing the life out of the boy.

We were returned to Livingston in thirty minutes less time than it required Ben to take us up.

Aside from the wagon rides, our trip was a delightful one, which we hope to repeat annually for the next hundred years, and hope those few lines may find the editors and numberless readers of the F. & S. enjoying a similar blessing.

KIAN.

## INTRODUCTION AND SUCCESSION OF VERTEBRATE LIFE IN AMERICA.\*

By PROF. O. C. MARSH.

PRESIDENT OF THE BIOLOGICAL SECTION OF THE AMERICAN ASSOCIATION.

SEVENTH PAPER.

IN this rapid review of Mammalian life in America, from its first known appearance in the Trias down to the present time, I have endeavored to state briefly the introduction and succession of the principal forms in each natural group. If time permitted, I might attempt the more difficult task of trying to indicate what relation these various groups may possibly bear to each other; what connection the Ancient Mammals of this continent have with the corresponding forms of the Old World; and, most important of all, what real progress Mammalian life has here made since the beginning of the Eocene. As it is, I can only say in summing up, that the Mammals are clearly the remnants of a very ancient fauna, which occupied this continent millions of years ago, and from which the other Mammals were doubtless all derived, although the direct evidence of this transformation is wanting.

Although the Marsupials are nearly related to the still lower Monotremes, now living in the Australian Region, we have as yet no hint of the path by which the two groups became separated from the inferior vertebrates. Neither have we to-day much light as to the genetic connection existing between Marsupials and the placental Mammalia, although it is possible that the different orders of the latter had their origin each from a separate group of Marsupials.

The presence, however, of undoubted Marsupials in our lower and middle Eocene, some of them related to the genus *Didelphys*, although remotely, is important evidence as to the introduction of these animals in America. Against this their supposed absence in our Miocene and Pliocene can have but limited weight when taken in connection with the fact that they flourished in the Post-Tertiary, and are still abundant. The evidence we now have is quite as strongly in favor of a migration of Marsupials from America to the Old World, as the reverse, which has been supposed by some naturalists. Possibly, as Huxley suggested, both countries were peopled with the low Mammals from a continent now submerged.

The Edentate mammals have long been a puzzle to Zoologists, and up to the present time no clue to their affinities with other groups seems to have been detected. A comparison of the peculiar Eocene Mammals, which I have called the *Tillodontia*, with the least specialized Edentates, brings to light many curious resemblances in the skull, teeth, skeleton and feet. These suggest relationship, at least, and possibly we may yet find here the key to the Edentate genealogy. At present, the *Tillodonts* are all from the lower and middle Eocene, while *Moropus*, the oldest edentate genus, is found in the middle Miocene, and one species in the lower Pliocene.

The Edentates have been usually regarded as an American type, but the few living forms in Africa, and the Tertiary species in Europe, the oldest known, have made the land of their nativity uncertain. I have already given you some reasons for believing that the Edentates had their first home in North America, and migrated thence to the southern portion of the continent. This movement could not have taken place in the Miocene period, as the Isthmus of Darien was then submerged; but near the close of the Tertiary, the elevation of this region left a much broader strip of land than now exists there, and over this, the Edentates and other mammals made their way, perhaps urged on by the increasing cold of the glacial winters. The evidence to-day is strongly in favor of such a southern migration. This, however, leaves the Old World Edentates, fossil and recent, unaccounted for; but I believe the solution of this problem is essentially the same, namely, a migration from North America. The Miocene representatives of this group, which I have recently obtained in Oregon, are older than any known in Europe, and, strangely

enough, are more like the latter and the existing African types than like any of our living species. If, now, we bear in mind that an elevation of only 180 feet would, as Dana has said, close Behring's Straits, and give a road thirty miles wide from America to Asia, we can easily see how this migration might have taken place. That such a Tertiary bridge did exist, we have much independent testimony, and the known facts all point to extensive migrations of animals over it.

The *Cetacea* are connected with the marine Carnivores through the genus *Zeuglodon*, as Huxley has shown, and the points of resemblance are so marked that the affinity cannot be doubted. That the connection was a direct one, is hardly probable, since the diminutive brain, large number of simple teeth, and reduced limbs in the Whales, all indicate them to be an old type, which doubtless branched off from the more primitive stock leading to the Carnivores. Our American extinct Cetaceans, when carefully investigated, promise to throw much light upon the pedigree of these strange mammals. As most the known forms were probably marine, their distribution is of little service in determining their origin.

That the Sirenians are allied to the Ungulates, is now generally admitted by anatomists, and the separation of the existing species in distant localities suggests that they are the remnants of an extensive group, once widely distributed. The large number of teeth in some forms, the reduced limbs and other characters, point back to an ancestry near that of the earliest ungulates. The gradual loss of teeth in the specialized members of this group, and in the Cetaceans, is quite parallel with the same change in Edentates, as well as in Pterodactyls and Birds.

The Ungulates are so distinct from other groups that they must be one of the oldest natural divisions of mammals, and they probably originated from some herbivorous marsupial. Their large size, and great numbers during Tertiary and Post-Tertiary time, render them most valuable in tracing migrations induced by climate, as well as in showing the changes of structure which such a contest for existence may produce.

In the review of the extinct Ungulates, I have endeavored to show that quite a number of genera usually supposed to belong originally to the Old World are in reality true American types. Among these were the Horse, Rhinoceros and Tapir, all the existing odd-toed Ungulates, and besides these the Camel, Pig and Deer. All these I believe, and many others, went to Asia from our Northwest Coast. It must, for the present, remain an open question whether we may not fairly claim the *Bovidae*, and even the *Proboscidea*, since both occur in our strata at about the same horizon as on the other continent. On this point there is some confusion, at least in names. The Himalayan deposits called Upper Miocene, and so rich in Proboscideans, indicate in their entire fauna that they are more recent than our Niobrara River beds, which, for apparently good reasons, we regard as Lower Pliocene. The latter appear to be about the same horizon as the Pliocene deposits in Greece, also regarded as Miocene. Believing, however, that we have here a more complete Tertiary series, and a better standard for comparison of faunas, I have preferred to retain the names already applied to our divisions, until the strata of the two continents are more satisfactorily co-ordinated.

The extinct Rodents, Bats and Insectivores of America, although offering many suggestive hints as to their relationship with other groups and their various migrations, cannot now be fully discussed. There is little doubt, however, that the Rodents are a New World type, and, according to present evidence, they probably had their origin in North America. The resemblance in so many respects of this order to the Proboscideans is a striking fact, not yet explained by the imperfectly known genealogy of either group.

The Carnivores, too, I must pass by, except to call attention to a few special forms which accompanied the migrations of other groups. One of these is *Machairodus*, the saber-toothed Tiger, which flourished in our Miocene and Pliocene, and followed the huge Edentates to South America, and the Ungulates across Asia to Europe. With this genus went *Hyenodon*, and some typical Wolves and Cats, but the Bears came the other way with the Antelopes. That the Gazelle, Giraffe, Hippopotamus, Hyena and other African types, once abundant in Asia, did not come, is doubtless because the Miocene bridge was submerged before they reached it.

The Edentates, in their southern migration, were probably accompanied by the Horse, Tapir and Rhinoceros, although no remains of the last have yet been found south of Mexico. The Mastodon, Elephant, Llama, Deer, Pecary, and other mammals, followed the same path. Why the Mastodon, Elephant, Rhinoceros, and especially the Horse, should have been selected with the large Edentates for extinction, and the other Ungulates left, is at present a mystery, which their somewhat larger size hardly explains.

The relations of the American primates, extinct and recent, to those of the other hemisphere, offer an inviting topic, but it is not in my present province to discuss them in their most suggestive phases. As we have here the oldest and most generalized members of the group, so far as now known, we may justly claim America for the birth-place of the order. That the development did not continue here until it culminated in Man, was due to causes which at present we can only surmise, although the genealogy of other surviving groups gives some data toward a solution. Why the Old World Apes, when differentiated, did not come to the land of their earlier ancestry, is readily explained by the then intervening oceans, which likewise were a barrier to the return of the Horse and Rhinoceros.

Man, however, came; doubtless first across Behring's Straits; and at his advent became part of our fauna, as a mammal and primate. In these relations alone, it is my purpose here to treat him. The evidence, as it stands to-day, although not conclusive, seems to place the first appearance of Man in this country in the Pliocene, and the best proof of this has been found on the Pacific coast. During several visits to that region, many facts were brought to my knowledge which render this more than probable. Man at this time was a savage, and was doubtless forced by the great volcanic outbreaks to continue his migration. This was at first to the south, since mountain chains were barriers on the east. As the native Horses of America were now all extinct, and as the early Man did not bring the Old World animal with him, his migrations were slow. I believe, moreover, that this slow progress toward civilization was in no small degree due to this same cause—the absence of the Horse.

It is far from my intention to add to the many theories extant in regard to the early civilizations in this country, and their connections with the primitive inhabitants, or the later Indians, but two or three facts have recently come to my knowledge which I think worth mentioning in this connection. On the Columbia River, I have found evidence of the former existence of inhabitants much superior to the Indians at present there, and of which no tradition remains. Among many

stone carvings which I saw there, were a number of heads which so strongly resemble those of Apes, that the likeness at once suggests itself. Whence came these sculptures, and by whom were they made? Another fact that has interested me very much is the strong resemblance between the skulls of the typical Mound-builders of the Mississippi Valley and those of the Pueblo Indians. I had long been familiar with the former, and when I recently saw the latter, it required the positive assurance of a friend who had himself collected them in New Mexico, to convince me that they were not from the mounds. A third fact, and I leave Man to the Archaeologists, on whose province I am even now trenching. In a large collection of Mound-builders' pottery, over a thousand specimens, which I have recently examined with some care, I found many pieces of elaborate workmanship so nearly like the ancient water-jars from Peru, that no one could fairly doubt that some intercourse had taken place between the widely separated people that made them.

The oldest known remains of Man on this continent differ in no important characters from the bones of the typical Indian, although in some minor details they indicate a much more primitive race. These early remains, some of which are true fossils, resemble much more closely the corresponding parts of the highest Old World Apes, than do the later our Tertiary Primates, or even the recent American Monkeys. Various living and fossil forms of Old world Primates fill up essentially the latter gap. The lesser gap between the primitive Man of America and the Anthropoid Apes is partially closed by still lower forms of men, and doubtless also by higher Apes, now extinct. Analogy, and many facts as well, indicate that this gap was smaller in the past. It certainly is becoming wider now with every generation, for the lowest races of men will soon become extinct, like the Tasmanians, and the highest Apes cannot long survive. Hence the intermediate forms of the past, if any there were, become of still greater importance. For such missing links, we must look to the caves and later Tertiary of Africa, which I regard as now the most promising field for exploration in the Old World. America, even in the Tropics, can promise no such inducements to ambitious explorers. We have, however, an equally important field, if less attractive, in the Cretaceous Mammals, which must have left their remains somewhere on this continent. In these two directions, as I believe, lie the most important future discoveries in Paleontology.

As a cause for many changes of structure in mammals during the Tertiary and Post-Tertiary, I regard, as the most potent, *Natural Selection*, in the broad sense in which that term is now used by American evolutionists. Under this head, I include not merely a Malthusian struggle for life among the animals themselves, but the equally important contest with the elements, and all surrounding nature. By changes in the environment, migrations are enforced, slowly in some cases, rapidly in others, and with change of locality must come adaptation to new conditions, or extinction. The life-history of Tertiary mammals illustrates this principle at every stage, and no other explanation meets the facts.

The real progress of mammalian life in America from the beginning of the Tertiary to the present, is well illustrated by the Brain-growth, in which we have the key to many other changes. The earliest known Tertiary mammals all had very small brains, and in some forms this organ was proportionally less than in certain Reptiles. There was a gradual increase in the size of the brain during this period, and it is interesting to find that this growth was mainly confined to the cerebral hemispheres, or higher portion of the brain. In most groups of mammals, the brain has gradually become more convoluted, and thus increased in quality, as well as quantity. In some, also, the cerebellum, and olfactory lobes, the lower parts of the brain, have even diminished in size. In the long struggle for existence during Tertiary time, the big brains won, then as now; and the increasing power thus gained rendered useless many structures inherited from primitive ancestors, but no longer adapted to new conditions.

Another of the interesting changes in mammals during Tertiary time was in the teeth, which were gradually modified with other parts of the structure. The primitive form of tooth was clearly a cone, and all others are derived from this. All classes of vertebrates below mammals, namely, Fishes, Amphibians, Reptiles, and Birds, have conical teeth, if any, or some simple modification of this form. The Edentates and Cetaceans with teeth retain this type, except the *Zeuglodonts*, which approach the dentition of aquatic Carnivores. In the higher mammals, the incisors and canines retain the conical shape, and the premolars have only in part been transformed. The latter gradually change to the more complicated molar pattern, and hence are not reduced molars, but transition forms from the cone to more complex types. Most of the early Tertiary mammals had forty-four teeth, and in the oldest forms the premolars were all unlike the molars; while the crows were short, covered with enamel, and without cement. Each stage of progress in the differentiation of the animal was, as a rule, marked by a change in the teeth; one of the most common being the transfer, in form at least, of a premolar to the molar series, and a gradual lengthening of the crown. Hence, it is often easy to decide from a fragment of a jaw, to what horizon of the Tertiary it belongs. The fossil Horses of this period, for example, gained a grinding tooth, for each toe they lost, one in each epoch. In the single-toed existing horses, all the premolars are like the molars, and the process is at an end. Other dental transformations are of equal interest, but this illustration must suffice.

The changes in the limbs and feet of mammals during the same period were quite as marked. The foot of the primitive mammal was doubtless plantigrade, and certainly five-toed. Many of the early Tertiary forms show this feature, which is still seen in some existing forms. This generalized foot became modified by a gradual loss of the outer toes, and increase in size of the central ones; the reduction proceeding according to systematic methods, differing in each group. Corresponding changes took place in the limb bones. One result was a great increase in speed, as the power was applied so as to act only in the plane of motion. The best effect of this specialization is seen to-day in the Horse and Antelope, each representing a distinct group of Ungulates, with five-toed ancestors.

If the history of American Mammals, as I have briefly sketched it, seems as a whole incomplete and unsatisfactory, we must remember that the genealogical tree of this class has its trunk and larger limbs concealed beneath the *debris* of Mesozoic time, while its roots doubtless strike so deeply into the Paleozoic that for the present they are lost. A decade or two hence, we shall probably know something of the mammalian fauna of the Cretaceous, and the earlier lineage of our existing mammals can then be traced with more certainty.

The results I have presented to you are mainly derived from personal observation; and since a large part of the higher

\* Delivered before the American Association for the Advancement of Science, at Nashville, Tenn., Aug 31, 1877.

vertebrate remains found in this country have passed through my hands, I am willing to assume full responsibility for my presentation of the subject.

For our present knowledge of the extinct Mammals, Birds and Reptiles of North America, science is especially indebted to Leidy, whose careful, conscientious work has laid a secure foundation for our vertebrate palaeontology. The energy of Cope has brought to notice many strange forms, and greatly enlarged our literature. Agassiz, Owen, Wyman, Baird, Hitchcock, Deane, Emmons, Lea, Allen, Gibbs, Jefferson, DeKay, and Harlan, deserve honorable mention in the history of this branch of science. The South American extinct vertebrates have been described by Lund, Owen, Burmeister, Gervais, Huxley, Flower, Desmarest, Aymard, Pictet, and Nodot. Darwin and Wallace have likewise contributed valuable information on this subject, as they have on nearly all forms of life.

In this long history of ancient life I have said nothing of what Life itself really is. And for the best of reasons, because I know nothing. Here at present our ignorance is dense, and yet we need not despair. Light, Heat, Electricity, and Magnetism, Chemical Affinity and Motion, are now considered different forms of the same force; and the opinion is rapidly gaining ground that Life, or vital force, is only another phase of the same power. Possibly the great mystery of Life may thus be solved, but whether it be or not, a true faith in Science admits no limit to its search for Truth.

## Fish Culture.

### OFFICE OF FISH COMMISSIONERS, STATE OF MINNESOTA.

ST. PAUL, Minn., Oct. 17, 1877.

EDITOR FOREST AND STREAM:

I want to tell you of a nice little trip Dr. Sweeney, our other State Fish Commissioner, and myself had in visiting the fish hatcheries of Illinois and Michigan.

We left St. Paul October 1, and with the kind courtesy of the West Wisconsin and North Western Railroad we were hurried over the best and smoothest road I ever traveled on. We were dropped off at Elgin, Illinois, where we were met by a dear friend, Dr. W. A. Pratt, Fish Commissioner, and a beautiful carriage, and were soon driven to a beautiful residence, about two miles from Elgin. It then being too dark to distinguish the beauties of the grounds, we were entertained magnificently by our friend and family. In the morning we rose bright and early, and visited the State Fishery and its beautiful surroundings, and I tell you it is not to be sneezed at. It is the best place I have seen for the purpose it is assigned. After tiring ourselves in that romantic glen, our friend, Dr. W. A. P., suggested accompanying us to the Michigan hatchery. At Niles, we were met by that good and jolly gentleman, George Jerome, Superintendent of Fisheries, and in the same beautiful style as before were soon landed at the handsome residence and grounds of our kind friends, where we were received in hospitable style by the family, and in a short time we were as old friends. After partaking of the luxuries awaiting us, we were shown over the City of Niles, which certainly exceeded my expectations. The State Fishery being about six miles from Niles, the visit was postponed until the next day. After being shown the sights, it was moved and carried that we return to our friend's residence, where we sojourned for the night. I think any one could make himself happy in George Jerome's company. He is the jolliest and best natured man I ever met, and a thorough fish man. In fact I found all the fish men exceedingly courteous and ever ready to converse on the latest and best labor-saving improvements in hatching fish, and the best adapted for the different waters. On the whole, I had as pleasant and successful a trip as I ever had in my life. I think I will let loose, as I am tired and expect I will tax your time too much to read it. Yours, most respectfully,

WILLIAM GOLCHER, Fish Commissioner.

P. S.—I forgot to mention our visit to the Michigan Hatchery. It is a beautiful place, nicely laid out, and well stocked with all kinds of fishes. I think the hatchers surpasses them all, and the superintendent most experienced in the business. W. G.

We have no doubt that Brother William had a most delightful trip. For his edification, we may state, with full consciousness of our powers of discernment and knowledge of human character, as well as by the testimony of Professor Agassiz, that the courtesy, attributes and general qualifications which William so much admires in the fishermen he met is due to the brain power obtained by the phosphorus contained in the fish.—Ed.

N. B.—When William was hurried over the best and smoothest road, etc., he must have felt like a cricket-ball delivered by a Powers or Talbot.

GROWTH OF TROUT.—The venerable Dr. Garlick has been pleased to send us the following communication with regard to Mr. Hasbrouck's "seven-inch trout":

BEDFORD, Ohio, Oct. 14, 1877.

EDITOR FOREST AND STREAM:

A word on the "rapid growth of trout." You may rely upon it that no young fry of the brook trout ever made such a growth as stated in your last paper. That seven-inch trout I have no doubt was probably three years old, and I should not be surprised if he were a five-year-old. It is a rare old lime the stream, a "remanent" was said, no doubt, and the trout seen in that stream on the 30th of September were natives of that stream. I have hatched and reared many thousands of brook trout, and I do not think I ever had a yearling trout that measured over three inches in length. Our trout were always kept in small spring pools until the yolk sac was absorbed, and they were then placed in our upper and smallest of the three ponds, where they remained one year, when they were run out into the second and larger pond by means of a sluice, and the following year they were run into the third and largest pond, and by these means I could always know the exact size of all the trout we had.

Trout grow very slowly until they are two years old. In this respect they are unlike many other kinds of fish, some of which arrive at maturity in a year.

To what a wonderful magnitude has the discovery of artificial breeding of fish arrived. It surprises me to read the accounts of the hatcheries. Though I did predict it, in the first paper I read, many years since, still it surprises me, and yet how many unimproved places there are. How many farmers have nice places, which, with a little expense, could have at all times all the fresh fish needed. Wishing you all the success you deserve, I am yours truly,

T. GARLICK.

STOCKING THE STREAMS OF NEW HAMPSHIRE.—The Manchester *Mirror* of Oct. 20th, says:

Since the first of May last, 2,000 landlocked salmon have been put into Tri-Echo Lake, in Milton; 1,000 into Lovewell's Pond, in Wakefield. The following ponds, lakes and rivers have been stocked with black bass, averaging thirty-six to each pond, and weighing on an average three-quarters of a pound each: Policy Pond, Salem; Wash Pond, Hampstead; Province Pond, Wakefield and Effingham; Ayer's Pond, Barrington; Jones Pond, Raymond; Pennichuck Pond, Merrimack; Reservoir, Kittery Navy Yard; Cocheco River, Rochester; Silver Lake, Madison; Chocoma Lake, Tamworth; Coles Pond, Somersworth; New Durham River, New Durham; Half Moon Pond, Alton; Reed's Pond, Merrimack; Mendum's Pond, Barrington and Nottingham; White Pond, Tamworth; Pawtuckaway Pond, Nottingham; Carpenter's Pond, Epping; Harvey Pond, Northwood; Suncook Pond, Northwood; Pinkham's Pond, Barnstead; Suncook Pond, Barnstead; Reservoir Pond, Middletown; Great Ossipee Lake, Ossipee. Reserving some of the best lakes and ponds for land-locked salmon, trout, white perch and pike perch, which we intend to introduce during the fall, winter and spring.

Yours respectfully,

LUTHER HAYES.

South Milton, N. H., Oct. 10, 1877.

SHAD IN LAKE ONTARIO.—SYRACUSE papers of the 16th inst. are congratulating Mr. Seth Green upon accumulating evidence of his success in cultivating shad in Lake Ontario. Very recently a fine male shad, weighing 5½ pounds, was caught in a gill net six or seven miles out in Lake Ontario, off Port Ontario, at the mouth of Salmon River. The fish is the largest of its kind yet caught in the lake, and is one of those placed in its waters by Mr. Green in the year 1872. The attempt to introduce the fish in fresh water was an experiment. It is now no longer in the list of experiments, but a matter of certainty. The fish have been caught at various points on the lake ever since the fry were put in, and appear to grow as rapidly and possess all the qualities of the shad that are caught in salt water.

Mr. Green now intends to go on with the work of supplying the lake with a large quantity of shad by liberating fry.

—The Minnesota State Hatchery House at St. Paul, but recently completed, has now 250,000 salmon eggs on the trays, which are apparently doing well. The eggs are for McLeod River, California.

—Why does not Livingston Stone, Esq., send some of the celebrated gamy and toothsome McLeod or red-banded trout of California to the East for propagating purposes? Those who know, declare that they will thrive and prove a valued acquisition to our catalogue of edible game fish.

MULLET FROM THE SANDWICH ISLANDS.—Mr. Redding, the Fish Commissioner of California, recently obtained from the Sandwich Islands some specimens of the mullet-fish known there as the *Awa*. They have been put in the sloughs near Bridgeport.

SALMON IN OHIO.—A correspondent informs us that a California salmon was caught in the Big Miami River on the 18th of this month which weighed five pounds. It is believed to be the progeny from the 125,000 of the same species which were deposited in the same river four years ago.

## Natural History.

### NEW VERTEBRATE FOSSILS.

IN a paper recently published, Prof. Marsh of Yale College, gives us further results of his explorations in the West, and describes a number of new genera and species of Vertebrates. The forms referred to are all from the Rocky Mountain region, and several of them are from the beds generally known as Cretaceous No. 1, but now regarded by our author as the equivalent of the Wealden of Europe. It is an interesting and suggestive fact that these beds have been gone over many times by professional explorers, all of whom have united in pronouncing them barren of vertebrate fossil remains.

The animals described in the paper to which we refer, include Mammals, Birds, Reptiles and Fishes, and we shall briefly refer to some of the more interesting forms. *Hellobatis radicans* belongs to the group of Rays, of which the familiar sting ray and "cow fish" are well known examples. The most peculiar point about this species is that it apparently inhabited fresh water, and is described as a "land-locked ray." It bears a considerable resemblance to a ray from the Mt. Lebanon deposits of Syria, described by Egerton under the generic name of *Cyclobatis*. It differs from the latter, however, in having a greater number of radiating digits, and in the possession of a number of dermal defensive tubercles which are wanting in *Cyclobatis*. *Diplosaurus felix* is a crocodilian from the newly discovered Wealden beds of Colorado, and is of great importance, as it supplies a "missing link" between the more ancient Teliosaurian type and the modern genus *Crocodylus*. *Diplosaurus* had the head somewhat like that of the modern *Crocodylus*, but its vertebrae were of the old biconcave shape. From the Pliocene lake basin east of the Mountains a true crocodile, *C. Solaris*, is described, the first known from these beds. It is interesting as furnishing a good indication of the climate of the region during Pliocene time.

The Dinosaurs, a group of somewhat bird-like reptiles, were very abundant in the Rocky Mountain region during a considerable portion of Mesozoic time, and these Wealden beds, to which we have already referred, have yielded recently several remarkable genera. One of these, *Titanosaurus*, was noticed some time since in FOREST AND STREAM, and in the present

articles we are furnished with a description of another new genus, *Nanosaurus*, differing widely from the former. While *Titanosaurus* far exceeded in size any terrestrial mammal of which we have any knowledge, *Nanosaurus* was very small, *N. Victor*, the largest of the two species, being about as large as a fox, while *N. Agilis* did not exceed in its dimensions a cat. The bones of these animals were hollow and the walls very thin. The crowns of the teeth seem to be compressed, and they are inserted in distinct sockets. The former has the characteristic thin trochanter.

A bird about the size of a small duck is described by Prof. Marsh under the name of *Groculavus lentus*. Until the discovery of this specimen Cretaceous birds were known only from Kansas and from the Atlantic coast. This form, however, comes to us from Texas. The specimens on which this species is founded differs widely from the similar parts in the *Odonotornis*, and is, therefore, referred provisionally to the genus *Groculavus*.

Besides the animals already referred to the present paper contains the announcement of the discovery of three gigantic Edentates, one, *Moropus distans*, from the Miocene of Oregon; the other two, *M. senes* and *M. elatus* from the Lower Pliocene of Nebraska. These animals are quite different from any edentates hitherto known and form a new family, the *Moropodidae*. *M. distans* was about the size of a tapir, while *M. elatus* was as large as a rhinoceros. The characters of these strange animals seem to point to the African Ant-bear (*Orycteropus*) as their nearest living relative. The other mammals enumerated in this interesting catalogue we must pass over very hastily. They include a new rodent, *Allomys*, apparently allied to the flying squirrels from the Miocene of Oregon, two new species of *Bison* from the Lower Pliocene of Kansas and Nebraska; a new genus of tapirid mammals from the Miocene of the Atlantic coast and the West; and a new genus of rhinoceros from the Upper Eocene of the Rocky Mountains. This last discovery is of unusual interest, as it is the oldest known rhinoceros, and enables us to trace the direct line further back into the past than we had before been able to.

Altogether the paper before us is one of great value, and contains more important announcements than are often found in a publication of this character.

### A REMARKABLE RAT'S NEST.

Mr. A. W. Chase, in a recent letter to one of the editors of the *American Journal of Science*, gives the following account of the habits of the California wood rat, *Neotoma* no doubt:

While on the northern coast, I noticed a fact in natural history, to me quite curious, regarding the habits of the so-called wood rat. I am not sufficiently versed in such matters to give you the name of this interesting creature. It is a little larger than an ordinary Norway rat, dark brown in color with large lustrous eyes, and a tail covered with thin hairs. This creature builds its nest in the woods, sometimes on the ground; more frequently on the lower branches of trees. They accumulate a surprising quantity of dried twigs, which they interlace to form a dome-shaped structure, often ten or twelve feet high and six or eight feet in diameter. Openings in the mass lead to the centre, where is found the nest, consisting of the finely divided inner bark of trees, dried grass, etc. But it is to the peculiar thievish propensity of this little creature that I wish to call attention. To make my story intelligible, I would first state that I am partial owner of some property on the Oregon Coast, on which a saw-mill had been placed, but which, owing to various causes, has never been in operation. On this property was a dwelling house for the hands, in which, on work being discontinued, was stored a quantity of stuff—tools, packing for the engine, and six or seven kegs of large spikes; in the closets, knives, forks, spoons, etc. A large cooking stove was left in one of the rooms.

This house was left uninhabited for two years, and, being at some distance from the little settlement, it was frequently broken into by tramps who sought a shelter for the night. When I entered this house I was astonished to see an immense rat's nest on the empty stove. On examining this nest, which was about five feet in height, and occupied the whole top of the stove (a large range), I found the outside to be composed entirely of spikes, all laid with symmetry, so as to present the points of the nails outward. In the centre of this mass was the nest, composed of finely divided fibres of the hemp packing. Interlaced with the spikes we found the following: About three dozen knives, forks and spoons, all the butcher knives, three in number, a large carving knife, fork and steel, several large plugs of tobacco; the outer casing of a silver watch was disposed in one part of the pile, the glass of the same watch in another, and the works in still another; an old purse containing some silver, matches and tobacco; nearly all the small tools from the tool closets, among them several large augers. Altogether it was a very curious mixture of different articles, all of which must have been transported some distance, as they were originally stored in different parts of the house.

The ingenuity and skill displayed in the construction of this nest, and the curious taste for articles of iron, many of them heavy, for component parts, struck me with surprise. The articles of value were, I think, stolen from the men who had broken into the house for temporary lodging. I have preserved a sketch of this iron-clad nest, which I think unique in natural history.

Many curious facts have since been related to me concerning the habits of this little creature. A miner told me the following: He once, during the mining excitement in Siskiyou County, became, in California parlance, "dead broke," and applied for and obtained employment in a mining camp, where the owner's hands and all slept in the same cabin. Shortly after his arrival small articles commenced to disappear; if a whole plug of tobacco were left on the table it would be gone in the morning. Finally a bag, containing one hundred dollars or more in gold dust, was taken from a small table at the head of a bunk, in which one of the proprietors of the claim slept. Suspicion fell on the new comer, and he would perhaps have fared hardly, for with those rough miners punishment is short and sharp; but just in time a large rat's nest was discovered in the garret of the cabin, and in it was found the missing money, as well as the tobacco and other articles supposed to have been stolen.

These same wood rats are among the greatest pests of our

western country to those who live in log cabins. They establish themselves in the roof beneath the sod, and once in possession they seem to be constantly on the watch to see what they can carry off. We have long been familiar with their purloining proclivities, and have even suffered by them, but the above narration far exceeds any experience of our own. Can any of our readers match it?

### SEALS.

With the exception of the whales and their allies, the seals, perhaps, at first sight exhibit a greater departure from our ordinary idea of animals than any other mammalia. Although still undoubtedly quadrupeds, their legs are so completely enclosed within the skin of the body, that nothing but the feet project, and of these the toes are united by skin, so as to form fins or paddles, adapted almost solely for the propulsion of the animal through the water. The position of the hind legs, too, is very singular; they are turned completely backwards, so as to form a sort of broad double-tail fin, very similar, both in appearance and action, to the tail fin of the whale. But in these, as in the forefeet, all the parts existing in the most perfect quadrupeds are to be recognized; whilst the tail of the whale is really a fin, and has nothing whatever to do with the hinder extremities. As might be supposed from the form of the limbs, seals are by no means at home when out of the water, floundering about in a decidedly awkward manner by a vermicular action of the abdomen, assisted by the fore paws. But in their native element the fish-like form of their bodies and their powerful paddles render them very active, and they swim and dive with great rapidity in pursuit of the fishes and other marine animals which constitute their general food.

The common seal, which is especially plentiful on the Pacific coast, is of a yellowish-gray color, often covered with dusky or blackish spots. Its average length is about three feet, though sometimes it measures five or six. It has a rounded head, and the eyes are very large, soft and black, giving it a most intelligent expression of countenance; it has no external ears, and the orifices of the auditory organs are furnished with valves, capable of being closed when the animal is under water; however these do not seem to prevent hearing, but act as a sort of additional drum or tympanum, rather intensifying than decreasing sound.

On the coast of Greenland and British America seals exist in innumerable herds in spite of the destructive warfare that has been waged against them for ages, both by natives and Caucasians. To the latter the "seal fishery" furnishes but two products, oil and fur; but so indispensable is the seal to the very existence of the former that it has been said: "The sea is the Esquimaux's field, and the seal-fishing his harvest." The skin of the animal, when deprived of the long and rather coarse hair which forms its outer coat, furnishes a soft downy fur of light brown or fawn color, held in great repute for caps, coats, mantles and other articles of winter comfort. It provides the Inuit with the whole of his clothing; and to a people who depend so much on seafaring life for subsistence, its capability of resisting water is not one of its least desirable qualities. The oil too, not only serves as a light giving medium, but is employed for heating and cooking purposes, and is held to be a most desirable beverage. McCulloch, in speaking of seal oil, says that, "when extracted before putrefaction has commenced, it is beautifully transparent, free from smell, and not unpleasant."

Every part of the seal is utilized by the Inuits. The pelt not only furnishes them with the warm clothing so necessary to an Arctic climate, but provides their boats and summer habitations with a waterproof covering, and when tanned forms a strong, serviceable leather. The intestines form substitutes for glass in lighting their huts, and are also formed into shirts and other articles of wearing apparel; the sinews furnish them with thread, the bones become tools and heads for spears, and their flesh is a most important article of food.

In fide weather seals are fond of basking in the sun, and vast herds of them are often seen thus engaged upon the gelid ice. In these situations, which are known as "seal-meadows," the hunters endeavor to surprise them while sleeping, so as to intercept their attempted retreat in the water, to which, as an asylum, they always direct their course when alarmed. They are generally killed by knocking them on the head with clubs, a single blow being sufficient to dispatch them.

In character seals exhibit amiable points. They are devoted to their young, and the latter are dutifully obedient to their parents; while the males fight valorously in defence of their consorts and families. In confinement, especially when taken young, they are easily tamed, and exhibit as much attachment for their master as does the dog.—*Appleton's Journal*.

**LARGE WAPITI ANTLERS.**—Captain Algernon E. Smith, United States Army, is the owner of a pair of elk antlers, found in the Black Hills of Wyoming, the dimensions of which are as follows: From tip to tip, 8 ft. 7 in.; widest spread outside of curvature of shafts, 4 ft. 8 in.; around burr, 12½ in.; just above burr, 10½ in.; left head tip to centre of skull, 5 ft. 1½ in.; right, the same; right head tip to right head brow antlers tip, 6 ft. 4½ in.; left head tip, 1½ in. less; right head curvature tip to burr, 4 ft. 9 in.; left head, ½ in. less; between brow antlers, 12½ in.; weight, 50 lbs. We have a photograph of them.

**HABITS OF DEER AGAIN.**—*Moorefield, W. Va.*—In a late issue of your paper "Antler" takes occasion to contradict statements made by me in a recent article on the habits of deer. Although he disagrees with me, I was glad to learn that the subject was of sufficient interest to merit a reply. I do not intend to trespass upon your valuable space with an answer, for I could only state the facts upon which my former statements were based. I may, however, be allowed a few words in regard to one point of especial interest. Although "Antler" has the corroboration of your learned self upon the question of horns, I venture to again assert what was once a theory with me, but which now has the force of fact, namely, that deer deposit their horns in secret places. It is true the horns are sometimes found, and bear marks of the work of rodents. Not only has recent inquiry confirmed my opinion, but I have learned a fact which seems to place the question beyond dispute. Several years since the deer in Druid Park, Baltimore, became so numerous that some of them had to be killed. A report upon the subject, by the Park Commissioners contained some curious facts in regard to the habits of the

deer. It was stated that only once since deer had been kept there (a number of years) had any of the horns been found, and then in a very secluded spot. Stranger still, the horns then discovered were buried. These gentlemen seemed to be of the opinion that it was the undoubted habit of deer to bury their horns, or when the ground was too hard to hide them in some secret place. The park alluded to is not very large, while the deer are very numerous. With the thousands of people who ramble through its groves, it is certainly significant that deer horns are never found. If it be true, as claimed by the Park Commissioners, that deer bury their horns, it seems probable that such horns as are found are dug up by rodents. One word in regard to that "tail business." With such a keen eye as "Antler" must possess, the novice would hardly need a "sign" that he had wounded a deer. Observation and inquiry have led me to believe the sign of some account, and so I shall continue to believe until a supernatural vision, as possessed by our friend, enables me to tell how close a bullet has passed to a deer's head, or that each particular hair is untouched, while the deer is running off at "double quick" speed.

SKOAMORE.

**ALEPIDOSAURUS.**—We mentioned this rare fish in our last issue. In our next we will give a full description of it and its habits, and all the facts connected with the capture of the specimen received by Mr. E. G. Blackford, to which we have made reference.

**BOA CONSTRICTORS.**—The boa constrictor in the New York Aquarium gave birth, last Saturday evening, to fifty young boas. The young strangers are from two to two and one-half feet in length, quite a respectable size for infant reptiles.

**ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING OCT. 20, 1877.**—1 black bear, *Ursus americanus*, presented by Mr. Geo. Bough, New York city; 1 horned owl, *Bubo virginianus*, presented by Miss Caroline Phelps Stokes, New York city; 1 hawk, *Buteo borealis*, presented by Mr. D. C. Deyoe, Westkill, N. Y.; 1 monkey, *Cebus capucinus*, presented by W. A. CONKLIN, Director.

## Woodland, Farm and Garden.

### THE IMPROVEMENT OF IMPOVERISHED LANDS BY MEANS OF SHEEP.

FERN BANK, Ohio.

EDITOR FOREST AND STREAM:

I am quite sensible, Mr. Editor, that for a journal like yours, with its legion of readers scattered over the whole North American continent, my last communication on sheep husbandry was somewhat too local in its application; but the fact is, your note of approval and allusion to the Blue Ridge of Virginia touches a chord in my heart which will ever vibrate, responsive to any kindly mention of the dear Old Dominion; and I was tempted to diverge from the path which I had proposed to follow in preparing these papers. I overran the trail, and now, if you please, will "hark back." My original intention was simply to advocate sheep culture, not with reference to the profits to be derived from wool and mutton, but as the cheapest method of renovating exhausted soils; the mutton and wool I reserve for another paper should this prove of sufficient interest to your readers to receive the honors of type.

We have in this country, and more particularly in the late slave-holding seaboard States, millions of acres too poor to bear the expenses of cultivation or even inclosure. To judge from the original growth of timber still standing upon these lands, most of them were, when first brought under cultivation, of excellent quality, and the problem now to be solved is their restoration to fertility at the least expense. The application of stable manure or other fertilizers is out of the question, for the impoverished soil will not sustain the cattle to produce the first, and the owner has neither the money nor the credit wherewith to procure the latter. Guano, poudrette, bone dust and the super-phosphates, even when not subjected to fraudulent adulteration, are all too expensive; they will not pay. What, then, is the alternative? We answer, gypsum and sheep. Gypsum, whether a manure or a mere stimulant we will not stop to discuss, is the cheapest of all fertilizers, because of the smallness of the quantity required; and impoverished as these lands are, none of them are too poor to carry one or two of our common, native, mongrel sheep to the acre. The gypsum will awaken such elements of fertility as may still remain dormant in the soil, and the sheep will make a clean sweep of the bushes and briars and other coarse vegetation that would choke the white clover and sweet grasses brought out by the plaster. But to carry out this system of improvement successfully, the old thriftless method of managing (or rather not managing) sheep must be abandoned. They must not be turned adrift, as is the almost universal practice, to shift for themselves, and never looked after except when at irregular intervals they are enticed with salt to put in an appearance, in order to be shorn or to furnish a victim for the shambles.

Let the farmer be convinced that his material salvation is to be attained only through his sheep, let him give to their well being as much and as earnest thought as he does to local politics, let him be convinced that the increase of his flock and the consequent improvement of his land is of more importance to him and his family than the election of this or that county demagogue to this or that office, then he will as he should do, care for his sheep with as much or even more solicitude than for any other stock. As a consequence he will soon see his galled, gullied and sedge-caked fields smiling in robes of emerald green he will be emancipated from the slavery of debt, and he will no longer feel inclined to escape by the back door when the tax-collector or the sheriff enters at the front.

It may be asked why the common native sheep should be recommended for the improvement of exhausted land? Simply, because being more frugal and hardier, they will bear heavier stocking than the improved breeds, and they are not near so costly; moreover, with judicious management, they will improve in quality just as certainly as the soil which they cleanse with their teeth and enrich with their droppings.

In spite of the teachings of an able agricultural press there is still among us a class of farmers who, with heads as hard as their fists, and that obstinate incredulity so often the accompaniment of ignorance will object to the proposed system on the old and obsolete plea of danger from sheep killing dogs; they might as well plead the danger of fire as a

sufficient reason for not building a comfortable house. It was hoped that the grangers would have suppressed this evil through legislative enactment, but alas! it would appear that the owners of marauding curs and the pot-hunters can yet outvote the grangers, and of course the demagogues in the legislatures will go with them even if the destruction of the last sheep and all the game in the country be the consequence. Of what value to a self-seeking politician is a great national industry compared with a vote which may enable him to clutch the spoils of office?

But why wait for a tardy legislation to do what we can accomplish ourselves? There are but two precautions necessary to remove all danger from dogs, the first is to fold the flock at night, and this is indispensable where the improvement of the land is the main object, and the other is to put bells on ten sheep in every hundred, the marauder will never venture into the fold, and if he attempted to chase the sheep when at large he is intimidated by the clamor of the bells. Another excellent safeguard is to let a few sharp-horned cows herd with them habitually; next to Spanish or Mexican sheep dogs the most efficient protectors sheep can have from their canine enemies, for when attacked the flock instinctively seek safety beneath the horns of their bovine friends.

On the continent of Europe the shepherd has a light box on wheels, in which he sleeps very comfortably at night. This house on wheels stands by the side of the sheep fold, and when the latter is moved, as is done every few days, the house is lifted off and the running gear serves to transport the hurdles from place to place as may be required. Where the flock is large and valuable enough to warrant this precaution, there is no reason why it should not be taken in this country as in Europe.

But to condense. Upon a given breadth of land spread plaster of Paris (gypsum) annually, at the rate of one bushel to the acre, turn upon it as many sheep as it will maintain; salt the flock regularly, or better still, keep lumps of rock salt permanently on the galled spots of the field; fold the flock every night on the same spot until sufficiently manured, and then remove the fold from place to place until the whole field is gone over.

The above may be accepted as a fair solution of the proposed problem: "To improve impoverished lands by means of sheep," if we add to it that in sheep breeding eternal vigilance is the price of success. F. G. S.

### TRANSPLANTING.

THE best time for transplanting shade trees as well as fruit trees and deciduous shrubs is just when the leaves have fallen or are about to fall, but when planting has to be done on a large scale, it has to be proceeded with at all times when the weather is open enough. The sooner therefore a commencement is made the better, and one condition is essential to the success of such operations, more particularly when they are performed at somewhat unfavorable seasons, viz.: that the plants should have been properly prepared in the nursery before being sent out, and if this has been the case planting may be performed with little risk at any season. Young trees and shrubs of all kinds should be moved or transplanted almost every season while in the nursery, and this has generally the effect of causing them to root near to the boles or stems, and there to form a dense mass of roots which necessarily retain a considerable portion of the soil. When this is the case the moving and transplanting in reality inflicts but a trifling check on the plants. With regard, however, to the transplantation of trees or shrubs that have attained considerable dimensions the case is somewhat different, as they will probably have occupied the position in which they now stand, undisturbed, for years, but from which, for some cause, it may be desirable to remove them. When this removal has for some time been decided upon, the trees have doubtless been judiciously root pruned a year ago, and their removal will be comparatively easy and without much risk, and may be proceeded with at once. The leaves have now accomplished their mission, or nearly so, the young wood is in a comparatively ripe state, and the buds have arrived at that condition in which they will be the least affected by the temporary check which is sustained by the necessary mutilation of the roots. If the operation is performed now it will afford ample time for reparation, before the atmosphere and the soil have become so cold as to retard the production of fresh roots. The plant is thereby enabled to start afresh in spring with plenty of young leaders already made, which it would not have if the planting be delayed until that time. In all cases, however, in which it is inconvenient to attend to the final removal of trees at present, it will be advisable (more particularly if the specimens to be moved are valuable) to defer the operation until somewhat late in the spring when the soil begins to receive some heat, and the probabilities of success are greater than if done at any time during the winter or late in the fall, no matter how favorable the weather may be. One or two points must however be kept well in mind in case of late spring planting, viz., keeping the plants as short a time out of the ground as possible, that the fibres may not get dried up—the giving of abundant and frequent supplies of water to the roots, as well as mulching the surrounding soil to prevent undue evaporation, and where possible syringing or hosing the plants in the evenings during dry weather, until there are sufficient indications of their having become established in their new situations, when that attention may, of course, be discontinued, especially if the weather be damp or cloudy. It is a well-known fact that evergreens, and even deciduous plants may be transplanted successfully at almost any time of the year; and indeed as regards evergreens, May and June are the preferable months in this climate—just as the young growth begins to start and active root-life with it. In fact the only drawback to spring planting is the considerable amount of extra labor which it necessarily entails at a very busy time of the year; therefore early fall planting may, all things considered, be regarded as the most suitable period for the prosecution of this work (with deciduous trees and shrubs) as the newly transplanted trees will not only require less labor, but it will also be possible to devote more time and attention to their requirements,

—We notice that *Nature* is republishing Professor Marsh's Nashville address on the Introduction and Succession of Vertebrate Life in America, which our readers are now enjoying. Its importance and value are appreciated abroad as well as at home.

—Mr. Elb. Nelson, a well known naturalist, has recently proceeded to Norton Sound by way of Alaska. Mr. Nelson, who goes to relieve Mr. Turner, was provided by the Smithsonian Institution, and we may look for very interesting results from his exploration.

—M. Bozulubsky has recently published a very interesting and important work on Gold and Gold Mining in Russia. It is stated in this volume that the yearly yield of the mines in Russia and Siberia amount to no less than \$15,000,000, and that the whole area occupied by the mines is about 2,100,000 miles.

**CEREALS.**—According to recently compiled statistics, Russia is ahead of all the nations of the world in its yield of cereals, leading the United States by 379,950,000 bushels, or nearly one-fourth the entire production of this country. Germany comes next, with less than one-half the amount produced by the United States, and is closely followed by France, whose product exceeds that of Great Britain by half, and Austro-Hungary holds a position nearly midway between the two.

**How to CATCH CHICKEN-HAWKS.**—It is a well known fact that a hawk will always light on some conspicuous place close to the poultry yard, from which to swoop down on its victims. Taking advantage of this, erect a pole with a flat surface at the top just large enough to hold a strong steel trap. Fasten this trap by a chain to a staple in the pole, and await results. No bait will be needed, for the hawk will be quite certain to light on the trap and be caught.

**GERMINATION OF PINES.**—Seeds of the Sequoia gigantea, or indeed of any of the Californian pines, if fresh and sound, can be sown in a cold frame, or in pots or boxes in the house or greenhouse, and slightly covered with a rather light peaty soil. If in a cold frame they will not germinate till spring, but no frost should be allowed to reach them. They should be transplanted as soon as fit to handle to prevent their "dampening off." Old seeds, such as you mention, can have no vitality and consequently will not germinate. The Sequoia is not quite hardy here, and will certainly not be so far North. Sequoia is named for the Cherokee half-breed Indian See-quah-yah, who invented an alphabet for his nation.

—Recently published statistics issued by the Norwegian authorities gives the following table of domestic animals per 1,000 inhabitants among the different nationalities: Horses in the United States, 227; Russia, 225; Denmark, 176; Sweden, 103; Austro-Hungary, 98; Great Britain and Ireland, 85; Norway, 84; Germany, 83; France, 70. Of horned cattle, in Denmark, 687; in Great Britain, 300. Of sheep, in Spain, 1,348; in Great Britain, 969; in Belgium, 142. The number of goats in Greece, 913; in Great Britain, 8. Of swine in the United States, 671; in Great Britain, 112; in Greece, 38.

**THE AUTUMN CROCUSES AND COLCHICUMS.**—These are among the most beautiful of the fall flowers seen peeping through the grass in clumps, or in the rocky; they give a touch of spring when the surroundings all remind us of the winter's approach. How charmingly may we adorn some favorite nook in the lawn at this season with the flowers of a blue and gold-tasseled crocus rising up suddenly through the grass. They are all hardy and vigorous and should be much more extensively grown.

**LAYERING SHRUBS, ROSES, ETC.**—A good method of rapidly increasing any variety that is found difficult to propagate is to bend down and layer the whole plant, covering it alike about one to one and a half inches deep. All the buds receive by this method a like impulse to throw out roots, while if only a portion is covered the vigor of the plant is drawn away in another direction. The shallow covering does not prevent growth.

**WILD RICE AND WILD CELERY.**—In compliance with the courteous request concerning the wild rice and wild celery and the culture of each in a late issue of the *FOREST AND STREAM*, I take pleasure in giving such information upon the subject as I have been enabled to gather. As to the wild celery (*Valisneria americana*) of Lake Koshkonong, Wis., I can give but very little information, knowing that lake only as the greatest resort of the delicious canvas-back in Wisconsin. Upon this subject I have no doubt the genial writer and keen shot, R. Valentine, of Janesville, Wis., is *au fait*, and could give the desired suggestions for the culture of wild celery, if, indeed, it be practicable. This aquatic weed is—as is well known—the favorite food of the canvas-back and widgeon, but the mallard, teal, wood-duck and most of the others of the common varieties of wild fowl found upon our inland lakes partake, with the greatest avidity, of the wild rice (*Zizania paniculata effusa*), found in more or less abundance along the low streams and lakes of this section of country.

Last season, desiring to test the expediency of sowing wild rice, I obtained a small quantity of fully ripe seed, gathering it myself to be certain of its condition, and during October had the seed carefully sowed in the stream called Duck Creek, near my present home. Previous to this not a solitary plant of wild rice was known to exist upon the stream, and I awaited with some anxiety the coming season for developments. Although a portion of the seed thus "cast upon the waters" was taken by the ducks of the vicinity, I had the pleasure of

witnessing the growth of a goodly piece of wild rice, which came to maturity and demonstrated the feasibility of wild rice culture. So well am I satisfied with the experiment that I propose to sow a much larger amount this season along Duck Creek, and am confident that by care in the selection of the seed, as well as the proper places in which to sow it, a most satisfactory result may be had.

In selecting wild rice seed great care should be taken to use only sound, ripe and fully matured kernels, such as may be easily shaken or beaten from the stem, as either green or shrunken seed will fail to produce plants. In the case of M. H. C., I consider the failure due to the seed, or, perhaps, to the nature of the soil in which it was sown.

I know not if the wild rice seed will grow in the waters of all our inland lakes, but incline to the opinion that it will thrive in most shallow waters, wherein the soil is alluvial rather than sandy, though I have known it to exist where the bottom was merely light sand covered by a thin strata of vegetable mould. This may be exceptional, at least it is unusual in this section. In sowing the seed of wild rice it should be placed in such spots as naturally thrives, i. e., along the low, marshy shores where very little if any current is perceptible, and along all inlets, sloughs or bayous extending inland; dropping the seed in one foot to three feet of water, where it may soon be covered with the dark alluvial, and thus escape the wild fowl until securely rooted. If sown in October, it should mature and bear seed the following autumn, and will then spread and thrive finely. Very high water—as freshets—will kill and drown out wild rice even more rapidly than will a drought and low water. Should I discover anything of practical value to sportsmen in future experiments in this line I will gladly communicate the same, and in the meantime trust that those who have had larger experience may give the readers of *FOREST AND STREAM* the benefit of their observations.

Westfield, Wis., Oct. 12

F. E. POND.

**NOTICE TO SPORTSMEN.**—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box 1,294.—*Advs.* ABNEY & IMBRIE, 38 Maiden Lane.

## Sea and River Fishing.

### FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.  
M. migrans. Bluefish, *Pomatomus saltatrix*.  
Mascallonge, *Esox nobilior*. Spanish Mackerel, *Scomber maculatus*.  
Pike or Pickerel, *Esox lucius*.  
Yellow Perch, *Perca flavescens*. Cero, *Cyrtum regale*.  
Sea Bass, *Scleropages ocellatus*. Bonito, *Sarda pelamys*.  
Striped Bass, *Morone americana*. Kingfish, *Melaneris nebulosus*.  
White Perch, *Morone americana*.

**FISH IN MARKET.**—Our quotations for the week are as follows: Striped bass, 18 to 20 cents per pound; smelts, 20 cents; bluefish, 10 cents; salmon, frozen, 30 cents; mackerel, 10 to 20 cents; white perch, 15 cents; weak fish 12 cents; Spanish mackerel, 30 cents; green turtle, 15 cents; terrapin, \$12; frost fish, 8 cents; halibut, 15 cents; haddock, 8 cents; king-fish, 25 cents; codfish, 8 cents; black-fish, 15 cents; native herrings, 6 cents; flounders, 10 cents; porgies, 10 cents; sea bass, 18 cents; cels, 18 cents; lobsters, 10 cents; scallops, \$1 per gal.; soft clams, 30 to 60 cents per 100; salmon trout, 15 cents; black bass, 15 cents; sheephead, 25 cents; whitefish, 18 cents; pickerel, 18 cents; yellow perch, 10 cents; hard shell crabs, \$3 per 100; soft crabs, \$1.50 per dozen; frogs, 45 cents per pound; turbot, 40 cents; sun fish, 10 cents.

**FISH CULTURE IN FULTON MARKET.**—On Friday, the 12th inst., E. G. Blackford, of Fulton Market, received from Prof. Fred Mather 500 salmon eggs, which he placed in a Ferguson hatching jar and set on his stall, and connected with the croton, so that a constant stream of fresh water passed over the eggs. On Friday, the 19th inst., five of the eggs broke and released the young fry, and at the present time they are nearly all hatched. Hundreds of people have visited the market, and expressed their pleasure and astonishment at this practical illustration of fish culture.

**MAINE—Edes Falls, Oct. 18.**—Sebago salmon are running up the Saco and Crooked Rivers in great numbers. When the gate is shut in the river here they can be picked out with the hand.

—There is no fishing in the lake (Memphremagog) by reason of close season, from Oct. 1st to Nov. 15th.

**MASSACHUSETTS—New Bedford, Oct. 17.**—The fine weather of the past week induced several of our amateur fishermen to make a short visit to the island in the lower part of the Bay, and with very good success. Chas. S. Randall, Esq., being "high hook" with three bass caught inside of two hours, the largest weighing forty-seven (47) pounds. Quite a number of smaller fish were obtained.

**MOVEMENTS OF THE FISHING FLEET.**—Only 43 fishing arrivals have been reported at this port the past week, 18 from the Banks, 18 from Georges, 9 from the Bay St. Lawrence, and 3 from shore mackereling trips. The receipts have been about 735,000 lbs. Bank codfish, 130,000 lbs. Georges codfish, 120,000 lbs. Bank halibut, and 1,000 blbs. Bay mackerel.—*Cape Ann Advertiser*, Oct. 10.

**A THIRTY-TWO-POUND BASS.**—Mr. John Rodgers, a retired merchant, residing corner of Eighty-third street and First avenue, in company with a Hell Gate pilot named Taylor, while trolling around the "Nigger Heads," a reef of rocks in Hell Gate, yesterday, struck a striped bass weighing thirty-two pounds four ounces. With a pole, reel and line, the latter only one-sixteenth of an inch in diameter, Mr. Rodgers, after fully an hour's work, aided by Mr. Taylor, succeeded in landing him on shore, not, however, without the aid of a gaff hook. This is the largest bass that has been taken in New York's waters for over twenty successive seasons. It is on exhibition at Jerolomon's bathhouse, foot of Eighty-ninth street, East River.—*Herald*, Oct. 24.

**PENNSYLVANIA.**—President, Oct. 19.—Bass fishing is excellent. Trolling is now the successful method of capturing them.

**VIRGINIA—Leesburg, Oct. 16.**—The fish thought to be a salmon, caught near Harrison's Island, turns out to be of some other family, was spiny rayed and had no adipose dorsal.

T. W.

**FLORIDA—St. Augustine, Oct. 17.**—Bass fishing yields large returns.

J. O.

**CANADA—Salmon Fishing in the Saint Marguerite.**—Mr. Robert Hare Powell has kindly furnished us with the following record of the fishing in this river, of which Messrs. Hare and Russell are lessees:

Number and Weight of Salmon Caught by Robert Hare Powell, Esq., and Robert Hare Powell, Jr., of 434 Walnut street, Philadelphia. In the River Saint Marguerite in 1877.—July 10th, 13½, 14½, b; July 11th, 12½, 21½, 19, 15½, a, b; July 12th, 11, b, a, 12, 11, 14½, 10½, a, b; July 13th, 10, 12½, 10½, July 14th, 12, 14, 11, 14, 14, 13½, July 15th, 17, 15½, 12, 11½, b; Three days did not fish; water too low. Heat excessive. July 16th, 10, 10½, July 20th, did not fish; July 21st, 13, 23, 10, 23½; July 22d, 9, 11, 14½, 10, 20, 22, 20½, b, a, a, 12, 11, 12, 12½; July 23d, 14, b, 12, 12, 19 lbs.; July 24th, 12½, 14, 9½; July 25th, 11, 12, 14, 9½; July 26th, a, a, a, 12½; July 27th, a, b; July 28th, Two days did not fish; water rising. July 30th, 21, 15, a, a, 11, 14, b, 14, 10, 14, 14, 12, 10½, b, b, a, a, a, lost in branches overhanging the pools. July 31st, 15, 12, 14, 13, 21, 20 lbs. a, a, a; Aug. 1st, 12, 15, a, 10, 12, 14, 10½.

NOTE.—a signifies loss of fin; b signifies loss of fish and fly.

Number and Weight of Salmon Caught by Willis Russell, of St. Louis Hotel, Quebec, in the River Saint Marguerite, Monday, July 2d, between 5 and 11 A. M. b; 12½, 18, 13, 19, 23, 15, 13½ lbs. Number of fish, 9; total weight, 115½; average weight, 12½. Besides the above, there were 5 salmon lost.

The summary of the season's fishing is as follows:

| R. H. Powell                                       | Days. | Fish. | Weight. | Average. |
|--|-------|-------|---------|----------|
| W. Russell   | 17    | 74    | 999½    | 13½      |
| Sam. Streitt, of N. Y., and E. A. Greene, of N. J. | —     | 9     | 145     | 16       |
| Walter M. Brackett, of Boston.                     | —     | 36    | 489     | 13½      |
| E. V. Clark, Esq., of N. Y.                        | 5     | 31    | 419     | 14½      |
| Col. Rhodes, Benmore.                              | 2     | 7     | 98      | 14       |
|  | 2     | 2     | 44      | 22       |
| Total.   |       | 159   | 2221½   | 14       |

**AN UNEXPECTED APPLICATION OF A ROD.**—The Editor of this paper has received the following characteristic letter, accompanied by the most beautiful bamboo rod which it has ever been our pleasure to handle. We do not know when any sympathetic act of friendship has appealed so directly to our sensibilities. The gift was as unexpected as it was generous, polite and opportune. Its bestowal was evidently prompted by the injunction of the Master, who enjoined upon Peter and the other disciples who were fishermen, when they found a brother "in distress, naked, sick, or in prison," to at once give him their coat, cloak, hat, boots, fishing nets, tackle, etc. It was the evidence of a proper appreciation of the forlorn condition of one who is bereft, stripped, dismantled and put "afloat," as they say in prairie parlance. Besides, the rod is a substitute for an Andrew Clerk rod, which has done constant and faithful service in our hands for more than five years past. The rods manufactured by that house, and by their worthy successors have long enjoyed a deservedly fair and enviable reputation; and we have no doubt that this one, so gracefully donated, will also prove its excellence by its works. Our thanks are due to our friends, whom we trust may long continue to prosper in business.

NEW YORK, 48 Maiden Lane & 25 Liberty st., Oct. 18, 1877.

**DEAR HALLOCK.**—We saw in the papers that while on your Western trip you had the misfortune to lose all your fishing tackle overboard. You must allow us to sympathize with you in your very serious loss. It is no joke to lose a whole fishing and hunting outfit. Please permit our sympathy to take a practical shape. This you can do by accepting the accompanying six-section bamboo trout fly rod. It may be "a poor thing but it is our own." It is marked "Abney & Imbrie's Best." This means that it is the best we can make. Of course if you want a real good article—one that will be just the thing to drop overboard—you must go elsewhere; our rods are intended to fish with.

Deducting the reel-plate, the rod weighs a trifle over six ounces. With one of the same calibre, we have taken several salmon (on one river in Canada) weighing from twelve to eighteen pounds. We, therefore, feel confident that even a novice like yourself may, with proper care, may bangle into the capture of a grayling or a small trout without doing irreparable injury to the rod.

We received a note from Seth Green, "the father of American fishes," a few days ago. He says that he has used one of our section bamboos for eight years without any expense beyond an annual coat of varnish. As we have not been idle during the past eight years, we are sure that the accompanying rod is worth a dozen of the one sold him in 1869. We have therefore calculated that the rod should last you about a century—if you don't drop it overboard in forty fathoms water.

Yours very sincerely,

ABNEY & IMBRIE.

—A disinterested friend has informed us that the Orvis fishing rods have gained such repute, chiefly through the advertisements and notices published in *FOREST AND STREAM*, that sales have already been made in all the States save Arkansas, and all the Territories save three. These rods are made of ash and lancewood, and are manufactured at Manchester, Vermont.

**OSTERS IN GREAT BRITAIN.**—Advices from the United Kingdom say that oysters are scarce, bad and highly expensive this season. As they are unusually abundant on this side of the water this season we can supply our Transatlantic cousins with any quantity of bivalves far better than their own waters can ever hope to yield.

—Fish are never found napping, though "rocked in the cradle of the deep."

### SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROT, BISSETT & MALLESON,  
Manufacturers, 65 Fulton Street N. Y.

## The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed; signs of suffering, etc.

### STREET DOGS IN CONSTANTINOPLE.

IT is my private, and therefore my unshakable, opinion, that, whatever anybody else says, the street dogs of Constantinople, in spite of the natural benevolence and chronic alms giving of the true Mussulman character, do not fare sumptuously every day, for I saw four street dogs make a simple, hearty meal on the remains of an old beaver hat. I do not mean to say that the street dogs of Constantinople live on nothing but old hats. On the contrary, I have intimate reasons for knowing that they live on dead cats, dead pashas, dead horses, dead asses, melon rinds, water skins, old saddles, shreds of ribbons, and nut shells. Have I not sat down and watched their frugal meal with the interest of a brother a thousand times? Have they not, like poor relations and friends, snapped at my legs on a dozen occasions? Have I not taken up my stick at last and drubbed them until I was weary, just to show that I really loved them?

I think that, striking an average, the more retired and short streets of Byzantium would furnish in the dog days, let us say, about from seven to nine dogs to the great unpaid dog army of Constantinople. Now, you must not run away with the notion that the pariah dogs, perhaps of good lineage, are mean, ugly, or debased in face or bearing. Not they. They may not be as bold and chivalrous as the shaggy Newfoundland; as lithe and crescent as that shivering exile, the Italian greyhound; as droll and muffy as the Skye; as sturdy and sagacious as the pointer; as vivacious and hearty as the smooth terrier, or as dogged as the bulldog, that most costermongery and blood-thirsty of our four-footed favorites. They are not very thoroughbred, though they do keep to themselves, and are as strict as gypsies about losing cast and position by lowering marriages, or even civic alliances. They are not ridiculously small-eared or large-thighed, or large-jawed; their hands and feet are not aristocratically too small for any honest use, but they are just such downright brave, sharp-teethed, strong-backed dogs as the Great Shaper first made and Adam first named in that most fruitful of languages—the Hebrew—the dodger, *i. e.*, wise animal, from whence, as Mr. Trenchant tells us, came the Venetian word "Doge," quasi "master spirit," *i. e.*, wise being, from whence is deduced, or dragged, the degraded slang word, "dodger," or "knowing one."

It is observed that, while the dogs in the quieter and more lonely streets on the tops of the Seven Hills toward the ruined walls were sullen, ascetic, fierce, shy and cynical, the dogs of the busier streets near the Bosphorus and down by the Scagli, or the bazars, were slinking, meim, timid and cowardly. Philosophy soon discovers the reason. In the quiet streets these dogs prowl and scavenger, and do the strolling, unpaid sanitary commissioner, and are the terror of Turkish urchins, and the dread of gossiping servants at garden doors; but nearer the busy haunts of men these same dogs become so kicked and drubbed and driven and "chivied" (for you cannot beat a London thief epithet for persecution), that they get quite broken-hearted, and, laying down abjectly all pretensions to savage freedom, become acknowledged and branded pariahs, rogues and vagabonds, servants of the public, doing willingly the meanest chores, yet as terribly worried in return as any unpopular cabinet minister; so that, while when alone in the higher streets, it is possible that you may be followed by a growing train of dogs, who, in time, will gather courage and fall on you, leaving for all we know, nothing but your shirt buttons, which they will spit out like cherry stones, according to the precedent of the unhappy sausage-maker? so, in other streets, it is nothing all day but one incessant charging out of protesting shop men from doorways, stick in hand, a shower of blows and a scattering away, ending with a growling howl (dismal to hear) that lasts sometimes a good five minutes.

But to describe our friend, "*Canis erraticus*," as Maler would call him. He is a fine made animal, nearly as large as a retriever, but occasionally sinking to the smaller foxhound size. He is generally of a ruddy brown or rufous color, now deepening almost to black, now lightening to the pale brown of a rather underdone ginger biscuit. His tail is nothing particular, but his head is well made and sagacious; his eyes are bright, wary and untamed; his teeth generally large, white, and singularly strong and sharp. As for the old legend of the necessity of going armed with a perpetual stick, it is now at least sheer nonsense. Except at night, when the unlighted streets are dangerous, the dogs will never touch you. Stopping for a stone, except in rare cases, would frighten a dozen; and so well is this known in Stamboul, that it is a common saying among the turbaned true believers, that no Turkish dog will stay in a mosque, because they always mistake the stooping and bowing men for vindictive enemies bending for stones to pelt them with. The Greeks have the same legend, which is more noteworthy there where the shepherds' dogs rush, like open-mouthed and hungry lions, upon every traveler that passes them, be he wise or simple.

It was the second week or so of my acquaintance with Constantinople that I saw the wild dog in his fiercest and most historic aspect. Almost the first thing the Anglo Saxon traveller visits is the Florence Nightengale's Hospital, over in Scutari. It is still called "Florence Nightengale's Hospital," and always will be called so in memory of that brave lady, though it is now truly returned to its old uses, and is again a barracks for dirty Turkish soldiers. I had done the proper thing—that is, had taken a caïque on the wooden bridge, skipping gingerly along its sharp, narrow, covered end, knowing that one inch awry I should be in the water. I reached my seat, and then letting ourselves gently drop into the *seri* of well or "crade," as the boatmen called it, snuggled myself comfortably into the cushion-lined box and called out in Turkish: "To the Scutari Barracks (*Yakakki aghane*). Mr. Boatman," and off we went.

A moment was taken by the stalwart boatman to adjust his oars, by a greased leather loop, to the rowlock pegs; then, poising the curious oars, the upper parts of which are as large and oval as small skittle pins, he flew over the blue Bosphorus with me, bearing straight to the cliff on whose top the English tombstones shine like beacons.

In due time that half mile or so of blue water was passed by the silk-shirted Palinurus, and, paying him so many great copper piastres, I leaped on the little plank jetty, where were found some Turkish boys watching a stalwart black diving. Asking them my way, and so learning it, I scrambled across the grooved sloping tramway of a caïque builders, and made along the narrow strip of shore that underlies the crumbling earth-cliffs of Scutari—the barrack side of the town. It was delicate walking, for the earth sloped very close to the black, shellless pebbles of the beach, and the miserly water washed high up to mock the boulders and colored stones and drag them back to submarine.

The walk was pleasant, on one side, because I could see the city gleaming in the distance, and the breath of the sea was bracing and fresh in that torrid climate; but on the other land it was not pleasant, for here and there a sluggish black stream trekked down the cliff, or poured through some self-worn channel, in a way that would have made the Thames, the grandmother of all sewers, past, present and to come, burst its banks with envy.

I was trying to quiet the scruples of my offended nose, and was wondering what strangled pashas and headless wives might not, fifty years ago, have been washed up on this noisome shore, where nothing but the wild barren ground grew and where the ground was strewn with dead starfish, when my eyes, looking upward from the beach, ran twenty yards off, and there fell, with alarm and horror, upon the carcass of a dead horse upon which a band of wild dogs were feeding as busily as aldermen at a charity dinner on a haunch of venison. They were tugging, and peeling, and riving, as energetically as lawyers on Chancery property, unanimous as swindling directors, silent as gluttings at a feast. They scarcely looked up to see who was coming; poachers and wreckers work not so industriously. I should have believed that they had not dined for a month before, for they were slaving like shipwrights working overtime the night before a launch. I knew not which dog's energy most to admire: whether he of the tanning, or he of the zoological; he of the anatomical, or he of the physiological department. It was a labor of love to them, and they went at it tooth and nail.

Some of the wretches were nuzzling their gory heads in the scooped-out stomach; others were tugging angrily at the crimsoning main, to get at the choicer morsels beneath. Others were stripping up the hide over flank and thigh with loathsome dexterity, and a few of the more timid, frightened by warning bites, and scared by ominous growls, were digging their sharp and hungry teeth into the distant logs and the long sinewy neck. The carrion-vulture gorging himself on a dead, swollen ox, is horrible to see, but this cried out to me: "You infidels, you are in a new country where life has no high value, and where death has new terrors." Making a long detour, so as to out-flank this public dinner, I passed on inward and upward to the stony street that leads to the hospital of Florence Nightengale.

Only the next day, as I strolled through an almost disused part of the "*Petit Champ des Morts*," as the French of Pera playfully call the old Turkish burial-ground, through which their chief promenade runs, I looked among the tombs around us, and saw a grave, immediately facing where we stood, that had lately fallen in, just as a badly baked pie might do at the first shivering touch of the knife. As the Turks are not civilized enough yet to boast of resurrection-men, and as their doctors are not so studious of death's secrets as to give even one farthing for dead Turks, whether murdered for the purpose or not, I began to wonder for a moment what had led to this yawning aperture. But, when I instantly remembered that the poor Turks were buried without coffins, only laths or light hoop-wood being placed to keep the earth from pressing uncomfortably on the pale man, I ceased to wonder. The body decays, the earth, unless renewed, falls in; and what leads to this ghastly and alarming accident still more is that the Turks are in the habit of leaving a hole communicating from the body to the upper air. The edge of this tube the sun chaps, and the crack, running downwards at once, levers up the baked clay.

I was turning away, wondering what horror would next meet my eyes in this strange country, when lo! the ground gaped and cracked wider, and from the dark, loathsome little cave toddled upwards, winking to the light, a little wild dog pup, his yellowish hair still almost down, and before I had done wondering at finding the poor man's grave turned into a kennel, up toddled, screeching feebly, yelping, and rolling now and then upon their backs, four others of the same breed, the respected mother of the family refusing to appear, and remaining in her fragrant subterranean drawing room.—*All The Year Around*, Dec. 31, 1859.

BENCH SHOW AT THE PARIS EXPOSITION.—It has been decided by the managers of the Great Exposition to be held in Paris in 1878 to add a dog show to its many other attractions. Dogs are to be divided into six categories; the first to comprise animals used for the protection of human beings and for guarding flocks; the second comprises hunting dogs exclusively; the third, those used to shoot over; the fourth, greyhounds; the fifth, fancy breeds and house dogs; and the sixth, the miscellaneous varieties not included in other classes. The show will open June 30, and last one week, and will be held inside the Exposition building. Entries are to be made at the Ministry of Agriculture and Commerce before the first of April next, and the management, in order to secure regularity and good order, will take upon themselves to feed and look after the animals, for each of which the owner, when he makes his entry, must deposit the sum of twelve francs, or about \$2.32. Entries may be made by mail, and remittances by post-office order, payable to the agent, who will supply the necessary blank forms. For dogs exhibited in lots, however, the entrance fee will be but \$1.16. Exhibitors must pay for the carriage of their dogs to and from the Exposition, but the railway authorities have agreed to convey them at exceptionally low rates. Dogs cannot be removed, unless if ill, until the close of the show, except house dogs, which may be taken away each evening and returned in the morning. A special jury, composed of French and foreign breeders will award the prizes, and this jury will be divided into sections,

no member being allowed to exhibit at the show. The prize list is as follows:

In each of the four first classes there will be given a champion prize for the best dog in each, and there will also be sixty gold, seventy silver, and one hundred and twenty-five bronze medals for distribution in the six divisions. There will also be given in the three first classes, a money prize of 100f. (\$19.30) with each gold medal; a sum of 75f. (\$14.45) with each silver medal, and 50f. (\$9.65) with each bronze medal.

We trust that American dogs will be represented at the Great Exposition, and feel confident that some of our native setters will reflect credit upon their masters and themselves. Certainly no better opportunity can be offered for the exhibition of native stock.

DOG DROWNING A CAT.—G. G. in writing to the *Land and Water* relates the following somewhat curious occurrence, which took place at Morebattie, a village near Jedburgh, in Roxburghshire: "A pup of the collie breed, about four months old, belonging to Alexander Woodcock, shepherd at Morebattie Tofts, was the other day observed to watch closely the drowning of a cat belonging to its master, in the water of Kale, which runs close to the shepherd's door. Woodcock is also possessed of a kitten with which this young collie is in the habit of romping. Shortly after the drowning of the cat, somehow or other the collie, feeling aggravated at the kitten scratching him, lifted it in his mouth, walked down to the little wooden bridge that spans the water, and quietly dropped the kitten in, just in the same way as he had seen his master disposing of the cat, thus showing that the drowning scene had made a deep, if not a lasting, impression on the dog's mind. At first sight this circumstance would certainly seem an extraordinary instance of imitative qualities in the dog in question. Puppies when being broken are taught their duties the more easily when they have an old dog to aid in the lesson; from the very outset they will almost invariably imitate his actions. Even if there is no old dog for them to imitate, puppies will imitate the actions of their master, and this is particularly observable in teaching a young dog to go "seek," when he observes by his master's action that the latter is searching for something he will often rather than join in the search. It may be in the present case that the pup saw his master drown one kitten, and imitated him by dropping the remaining one off the bridge in the same way. It seems more probable, however, that it was by mere chance the pup dropped the kitten into the water, as it is a very common thing for young dogs to take kittens up in their mouths and carry them even a distance of several yards in play and drop them.

TENNESSEE FIELD TRIALS.—The programme of the field trials is as follows:

Monday, November 12, 1877.—Puppy stakes (for pointers and setters under 18 months), \$800, to be paid in prizes of \$150, \$100 and \$50 respectively. Mr. H. C. Pritchett gives \$25 in gold to the trainer of the best trained pup in this stake. Entrance \$15, to close November 1st, with \$10 forfeit.

Tuesday, November 13, 1877.—Champion stakes (open to all), \$500, to be paid in prizes of \$250, \$150 and \$100. Mr. V. L. Kirkman gives \$25 in gold to the trainer of the best trained dog or bitch in this stake. Entrance \$25, to close November 1st, with \$10 forfeit.

Wednesday, November 14, 1877.—The Dupont Powder Company's stake, \$250, for braces. (Open to all—a brace may be owned and hunted by two persons.) The prizes are \$150, \$75 and \$25. Mr. J. F. Nicholson gives \$25 in gold to the trainer of the best trained brace in this stake. Entrance \$25, to close November 1st, with \$10 forfeit.

Same day.—St. Louis Kennel Club stake, \$50 silver cup. For puppies under 12 months. Entrance \$5, to close November 1st, \$2.50 forfeit. All races will be on quail.

—There is much excitement at Wallingford, Conn., over hydrophobia. Several dogs and a number of cattle have been bitten by a rabid dog, and it is feared that there may be some human victim.

DOLLY AND BEAUTY.—E. F. Mercillott has sold to Mr. Wm. Marsh and to Ogden Wood, Esq., the artist, two puppies by Morris's Pete, of N. J., out of Grace, first prize winner at N. Y. Bench Show, she by owner's Pet.

—Chas. Trantor's red Irish setter bitch Bess whelped ten pups—eight dogs and two bitches, out of imported Joe, by (Jack).

TENNESSEE.—Cash premiums amounting to \$2,330 are offered for the shooting tournament which is to be held in connection with the Field Trials at Nashville, Nov. 15th, 16th and 17th. We shall print full particulars next week.

NO NAME GIVEN.—The plant sent last week is *Dulichium spathaceum*, a curious Cyperaceous plant, and a native of this country. Please state in future where collected.

NAME CLAIMED.—F. A. Cary, of Princeton, N. J., claims for his red Gordon setter, out of Scott, Rodman's kennel, the name of Guy Manning, Junior.

EGG SUCKERS.—Here is another recipe from a correspondent:

EDITOR FOREST AND STREAM:

I completely cured an egg-sucking dog with the following recipe: Having blown an egg, I filled the shell with mustard, red pepper and enough vinegar to make the mess quite mild; then putting the egg in the dog's mouth, I crushed it there by closing the jaws. I held the mouth closed as long as the violent struggles of the animal would permit, and a turtur "Monkey" would fairly run from the sight of an egg.

NORFOLK, Va., Oct. 3, 1877.

W. B. TAYLOR.

## Game Bag and Gun.

## GAME IN SEASON IN OCTOBER.

|   |   |
|---|---|
| Moos Alceste, machia.                     | Red Deer, <i>Capreolus virginianus</i> .    |
| Elk or wapiti, <i>Cervus canadensis</i> . | Squirrels, red, black and gray.             |
| Hares, brown and gray.                    | Quail, <i>Oxyechus virginianus</i> .        |
| Wild turkey, <i>Meleagris gallopavo</i> . | Pinnated grouse, <i>Carpodacus</i> .        |
| Woodcock, <i>Philohela minor</i> .        | Crow, <i>Corvus americanus</i> .            |
| Ruffed grouse, <i>Bonasa umbellus</i> .   | Sandpipers, <i>Tringa</i> .                 |
| Plover, <i>Charadrius</i> .               | Willetts.                                   |
| Gadwall, <i>Anas boschas</i> .            | Red or Rice Birds, <i>Dolichonyx oriz</i> . |
| Rails, <i>Rallus virginianus</i> .        | Wild Duck.                                  |
| Snip and Bay Birds.                       |   |
| Cariboo, <i>Tarandus rangifer</i> .       |   |

"Bay birds" generally, including various species of plover, sand-piper, snipe, curlew, oystercatcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limosa* of Shore Birds.

The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

| States    | Pinnated Grouse. | Ruffed Grouse. | Quail.         | Woodcock.       |
|-----------|------------------|----------------|----------------|-----------------|
| Ill.....  | Sep 1 to Jan 15  | Oct 1 to Feb 1 | Nov 1 to Feb 1 | Sep 1 to Jan 15 |
| Ind.....  | Oct 1 to Jan 15  | Nov 1 to Jan 1 | Nov 1 to Jan 1 | July 1 to Jan 1 |
| Iowa..... | Aug 15 to Dec 1  | Sep 1 to Dec 1 | Oct 1 to Jan 1 | July 1 to Jan 1 |
| Min.....  | Aug 14 to Oct 1  | Sep 1 to Dec 1 | Oct 1 to Jan 1 | July 1 to Jan 1 |
| Wis.....  | Aug 15 to Nov 1  | Sep 1 to Jan 1 | Sep 1 to Jan 1 | July 1 to Nov 1 |
| Neb.....  | No Shooting      | No Shooting    | No Shooting    | No Restrictions |
| Kans..... | Aug 1 to Feb 1   | Oct 1 to Jan 1 | Oct 1 to Jan 1 | No Restrictions |

MASSACHUSETTS.—Salem, Oct. 19.—Since my last there has been a fair sprinkling of luck in getting the various kinds of fall game now in season. Two or three fair bags of snipe (for this section) have been made, also some woodcock, with a few black ducks, squirrels, etc. Proctor, of Swampscott, shot nine coots off Tinker's Island one A. M. last week. Some geese have been flying. There ought to be some "winters," yet to come, and some late grassbirds, both *A. maculata* and *P. americana*. Weather cold and raw now, with N. E. wind and a heavy sea in the bay. I recently viewed two fine setter pups at the Stetson farm, Swampscott. They are beauties.

TEAL.

Spencer, Oct. 20.—The Sportsman's Club have elected the following officers for the ensuing year: Pres., E. M. Bliss; Vice-Pres., L. M. French; Sec. and Treas., A. W. Curtis; Executive Committee, F. N. Prouty, C. A. Chapman and D. C. Luther. The club has accepted an invitation to participate in the glass ball shoot at Worcester, Saturday.

NEW YORK.—Shooting about Rochester.—The Express sums up the fall bird shooting in the vicinity of that city. Snipe and woodcock are not so abundant as usual this season. Partridges are found in fair numbers, and good bags reward the sportsman. There is a noticeable scarcity of plover, ducks, pigeons and quail.

NEW YORK.—Schenectady, Oct. 20.—Shooting is better in this vicinity than before for years. Partridges, gray squirrels and rabbits are very plenty. Chas. W. Haverly has come in with fine bags this week. Parties have had fine sport coon hunting this fall. They have been quite plenty. Red squirrels and woodcock very scarce.

C. W.

Ithaca, Oct. 22.—Quite a number of large flocks of ducks have made their appearance at this end of the lake within the past two or three days.

SENDOA.

Long Island.—Atlanticville, Oct. 22.—The broad-bill begin to make good shooting in Shinnecock Bay, and as there is plenty of feed in this end of the bay we are expecting fine sport. Probably before this is perused by the readers of your valuable paper many birds will have succumbed to a steady hand and straight eye. The largest bag I have heard of was thirty-nine, all killed by one man, a neighbor of mine.

W. F. HALSEY.

—The next meet of the Queens County hunt will be on Saturday, Oct. 27, at Newcastle Wood.

NEW JERSEY.—Bergen Point, Oct. 20.—Ten gentlemen have organized the "Bergen Point Amateur Gun Club;" they have purchased a Bogardus trap. Mr. C. H. Davis is President.

Dover, Oct. 19.—Ruffed grouse are numerous in the vicinity.

J. L. D.

PENNSYLVANIA.—Delanco, Oct. 23.—This morning I saw quite a variety of ducks, including black duck, gray duck, teal, widgeon and divers. I captured two black ducks and a widgeon. Rail birds very scarce; quite a number of gray snipe have been shot on the meadows the last few days. Any one desiring boats for fishing and gunning and full information should address George Hartley, this place.

RAIL.

Tionesta, Oct. 19.—Ruffed grouse are rather scarce in the immediate neighborhood, but out six or eight miles from town sportsmen report them abundant.

KENTUCKY.—Louisville, Oct. 22.—Quail shooting is the sport at present, and a great number of hunters are out.

MICHIGAN.—Bay City, Oct. 21.—Have just returned from camp, a hundred miles north of here. Our party had eminent success, bagging twenty-three deer in a fortnight.

D. H. FRITZGUTH.

OHIO.—Carrollton, Oct. 20.—We have very fine grouse shooting here this season. Quail in abundance, also some woodcock. I was out shooting on the 18th, and bagged nine woodcock and two grouse.

M. STOCKTON.

TENNESSEE.—Huntingdon, Oct. 18.—There are now immense numbers of squirrels in particular localities in Carroll County, confined principally to the bottoms, where hickory nuts are abundant. If they are on the move I cannot ascertain in which direction they are going; but they are moving, as hundreds are killed in the same place. With an ordinary hunter the average bag per day is from twenty-five to thirty. First mallards seen in a mill pond on the 16th inst. by Scott Bennett. No wild pigeons in the woods here as yet.

L. L. H.

FLORIDA.—New Smyrna, Oct. 18.—Sportsmen will have grand sport here this winter. Deer and bears are very plenty. A neighbor counted fifty quails in one flock in his garden. Turkeys are also seen, and many signs of them. The writer stepped out about half a mile from his office and succeeded in stalling and killing a very large doe which had ventured too near. Morrison Lewis killed two turkeys recently.

STAR.

MISSISSIPPI.—Natchez, Oct. 15.—For some time past but little interest in the sports of the field has been manifest in this county, but there has been a revival among the lovers of legitimate sport which has resulted in the organization of the Gaillard Sporting Club. Although our game law expires 15th Sept., it is too warm to hunt the partridge or other game, so our season does not really begin until a month later. Game in abundance this year; wild fowl can now be seen on the bars of the Mississippi River. It is early for this game to put in an appearance.

W. D. J.

TEXAS.—Galveston, Oct. 19.—Our sportsmen are making good bags. Teal and grayback are arriving in good numbers and a stiff norther will make decoy shooting good on the island. I have seen a few Wilson snipe, but not enough to hunt such an uncertain game yet.

B. R. B.

WISCONSIN.—Puckaway, Oct. 20.—The shooting is very fine and improving.

SKIP.

KANSAS.—Independence, Oct. 18.—A large hunting party for the capture of all kinds of game is being organized here. A like enterprise is on foot at Lee's Summit.

CALIFORNIA.—Chico, Oct. 10.—Gen. Bidwell shot a black rabbit here the other day. The skin has been preserved.

CANADA.—Magog, P. Q.—Partridges are plenty, but very wild, and as the foliage is very thick, it is hard to get at the birds.

IMPERVIOUS SHELLS.—The following information is cheerfully published:

U. S. S. SARATOGA, HAMPTON ROADS, Va.,  
October 19, 1877.

EDITOR FOREST AND STREAM:

Having seen a good deal of discussion in different papers about the relative merits of Ely's and American made paper shells for shot guns, I wish to state that about a week ago, while shooting "sora," or "ortolans," on some flats near the Dismal Swamp, the boat I was in sunk and carried about seventy-five loaded shells, among other things, to the bottom. These shells were about one-half each kind, Ely's and the St. Louis conical base shell. On raising the boat and getting the ammunition out of the water, they all appeared about equally soaked, but after thoroughly drying them, the American shells fitted the gun perfectly, with the exception of one that happened to be crushed, while of the Ely's about one-half had absorbed so much water and altered so much in shape that it was impossible to do anything with them.

This I regard a fair test. So much for the relative merits.

Yours sincerely,

E. J. ARTHUR, Lieutenant U. S. Navy.

A DISASTROUS BUFFALO HUNT.—The Independence (Kan.) courts have just acquitted of the charge of horse stealing a young English aristocrat, whose appearance in the prisoner's dock was due to this extraordinary chain of circumstances: Last spring Norman Francis Bennett, Esq., one of the landed gentry of England, having read of the hunting exploits of Grand Duke Alexis, Buffalo Bill and other Nimrods, arrived in this country. Supposing Kansas City to be in the centre of the buffalo country, he proceeded thither, and providing himself with all the hunting paraphernalia, he selected a wild Texas mustang and went forth. Before going two squares the broncho had bucked him twice, and upon reaching the public square positively refused to go further. Selling the animal in disgust, the young hunter then hired a lively horse, and proceeded on his way. It is needless to say he saw no buffaloes, but wandered on in search of ducks. His horse falling lame and darkness coming on, he kindled a fire by the wayside and went to sleep, only to be awakened by a man's knee on his chest and hand on his throat. Robbed and pitched headlong down a declivity he lay for a long time unconscious. The next morning he went on, and the day following arrived at St. Joseph, where a new misfortune awaited him. The irate livery man here overtook him, and despite his protestations of innocence, the Englishman was lodged in jail on a charge of horse stealing. There he has remained until his trial the other day. Through the whole train of his misfortunes he has won favor everywhere, and while cooped up among the vilest criminals never lost the bearing of a true gentleman, and endured his confinement and trial with true bulldog grit. But "when the foreman arose and announced that the jury had decided upon a verdict of 'Not guilty,' the young tourist's nerve gave way. Tears came to his eyes, and as he rose from the prisoner's dock the tears rolled down his cheeks. He walked to the juryman, shaking each by the hand, remarking: 'I knew I was not a thief. I scorn a thief, and I knew you would prove me to be an honest man.'

It is certainly very strange and little to their credit that the many professed friends whom Bennett made in Kansas City should have allowed him to start out on any such wild chase.

CONVERTING MUZZLE-LOADERS.—In the FOREST AND STREAM of October 4th, Mr. R. C. Ducaigne informs us that muzzle-loaders cannot be converted to breech-loaders with any degree of satisfaction. I beg leave to differ, and will try to explain how it is done:

First, remove the breeches, and separate the barrels; solder on the lugs, and bore out the breeches for shells. Saw off the fore-end of the stock, and fit a breech piece of the preferred pattern, fasten in place, fit locks, then the barrels to breech piece. Now, cut the fore-end to proper length, fit fore-end to it, rebore barrels, and you have a breech-loader equal in all respects to a new one, and of nearly the same weight.

We have reduced the barrels by boring for shells, but have soldered more metal in the shape of lugs and under plates. If the work is done by a good mechanic, it will stand as heavy charges as when a muzzle-loader. I know of an old London flint-lock double gun that has been converted first into a percussion lock, then a pin-fire breech-loader, and to day is a top-snap, central fire breech-loader. The grandson of the maker of this gun is still in the trade, but he cannot turn out better work than is seen on this gun, nor one capable of doing better execution. My advice to those who own good muzzle-loaders is, to convert them, and thus retain an old and tried friend.

B. R. B.

HUNTING IN PALACE CARS.—It will be remembered that in his Stray Notes from Minnesota Mr. Hallock speaks of meeting a hunting party composed of Capt. Chas. A. Messier and Fitz Matthews, late of the British Army, and Messrs. Jerome Marble and C. C. Houghton, of Worcester, Mass. Their movements beyond Brainerd are mentioned in the Bismarck (D. T.) Tribune, at which place the party arrived Oct. 14: They left Brainerd on Sept. 10th, and have been working this way, shooting ducks, geese, chickens and plover. They stopped at Crystal Springs for two weeks and had a rare good time around there. This is the third season these gentlemen have been out here. They hunt in style, or rather under circumstances more convenient than the average hunter enjoys. They have chartered two cars. One of them is divided into kitchen, dining-room and drawing-room, with the usual palace

car berths in the same car. The other is devoted to the four hunting dogs, a supply store and game depot and sleeping room for one of the party. Accompanying the gentlemen are Mrs. Jerome Marble and two daughters and Mrs. Houghton and daughter. They enjoy life on the track. The gentlemen expect a week's hunt in this vicinity with officers of Fort Lincoln.

The party have killed 1,200 birds. While here they will go down toward Fort Rice and bring down a few deer and elk. They will keep up their sport until snow begins to fly.

A BIG HUNT.—The Raleigh (N. C.) Observer comes to the front with a long story of a man who started out with one bullet in his rifle, missed the buck at which he shot, but with the one bullet killed two deer he had not seen; on the way home flushed a flock of turkeys, constructed a blind on the spot, called a gobbler up within three feet, and then jumping out with a yell, petrified the bird with terror and captured it alive. Then encountered a flock of partridges who attacked him, and were slain one by one at the point of the ramrod. The Observer not only prints this tale, but has a man who will vouch for it.

## PIGEON MATCHES.

KANSAS.—Rosedale, Oct. 13.—Team match between Protective and Invincible Clubs; 10 glass balls each.

| PROTECTIVES.                    | INVINCIBLES.                    |

A B Wa-kom (Second prize, \$5).....1 0 1 0 3  
W B Winston.....1 0 1 0 2  
N B Murff.....0 0 0 1 2  
On the 11th inst., a pigeon match took place; prizes, \$20 and \$10; 8 birds each, 25 yards rise, 80 yards boundary; ground traps. Stuart, 1st prize, with 5 out of 7; Haggard, second, with 4 out of 8. The winners of both prizes shot with very light 12-gauge (choke-bored) breech-loaders, made for them by Geo. Gibbs, of Bristol, England. VEXATOR.

Wordsworth says, with poetic fervor, that heaven lies about us in our infancy. This depends largely on conditions. Among others, it has something to do with such things as soap. Parents who wish to brighten the paths of their children through infancy and upward, hereafter will use B. T. Babbit's Toilet Soap, than which chemical art can reach no other product. It is pure, sweet and emollient, and soon becomes an indispensable adjunct to toilet and bath.—[Adc.]

## Answers to Correspondents.

No Notice Taken of Anonymous Communications.

—A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

SUBSCRIBER, Norfolk, Va.—See answer to Tyler.

JACOB CURLEW, Brooklyn.—See notice at head of answers to correspondents.

A MODEL CAMP.—Will the author of "Reminiscences of Camp Life" kindly send us his address, which has been lost?

HORACE W., Clyde, Mich.—What is the fastest pacing in harness on record? Ans. By Switzer at Cleveland, Oct. 3, 1877, time 2:16 and 2:16 1/4.

C. L. P., Port Henry, N. Y.—Can you furnish Frank Schley's book on "Partridge and Pheasant Shooting?" Ans. Yes, we have them for sale; price \$2.

R. W. C., Vineyard Haven.—Can you inform me where I can purchase a pair of beagles for rabbit shooting, male and female? Ans. See advertising columns.

SPORTSMAN, Potomac, Pa.—Please inform me where the Newcastle chilled shot are made and where they can be bought? Ans. Bought at H. C. Squires, No 1 Cortlandt st. Made at Newcastle on the Tyne, England.

L. Munsfield, Pa.—1. In your table of charges for shot guns in the "Gazetteer" you say 1-1/2 oz. for No. 12. Is that correct? 2. Which is the best for hunting through briars, Spanish needle or duck, fustian, or corduroy? Ans. 1. Yes. 2. Either are good, but corduroy is generally preferred.

O. C. S., Meadville, Pa.—1. Does Bogardus use metallic shells in any of his matches? 2. Will they shoot as well as paper shells? Ans. 1. Yes. 2. Yes. 3. There is no difficulty with the wad if a proper size is used.

H. J. C., Milton, Pa.—1. Please inform me where I can purchase "The Leaf of Life, or Life Plant"? 2. What is the reputation of J. F. Marsers, 125 Nassau St., New York city? Ans. W. J. Davidson, 285 Fulton st., Brooklyn. 2. Good, to the best of our knowledge.

BUTLER, Pittsfield, Mass.—I will esteem it as an especial favor if you will give me the address of C. W. B., of Westboro, Mass., who inquires in this week's issue in your Answers to Correspondents about the Resignation region as a trapping country. Ans. Address not kept.

L. F. N.—Does the Remington Co. make a "sight case" similar to that which the Sharps Co. furnish with their Creedmoor guns? Where can I get one, either Sharps' or Remington's; and what is the price? Ans. All dealers in firearms have them. They are made by a firm in Newark, N. J.

R. D. N., Hallfax, N. S.—Would you kindly recommend me to some one of whom I could obtain a pug puppy; and also inform me about what price would be asked for a good one? Ans. We know of no one on this side of the water. Apply to Mr. Rotherham, Royal Surgery, 55 S. Moulton St., London, England.

C. X., Millersburg, Pa.—I have a bitch which a week or so ago came in heat. I sent her away to a dog, when she utterly refused his attentions. All devices proved useless. Ans. If you stop and reason, you will see nothing strange in this. We cannot enter into fuller explanations in our columns. Try another dog.

D. C. B., Keosauqua, Iowa.—Will cocker spaniels make good turkey, ruffed grouse and squirrel dogs? If not what breed of dogs (other than curs) will train best for such purposes? Ans. A small cur is the best dog for squirrels. Either cockers or clumbers when properly broken are good dogs for ruffed grouse and turkeys.

RUSTICUS BRUNSEN, Providence, R. I.—1. With how much advantage can an 8½ pound, 12 bore, breech-loading shot gun be used in duck shooting? 2. State the proper charge to use with such a gun in duck shooting? Ans. 1. With good 4½ drs. in the hands of a good man, and when properly loaded. 2. 4 to 4½ drs. powder, 1½ oz. shot.

W. J. O., Statesville, N. C.—What is the proper load for a breech loader (12 gauge, 31 inch barrels, 7½ lbs. weight) as to powder, and different sizes of shot? Should both powder and shot be tightly rammed? Ans. Size of shot makes no difference as to drs. of powder used. Powder should be tightly rammed. Ramming shot makes it scatter. The gun shoots closer with loose wad.

S. T. G., Mount Airy.—This Fall I intend to go ducking in Maryland, and I have a breech-loading Dean gun, No. 13 bore, 33 inch barrels and weight 8 pounds. I would like to know the proper load of powder? also, what number of shot, and how much, for ducks and geese? Ans. If your gun is properly bored and well-proportioned, especially at breech, 4 drs. powder and 1 ounce No. 4 shot will be the proper load.

W. H. W., Brockton, Mass.—Supposing that a rifle is shot at and at the same instant that the ball leaves the muzzle you drop one from the muzzle to the ground which ball reaches the ground first? Ans. If the rifle be shot horizontally both balls will fall to the ground at the same time; but if it be elevated the ball left will strike first, but the difference of time will be very small and not appreciable unless the elevation be considerable.

T. W., Leesburg, Va.—What is the supposed advantage in an hexagonal bamboo rod? Ans. The old story of the bundle of twigs mechanically considered. Is easier to break four strips than six. Besides, the angles make the rod stiffer. Again, it is easier to work clear narrow pieces than wider ones out of the same cane. The plth is also more thoroughly removed from the enamel. A rod maker may give you other good reasons.

H. W. S., South Haven, Mich.—Can you tell me of some party in Lake Co., or near there on one of the railroads who could furnish me board and a guide for a few days in a locality where deer are plenty? Ans. Go to Baldwin on the line of Flint and Pere Marquette railroad. Hotel and private board \$1 per day; guide \$1.50, teams \$2.50. Bears and deer in abundance, fish in lakes, country level and well timbered with excellent camping grounds.

J. V. A., Newburgh, N. Y.—1. What dog would you advise me to use for general purposes in Orange Co., a setter or a spaniel? 2. Can you give me a remedy to apply immediately upon a dog being bitten by a poisonous snake? 3. To whom can I subscribe for *Le Chasse Illustré*? 4. When do snakes retire to winter quarters? Ans. 1. Setter. 2. Make him swallow large and repeated doses of olive oil or whiskey. Rub mercurial ointment into the bitten part. 3. 56 Rue Jacob, Paris, France. 4. When winter comes.

DICK, Rochester, N. Y.—Please give a recipe for staining black walnut a darker color so that it will admit of polishing. Also a good way to get a lasting polish. What is the price of Thomson's new hunting boot? Ans. Black walnut needs no stain to make darker, a wood filling is all that is necessary. You probably have buttennut instead of walnut. The following makes a very nice lasting polish: Shellac 9 parts, gum mastiche 3 parts, sandrach 2 parts, alcohol 120 parts. Thomson's boots, \$7 50, we believe.

A. E. L., Natchitoches, La.—Please let me know what quantity of powder and No. 4 shot will require to load a breech-loading shot-gun, 12 gauge, for duck shooting? Also, will cleaning a gun every time after shooting (say twice a week) with tepid water injure it? Ans. To have the gun work pleasantly the load will vary according to weight of game. For an 8 lb. 12 gauge, medium weight at breech, 4 drs. powder, 1 oz. shot. Washing twice a day will not injure your gun if properly dried and oiled afterward. Always clean after each using.

NATURALIST, Halifax, N. S.—Can the pupae of the elephant moth be reared successfully? Ans. Yes, the pupae of the large elephant hawk-moth (*Chororampa elyensis*) may be raised by placing them in a shallow box on a thick layer of light moss, and covering with a thin layer of the same, putting over the whole a layer of moss, which must be slightly dampened once in two weeks or so. Put the box in any out-building, and leave the pupae alone; the moths will come out early next summer. The female pupae are larger and more bulky than the male.

T. M. B., Mount Airy, N. C.—Please inform me if you know anything of the three barrel breech-loading gun—two shot and one rifle barrel. Do they give satisfaction, and are they good for small game, and do they shoot well? Are they complicated and liable to get out of repair sooner than any other gun? Ans. We are acquainted with the Baker three-barrel gun, manufactured in Syracuse, and have always taken pleasure in recommending it for long campaigns. It is just the thing for Florida, Wisconsin and the middle tier of the Western States. The shot barrels are on top and the rifle underneath. See advertisement in our columns. Another three-barrel gun is made by B. E. Miller, of Cortland, New York, who recently commenced the manufacture. The rifle barrel is on top. We know nothing of these guns except what we have learned by circular. We do not object to a combination gun if properly made. They can be made as safe as any other gun.

NEOPHYTE, Brooklyn.—Please tell me what is the usual price asked for loading paper shells? Is \$5 too much? Ans. Depends upon the quality of shell, and quantity and quality of ammunition used. The price ranges from \$3.50 to \$5 per hundred. Marsters, 55 Court St., Brooklyn, and 125 Nassau st., New York, advertises to load shells at \$4 per hundred, which is reasonable average, and his work, we believe, is carefully done.

FLEET, New York.—Please inform one of your readers if there is any difference between a porgie and a moss bunker, or if they are of the same species of fish. Ans. The porgie is quite different from the menhaden. It belongs to the family of *Sparidae*, or sheepsheads, the latter to the *Scorpaenidae* or mackerel. Moss bunkers, or menhaden, are not much eaten, being too fat.

C. S. S., Cincinnati.—As I expect to go hunting and fishing along the Miami, please tell me the best bait for the California salmon. Do you know any gunmaker by the name of Sutherland? Ans. You will not be permitted to take salmon this year. You would have to experiment to ascertain about the bait. There is such a gunmaker as Sutherland, but we cannot place his residence at this moment.

SUNSHINE, Sterling Run, Pa.—In shooting on the wing should the gun be thrown to the level on which the bird is flying and then swing at the shoulder and follow the bird until the gun comes flush ahead of the bird and then discharged? Or should the gun be thrown equally up and just ahead of bird and discharged as the bird is coming before the gun? The gun not to swing sidewise at all. Ans. It is a matter of opinion. Some prefer one way, some another. Personally we follow Bogardus' rule if allowing the gun to swing at the shoulder.

H. D. LUTCHMAN, Versailles.—1. Is the Fenner boat safe and will it answer the purpose for Florida, or is there any better portable boat? 2. What is the best place in Florida for an ornithologist not too far south? How is Homosassa and what accommodation in Charlotte Harbor? 3. Who has the Tolley gun for sale? Ans. 1. It is safe, but the Bond boat is better for Florida. 2. Ober's bird collection was made chiefly along the Indian River. Homosassa is a good place for salt water species, and so is Egmont Key, on the Gulf. 3. F. W. Jones of *Financial Chronicle*, William street, New York.

E. E. C., Darlington, Md.—1. Is the Winchester rifle, model 1873, suitable for general use in the Northwestern territories? Is it fully powerful enough for bears, buffaloes, elk, etc. 2. Would it do for grizzlies when explosive balls are used? 3. Is the octagon barrel more accurate than the round? 4. Is the Colt 45 and S. & W. No. 3 made of wrought or cast steel barrels? Which is better? Ans. 1. It is very good, but we would prefer one using a larger charge and more effective. 2. No. Would prefer a heavier and crushing ball. 3. Generally better finished. 4. They are wrought and struck up in dies by immense power presses and drops.

TYLER, Norfolk, Va.—Please give a prescription for a setter dog, two years old, troubled with a sore nose. He has, for ten days past, been afflicted with inflamed and swollen nostrils, and has a cracked scab or crust extending around the upper surface of the end of the nose. There are two larger and deeper cracks extending through the scab from the upper inner corner of the nostrils. Sneezes a little. Nostrils slightly more moist than usual, but has no running or discharge from them. Have never seen anything like it before, though accustomed to the care of dogs. Cannot have been caused by pollen of flowers or juice of plants as dog has not been out of the city. Ans. Wash with castile soap and tepid water, and apply a very weak solution of carbolic acid. Examine nostrils and throat, and see if they are inflamed. Write again.

T. H., Williamsport, Pa.—1. Are those sporting dogs advertised in the columns of *FOREST AND STREAM* exactly as represented by advertisers? 2. Is glass-bird shooting as good as bird shooting for learning the art of wing shooting? 3. Will it be of much advantage in wing shooting to practice ball shooting? 4. What is proper load of powder and shot for Parker 10 gauge 50 inch 8½ lbs. for shooting the ball that is size shot? 5. Where and at what time does the New York State Game Association hold next year's convention? 6. Would contributions in regard to game prospects, shooting, fishing, etc., be acceptable from this place to F. and S.? 7. Does Hallowell's "Gazetteer" treat systematically on breaking sporting dogs? Ans. 1. We cannot stand dog-father to our advertisers. 2. Many think so. 3. Yes. 4. 3½ to 4 drs. of powder, 1½ drs. No. 8 or 9 shot. 5. Buffalo, N. Y. in June next. 6. Yes. 7. Most certainly. It is a complete sportsman's cyclopaedia.

FRANK E. W., Pittsburgh, Pa.—1. Why in the name of common sense is it that a gun cannot be bored out in this country so that it will shoot. I had an elegant breech-loader costing \$225 bored, and it is now useless. I have loaded it every imaginable way yet I can do nothing with it. Could you give me some new idea in regard to loading shells. It is an 8½ lb. 12 bore weapon. 2. I own a pointer pup, or rather a two year old dog; he has an exquisite nose, but I cannot get him to stand. He has pointed quail, but I want him to work on ruffed grouse. What must I do to induce him to point? He is willing to do what he can if he only understood what was wanted. I shall get an all-broken dog next season, but I want to use my present dog this time. Ans. You will find several reliable firms advertised in our columns who can probably fix your gun. We should load 4 or 4½ drs. of powder, and 1½ oz. shot. 2. Try the spike collar. Ruffed grouse are bad birds to attempt to work a young dog on.

S. S. H., Elmira.—I wish to ask if "Game in Season in October," as published in your journal, is intended to apply to the State of New York? If so, are you not mistaken in saying that quail are in season this month? I have seen the State law, which reads Nov. 1, so says *Fur, Fin and Feather*. Your journal is considered authority on questions of this kind, and if wrong in this case, has induced several here to shoot quail out of season. Please let me hear from you. Ans. In designating seasonable game we refer to natural seasons without regard to State laws, which vary considerably and create a great deal of confusion. Our journal is not published for the State of New York alone, but for the whole country, and our printed instructions are of as general application as the extended geography of the continent will warrant. Our readers would do well to provide themselves with the laws of their respective States for constant reference. They are all contained in *Fur, Fin and Feather*.

E. J., Corry, Pa.—Will you please prescribe for my pointer dog, age 3 years; am feeding on scraps from table and corn meal mush. The dog appears lively, has good appetite and eats anything given him. Some weeks ago, his coat became a little rough and the skin covered with what appeared to be dandruff, and the hair, in several places, appeared to be slightly raised, as if by small pimples, and would come out easily. He emits an unpleasant smell, especially when heated, and a few days since, a raised blotch, of a pinkish color and about the size of a silver quarter, appeared on the upper part of his tail. A day or two after it appeared, the hair all came off it, and it turned to a bright red and became sore, apparently itching greatly, as the dog was constantly biting and licking it; the sore has now got quite deep and angry-looking. I have another dog, same age and litter as above, which is affected in the same way, except the sore. Ans. Use Juniper Tar Soap (Hazard & Caswell's). Pay strict attention to cleanliness, both of the animal and kennel. Feed no more cornmeal, but use mutton or beef broth and oatmeal. Give plenty of exercise. Six drops of Donovan's solution, three times a day in water, will be a valuable adjunct to the above treatment.

P. B. C.—Please tell me how to use the Dillman Powder? Ans. There is not much difference in the use of this powder from that of common black powder, the whole secret is in large wads and tight-fitting bullets, as the powder needs confinement to perform well. Use precisely the same bulk, or ¾ to ¾ in weight of black powder for rifles, and do not press the powder down with the bullets except in muzzle-loading rifles, when it should always be pressed to the same mark. In breech-loading rifles when the bullet does not fit tight or the shell expands too much after shooting so that the bullet goes in loose, use a large wad on top of powder, or several thin wads, but always so that the powder is not pressed; if pressed the powder does not work accurately; the powder needs confinement, but not pressure in rifles. Rifle powder is lettered P and WFF. Shot-gun powder A, B and CC. Use half in weight of black powder or the same quantity by measure, heaping full. For C powder press the wads down as usual, of B powder give a little more pressure and of A the most. Tap the measure a few times so that the powder may settle even. In 16 bore the rifle powder is more preferable. The A powder can be used in both rifle and shot-gun. Proper charges of this powder are as follows: 16 gauge 2½ drs. by measure; 14 gauge 3 drs. by measure; 12 gauge 3½ drs. by measure; 10 gauge 4½ to 4 drs. by measure; 8 gauge 4 to 5 drs. by measure.

## TO SPORTSMEN AND DEALERS IN SHOT.

At the Convention held at Batavia, N. Y., June, 1873, by the "N. Y. State Sportsmen's Association," a standard of sizes (diameters) for shot was adopted, to be known as the "American Standard," commencing with No. 12, to measure 5-100 of an inch, and each size increasing 1-100 of an inch to the largest. The object of their action was to induce all manufacturers to conform to that standard, so that a certain number shot mean the same size throughout the country. There was no particular brand of shot adopted, but by so doing, the very object in view would have been defeated. Without experimental test, it was assumed that the several diameters of shot would require a certain number of pellets of each diameter to make an ounce avoirdupois. Upon a careful calculation by a competent mathematician, we found that these assumed numbers were incorrect, and that if we adopted the diameters we could not adopt the number of pellets. The scale of diameters, being absolute, governed absolutely the number of pellets to the ounce, and as the diameters increased regularly and uniformly, the number of pellets to the ounce must of necessity decrease in an equally regular and uniform ratio.

The following table will show the difference between the *actual* number of spherical shot of given diameters *required* in each ounce, as compared with the *assumed* number, and that the number of pellets in an ounce of such shot cannot bear the proportion there assumed, and still claimed by some parties.

| Standard Diameter | Number | Correct number of Pellets in an ounce | Assumed number of Pellets in an ounce | Increased number of Pellets on each size | Increased number of Pellets on each size |
|-------------------|--------|---------------------------------------|---------------------------------------|--|--|
| 12                | 12     | 286                                   | 286                                   | 176                                      | 100                                      |
| 11                | 11     | 366                                   | 366                                   | 180                                      | 100                                      |
| 10                | 10     | 456                                   | 456                                   | 184                                      | 100                                      |
| 9                 | 9      | 546                                   | 546                                   | 188                                      | 100                                      |
| 8                 | 8      | 636                                   | 636                                   | 192                                      | 100                                      |
| 7                 | 7      | 726                                   | 726                                   | 196                                      | 100                                      |
| 6                 | 6      | 816                                   | 816                                   | 200                                      | 100                                      |
| 5                 | 5      | 906                                   | 906                                   | 204                                      | 100                                      |
| 4                 | 4      | 996                                   | 996                                   | 208                                      | 100                                      |
| 3                 | 3      | 1086                                  | 1086                                  | 212                                      | 100                                      |
| 2                 | 2      | 1176                                  | 1176                                  | 216                                      | 100                                      |
| 1                 | 1      | 1266                                  | 1266                                  | 220                                      | 100                                      |
| BB                | BB     | 1356                                  | 1356                                  | 224                                      | 100                                      |
| BBB               | BBB    | 1446                                  | 1446                                  | 228                                      | 100                                      |
| CCC               | CCC    | 1536                                  | 1536                                  | 232                                      | 100                                      |

It will be seen by the above comparison that this assumed number of pellets to the ounce, shows an irregular increase, and proves at once that it is incorrect. The increase in number of pellets from BB to BB being less than from BB to BBB. The difference of increase from No. 4 to No. 5 is very slight, whilst from No. 5 to No. 6 is more than six times as great. From No. 6 to No. 7 is a little less. No. 11, which should properly show a very much greater increase than any of the other sizes, shows less than either No. 9 or No. 10. No. 12 then suddenly jumps ahead to pellets. It may be well for Sportsmen to remember that the mere name "American Standard" printed upon shot bags will not change the size of the shot. Perfection in this respect can be known only when by actual measurement the diameter is shown to correspond with the proper number of pellets in an ounce.

Many inquiries from Sportsmen, as well as all representations made by some parties who do not make shot up to the standard, induce us to offer this explanation. When the "American standard" was agreed upon, we at once adapted our machinery to its manufacture. The uniformity of pellets to the ounce, which we publish, is calculated to mathematical accuracy and proved by actual test. It represents perfection. If all the pellets in an ounce were the exact size and perfect, they would count what is claimed. As it is difficult to reach perfection, we get as close to it as possible. Our shot will be found more uniform, less mixed in the bag, more perfect in roundness, better finished, and cleaner than any shot prepared with less care.

Our attention has been re-called to some assertions made some years ago by interested and unscrupulous parties, and now re-published in pretending that the term, "Patent Finish," which we have used for twenty years as a trade mark to designate its character, is nothing but an extra quantity of plumbago, beyond what is ordinarily used to polish shot, and that such surplus "finishes the gun," and is very disadvantageous to the user. We hardly know what to admire more, the dishonesty or the wisdom of the author of this attempt to impose upon Sportsmen; disinterestedness in the design to injure a competitor under the guise of protecting the interests of the buyer, or wisdom in that they did not know that the only object in using plumbago in polishing shot is to prevent the leading of the gun, and that if it were possible to attach an appreciable surplus quantity to the surface of the shot, it would be the best possible security against such leading.

As the above is true, our shot would be lighter than other shot carrying less plumbago, by the great difference between the specific gravity of plumbago and of lead. Its falsehood is proved by the fact that a given measure of our shot has been found to be, and probably is, heavier than an equal measure of other shot of the same number and size.

We trust that intelligent and well-informed Sportsmen will laugh, as they have laughed, at the subject of the paragraph, and that we are assured by some buyers that this notice is necessary to protect our business from damage.

TATHAM & BROTHERS,

NEW YORK, September 21, 1877.

## A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 703) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2932.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

## Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

\* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 25, 1877.

## To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS,  
Business Manager.S. H. TURRILL, Chicago,  
Western Manager.

DR. G. A. STOCKWELL.—This person, who has held position as an assistant editor on this paper for the past four months, is no longer connected with this office in any capacity, his connection having been severed this week.

SWINDLED AGAIN.—We have again been victimized to a large amount, by irresponsible persons collecting our advertising bills, and as there seems to be no legal recourse or means of punishing the swindlers who constantly prey upon us, we again beg our advertisers to extend to us their protection by refusing, in accordance with the standing notice in this journal, to pay over any money to any but duly authorized persons, bearing letters from either Mr. T. C. Banks, Business Manager, or Chas. Hallock, President of the Forest and Stream Publishing Company.

AWAY TO THE SOUTH.—The exodus has begun. Already the hosts of pleasure-seekers and health-seekers are following the birds, and flying southward. The Old Dominion Line of steamers had in one day, last Monday, sixty applications for passage. Some of these go to the shooting grounds of Currituck and the vicinity, while others are bound to Florida and the far South, where they will spend the winter.

OUR WASHINGTON LETTER.—We beg to again call attention with becoming satisfaction to the admirable letter of our Washington correspondent, Mr. R. F. Boisseau. There is a vast deal of information contained in this and all his letters, which is most valuable to sportsmen.

—The Special Trains running to and from New Haven in connection with steamers leaving Pier 25, E. R., have been discontinued for the season. The New Haven steamers leave as usual at 3 p. m. and 11 p. m., passengers can connect with trains for North and East by taking horse cars from steamboat dock to railroad depot at New Haven.

THE GAME LAWS.—There is in course of publication a German edition of the game laws of this State, translated by Mr. W. Thiese, editor of the *Schuetzen und Jagd Zeitung*, and published in that paper. Mr. G. Lander, the proprietor of that paper, intends to publish them also as a pamphlet, undertaking that can be highly recommended.

## THE WOODRUFF SCIENTIFIC EXPEDITION AROUND THE GLOBE.

MANY of the readers of FOREST AND STREAM no doubt have, from time to time, seen allusions to this well known excursion for pleasure-loving travelers and students of science, and as the final arrangements for the start are now being completed, a brief description of its object may possess a certain degree of interest. It is proposed by Mr. Woodruff and General David McCauley to convey a number of persons so inclined around the globe in an ocean steamship, commanded by United States Naval officers, and thoroughly found in every respect for scientific investigation and purposes of pleasure. All are invited, male and female, scientific and non-scientific, although special attention will be paid to students to enable them to make their trip mentally profitable, and for this purpose a competent and well selected corps of scientists has been engaged, prominent among whom we may mention Professors Jenney, Rothwick, Merriam, Barnard, Corwine, and others. The ship will be provided with dredges, swab-tangles, nets and all the other paraphernalia for deep sea dredging, preserving tanks, cans, bottles, microscopes, etc., etc., in short everything necessary for the use of the collectors on board, and their specimens will be transported back to New York free of charge. Lectures will be delivered at stated times, with blackboard illustrations, which are fine to all, although not obligatory, and practical instruction will be given in the different modes of collecting and preserving objects of natural history. Steam launches are provided for short water excursions, and an armament is carried to protect the passengers from danger of too familiar savages; for it should be stated that the ship will touch at localities seldom or never visited by white men. The programme is substantially as follows: Leaving New York, the first stoppage will be made at the British West Indies, from thence to the Coast of Brazil, mouth of Amazon, Rio Janeiro, Monte Video, Valparaiso, Straits of Magellan (to view the living glacier), Society Islands, Australia, Fiji, and Sandwich Islands, Coast of China and Japan, visiting the inland sea of the latter country and the rivers of the former, Spice and Andaman Islands, Indian Ocean, India, Persian Gulf, Suez Canal to Mediterranean, up the Nile, Mycære Schliemanns excavation, Crimea, Coast of France, and England, Straits of Gibraltar, and hence by the Azores. In addition to the seaports visited, a sum of \$30,000 will be placed in the hands of trustees to defray the cost of inland excursions. For this trip, unequaled in point of attraction, the very moderate sum of \$3,500 is asked, a trifle over \$100 a month, much less than an ordinary tourist would have to pay for a very commonplace European tour. It should be remembered that this sum covers every expense—board, transportation and instruction for those desirous of being taught, and that such care has been exercised in the selection of a faculty that students may prepare for any college in the land while continuing their cruise. It should also be mentioned that in addition to the naval surgeon three other accomplished and practical medical men accompany the expedition, hence every land party temporarily detailed from the ship will be supplied with proper medical attendance. The project seems to us most feasible and praise-worthy, and it has met with the greatest encouragement from all of our prominent scientific institutions and men.

In conclusion, we offer our heartfelt congratulations to the directors of the expedition, and trust that their trip may be pleasant and profitable and serve but as the initiatory movement for other excursions similar in character.

RIVERTON, CONN., Oct. 16, 1877.

## EDITOR FOREST AND STREAM:

As an ardent admirer and well rewarded subscriber of FOREST AND STREAM, I take the liberty to say that I miss the "Letters of Sportsmen," which constituted so interesting a feature of the ROD AND GUN. In my opinion no department of that paper contributed so largely to the education of young and amateur sport-men as did the letters from such writers as "Boone," "Snap-Shot" (afterwards "Howdah") "Royal," of cherished memory, and "Off-Hand," who has also been "gathered in." Then there were the letters from old hunters in the Far West and California, whose names I do not at the moment recall, giving us their opinions relative to the most effective weapons and manner of using them. Those from "Van Dyke" were of especial interest to me, inasmuch as they emanated from one long used to rifle shooting in the pursuit of game.

I hope your enlarged and improved paper will ere long afford the space for more of the same sort, and that the mantles of "Royal" and "Off-Hand" may descend upon worthy shoulders, and may the inspirations of "Boone" awaken echoes in our hearts in the future as in the past. None but one of nature's noblemen could have written "Hill and Farewell."

D. H. S.

We certainly appreciate the friendly disposition evinced by our esteemed correspondent. We deplore, with him, the absence of some (not all) of the familiar pens which he enumerates, and regret that our columns do not longer invite their attention. We like very much to have our weaknesses and deficiencies pointed out, and if the columns of FOREST AND STREAM are really deteriorating, as his remarks would seem to imply, we trust that friends of the paper will rush to its rescue and save it from disgrace and premature oblivion. The standard of sporting literature is certainly advancing, and if the pens of such eminent writers as Major Merrill, Commander Beardslee, Judge Caton, D. G. Elliott, Professor Marsh, Dr. Rawlings Young, Geo. Dawson, J. Matthews Jones, Ernest Ingersoll, R. F. Boisseau, Dr. Garlick, R. E. Ducaigne, Prof. Harvey, and a hundred other writers equally eminent or popular do not fill the bill, then we can assuredly congratulate our reading public upon the rapid advances that

we must assume to have been made in *belles-lettres*, and all that pertains to matters of science, metaphysics and domestic economy. Nothing now remains for us to do but to politely inform our gentlemen contributors that they are not up to the times. They must study to improve in order that their laurels may not fade or the sun set upon the skin and dry bones of purely dead ideas. We invite attention to these few remarks.

AMERICAN ARMS IN THE EAST.—American arms are playing no small part in the contest now waging in the East. The Providence Tool Company are just filling a new order of 100,000 Peabody-Martini rifles for the Turks, which will make a total of 600,000 furnished during the last eighteen months. The Winchester Arms Company has also furnished a half million or more, and will receive more orders. Counting the Remingtons, with which the Egyptian troops are armed, it is but a moderate estimate to place the number of American rifles in use in the Ottoman Empire at three-fifths its whole armament. The rapidity with which American arms can be discharged is unequalled, giving an immense advantage to a small body of troops; and their supremacy has been marked throughout the war, if we may believe a tithe of the accounts written, which describe the slaughter committed among the Muscovites during their charges upon the Turkish strongholds, as without parallel in history. It would seem impossible for any body of troops to face the storm of bullets that sweep the approaches, for the Turk is a sure marksman at such short distances as two and three hundred yards. In the Russian service there are, perhaps, 80,000 Remington rifles, and the troops thus armed have been noted for their efficiency in the field over those armed with the common weapons—Gorloff and Kimka rifles. America bids fair to supply the world with small arms, so marked is their superiority. It was the Winchester that enabled Sitting Bull to defy and escape his pursuers, and Joseph to so long baffle and defeat the flower of the regular army. American arms and American forms of fortification, are contributing not a little to the prolongation of the Eastern war, and give the Russians far more trouble than that fanaticism and valor for which the Turks are so noted, and which makes them foemen worthy of any nation's steel.

OUR RIFLE DEPARTMENT.—We observe that two new journals have been started in New York, devoted expressly to long-range rifle shooting and the interests of the National Guard. While it might be deemed expedient by the National Rifle Association to have an organ of its own, we have never heard it intimated that any such organ was desired. The *Army and Navy Journal* is a specialist in these matters, and there are also the standard sporting papers, besides, which devote a large share of their attention thereto. The FOREST AND STREAM and ROD AND GUN, especially, has been most assiduous, from the start, in promoting the interests of long-range rifle practice and the interests of riflemen, and most careful and painstaking in the publication of scores, as well as impartial and judicious in its study of general topics and disputed questions, speaking fearlessly and without favor. It may, properly and without affectation, lay claim to the credit of having co-operated with well-known gentlemen and been largely instrumental in initiating the movement in this country, and promoting the competitions which have made it so popular and given it a world-wide interest. We have been identified with it from the beginning. We first published the scores made at the Creedmoor range, and ever since have been careful always to print them with such accuracy as to make them reliable for future reference. Editorially, we have always led in those views and suggestions which have brought the rifle, the range, and the rifle practice itself, to that perfection which it has reached. Our columns of 1874 bear abundant testimony to this assertion, and we do not expect that any person, cognizant of this claim, will attempt to gainsay it, or desire to do so. We know that our efforts have been, and are appreciated, and believe that our paper has filled the bill to the general satisfaction. At any rate, if it has not done so here at home in America, it has done so in Europe. It is not so much for the purpose of making objections to the enterprise of the gentlemen who think that the fittest of the two new Rifle papers has a chance to survive the other, as to bring the following testimony of the *Royal Service Gazette*, of October 6th, in support of what we have ventured to say. We make the following quotations from this official paper, which has usually, if not always, printed our reports in preference to those of any other American journal, a courtesy which we abundantly appreciate:

"As for the match of this year, the very ample report which we reprint from the excellent New York paper, FOREST AND STREAM, shows that the shooting was better than ever. Sir Henry Halford and his comrades need take no shame to have been beaten."

"We are glad to be able to publish to-day very full details of the International Match at Creedmoor, of which we gave the result some time ago. The Report we print is taken from the New York paper called FOREST AND STREAM, to which we have often directed our readers' attention. The analysis of the shooting is most complete, and leaves, indeed, nothing to be desired, while the descriptive writing is, if a little more florid than we are accustomed to in accounts of rifle matches at home, very graphic and amusing."

—Mr. John A. Nichols, of the firm of Nichols & Lefever, Syracuse, has presented to Sir Henry Halford an Indian birch canoe. It is to grace the lake on Sir Henry's estate, and will be a novel craft on English waters. Mr. Nichols also sends to Sir Henry one of the firm's Creedmoor rifles.

GAME PROTECTION.

PENNSYLVANIA.—*Milford, Pike Co., Oct. 18.*—The annual "confidence game" in order to entrap sporting visitors has been played this year in Pike county. The two market hunters of the village of Milford, however, pretty well cleaned out local woodcock by the 3d July, and before August, when woodcock hunting was no longer profitable and two hotels demanded game at all hazards, work was begun with chicken, pheasants, and every brood was decimated, so that by even Sept. 1, it was impossible to strike a flock anywhere, and the birds were found single and very wild. The law for ruffed grouse was up on the 1st inst., and on that day and up to the 16th inst., your correspondent sought almost in vain for this game. Not a single flock was seen either on the Sawkill, Santavine, Raymondskill, Dwarfkill, Dimmick Meadow Brook, Deep Brook, Conasaugh, Log Tavern Pond, Butternut Orchard, Sawkill Pond, and other resorts, showing that the birds had been shot at continually before the law was up. The bag for three guns for twelve days' hunting was twenty-five pheasants and eleven woodcock. Of the latter five were flight birds. There are but few pheasants between the Shohola and the Paupack creeks, owing to the forest fires, and the deer appear to have deserted this region. There is a deer in the neighborhood of Milford, but when hunted it runs to Pond Eddy; and there are one or two deer in the Bushkill region between Dingman's Creek and the Big Bushkill. There are some bear around the Knob on the borders of Wayne county. Let Sportsmen give Pike county a wide berth, then the hotel keepers will help to get up a sportsman's club (the recent attempt was a failure, as the "wire cartridge" gentry wanted to get control), and will discountenance market hunting out of season. By the by, the names of the dog poisoners in this village are known, and when the proper time comes they will be taught a lesson. AMATEUR.

[REMARKS.—We are glad to know that in that portion of Pike county which is preserved by the "Blooming Grove Park Association," deer and ruffed grouse are sufficiently abundant to afford good sport to members and other visitors.]

Pottsville, Oct. 22.—In a letter to your valuable journal of Aug. 16, I stated that game of nearly every kind in the county was very abundant, etc. I notice our sportsmen starting early in the morning for the field of sport, but returning in the evening with little or no game. They say it is very scarce. Last week a party of us went on a hunting expedition through the interior of the county expecting luck, but the reward of our hunt amounted to two pheasants. Farmers told us that during the miners' protracted strike, they came from other counties, raided their farms and forests, and deer and game of every kind have been almost totally destroyed. Our sportsman's associations seem to be helpless in protecting game and prohibiting unlawful shooting, etc. Only a few weeks since a party (including several coal and iron policeman) shot nearly two dozen pheasants on Sunday. The names of the parties have been inquired for, and whoever they are, a fine of ten dollars apiece for the birds, and twenty dollars for hunting on Sunday is due from them to the County Treasury. I have also been informed that a party shot on last Sunday fifteen pigeons, and carried them through town as though they defied the penalty of the law. Other parties have been habitually shooting robins and various insectivorous birds. Their names have not as yet been made known, consequently no arrests.

DOM PEDRO.

—That the Philadelphia Sportsman's Club means business is evident from the prosecutions instituted by them for violations of the game laws. On Monday, Oct. 15th, they caused the arrest of Phillip J. Lauber, of 24 South Fifth street, Philadelphia, for serving the guests of his restaurant with quail on toast. Magistrate List fined him \$10 and costs.

FISHING IN CAYUGA LAKE.—A correspondent writing from Schenectady under date of Oct 5th, says:

Fishing was never so poor in Cayuga Lake as this year. I camped there nearly two months this summer, and know that nearly every person residing on the lake fishes contrary to the statutes. It is an open secret among all classes.

I myself saw numbers of beautiful trout which had been taken with the gill nets. Everybody seems to justify the violations of the law; they argue that the law is wrong—should never have been enacted. "Why," they say, "should sportsmen's clubs, consisting of a few elegant gentlemen of wealth and leisure, go to Albany and secure the enactment of a law which shuts up the lake to a large number of people who had always been accustomed to get a considerable fraction of their daily food in this manner?" The beautiful lake has always been free to them, why should these refined robbers snatch away a right which they have enjoyed for so many years?

This is the prevailing sentiment, and it would be an immense job to enforce the law. Meantime the attractions for sportsmen are growing smaller by degrees and beautifully less.

THE SALMON FISHERIES OF CALIFORNIA.

THERE is no fecundity so continuous and vast as to supply the waste of unremitting destruction, and although the salmon of Oregon and California have swarmed the rivers of those States by millions, and are remarkable as being among the most prolific of fresh water fishes, yet it has become apparent already that they are rapidly diminishing in numbers through their destruction out of season by unconscionable and reckless fools, who look only to present gain, regardless of future want and impoverishment. The penalty of \$50 fine for violation of the laws for governing fishing is no obstacle whatever when the illicit profits of avarice are so large as to make the fine infinitesimal in comparison. There are prominent and wealthy firms whose infraction of the laws is constant and defiant, and who sneeringly pay the fines as often as imposed. The boldest of these is that of Emerson, Corville & Co., who, it is said, can afford to pay a fine of \$200 per day for three months and still make money by catching seed salmon. There seems no other way to reach these offenders except by making the penalty sufficiently heavy to be onerous

and then to impose it with a will. The subject is engaging the serious attention of the journals of the Pacific coast, and we are gratified to observe that there is a probability of the abuses being pressed upon the attention of the Legislature at its coming winter session. We have also had the pleasure of a very intelligent and profitable interview with Mr. Horace F. Dunn, of San Francisco, who is now in this city, relative to the subject. It has taken but four years to destroy seven millions of buffalo, and we can readily see that the same doom which has nearly wiped their race from the plains awaits the salmon in their native streams unless immediate measures of prevention are employed. There is something rotten in jurisprudence or its application if these miserable offenders cannot be reached and interdicted. They should be persecuted for every infraction of the laws. The great difficulty in the way of unremitting prosecution seems to be that no one seems to think it his especial business to assume personal responsibility in the matter. The Fish Commissioners of California are efficient, fearless and industrious men, but as they receive no remuneration whatever, even for traveling purposes, they cannot be expected to be very earnest in undertaking risks and incurring expenses for the public good. A system of paid wardens, who will devote all their time to the business, and whose duties shall be so carefully defined and guarded that they cannot be bought by the law breakers, would seem to be demanded as the one best calculated to accomplish the desired work. In every State wherever there are game laws there should also be game wardens and constables, just as in cities there are policemen to enforce the regulations for the public peace and safety.

MULE TRAITS.

MULES are the offspring of horses and asses, and do little credit to either parentage. From the horses they seem to derive their heels, from the donkey their heads. All the obstinacy of the ass, all the viciousness of the horse, in brief, the poorest mental qualities of both, the mule rejoices in possessing. Nor is his stubbornness dignified and patient, eliciting sympathy and commanding respect for the principle which it seems to involve, as in the case of his progenitor, but uncertain, intermittent and vexatious; it is active rather than passive. Moreover, you cannot overcome his natural depravity, making him a gentle friend as you do your horse. A horse that you have ridden long and attended with personal care will learn to love you, whinny when he hears your voice, respond by every equine congratulation to your caresses, pine for you when dead. No mule ever would. Make a pet of a mule and you ruin what little good there may be in him. Be shot off his back in battle (if you could ever get him there) and he would kick you as you fell, glad to be free, and run away. I am speaking of the pack mules of the Rocky Mountains. I cannot venture, with Col. Sellers, to speculate upon the m-e-w-l-s of the Mississippi bottoms.

The Western pack-mule is small, sinewy, and, like old Joey Bagstock: "Tough, sir! tough! but de-evlish sly!" Most of them are bred from Indian ponies, and are born on the open plains, where the herd has ranged during the winter. Having previously been lassoed and branded, when three years old they are driven or inveigled into a corral and exhibited for sale as *bronchos*. And they are wild; an untamed horse is a model of gentleness beside them. Sometimes they are accustomed at once to the saddle, by one of those wonderful riders who can stick on the back of anything that runs; rarely are they trained to the harness, but ordinarily are broken to the pack-saddle. The transportation of freight through the mountains in wagons is generally impracticable. Pack-trains of mules are therefore widely used everywhere on the Pacific Slope.

The first time the pack-saddles are put on there is an exciting scene, as may be well be imagined. The green mule, strong in his youth, having been adroitly lassoed, is led out into an open space, stepping timidly, but not seeing any cause for alarm, quietly, and before he understands what it all means, finds that a noose of the lariat about his neck has been slipped over his nose, and discovers that his foci have an advantage. He pulls, shakes his head and stands upright on opposite ends, but all to no avail. The harder he pulls the tighter the noose pinches, so he comes down and stands still. Then a man approaches slowly and circumspectly, holding behind him a leather "blind" which he seeks to slip over the mule's eyes. But too long ears stand in the way, and the first touch of the leather is a signal for two jumps—one by the mule and one by the packer, for packers are wise enough to fight shy of the business end of a mule. The next attempt is less a matter of caution and more of strength, and here the animal has so much the advantage that often it must be thrown to the ground. 'It is fine to see the indignation of such a fellow! He falls heavily, yet holds his head high and essays to rise. But his fore-feet are manacled by ropes, and his head is held. Yet he will get upon his hind-feet, stand straight up and dash down with all his weight in futile efforts to get free. Secured with more ropes, allowed but three legs to stand upon, and cursed frightfully, he must submit, though never with good grace. It is not always, however, that this extremity is resorted to. Some animals make little resistance while the strange thing is put upon their backs, and the fastenings adjusted, all but one. When an effort is made to place that institution called a crupper under a young mule's "narrative," language fails to express the magnificence of the kicking. The light heels describe an arc from the ground to ten feet above it, and then

strike out at a tangent. They cut through the air like whiplashes, and penetrate what they strike like a bullet. But mule-flesh tires; strategy wins; the crupper is gained, and the first hard pull made upon the *sinch*, (as the girth is termed) which holds firmly every hair's breadth gained, and will finally crease the contour of the mule's belly into the semblance of Cupid's bow. But the mule is springing again, bucking now, with arched back and head between his knees, landing on stiff legs to jar his burden off, or falling full weight upon his side and rolling over to scrape it free. He will sit on his haunches and roll over backward; will stand on his head and turn a summersault; finally will stand still, shaking with anger and exhaustion, and let you lead him away. He is conquered.

Used from colthood to being with the herd, it is not difficult to induce a company of pack-mules to keep together, and to learn to follow a leader, or rather the bell that the leader wears. If this leader is a horse, all the better. Mules will go perfectly daft over a horse, and there are always fierce contests the first day a train starts out as to which mule shall have the coveted place next to the bell-horse. It often happens that for weeks afterward the victor has to maintain his position by constant exercise of heels and teeth, with much squealing and mulish profanity. I have seen two mules fight so incessantly for the place next to the bell-horse, when feeding, that they forgot to eat all day.

This point decided, the mules drop into Indian file, each keeping his chosen place in the line day after day, through the season, under ordinary circumstances. There is always a vast amount of groaning and moaning, and the less heavily they are packed the more they grumble. Plodding along in a rapid walk very demurely, head down, eyes half closed, ears monotonously wagging, you think they have forgotten all their pranks, abandoned all their intentions of wickedness, and you fall into an admiring contemplation of their exceeding docility and sweetness. Meanwhile the saddle and load of a certain little buckskin-lured, cayuse mule has been slipping backward, and he, knowing it, has wigged and swelled himself, and moved the skin of his belly until he has got far enough through the *sinch* to try his experiment. With the suddenness and agility of a grasshopper he gives a tremendous leap toward one side, bucks high in the air a dozen times in as many seconds, dancing about, kicking, stands straight up on his hind legs and falls over backward; then he wiggles through the loosened girths until he can bring his heels to bear, and kicks boxes, bags and bundles until the saddle slips down his legs and confines them like a handcuff. Next he rolls over, and quietly nibbles the grass within reach waiting until you shall come and release him. Get a mule down thus, let him find himself fastened, and he will lie perfectly still until you come to his assistance—will often lie in the mud and drown unless you hold his head out of the water for him. Getting themselves mired in a favorite amusement with them, and those behind are morally sure to rush in on top of their mates, floundering in the bog in spite of all you can do. Their sagacity in some directions turns to the most desperate stupidity in others. Very sure-footed in crossing a stream, as elsewhere holding their place well against the strongest current, and, able to swim ashore with their burden intact, you have little anxiety so long as you can keep the water out of their ears. But once the fluid enters those furry receptacles, wits and courage desert the mules, and instantly leaping into the river you must drag, push, and carry that animal to land if you value him or his cargo. Then stand back while he shakes his head!

A mountain mule is very particular and private about his ears. Those precious appendages must on no account be trifled with. We had one mule whose head it was necessary every morning to strap down to a log in order to put the bridle on, all because she was so "touchy" about her ears while perfectly gentle in other respects. The result was, she was compelled to wear a permanent brille, the bit alone being taken off at night. Those restless ears are wonderfully expressive—a perpetual index to the animal's mind. When the little beast lays them tightly upon its mane look out! It is bent on mischief. When they are upright, and twisted backwards, there is supposed to be danger in the rear, and likely enough you will suddenly find yourself behind. When they point straight forward guard lest you are shot over them; if they are limber and waggish there is no telling whatever as to the next move. Notwithstanding this excessive delicacy, when the flies are very thick you may lash their heads all day with branches, and they will only thank you.

If you can never gain the confidence of a mule, much less does he merit yours. I have known one to carry his rider in the most exemplary manner for hundreds of miles, and then one morning begin a series of evil antics and develop an unreasonableness as uncomfortable as it was unexpected. They are forever doing something surprising, pulling heroically through real difficulties to tamely give up before some sham obstacle, immediately afterward, terror-stricken at nothing, and unalarmed at what you naturally supposed would stampede them with fright. Mules naturally are timid, and absurdly so. If one scares all the rest are frightened. A piece of black wood, like the embers of an old camp fire, will cause almost any mule to shy. A certain shaped boulder was invariably regarded with distrust by one I used to ride. Rattlesnakes they hold in just abhorrence; bears paralyze them with terror; Indians they cannot be spurred to approach.

Mules are social beings. They become so accustomed to being together and following the bell-horse that you may trust their staying with him as far as you can trust them at all. It is upon this principle that all pack trains are conducted, and

it has been the salvation of many an outfit. Once the Indians ran off with our herd in the darkness of a stormy night. One of our muleteers immediately discovered the loss, ran to the camp of the half hostile Indians, who were just preparing to vamoose, and yelling as though he had a regiment of fiends with him, with his sombrero folded into the semblance of a revolver, he dashed among the astonished savages, leaped upon the bell-horse and galloped away with all the mules following. It was a far braver thing to do than you have any idea of.

This attachment of your mule to the bell becomes a great nuisance when you come to ride along with the train, making equestrianism a dreary labor, notwithstanding the fact that the gait of most mules is as easy as that of horses. Mile after mile you plod along in the rear at a right-foot-left-foot, right-foot-left-foot jog, that wears out muscles and patience. The sun beats down, the dust rises up, and your only entertainment is the cow-bell hung on the neck of the leader. The first hour you do not mind it much; the second, it grows wearisome; the third, painful, and you hold your ears to shut out the monotonous clangor. After the fourth hour you go crazy. All life centers about that tireless hammering and your mind loses itself in endlessly conning some absurd refrain in unison with the ceaseless copper-clatter of that ding-dong bell.

"Hokey pokey, winky w n z,  
Linkum laukum musc dance,  
The Indian swore that he could hang,  
The man that couldn't keep warm."

That's the kind of music to march by.

"But why do not you take unto your mule wings and flee away from this?" asks one. Because you musn't, and because you can't. You mustn't, first, since it would soon wear out the little beast that must carry you two thousand Western miles this summer—and Western miles are a good deal longer than Eastern ones. You can't, second, for what is misery to you is melody to the mule, and if you try to ride him outside the hearing of the bell he may perhaps be made to go, but it will be in such a protesting, halting, lame and blind way, with such "uncertain step and slow," turnings of reproachful eye and brayings of mouth, that you will find it better to endure the evil of the pack-train than to try to escape from it. Stop behind to pick a flower and you must tie your mule as strongly as you would moor a frigate. A mule cannot bear to be left alone, and although he knows that he can go straight back from wherever you may take him, following a trail like a sound, yet he considers himself hopelessly lost and forlorn when he can no longer hear the bell. It is his use and habit to go with it; it means everything that makes life happy for him and he will endure very much punishment before forsaking it.

Mules have much individuality, and take strange notions. One can see this in their countenances. They vary greatly in sagacity and in tractability. All their characteristics are positive, and frequently asserted in the most startling manner. They are crotchety, too. One I knew would never allow himself to be caught to have his pack put on or adjusted until all the others had been attended to; then he was quite ready. Another was a good and gentle riding animal, and had no objections to your pipe, but you must get out of the saddle to light it. Strike a match in the saddle, and the devil entered into that breast on the instant. It is often impossible to overcome these prejudices. I had a mule once that would bray ferociously and incessantly whenever it was out of hearing of the train-bells. It was an excessively annoying habit, and, persuasion failing, I used to dig my spurs into its sides, and hammer its head first with a strap, then with the butt of my pistol. I felt that there was no sense in the absurd practice, and was bound to break it at once. But after an hour or two it was hard to keep my seat, for about once a minute the beast would duck its head and jump as though propelled from a cannon, uttering a terrible bray, as though just to invite punishment. So I changed my tactics—paid no attention to the noise, and in a couple of days had no further annoyance. They know what disturbs you, and maliciously do that one thing, regardless of pain to themselves. Another mule I had was an example. He had a trick of swelling himself out when I put the saddle on, so that it was impossible to draw the girth tight; I might as well have tried to draw in the waist of a steamboat boiler. I always had to catch him unawares, after we had got started, in order to tighten the girth sufficient for safety. There is no denying that they are very wise and cunning in their way, hardly any denying that they can talk among themselves; but it is an unfortunate fact that their wisdom is all exerted for wickedness, and their conversation used chiefly in plotting combined mischief.

It happens, therefore, that an Eastern man unused to working about mules, finds their tricks and treachery, lively heels and diabolical disquisitions, a constant check upon the enjoyment of Western wandering. The mule packers are the most desperately profane men I ever saw; they exhibit a real genius in profanity. It is not surprising, considering the continual vexation to which they are subjected, and which they must not retaliate, lest they should injure the precious strength and carrying power of the little animals, upon whose endurance their lives and fortunes depend, and which make mules far more valuable than horses, after all, for mountain service. But it is my honest and serious opinion, founded upon much observation, that so long as any considerable number of pack mules are employed there, it is utterly useless for any missionaries to go to the Rocky Mountains. I doubt whether there is power enough in Christianity to overcome the wicked influence of the mule.

ERNEST INGERSOLL.

## VACATION RAMBLES IN MICHIGAN, WISCONSIN AND MINNESOTA.—NO. 2.

By THE EDITOR.

GENTLEMEN:

October 25, 1877.

It is generally easier to imagine what may be than to remember what has been. There are few events of our lives that impress themselves so indelibly upon the memory that they remain vivid and green until the end. In taking up the back track (as a woodman would say) of my vacation rambles, I find the trail so cold that I am often at fault. Interesting incidents and observations, names of persons, places and things, which gave pleasure and satisfaction for the time being, have passed quite out of mind, so that I am exposed to one of two inferences, namely: that my journeyings were monotonous, rapid, stale and unprofitable, or that I am unimpressible, listless and ungrateful to the many friends who vied with each other to make my vacation agreeable and improving to body and mind. For instance, I remember we hunted for grouse one week in Southern Minnesota. My friend John Swainson, of St. Paul, had a beautiful red setter, whose sagacity was fully up to his nose, and both were seldom at fault. He was a good dog, and stood on many a bird for my bag. He had a noble pedigree, too, and John, our venerable venator, his master, was justly proud of him. He was an animal to be remembered, and yet, woe's me! I've forgotten his name! What ingratitude must I reproach myself for! Thankless for every chicken promptly retrieved and brought to hand! Thankless for cautious drawing on birds so that none were prematurely flushed! Thankless for hard work afield in the broiling sun of noonday! What will be my reward when I shall seek hereafter to enter the Dog Heaven? Shall I not then be forgotten as well by the dog's master as by the dog?

This comes of losing one's notes and memoranda by capsizing in the Mississippi River. I shall never take notes again if I am to be capsized. *It's a waste of time.* I remember seeing some of our "goods" floating afar down stream, while I was still swimming determinedly for the shore athwart a four-mile current. The wind was blowing more than fresh, and speeded them on their career. I saw them, as the minstrel sings,

"Way down on the Mississippi floating:  
Long time they traveled on their way—"

And then finally they all sank to the bottom! They say, 'tis "an ill wind that blows no one good." This was one of these winds; it did not waft one good to the shore. Fortunately my mishap came after my rambles had been two-thirds accomplished; and I have to affirm despite catastrophes and appearances of negation, that my vacation was not only pleasant but profitable. Of this I will try to convince you.

Michigan is now, comparatively speaking, one of the older States. We discover this after we have gone farther West. Visitors of scarcely thirty years ago are surprised to find much of its then wilderness now settled and cultivated. Its southern and middle section is carpeted with meadows and grain fields, and dotted with villages and hamlets. It is the great orchard of the West—the distributing fruit centre of all the country northwest of Pennsylvania. What luscious apples one finds on the west shore! All the harder fruits grow there in full perfection. That is the section which old Père Marquette and his co-evangelists selected for the establishment of their missions; and it is astonishing to discover with what unvarying sagacity they always chose the most salient points throughout America as respects climate, accessibility, military strategy, or missionary work. Modern geographical explorations, or recent surveys have failed to discover more eligible or commanding sites than those they selected. Grand Rapids is the "hub" of Michigan. I do not know that its influence extends beyond where it is carried by its many distinguished representatives at Washington and elsewhere. I cannot conjecture that it would disturb the system of the universe if its single light was snuffed out.

It certainly has not the commercial importance of Chicago or St. Paul. It is not the focal point of a vast internal commerce, nor yet the frontier distributing depot of an illimitable and rapidly growing region from whose multiplying settlements come constant demands for farm implements, mechanical apparatus, and consumable goods of all kinds. But one fact must be accepted, namely: that the State of Michigan could not do without it. Grand Rapids supplies all the households of the State with furniture manufactured from the beautiful hardwoods that adorn and enrich its swaying forests—its beech, ash, oak, hickory, curly and bird's-eye maple, which the extension of the Grand Rapids & Indiana Railway to its northernmost limits has made opportunistically accessible. It manufactures the "chairs of State" which it fondly hopes its aspiring statesmen may some time hereafter fill. It utilizes in many ways all the products of the forests, farms and quarries of the State, and obtaining them cheaply grows rich upon their ready sales and reasonable profits. It grows also in population and architectural beauty. It has 35,000 inhabitants; it has also thirty-five churches, and yet is not impoverished! Just imagine the pecuniary strain that compels one thousand men, women and children, including paupers, to support a whole church and its minister! Consider for one moment the encouragement afforded to the minister to "be not backward in well doing." ["Why do the heathen rage and the people imagine vain things?"] I consider a single church spire in a village of moderate size an indication of refinement, thrift and good order, especially if it be of fair architectural

aste and well-painted; but if I were seeking a place for permanent residence and discovered several steeples I would skip it instantly and move on further, no matter how luxuriously the trees clustered in its streets or how lustily the cocks crew in the genial warmth of its morning sun.

Grand Rapids occupies both sides of the Grand River, a lively stream that tumbles through its purlieus in a series of rapids, and then flows forty miles in volume sufficient for navigation, emptying into Lake Michigan at Grand Haven. Its business portion covers what was the river "bottom," and its environs spread over and crown the surrounding hills in picturesque demesnes and charming villas of no ordinary pretensions. The streets are abundantly shaded, and the general aspect is cheerful and vivacious, encouraging good humor even "in storm and wintry weather." The principal structures are of the cream-colored brick, which so generally prevails throughout the Northwest and Ontario, in the cities of Toronto, London, Bay City, Saginaw, Milwaukee and St. Paul. Its hue and tone are most grateful to the eye. It combines with granite, blue stone, red and olive sandstones and red brick with the most striking and successful architectural effects. It always looks clean when it is most dirty, and bears weather stains like a veteran trooper. It looks cool in summer, and is in sufficient contrast with the sparkling snow to wear an aspect of warmth in winter, especially when worked up with darker trimmings. The attractions of surrounding garden flowers are enhanced by their contrast therewith, and the green of their foliage or of window-blinds is not "killed" as it is when in contact with red brick.

To the two principal hotels in Grand Rapids too much praise cannot be given. I believe they are in some measure connected under the same management. Mr. Furnham Lyon, who has some supervision of each, as well as of the Bancroft House, at East Saginaw, is perhaps the best known caterer in the Northwest, and is deserving of a reputation that has been well earned. To "know how to keep a hotel" implies a knowledge of housekeeping on a magnified scale. The mistress of a household knows how many vexations attend her daily avocations; how much hard labor and constant attention is required, and what a continued mental task it is to provide the reasonable variety of food required for three meals per day for her small family; but to provide four and five meals a day, year in and year out, for a community of several hundred, with all the variety and perfection in cooking which the most fastidious require, as the leading hotels do—why, the duties of a quartermaster-general are nothing in comparison. The quartermaster's *menu* is not complex. The soldier does not require much time to study up the bill of fare, and it is as easy for the quartermaster to order the heads knocked out of a thousand barrels of hard tack at once as out of a single one. A quartermaster couldn't run a hotel. The tables of the Morton House and Sweet's Hotel are uniformly good, and the charge of \$2.50 per day is so moderate that a man can eat his daily bread without feeling that he is robbing the poor box or hypothecating the appropriation for his funeral expenses.

Although Grand Rapids is technically neither grand nor rapid (it cannot be considered a "fast" town), I like it well, and I believe that no stranger leaves it without hoping to visit it again. This is more than old Lot could say of Sodom and Gomorrah.

The town of Grand Haven, near the mouth of the river, is a much frequented resort for the people of Grand Rapids, who make excursions by rail or steamer during the summer season, and the Outler House at that place is worthy of the reputation it enjoys as one of the most charming watering-place hotels in the Northwest. Mineral water is the principal beverage used there. Reed's Lake, three miles out of Grand Rapids, is the objective point for pleasant drives, and the little steamers, sail-boats, bass-fishing, picnic grounds and bathing, afford a combination of attractions. Fulton Park is a favorite resort. I am particular in mentioning the characteristics of the places I visit, because I know I am writing to many people who have never visited the West, and have little idea of what is to be seen there.

The completion of the Grand Rapids and Indiana railroad has benefited this place considerably by opening up the great central timber region of the northern part of the peninsula. The company offer such inducement to settlers that possibly 30,000 have located along its line between Grand Rapids and Petosky within the past five years. Its entire policy is liberal, and its management economical and trustworthy. The hardest work of its officials is W. O. Hughart, Esq., its indefatigable president. His unremitting labors are varied only by an occasional excursion to Bear Lake, near Petosky, where he has an unpretending shooting-box. John H. Page, until lately its general passenger agent, has done a great deal to bring the country, which the road traverses, into public notice, especially by publications in the interest of sportsmen. One of these is a pamphlet with maps, designating all the principal fish and game resorts, to which the company has provided expeditions and comfortable means of access by land and water. Of these I shall speak in my next letter, and I shall hope to show that northern Michigan is one of the most attractive regions in the United States. It is by no means all a wilderness. One can take his family with him wherever he may elect to go, and no Benedict can leave his compliant wife at home under the plea that the journey is too rough or the hardships too severe. Let all the married women who read this remember it.

HALLOCK.

WANTED.—A copy of the "Naturalist's Directory," printed at Salem, 1877, for use in this office. The edition is out of print.

## OUR WASHINGTON LETTER.

PARTRIDGE SHOOTING AND WHERE IT MAY BE ENJOYED—  
FARMERS BECOMING INTERESTED IN GAME PROTECTION  
—ETC., ETC.

[FROM OUR OWN CORRESPONDENT.]

WASHINGTON, D. C., Oct. 20, 1877.

OF all the land birds the partridge in this section affords by far the greatest sport. And now that the season is just beginning our sportsmen are anticipating pleasant times in the fields of Maryland and Virginia, where the birds are always plentiful. Our gunsmiths are kept busy in repairing and cleaning fowling pieces, and the dealers in ammunition and gunning implements are doing a thriving business, although many of our sportsmen send to other cities for their supplies, and frequently send their guns abroad for slight repairs. A large number of them are induced to do this by the attractive advertisements which weekly appear in the columns of *FOREST AND STREAM*. We have first-class gunsmiths in this city, and there is no reason why ammunition and all necessary gunning utensils should not be sold here as cheap as elsewhere. I could mention several dealers who have good supplies, and offer articles equal to those procured in other cities, but the great trouble with many of our Washington merchants is that they do not spend enough money in advertising. They have yet to learn that every dollar invested in parading before the public their establishments and wares is sure to bring increased trade, and result in a more extensive business. There are some exceptions, and here as well as in other cities men who have liberally patronized the advertising columns of papers build up their business, and make money, no matter if the times are dull. The columns of a journal devoted to shooting, fishing and other out-door sports should be patronized by our gun-dealers and others having goods used by sportsmen. The *FOREST AND STREAM*, with its large circulation, not only in this city but throughout the States of Maryland and Virginia, is the medium through which they should make their places of business known, and then Washington will come in for a good share of the trade of sportsmen.

The close season for partridges (*Ortyx virginianus*) in the District of Columbia expires on the first of October. Rather too early, as the last brood of young birds are hardly feathered by that time. The bill introduced into the Senate some time ago for the preservation of game in the District, proposed to fix the close season from the 15th day of January until the first day of November. The 15th or 20th of October would be a more suitable date to end the close season, and such amendment will probably be made, should the bill ever be considered. There are within the limits of the District generally a good many birds at the beginning of the season, but they are soon killed or driven into the neighboring counties of Maryland by the constant shooting. In some of these counties it is unlawful to shoot them before the 15th of October, and in others before the 20th, while in Virginia, under the new game law they cannot be killed before the first of November. As a game bird the partridge ranks next to the jack snipe (*Gallinago Wilsoni*). All sportsmen will agree with me that the woodcock (*Philohela minor*) ranks first, the jack snipe next, and the partridge third in the list of game birds of this section. Toward the latter part of October, by which time the young birds have attained nearly their full growth, they are fat and juicy, and beyond doubt a very toothsome delicacy, the flesh being white and tender. Like many other game birds the partridge is known by different names in various sections, that just mentioned prevailing in the Southern and most of the Western States, while in the Middle and Eastern States it is called quail. Probably there are more partridges killed in the States of Maryland and Virginia every fall than in any other two States of the Union. Many are killed legitimately over dogs, by sportsmen from New York, Philadelphia, Baltimore and other cities, but great numbers are trapped and sent to the markets of these cities by pot-hunters, and unless this trapping business can be broken up the birds will soon be growing scarce in these States. The new game law of Virginia makes it unlawful to capture partridges at any time by means of nets or traps of any kind until after the expiration of two years from the passage of the act. As it is contemplated to further amend this law, it is hoped that the trapping business will be prohibited for all time.

There is not a more delightful field sport than that of shooting partridges. It can only be enjoyed in the autumn, that season

"All in yellow clad,  
As though he joyed in his piteous store,"

when the bracing atmosphere of the frosty morning sends the blood of the sportsman coursing through his veins with renewed and freshened life. The favorite ground of the partridge in this section is upon old wheat stubble fields, where they are always found until ten or eleven o'clock in the morning, and again in the afternoon; but in the middle of the day they often retire to some neighboring briar patch or other favorable locality, where they preen and sun themselves. In very windy and rainy weather they take to the woods and thickets, where they feed on insects and berries, the bird being insectivorous as well as granivorous. In damp or rainy spells there is not much sport in hunting these birds as they seem to prefer running in such weather rather than take flight. It is only in calm, clear weather that the sportsman can enjoy the shooting to any extent, as the birds will then lie to a dog, and take wing when forced to, instead of running a quarter of a mile or more as they do in wet seasons before they can be flushed.

It has been held by several prominent ornithologists that the partridge is gifted with the power of withholding its scent and often the best trained dogs are reprimanded for not finding birds carefully marked down. I cannot say whether or not the bird does possess such power, but close observation has convinced me that there are times when the dog, no matter how experienced he may be, cannot scent the bird. Frightened birds especially often puzzle the most careful dog. As an instance, I may mention that upon one occasion while shooting partridges in Orange county, Va., an old bird was flushed and wounded. He fell in the open field, and the place was carefully marked. We had three dogs, two of them especially being very reliable. They worsened for the wounded bird, and although it was an open stubble field with no place that we could discover for the bird to hide, the most diligent search failed to reveal its whereabouts. Carefully did the dogs examine the whole place within a short space of four or five hundred yards where the bird was seen to fall, and finally we left the spot, somewhat puzzled to know what became of the bird. It so happened that we crossed the same field several hours afterward, and upon reaching the place where the bird had been fired at and wounded, York, a faithful old pointer stiffened out, and the other dogs caught the scent almost as soon as he did. Then we found the wounded bird, still alive, but unable to fly. The dogs pointed it at the very place where it was observed to fall three hours previously, and at that time all three of them passed over this very ground a dozen times or more. The bird was hidden behind a stone, and it was evident to both my companions and myself that no scent was emitted from the bird when first wounded, else he would have been then found.

It has been held by some writers that the partridge can be domesticated, but several attempts to do so which have come to my knowledge do not sustain this assertion. I have known of instances where the birds during very severe winter weather have been found in barn yards, and even near the kitchen door of farm-houses for food, but with the advent of milder weather they again sought the fields and briar patches.

Several years ago Mr. T. Edward Clark of this city, while shooting on the farm of the late James Nokes, in Prince William county, Va., flushed and killed a white partridge, which he had stuffed and mounted, and it is now on exhibition in the museum of the Agricultural Department. It was in a covey with the ordinary birds and proved to be quite a handsome Albino specimen.

Although I have written a good deal about the rare sport afforded by partridge shooting in this section, I cannot refrain from mentioning some of the favorite haunts of this delightful bird, and I have no doubt that many of your readers have visited the very places; hence a reference to them will bring to mind the happy hours they have passed in the fields around Washington. Beyond a doubt the most desirable shooting ground is in Orange County, Va., near the head waters of the Pamunkey River, where the country is fertile and thousands of bushels of wheat are gathered annually, leaving stubble fields in many places of a hundred acres and more in extent. Here the birds are always abundant. It has been my good fortune for several years past to spend a week or so in that section, and we have frequently found half a dozen or more coveys of birds in a single stubble field within half a mile of the residence of the gentleman with whom we were stopping. They are not hunted here to any great extent, and therefore are not so wild as in some other sections. It is an easy matter there to go out after breakfast, bag from thirty to fifty birds, and return to the house by noon. After dinner the sport can be again enjoyed during the afternoon, and when night approaches the sportsman can rest from his work, but neither himself nor his dogs feel that fatigue which is so often the case where birds are less plentiful. There are other favorite shooting grounds in Virginia, near Manassas Junction, and again in the vicinity of Clifton, to which I may refer in some future letter; and here I can only repeat what I have before had occasion to say, that the people of Virginia are courteous and generous, and a gentleman properly introduced is always made welcome by the farmers and sure to have good sport.

In Maryland there is a small village, about twenty miles from Washington, known as Tee Bee, in the neighborhood of which the partridges are quite plentiful and the shooting excellent. Being some distance from a railroad the birds are not driven off by constant shooting, and the pot hunter is unknown in that locality. At Nottingham some distance below, in the vicinity of Marlboro, and various other places, there are extensive stubble-fields and plenty of birds. In Montgomery County, lying to the north of Washington, the shooting is also good, so your readers will see that the Washington sportsmen are favored with a magnificent country within a few hours' drive of the city, where they can enjoy themselves at partridge shooting during the whole season.

The Game Protective Association, recently organized in our neighboring city, Alexandria, is in a very flourishing condition, and I am glad to say that the farmers in that vicinity are becoming interested in it. At a recent meeting several communications were received from farmers in the neighborhood of the city, offering all the aid in their power to the Association in promoting its aims. It was resolved to furnish each member with a descriptive card for their protection while hunting in the adjacent country. It was resolved to have posters printed and put up, containing a synopsis of the game laws, and the offer of a reward for the apprehension of persons found violating the same.

The Alexandria, Va., *Gazette*, of a recent date, says:

"This morning early several flocks of partridges alighted in the streets of this city. Several of the birds were killed with stones by the boys, who did not have the fear of the game laws before their eyes. In one case where a boy had knocked over a partridge, a hunting dog belonging to a citizen happened to come along and forthwith took possession of the bird and carried it home to his master."

Maj. T. B. Ferguson, the Maryland Fish Commissioner, has received 200,000 California salmon eggs from the McLoud River, California, as Maryland's quota of the eggs collected by the United States Fish Commission. The eggs were transported here in a refrigerating car. They have been placed in the hatching-house at Druid Hill Park. When hatched they will be distributed among the principal rivers of the State flowing into the Chesapeake Bay. It will be remembered that from seven to eight hundred thousand of the same variety of fish were placed in Maryland waters by the fish commission last year.

One of the great needs long felt by intelligent sportsmen is supplied by that admirable work, "The Sportsman's Gazetteer," by Charles Hallock, and published by the *FOREST AND STREAM* Publishing Company. The increasing demand for the book in this section is noticeable. I have heard many sportsmen speak in the highest terms of it, and one evidence of its popularity is that several booksellers have more than once been compelled to renew their supply. I have only to say from personal observation that it is the *ne plus ultra* of sportsman's literature. R. F. B.

## FOX HUNTING ON LONG ISLAND.

FOR ten years and more, in the columns of the *Turf, Field and Farm* and in *FOREST AND STREAM*, at the clubs and whenever opportunity offered, the writer has urged upon the young men of New York the getting up of a subscription pack of hounds within easy reach of their city by boat or rail, but he found it very up hill work; for though the average young Gothamites are well up in most of the athletic sports, many of them being even capital whips, they are not at all familiar with the saddle, and only a few, a very few of them indeed, are capable of riding to hounds. It is therefore with great pleasure that I learn by your issue of Sept. 27 that some members of the Westminster Polo Club have at last succeeded in organizing a hunt at East Meadow Brook, on Long Island, and that a pack of hounds imported from England is to be kennelled at Garden City.

Under the management of such capital horsemen as Mr. A. Belmont Purdy, Mr. Griswold and a few others, we have a guarantee of the eventual success of the enterprise; but there are one or two facts which may prevent that immediate success upon which the fate of such undertakings usually depend. To the casual observer, the level plains surrounding Garden City offer a magnificent hunting country, but it is to be feared that the only merit of such a location is its accessibility to the city; with a surface of black mould, indicating great fertility, the soil of these plains is in fact barren, thirsty and sandy, and will not, it is to be feared, carry a good scent. As regards English foxhounds, I mean of course the best, such as are hunted at Belvoir, in Leicestershire, and half a dozen other places in England, though they are as near perfection as can be for hunting in their native land, they have been proved, except in the stud, utterly useless in this country. No one who is familiar with hunting in England or with the writings of "Nimrod" will deny the superb quality of the famous Queen pack. When the late Commodore Richard Stockton was abroad, forty or more years since, Sir Harry Goodricke presented him with three magnificent hounds from the Queen pack. The Commodore sent the dogs to the late John S. Skinner, to be added to the Baltimore pack, which, supported by the late Robert Oliver—grandfather of Mr. Oliver Colt, of Long Island—Judges Kell and Upton Heath, John P. Kennedy and other leading citizens, was in a flourishing condition, and hunted regularly through the season three times a week. The writer, then quite a youth, remembers perfectly well being sent with a servant to receive these hounds, and being astonished at the shortness of their ears, not being aware that it was customary in England to disfigure foxhounds by clipping, or rather rounding the ears to prevent laceration by briars and brambles; but these hounds were truly magnificent creatures—deep chested, and as straight in the forelegs as a winner of the Altceet Cup. They had powerful joints and prodigious bone and muscle. Of course the advent of the foreign hounds created a great sensation among the hunting men, and the "meet" which was near North Point, was largely attended, some gentlemen coming all the way from Fairfax in Virginia, and from Washington City to be present.

The English dogs were in superb condition, and as old Amy, the huntsman, observed, "Took de shine out of our native dogs completely." Soon after sunrise, with the dew yet heavy upon the ground, the hounds were thrown into a thicket of second-growth pines, where a fox was soon found, which, after running a ring or two, broke cover almost under the noses of our horses, and struck boldly into an old field of great extent. Every dog was well up and in full cry, the strangers coming out of the cover at the tail end of the pack; but in two minutes or less they were in the lead, and in two minutes more the natives were left entirely out of sight in the rear. Such a marvelous burst of canine speed had never been witnessed before in Old Maryland. But what astonished everybody still more was the grand style in which

A NATIONAL RIFLE MOVEMENT.—The Board of Directors of the National Rifle Association are circulating for signature a petition to Congress, having for its object that of procuring some enactment of a law which would authorize the Secretary of War to offer prizes to the uniformed militia of the different States and to the regular army and navy for excellence in shooting ; to issue ammunition to them for practice, and to aid the construction of ranges and the general promotion of rifle practice in such portions of the country as possess a uniformed and properly organized militia, or where detachments of regular troops are located. This would effect a great and much needed reform, and would be strictly within the powers of Congress. The matter will soon be presented to Congress by the Hon. Benj. A. Will of New York.

CREEDMOOR, Oct. 20.—A cold drizzling day at Creedmoor last Saturday did not prevent a good attendance at the two off-hand matches on the programme, and good scores were shown at 300 as well as at 200 yards. It will be noted that out of a possible 50 in each match, the best winning score is shown at 300 yards. The first match contested was the fifth competition for the *Turf, Field and Farm* badge; 200 yards, 10 rounds, any rifle, off-hand. The scores stood:

|                  |                      |
|------------------|----------------------|
| A F Phillips     | 45 43 34 54 44 55—42 |

COLUMBIA RIFLE ASSOCIATION.—This popular organization held their annual fall shooting at Guttenburgh Park, N. J., the 15th and 15th instant. It was well attended by marksmen from the numerous clubs, and the shooting was excellent, as the scores will show. The target of honor (rings), open to members of Columbia Club only; ring or union target, open to all, and the point target were all that were used on this occasion; 200 yards; position, standing; ring target, possible 75, three shots.

|                               |          |         |

| C Kundahl                      | 53       | "          |

W. M. Farrow won the first and last flag prizes.

"WISCONSIN" writes: I notice that in last week's paper you give what appears to be a full account of the rifle matches in Chicago. You, I believe, omitted the mid-range match, which was as follows. The most exciting and best shooting of all:

THE MID-RANGE MATCH AT CHICAGO.—As the teams in the interstate match retired to the one thousand yards range, Sir Henry Halford arrived on the ground, accompanied by J. K. Miller, R. S. Greenhill, and other members of the British international team. They at once proceeded to the five hundred yards range and began shooting in the individual match, open to any member of a regular rifle club. They had shot out their scores before the last of the team shooting was done, and left for the depot, pretty well satisfied that the prizes for that match belonged to that crowd, for Miller and Hyde had made forty-eight out of a possible fifty each, Miller taking first place under Creedmoor rules. Then the rest came down and began shooting. It was evident that forty-eight was necessary to get the silver, so, when any one dropped three he dropped himself out of the competition. Finally, the contest narrowed down to three, and became exciting, as there was every chance for either of them to beat the best scores yet made. There were Hill and Fielding, of Milwaukee, and Thompson, of Chicago. Hill shot his score through, making ten bull's-eyes, and first prize. At the sixth shot Thompson got a "centre" and Fielding followed with one in the same place. Then each made four fives, scoring forty-nine, their scores being symmetrical. So they had to shoot off for second place. After three bull's-eyes Thompson's mid-range cartridges gave out and he put in a long-range cartridge, lowering his elevation a couple of points, but it was not enough, for he got a high four. Fielding turrowed the black and took the cup. Honors were therefore even. Illinois took the team prize, Wisconsin the individual. The scores are as follows:

|                   |                    |
|-------------------|--------------------|
| David Hill        | 5 5 5 5 5 5 5 5—50 |
| E Fielding        | 5 5 5 5 5 5 5 5—49 |
| R S Thompson      | 5 5 5 5 5 5 5 5—49 |
| J K Miller        | 4 5 5 5 5 5 5 5—48 |
| George Millard    | 4 5 5 5 5 5 5 5—48 |
| F Hyde            | 5 5 5 5 5 5 5 5—48 |
| Sir Henry Halford | 4 5 5 5 5 5 5 5—47 |
| A G Alford        | 4 5 5 5 5 5 5 5—47 |
| J Johnston        | 5 5 5 5 5 5 5 5—47 |
| R S Greenhill     | 3 4 5 5 5 5 5 5—44 |
| W H S Cleveland   | 3 4 5 5 5 5 5 5—44 |

Ties on forty-nine.

|          |              |
|----------|--------------|
| Fielding | 5 5 5 5 5—25 |
| Thompson | 5 5 5 5 5—25 |

ENGLISH OPINION ON THE BIG MATCH.—The English press have been characteristically slow and cautious in their comments on the International Match, but once convinced that the victory is undoubtedly against them, and that the fight was fairly conducted, they are free to acknowledge the fact, though their explanations do not in every detail tally with our own. The inferiority of muzzle-loading weapons they are not ready to agree to. In a long leader on the match the *Volunteer Service Gazette* says:

Just four years ago the first prize meeting of the United States Rifle Association was held at Creedmoor. Immediately afterward Major Leech offered to bring an Irish team to shoot against the United States with match rifles. This challenge was accepted, and it was arranged that it should be shot for in the autumn of 1874. It would seem that this invitation or challenge, coming from a country whose representatives had just vanquished England and Scotland in the great small-bore match of the year, stimulated the American riflemen to incredible exertions, with the result, as we all know, that to the unbounded astonishment of every shooting man here, they not only won the match, but won it with an average which had then never been approached. Not one of the least interesting features of this *debut* of the American long-range shots was that they had not only, if we may so speak, to learn to shoot, but actually had to construct a weapon to shoot with, for one of the stipulations made by Major Leech was that each team should fire with rifles manufactured in its own country. The American gunmakers were characteristically as ready to accept this challenge as the shooters had been to accept theirs, and boldly discarding the muzzle-loading principle turned out breech-loaders which were shown to shoot at least as well as the form of match rifle accepted in England. From the first match in 1874 the Americans have undoubtedly carried all before them, and have shown to what a pitch of precision team shooting may be brought. In 1875 they sent a representative team to Ireland, and shattered all the theories which had been framed as to the advantages accruing from the bright climate of North America. In 1876, on their own ground, they routed in detail the Irish and Scotch teams which attacked them; and now in 1877 they have successfully resisted the onslaught of a picked team of the best available small-bore shots of the whole of the United Kingdom. Truly Colonel Drake was right when he said last year, when the question of getting together a team from the United Kingdom was mooted, that whatever we did we should find the Americans "hard to beat."

As for the match of this year, the very ample report which we reprint from the excellent New York paper, *FOREST AND STREAM*, shows that the shooting was better than ever. Sir Henry Halford and his comrades need take no shame to have been beaten.

It only remains to be said that the great International Match of 1877 gives another instance of the honest and cordial good feeling which rifle shooting shares with cricket and one or two other forms of emulation. The winners are pleased, and the losers are only desirous of trying once more. It is not necessary to say that the reception of the foreign team was marked by the usual cordiality and hospitality of the American nation, and that Sir Henry Halford undoubtedly expressed the feeling of all his comrades when he announced his intention of, if possible, challenging the great trophy once more.

The American papers, particularly those which treat at all scientifically of rifle-shooting, are, of course, much elated at the success of the representatives of their country, and read us many good-humored lessons on the causes of our defeat, and the antecedent probability that such an event would happen. We are not, indeed, quite sure whether the Irish team, which carried off the Elcho Shield at Wimbledon in 1875 will be quite ready to acknowledge that, as one of the New York papers assert, the Irish victory was solely due to the "coaching" of their American friends. But we think that all our small-bore shots must admit it to be true that the drilling of teams for target shooting has been much more scientifically and systematically carried on in the United States than has ever been the case on this side of the Atlantic, and that the wonderful results which have been arrived at are due almost altogether to this drilling. It is for our captains to learn a lesson from their opponents. Our men are individually, as good, and our weapons are, we believe, at least as good as those used in America. When the Americans next visit us at Wimbledon, which we hope may be next year, or if Sir Henry Halford again takes a team across the Atlantic, we shall confidently hope that it may be shown that the small-bore shots of the United Kingdom can shoot as well together as they can undoubtedly shoot individually.

And, in concluding, the *Gazette* thinks:

Everything seems, indeed, to have passed off in the most satisfactory manner—the Americans were evidently pleased with their guests, and the arrangements appear to have been nearly perfect. The more one examines the scores, particularly those of our opponents, the more one is astonished. The United Kingdom must manage to train a team during the ensuing twelvemonth which will bring the trophy across the Atlantic for once, if only to tempt an American team to come and fight for it at Wimbledon.

REGULAR ARMY PRACTICE.—The report of General Benet, Chief of Ordnance, made to Congress within the past few days contains some interesting facts touching the confessed inability of our regular army men to make anything like a respectable showing before the targets. That such a deficiency does exist, with few exceptions, is beyond question, and it has frequently been remarked that much of the apparent want of success on the part of the troops in their encounters with Indian outlaws is the fact that the savages know how to make their firing effective, while the soldiers waste their efforts and ammunition in wild shooting. At many points where regular troops are stationed, target practice is not systematically followed out, if attempted at all, and at many other stations it is only the presence and example of the resident militia which has compelled them to a certain amount of drill. This state of inefficiency has been the natural outcome of a miserly system of restriction in the issue of ammunition. Certain it is that without a reasonable supply of material with which to practice, the men will never reach even a reasonable degree of skill in the use of the regulation arm. General Benet speaks as follows:

In no one particular are we so lamentably deficient as in the

supply of metallic ammunition. Until recently only ten rounds per man per month for target practice has been allowed, making a total of 3,000,000 of cartridges required annually for this important purpose. Experience has conclusively proved that this allowance is entirely inadequate to teach the soldier the use of his rifle, and perfect him as a marksman. Constant applications from the troops and from commanding Generals for a larger supply clearly indicate its absolute necessity, and upon my recommendation the allowance has been doubled, making the annual expenditure 6,000,000 of cartridges. Our reserve stock of cartridges, calibre 45, is only 9,000,000.

—The Separate Troop Cavalry, at Oswego, have challenged the Forty-Eighth Regiment to a rifle match for a supper—distance for infantry 300 and 500 yards with rifles; for cavalry 200 and 300 yards with carbines. The infantry team is composed of Col. C. V. Houghton, Lieut. J. S. Barton, Serg't L. L. Barnes, Corporal A. Cropsey, Serg't-Major Geo. White. The cavalry team will be Capt. Turner, Lieut. Newell, Lieut. Wellington, Serg't Haven and private Wagner.

ANOTHER CHALLENGE.—The Zettler Rifle Club, discontented with their defeat at the fall shooting of the Helvetia Rifle Club, has challenged the latter club to another match, which will take place at the Schutzen Park in Union Hill, on Monday, October 29. Great interest is attached to this match, the result of which I will not fail to communicate to you for publication in your next issue.

S. O. V.

AMATEUR RIFLE CLUB.—The Competition for the Bronze Medal of the National Rifle Association, will take place at Creedmoor, Long Island, Saturday, October 27, 1877, at 10:30 A. M. Conditions, open only to members of the Amateur Rifle Club; distances: 800, 900 and 1,000 yards, fifteen shots at each; no sighting shots, coaching or previous practice on day of match allowed; position and rifles, any within the rules. Entrance fee, \$1. Prize to become the personal property of the winner in this competition.

JOSEPH HOLLAND, Secretary.

CONLIN'S RIFLE GALLERY.—Mr. Conlin has inaugurated something new in the way of gallery competitions, which cannot help being popular. The prize offered is an elegant gold badge which is to be won three times, not necessarily consecutively, before becoming the property of the winner. The following are the conditions of the match: Each competitor to load his rifle and fire as many shots as he can within one minute and a half's time (by the sandglass) at a reduced Creedmoor target. The competitors to be shot every Monday evening till the badge is finally won. Each competitor to have two trials during the evening. If a shot should be fired after "time" is called the average value of one shot will be deducted from the total score. In case of a "tie" another target to be shot. All disputes to be decided by a referee. Open to all comers.

The first competition took place last Monday evening.

|                     | Shots. | Score. |
|---------------------|--------|--------|
| Thomas Wilds, M. D. | 16     | 62     |
| Pierre Lorillard    | 17     | 59     |
| Dr. Dudley          | 15     | 57     |
| J D Hewitt          | 15     | 57     |
| A J Choylet         | 16     | 51     |
| E Roosevelt         | 14     | 51     |
| Judge Sherman Smith | 12     | 49     |
| E Wilson            | 12     | 45     |
| E Shearman          | 12     | 43     |
| N B Thurston        | 12     | 43     |
| R Finnegan          | 12     | 41     |
| G Work              | 10     | 40     |
| A J Wilson          | 10     | 38     |
| Wm Klein            | 11     | 31     |
| C E King            | 10     | 30     |

The second competition will take place at this gallery next Tuesday evening, Oct. 29, 1877.

A CORRECTION.—A correspondent writes to correct the score of Mr. A. G. Alford at the long range match at Chicago the other day. The score should have been 75 instead of 74, as stated.

### THE "UPSET" OF BULLETS.

I will give you, in brief, the experiments of Mr. A. S. Fowle, a rifle maker and rifle shooter, of Newark, N. J. In conversation with Mr. Fowle, he was satisfied that there was something that impaired the flight of missiles when quick powder was used, and he had no doubt but they were forced out of shape while in the gun, and on a favorable occasion he instituted the following experiments: Perhaps the most important of these experiments were conducted by a .44-cal. muzzle loading rifle, 230 grains of lead and 53 grains of powder. All the powder used was Hazard's. It was found by shooting 60 yards and landing the missiles into a light, but very thick snow-drift, when coarse, slow powder was used (I think No. 4 duck size), the missile was perfect; but when the powder was reduced to finer, FG sea shooting, with little change in trajectory, the missiles were quite visibly upset or flattened at the front; and where the powder was reduced to FFG, the missiles were mashed like putty, and their flight was seriously disturbed. At each change of powder a new locality in the drift was chosen, so that when the snow thawed away, those missiles that could not be found before could then be gathered in their order; and, not at all strange to me, the missiles were found mashed regularly as the quicker powder had been used, and none had stripped or jumped the rifle.

The next experiment was with a Remington Creedmoor, regular sized missile, containing 1-32 tin. With 165 grains of FG powder these were visibly upset. As these by their weight and great force would pass through the drift and reach the ground, thereby getting scratched and sometimes bruised on the point, it became necessary to determine whether the missile was upset by contact with the air or the earth, and, in order to do this, Mr. F. inserted snugly a hard piece of wood that just filled the inner chamber of the missile, which, it was thought, while the two forces were acting simultaneously, it would prevent the upsetting of the missile at that point. On shooting, the fact was proved. Every missile fired was now upset from the point to the plug, and from the butt or heel the fanges also swelled to the plug, leaving a distinct neck opposite the plug.

It is here claimed that if the mash or upset had taken place by contact with the earth, the mash would have extended through both wood and metal, and would have been greatest at the point of contact; but, on the contrary, the mash was evenly distributed through the point of the missile to the plug. The shortening of these Creedmoor missiles, with 165 grains powder, was near one-eighth of an inch; those fired with 59 grains were not visibly compressed, notwithstanding they were variously scraped on the side of the convex point by contact with the earth, like those fired by the 165-grain charges.

We regard this knowledge of the air resistance in guns important to rifemen, since by such experiments it may be determined exactly how much force the metal they use for missiles will bear without injury to their flight.

**THE AMATEUR OARSMEN REGATTA.** The regatta of this association on the Kill Von Kull last week was hardly a success. The races were interrupted by the inopportune presence of tugs and tows. The time of the winning crews for the mile and a half course were:

Junior single sculls—E. L. Rodewald, 10m 45s.  
Pair-oared shells—Atlantis, 10m 40 $\frac{3}{4}$ s.  
Four-oared shells—Columbia crew, time not taken.  
Four-oared junior gigs—Carman crew, 9m 41 $\frac{3}{4}$ s.  
Senior single sculls—Won by G. W. Lee, of the Triton.  
Six-oared gigs—Won by the Dauntless crew in 10m 2 $\frac{3}{4}$ s.

**THE OSWEGO RACE.**—The single-scutt race at Oswego last Wednesday resulted in another victory for Courtney. The time for the three miles was 29m. 14 $\frac{3}{4}$ s. Riley was second, and Johnson third.

**NEW JERSEY—Burlington, Oct. 20.**—The third annual regatta of the Oneida Boat Club was rowed by the following crews: Undine, Quaker City, West Philadelphia, and University of Pennsylvania, of Philadelphia; Oneida and Falcon of Burlington. The race was finished in the dark, the time being given for the one and one-half miles, Quaker City, 7m 11s.

**THE MISSISSIPPI VALLEY OARSMEN—Chicago, Oct. 10.**—Editor of Forest and Stream: The amateur oarsmen of the West held an important meeting to-day in the club rooms of the Palmer House. There were delegates present from nine of the leading boating clubs of the Mississippi Valley. The meeting was called for the purpose of forming an association fostering the interest of oarsmen. The Association will hereafter be styled "The Mississippi Valley Amateur Rowing Association." It was decided that an amateur is one who has not entered in an open competition; or for either a stake public or admission money, entrance fee, or competed with or against a professional for any prize; who has never taught, pursued or assisted in the pursuit of athletic exercises as a means of a livelihood; whose membership in any rowing or other athletic club was not brought about, or does not continue because of any mutual agreement or understanding, express or in public, whereby his becoming or continuing a membership of such club should be of any pecuniary benefit to him whatever, direct or indirect, and who has never been employed in any occupation involving any use of oar or paddle. It further provides that the executive committee shall be judges of the fact.

Two annual conventions are to be held, to consist of two delegates from each of the clubs in the association. The by-laws provide for an annual regatta two days in June, the time to be fixed by the executive committee.

The regatta laws of boat racing of the National Association of Amateur Oarsmen have, with a few minor changes, been adopted as the rule of this Association.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their Timing Watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

## Sportsmen's Goods.

## DUDLEY'S

Pat. Pocket Cartridge Loader.

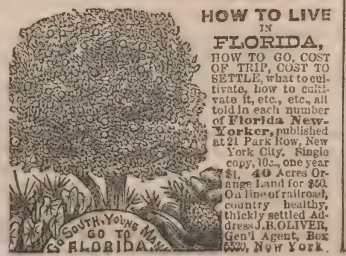

EXTRACTS, DECAPS, RECAPS, LOADS  
CREASES AND TURNS OVER  
CARTRIDGE SHELLS,

Equal to the most expensive machines. Is adapted to both paper and metal shells. Weighs out four ounces, and is as handy as a pocket knife. In short, is just what sportsmen have been looking for.

Samples sent, postpaid, to any address on receipt of price, and if not satisfactory the money will be promptly refunded.

Nickel-plated, \$2; polished, \$1.75; japanned, \$1.50. Liberal discount to the trade; 10 and 12-gauge now ready.

Poughkeepsie, N. Y. DUDLEY & CO. Oct 15 1

**HOW TO LIVE IN FLORIDA.**  
HOW TO GO, COST OF TRIP, COST TO SETTLE, what to cultivate, how to cultivate it, etc., etc. All told in each number of Florida New Yorker, published at 21 Park Row, New York City. Single copy 10c. One year \$1. 40 Acres Orange Land for \$25. On leased railroad, country healthy, thickly settled. Address J. OLIVER, Gen'l Agent, Box 550, New York.

## NEW YORK SHOOTING COAT.

A stylish, handsome Coat. First-class in every particular. Pleasant to wear, durable, and in the end the cheapest.

MADE OF BROWN VELVETEEN.

Pockets and lining made to take out, so that it may be worn for early fall and winter shooting. (Horace Smith, Esq., says: "It is my idea of a shooting coat. I have worn them for several years, and would have none other.") Price for Coat, \$25; Vest, \$2.50. For full suit, \$14.00. I also make the sleeveless Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

Also, in addition to the above, I am making a Waterproof Canvas Suit, cut same style as the Velveteen; goods, not stiff and hard, but soft and pleasant to wear; guaranteed to turn water. Sportsmen who have seen it say it is The Best Yet. Coat, \$20.00; Vest, \$2.00. For full suit, \$14.00. I also make the sleeveless Coat; Vest with sleeves if desired. Rules for measurement and samples sent upon application.

F. L. Sheldon,

For Sale in New York by

RAHWAY, N. J.

H. C. SQUIRES, 1 Cortlandt St., N. Y.,  
CREEDMOOR PARLOR RIFLE.

Finely finished, carved stock. Loads at breech with small percussion cartridges. Will shoot 250 feet with accuracy and force. There is scarcely any report, and no smell from this Rifle, making it very appropriate for parlor use, picnics and fairs. The shell extractor is on the hammer, pulling out the old shell every time.

Price, \$10; cartridges for rifle \$3 per thousand, or \$1 per box of 250. Iron bell target, with numbers, \$5 sent C. O. D. or on receipt of price. Send for price list of Revolvers, Skates, Novelties and Sporting Goods.

FISH &amp; SIMPSON,

132 NASSAU STREET, NEW YORK.

A VICTORIOUS INVENTION  
The Eagle Claw.

An ingenious device for the purpose of catching all kinds of Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with the simplicity of removing the victim, are among its peculiar advantages.

It is immaterial how to place it when set. It may be buried flat in the ground, suspended from the limb of a tree, or when occasion requires, covered with grass, leaves or other light material without in any way impairing its certain operation.

It is adapted for both of any season, and, when set, no Animal, Fish or Bird that touches the bait can possibly escape. It does not mangle or injure its victims in the slightest degree, nor need they be handled to free them from the trap.

PRICE LIST:

No. 1—For fishing and all kinds of small game and animals, sent by mail, 35 cents.  
No. 2—For catching Mink, Muskrats, Raccoons, large Game, Fish, &c. 75 cents.  
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves, Panthers, &c. Can be easily set by a boy, and will stand a strain of several hundred pounds. Weight, 10 to 16 lbs. \$10.  
All goods sent, charges paid, to any address on receipt of price. Address

Stent &amp; Co., Gen'l Agents,

132 Nassau St.,

NEW YORK.

AGENTS WANTED.

A NEW BREECH-LOADING RIFLE  
FOR \$5.

WITH ELEVATING SIGHTS GRADUATED UP TO  
700 YARDS, USING EITHER FIXED CARTRIDGES  
OR RELOADABLE METALLIC SHELLS.  
Can be used as a Muzzle-Loader.

THIS IS THE BIGGEST BARGAIN WE EVER OFFERED!

The Rifles are all brand new and just as they came from the factory. They cost to manufacture over \$10 apiece, and are superior shooters; they are very finely finished, with case-hardened locks, blued mountings, and handsomely formed black walnut stock; barrel of the best steel, finely rifled. The lock and graduated sight alone cost \$2, and as handsome and well made a rifle cannot be bought in the United States for \$20. The loading arrangement is a drop action, similar to Ballard or Sharp, the simplest and best. Every man and boy in this country who needs a rifle should purchase one of these guns. Such a bargain will never be offered again. The editor of the "Boston Globe" says: "More than 1000 rifles have been ordered to purchase one, and the price is very low." We have furnished several rifle clubs with this rifle, and have received many praises for their shooting qualities. If you have any use of a rifle, clear for use or trade, order it once and say that you want our New Union Rifle, so as not to conflict with former advertisements. Remember that these guns are brand new, cost the manufacturer over \$15 apiece, and that we guarantee them as represented. Where parties with it, as well as becoming sent 1st rifle to correspond by mail. Cartridges, \$5 a box. Metallic shells, \$2 a box. G. W. TURNER & SONS, 20 Central Street, Boston, Mass. Say where you saw this.

MANUFACTURERS OF

BLASTING AND MINING, SHIPPING AND  
SPORTING GUNPOWDER.

SPORTING BRANDS—Eureka, Continental,  
"Border Rule," Snap-Shot, and Warren Sporting  
Cannon and Musket, U. S. Standard. The above can  
be had of the dealers, or at wholesale at the office,  
27 Doane street, Boston, Mass., and of the agents,  
JOHN P. LOVELL & SONS, corner of Wash-  
ington, Cornhill and State street, Boston, Mass.  
Jy19

THE  
HAZARD POWDER CO.  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."  
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of  
strength and cleanliness. Packed in square canisters  
of 1 lb. only.

Hazard's "American Sporting."  
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and  
6 1/4 lb. kegs. A fine grain, quick and clean, for  
upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."  
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters  
and 6 1/4 and 12 1/2 lb. kegs. Burns slowly and very  
clean, shooting remarkably close and with great  
penetration. For field, forest or water shooting, it  
ranks any other brand, and it is equally serviceable  
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."  
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25,  
12 1/2 and 6 1/4 lbs, and cans of 5 lbs. FFG is also  
packed in 1 and 1/2 lb. canisters. Burns strong and  
moist. The FFG and FFG are favorite brands for  
ordinary sporting, and the "Sea Shooting" FG is the  
standard Rifle powder of the country.

Superior Mining and Blasting Powder.  
GOVERNMENT CANNON & MUSKET POWDER:  
ALSO, SPECIAL GRADES FOR EXPORT OF  
ANY REQUIRED GRAIN OR MOOPE, MANU-  
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-  
pany's Agents in every prominent city, or wholesale  
at our office,  
88 WALL STREET, NEW YORK.

THE  
New Dittmar Powder.

THE CHAMPION POWDER OF THE WORLD  
For all off-hand shooting at short and long ranges.  
Unsurpassed for Cleanliness. Pleasant to shoot on  
account of little recoil and report. Desirable for  
hunting on account of little or no smoke. Un-  
equalled for rapid firing, as it does not foul and heat  
up the barrel as black powder. Great accuracy,  
penetration and good pattern. Safer than black  
powder. Address

## N.Y. Newspaper Mailing Agency

With the latest improved Newspaper Folding and  
Mailing Machines, No. 13 Spruce street.

JAMES BRADY, Manager and Proprietor.

## Sportsmen's Goods.

BOSTON  
SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS &amp; SON.

BOSTON.

Each article—coat, trousers, vest and hat—have the name and manufacturer's address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We make but one quality, and that is the VERY BEST. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest, and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are riveted, and nothing is neglected to make the whole suit complete in every way.

## OUR PATENT DECOYS

have entirely superseded the old-fashioned cumbersome, wooden decoys. The birds are hollow, and six of them occupy about the space of one wooden decoy. The Duck Decoys of all kinds are \$12 per dozen: geese, \$3 each; yellow leg, \$4.25 per dozen; black breast plover, \$3.75 per dozen; red breast plover, \$3.75 per dozen; golden plover, \$3.75 per dozen; turnstone, chicken plover, etc., \$3.75 per dozen; sandpipers, \$3.50 per dozen. We are now making standing geese for field shooting.

## THE HUNTER'S TENT

is made of tan-colored duck; light, easily transported. Size, 7 ft. by 8 ft. Price, \$10 complete, made on the umbrella principle, folding into a neat roll 3 feet long.

In the judges' report at Philadelphia they were commended for excellence in every part. Very novel and practicable; adapted to all out-of-door purposes where lawn, beach, hunters and camp tents are used; quick folding; all sides strongly fortified; enables them to stand against wind and rain. Rev. F. B. Savage, of Albany, N. Y., who camps out in Florida in winter, and the Adirondacks in summer, writes this about the tents:

ALBANY, July 31, 1877.

SRS—I have just returned from a three-weeks' camping expedition in the Adirondack, and have had the three tents bought of you put to the severest tests of exposure both as to wind and storm, and I do most unhesitatingly say they are the most complete thing of the kind I ever used.

1st. They are easily put up or taken down.

2d. They are perfectly waterproof.

3d. They are a good height, and all the room I available.

Our party asked for no better. They were admired by all who saw them, and one party insisted on buying one of ours that was to spare. Rev. Dr. Duryea, of Brooklyn, and the Rev. Dr. Irwin, of Troy, both indorse what I say about your tent. With kind regards, yours truly,  
F. B. SAVAGE.

Tan-Colored Leather Pliable  
Waterproof Suits.

In Shooting Coats, Jackets, Breeches, Vests and Hats at following prices: Coats, \$22; Breeches, \$15; Jackets, \$18; Vests, \$12. These form the most elegant shooting equipment known. They are indestructible.

A recent notice in the FOREST AND STREAM from a correspondent, says:

Whenever a sportsman, or even one who does not claim the distinction, finds a really good and useful article, it is no more than fair that he should let others have the benefit of his knowledge. For this reason we would call attention to the Tan-colored Leather Shooting or Fishing Suits, made by G. W. SIMMONS & SON, of Boston, Mass., the manufacturers of the famous "Boston Shooting Suit."

I saw these goods advertised in your paper, and wrote to the parties for samples. I found the material as soft and pliable as a piece of kid. I tested it by soaking in water twelve hours, and found it as nearly waterproof as one could desire, and after drying was happily surprised to find it had not stiffened in the least. I have since then received a full suit—coat, vest and breeches—ordered by letter from measure taken by myself.

The goods are splendidly made, well lined with flannel; in fact I do not see how they can be improved.

My friends are unanimously in their verdict that G. W. Simmons & Son's leather goods cannot be excelled in quality or beaten in price.

For every kind of sportsmen's goods address

G. W. SIMMONS & SON,  
Oak Hall, Boston, Mass.

GUNSMITHS AND RIFLE GALLERY,  
207 Bowery, New York.

## Gale's Patent Tents,

Adapted to all purposes where Lawn, Beach, Hunters' and Camp Tents are used; are eight feet high, seven feet square at bottom, will lodge four persons; can be set up or taken down and packed in five minutes, making a bundle four feet long, of twenty-five pounds weight. The pole in two parts, is joined together by a brass tube. They are wonderfully light, and yet very strong, and are the handiest and cheapest tents extant. Samples of goods and price list sent free, and the tent sent on receipt of price, or C. O. D. Prices from \$10 to \$15.

GALE & CO.,  
Boston, Mass.

## GENERAL GUIDE,

WITH MAPS AND ILLUSTRATIONS.

896 pp., Price \$3.

Tinted Paper, 1/2 bound Morocco \$5; Tinted Paper, Muslin, \$4.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM," AUTHOR OF THE "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

"FOREST AND STREAM" PUBLISHING CO.

Sent by mail post paid on receipt of price.

This book is a complete encyclopedia for sportsmen. It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America. It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish. It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. It describes 297 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each. Every kind of dog used for sport is designated, and his points for such judgments fully given. It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any person can administer the prescription with perfect confidence in their safety and efficiency. It contains very useful recipes and remedies for wounds, bites, poisons, illness and emergencies of all kinds, for cleaning, repairing and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen, and a directory where to buy outfitting goods. It instructs in Taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

## INDORSEMENTS.

SPORTSMAN'S GAZETTEER.—Geo. Bird Grinnell, of the Peabody Academy of Science, New Haven, writes: "I have to thank you for a copy of the Sportsman's Gazetteer received day before yesterday. I have delayed acknowledging it, in order that I might be able to speak intelligently of its merits. I have looked it over somewhat carefully, and I must say that I am delighted with it. It seems to be just the book that we have so long wanted in this country—an American 'Stonehenge' in fact. On the fishes you have surpassed yourself, and I am astonished at the amount of material you have collected, and the happy method in which you have treated the group. The Dog and Diseases of the Dog are admirably written, and will prove one of the most useful of manuals for sportsmen. The Art of Fly Fishing, and the hints and recipes are all that could be desired; in fact the book seems to be a complete success. I do not see how it can fail to be a very large sale."

THE SPORTSMAN'S GAZETTEER.—The Gazetteer duly came to hand, and to say that I am delighted with the book only faintly expresses my appreciation of it. How you have been able to gather so much valuable matter together is a mystery to me. It certainly speaks well for your industry and knowledge of the subjects discussed. For the size and valuable information contained, the price, I think, is remarkably low, and I would not be without it for double the price. Every sportsman and everybody interested in sporting matters should have a copy, and I shall take great pleasure in recommending it to my many friends.

H. C. YARROW, M. D., U. S. A.

THE GAZETTEER.—The Sportsman's Gazetteer was duly received, and myself and many of our best judges in sporting literature have critically examined the book, and all unite in pronouncing it the most valuable work ever issued from the press on kindred subjects. It is a wonder to all how so much valuable information could be so intelligently crowded into a book of its size. The task must have been very great, but has been accomplished in a remarkably concise, intelligent and pleasing manner. Every page demonstrates the fact that the author was a master of his subject. No sportsman or tourist can be without it, and all who are "tough" and, no doubt, will be, read interestedly by the masses, and certainly by all interested in the study of natural history.

DR. D. C. ESTES.

Lake City, Minn., Aug. 1, 1877.

## THE "FISHING LINE."

## Brook Trout, Grayling and

## Black Bass Fisheries

OF NORTHERN MICHIGAN, VIA

## Grand Rapids and Indiana Railroad.

(Mackinac, Grand Rapids &amp; Cincinnati Short Line.)

Sportsmen who have caught a fly or trolled a spoon in the waters of the Grand Traverse River will come again without solicitation. All other lovers of the R. & I. are invited to try these waters, wherein the fish named above, as also Muscunonge, Pike and Pickerel, abound.

In no other streams east of the Rocky Mountains is the famous American Grayling found in such numbers.

Brook Trout Season opens May 1st.

Grayling Season opens June 1st.

The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had in many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points on the Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also, on and after July 1st, Mackinaw and Lake Superior Excursion Ticket.

## Dogs, Guns, and Fishing Tackle Carried

Free at owner's risk.

## Camp Cars for Fishing Parties and Families

on new route.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the Fishing Grounds, send to FOREST AND STREAM office, or address:

TO SPORTSMEN IN GENERAL!

Headquarters Bohemian Glass Works,  
214 PEARL STREET, NEW YORK.

MAKE THE FEATHERS FLY WITHOUT KILLING THE BIRD—SOMETHING MUCH NEEDED.

The Bohemian Glass Works having made a specialty of the manufacture of Glass Balls for Trap Shooting for the past year, and having facilities for manufacturing cheaper and better than other establishments, have secured the service of that well-known Sportsman,

IRA A. PAINE,

to take entire charge of the production of his new patent Feather Filled Ball, which we hold the exclusive right to make and sell.  
In offering this new ball to the public it will require very little introduction, as in no instance where it has been exhibited has it failed to take the place of all others; and is to-day the only perfect substitute for a bird in use.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 500 or boxes of 500. Send for price list. We intend offering special inducements to the trade.

Capt. Bogardus' Patent Glass Ball Trap and Rough Balls.

These Traps and Balls patented by Bogardus and used by him many thousand times, proves them to be just what is wanted by all

SPORTSMEN'S CLUBS AND AMATEURS.

THE PATENT ROUGH BALL—The only Ball that will break sure when hit by shot. Use none but the best. Every ball marked. Patented April 10, 1877; Traps, March 13, 1877.

Geo. E. Hart & Co.,

NEWARK, N. J.

TRADE SUPPLIED.

HUBER & MERWIN'S CHAMPION BALL TRAP.

This certifies that I have used every trap in market, and find the CHAMPION GLASS BALL TRAP, for durability and perfection of its operation, superior to their all, and take pleasure in recommending the "Champion" to sporting clubs and my friends. (Signed) Aug 1y

We call the attention of the fraternity to the above trap, claiming to be the *plus ultra*. It combines compactness with durability, and is arranged, by a switch on the bed-plate, to throw a ball in any direction or at any elevation unknown to the shooter, a screen preventing his seeing the direction in which the trap is set.  
The spring, as the cut will show, is made of a steel rod or wire, bent spirally at the point of attachment, thus receiving the concussion its entire length, and preventing breakage.

PRICE \$10.

FOR SALE BY

BARTON & CO., Sole Agents,  
337 BROADWAY, NEW YORK.

THE GREEN GUN has the simplest and strongest snap-action made. The proportions and finish, the shooting qualities for penetration and pattern, are not excelled. Can bore to make any pattern ordered, from a cylinder to a full choke.

Price \$45. Re-boring and repairing breech-loading shot-guns done promptly and in the very best manner. Send for new price list to CHARLES GREEN, 3 West Main St., Rochester, N. Y. Aug 30 tf

Volume 9.—No. 13.  
[No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun,  
AUTUMN.

BY T. S. VAN DYKE.

SING not to me of blushing Spring,  
With birds, and lambs, and bees, and flowers;  
Nor of the charms that pleasures cling  
O'er rosy Summer's dragging hours.

Give me those calm and halcyon days,  
That mourn around dead Nature's bier,  
When Recollection softly plays  
O'er sports of many a banished year.

Those sweet and peaceful smoky days,  
That seem as if life's toils were done;  
When struggles down with softened rays,  
Through dreamy haze, the bloody sun.

Or e'en when dark the sky doth scowl,  
And Winter's scouts o'erturn the land,  
And Boreas, with blustering howl,  
Springs to the elements' command.

Give me the wood-bound stubble field,  
Where oft I've fished the little quail,  
Where oft the double shot hath pealed  
Across his airy, buzzing trail.

Give me the saddened, tattered wood,  
With crimson vine and tangled briar,  
Where oft, with throbbing heart, I've stood  
While grouse or woodcock shunned my fire.

Give me the brown and bushy dingle,  
The marsh, the prairie, or the plain,  
Where oft I've felt my being tingle  
With mighty expectation's strain.

Give me the little rush-fringed lake,  
Where thick the stately wild rice springs,  
Where oft the very air doth shake  
Beneath ten thousand rushing wings.

Give me the mountain's shaggy side,  
In rich and varied colors bright,  
Where antlered beauty loves to hide,  
And disappear with crashing flight.

With gems like these is Autumn graced;  
With gold is fringed its darkest cloud;  
Oases cheer its desert waste;  
And diamonds sparkle on its shroud.

For Forest and Stream.

## A Summer on the Lower St. Lawrence.

AFTER a pleasant but commonplace journey from Boston to St. Johns, and thence by the new inter-colonial railroad toward the Bay of Des Chaleurs, we find ourselves located for a few days at Dan Frazer's noted resort for salmon fishers, on the beautiful dark-green Metapedia. The hotel, which hardly deserves the name of such in view of its indifferent board and accommodations, is, at the time of my arrival, well filled with angling tourists from all parts of the Dominion and the United States, including even the outlying islands of the Bermudas, which had sent a creditable deputation from its resident garrisoned officers. I am free to confess to a tinge of shame and mortification at my ignorance when hearing here discussed all around me by everybody the minute details and merits pertaining to the craft of an angler who, disdaining the sportive sea trout, reserves the salmon for his special gratification. The Silver Doctor, the Fairy, Jock Scott and other appellations are bandied about here in the same positive manner as different species of game birds, only with this difference, that in the latter we deal with a mass of animated feathers of typical indivisibility, while in the former we merely allude to bits and tinsels of gaudy colored feathers and silk, which change about as often in pattern as the fancy of these makers dictates.

Salmon fishing is a privileged pastime, requiring a round outlay of means, an exceptional outfit and ready access to the rather circumscribed geographical area in which this fish occurs. But few of the many devotees to field and aquatic sports can really afford to indulge in this specialty, since the gear needed for it is expensive and not serviceable in the capture of any other fish. Exclusively constructive rods, reels, lines and flies, if complete, could hardly be purchased for less than a hundred and fifty dollars, which would be but the

smaller half of the bill, since the lease of good streams ranges as high as a thousand dollars for a short summer season. Government permits at established rates of one dollar per day can, however, be readily obtained at any one stream owned by the crown; but success in these is apt to be poor, as their privileges are open to all comers. Such is the case at the mouth of the Restigouche and the Metapedia, two of the most notable salmon bearing rivers emptying their floods into the wide embouchure of the majestic St. Lawrence River. The fishing on them is rather fair at the beginning of the season when salmon commence their ascent, and continues so until about beginning of July, when the lessened amount of rainfalls causes the gradual shrinking and consequent heating of their waters, which, to suit the fish, must have a certain degree of coolness. He then forsakes all shallow rapids and resorts to deep pools, where, when calms and weather favor, he may be seen lying motionless in solid banks, resembling rather a dark vein of the rocky river bed, than the even, living phalanx, which betrays its nature by an occasional splash or a slight movement of the tails or part of the ever restless members. At this time they grow, generally speaking, indifferent to the tempting, trailing, gaudy titbits of feathers, so cunningly hiding the barbed dangers lurking in their midst, from the angler's well tempered hook. A few may take a notion from time to time to rise up from the luxurious coolness of their deep environment to take, as it were, a cursory glance at affairs above, or of satisfying merely their curiosity, after which they lazily descend, to the great mortification of the angler, who has spent many weary hours in the painstaking, patient pastime of casting his fly to the utmost limits of the dark pool, which bears his birch canoe with its usual complement of two expert boatmen. It is evident that the desire to replenish his empty stomach is not the ruling motive of this sportive habit of the fish, since he does thrive literally upon nothing at all from the time that it ascends the streams for spawning purposes until his return back to the sea, which happens between the months of May and September.

At the end of his summer journey, he resumes once more his predatory habits, and prefers even the worm of the rustic pothunter to the sportsman's fly, which offers no promising nourishment in his emaciated condition. He is at that time too poor to serve as an object of legitimate sport. There are several excellent pools close to the Metapedia tavern. These are formed by the excavating tendency of rushing waters, when checked in their onward flow and turned into a rotating movement. The angler often finds himself in luck at these chosen spots, and may take, within a few hours, a half a dozen or more of his silvery prey, averaging on these streams the notable weight of fourteen pounds. His expenses, however, are commensurate with his gratification, and exceed vastly those of the man of gun, since board and the hiring of help cannot be had for less than seven dollars per day, all extra luxuries excluded. Neither is salmon fishing, royal as the fish may be, the par excellence royal sport, the exclusive privilege and reward of ripe experience, and the well earned knowledge of the habits of the fish. The pastime, in fact, is becoming fast a favorite recreation of the merest tyros, ladies included, who never even aspired to a fair share of professional honors enjoyed by the sterner sex. I am assured that Lady Dufferin manages to capture in the most approved style as many salmon as most of the successful and experienced anglers, and that these honors are fully shared by some of her lady friends.

The sport is now reduced, by means of suitable canoes and the help of efficient boatmen, to an ordinary enjoyment. It is these, not the angler himself, who select the best localities where a successful cast may be made. Neither is there any necessity of enduring fatigue and toil, wading of the streams, or leaping dexterously from rock to rock, as in the case of brook trout fishing, where foaming, seething waters, yawning between huge slippery boulders impart the additional spicy flavor of possible mishaps or even danger to life. Nothing of the sort is apt to happen here; the roomy, dry and clean canoe, manned by two trustworthy, experienced men, and moored within hail of the tavern, awaits your pleasure. The boatman, who is mostly of more or less alloyed Indian extraction, does take care of everything, sees to all of the gear and even to the safe landing of the fish itself after his exhausting struggle against the wiry strength of the plaited line, which holds an inexorable strain upon him from the time that he took a fatal notion to the feather at its end. Thus it happens

often that any beginner chancing to be on the right spot may have better success than the most expert angler, no matter how much the latter may boast of his experience and technical skill.

Nearly all of the streams falling into the broad basin of the lower St. Lawrence abound in salmon. Their number has of late somewhat increased, as the laws regulating their capture are rigidly enforced. Their size, however, varies in different waters. The Restigouche and the Cascapedia boast of the largest fish, while the Nepissiguit, Metapedia and Natashquan rank below in average. The government controls the lease, and appoints wardens to all streams which are not rented to private parties. Their duties consist in warning off or arresting all intruders. A uniform tax of one dollar per day entitles all comers to the privilege of fishing for salmon. Accurately collected statistics show an annual amount of fish taken in each stream, along with their average, and would afford the most condensed and truthful information concerning the points, indispensable to all whose time and means permit to indulge in the sport. Along with these valuable hints we find here and there cropping out, curious relics of ill-founded prejudices, as evidenced in printed suggestions toward a more efficient protection of salmon and trout against their enemies. The kingfisher is singled out as one of the most conspicuous, and a premium upon each head is recommended as an efficient check of the supposed havoc which the young fry of salmon suffers by that bird.

It is true that the kingfisher is a common sight along all of the streams, and also that he follows strictly the avocation denoted by his name. But the daily amount of fish consumed by each bird cannot be of any weight, when considering the problem of effective protection. It would be well, also, to inquire into the particular species which serve the kingfisher as his usual food, and the inquiry could only be satisfactorily answered by accurate examination of the remains found in the stomachs of a dozen or more of these birds. It is more than probable that he preys less upon the young fry of salmon and trout than upon suckers and other sluggish, stationary fish which he could capture more easily than the other, which would be more likely to offer difficulties by reason of their natural restlessness, great swiftness and their habit of concealing themselves under rocks or the whirling eddies of deep pools near cascades. The conspicuousness and the name of of the bird are probably responsible for assigning to him the greatest share in the annual destruction of fish, and the mistake in overlooking far more efficient and dangerous enemies. A kingfisher probably weighs from four to five ounces, and raises a family of from five to seven young, for which he provides. Although conspicuous, they are far from being numerous, since each bird controls a separate fishing ground of his own, from which he keeps all other intruders. The great noise and chatting resulting from frequent encounters with them have probably led many superficial observers to the error of making exaggerated estimates of their numbers, whereas five pairs a mile would probably be an unusual surplus on any stream.

It would seem that if birds are chiefly injurious to the trout and salmon, that the kingfisher cannot be held alone responsible for the great annual destruction inflicted upon them. They encounter far more dangerous enemies in the sheldrake and cormorant. We meet the former frequently in the summer along the streams and inland lakes, upon which they raise their numerous, voracious brood of young. It would be difficult to think outside of the Colymbidae of a bird more admirably adapted for the capture of the finny tribe, with their slimy, slippery bodies, than the family of the Mergansers, of which the so-called sheldrake forms a common species. They are expert swimmers, being slim in body and of broadly webbed toes, with plenty of power and little resistance to overcome. The wonderful plasticity of their throat enables them to swallow any fish, even crosswise, though the same should be provided with unyielding dorsal fins, as in the case of the rock bass. It is questionable if outside of the above named groups and the old wife (*Harelda glacialis*) there is any other bird capable of remaining so long under water in their diving excursions. Their digestive powers are enormous, and it would not be hazardous an exaggeration, but what they are capable of capturing and absorbing daily half of their own weight, which cannot be less than two pounds or above, in full grown birds. Counting in of their brood of from seven to eleven, which require the same amount of food in proportion to their size, we can form an estimate of the damage inflicted by these birds

upon fish of all kinds, including those which escape the occasional net of the kingfisher.

A glance, too, at the means of the latter to capture its prey, as compared with those of the voracious merganser, will afford additional point to the argument. In the one we view a smooth spear-shaped like beak, necessitating, to be serviceable, extremely favorable combinations for pinning and securing its prey, while the saw-like, relentless grasp of the narrow beak of the other could make incalculable, never-failing havoc.

I have singled out these birds, as their geographical distribution is very general, being resident breeders of all streams of eastern North America, from the shores of Labrador to the wooded retreats of the mountains of Pennsylvania. But the visitor to the Gulf of St. Lawrence cannot fail to notice, also, here and there a less active but even more voracious enemy of the salmon in the cormorant, the proverbial symbolism of all aquatic voraciousness. There is a curiously-shaped rock near the eastern extremity of the Province of Quebec, called, from its appearance, the rock of Perce. The little town near it is named likewise, and is a convenient station of the Gulf Port steamers running regularly between Quebec and Halifax. Romantic Gaspé, with its beautiful fjord-like bay, is but fifteen miles north of it, and thus adds to the desire of any tourist to the Gulf of the St. Lawrence to linger a few days where so many attractions compensate for this judicious outlay of time. Perce Rock is but a few hundred yards from the main land, and stands out like a conspicuous landmark in bold relief to the straight outlines of the main shore.

It is formed of almost perpendicularly tilted schists of grayish slates, and has a flat square top, which may be owing to the vast denudation which has affected this whole region on the grandest possible scale. This top has been for ages the chosen breeding ground of the great common cormorant and other large colonies of sea gulls, which seem to live harmoniously with their voracious neighbors. The rock rises perpendicularly, is inaccessible by nature and additionally so by special local laws forbidding its ascent, and enacted to prevent possible catastrophes or the disturbing of the breeding grounds of these birds. They must be both an instructive and charming sight to the lessees of the great salmon rivers Dartmouth, York and St. John, which empty their floods fifteen miles from this spot into the basin of Gaspé. There seems to be organized a regular system of fish transportation between the hungry broods on this rock and the upper course of these rivers, as even human ingenuity could not desire better. The visitor at Gaspé may see every morning as unfailing as time, cormorant after cormorant flying up stream, to return at intervals loaded down to the utmost with fish for their hungry young, after having, of course, enjoyed themselves to the utmost the liberal banquet spread before them by the myriads of quickly growing salmon, which abounds here in spite of these immense inroads upon its successful increase. If in turn I mentally calculate upon the relative amount of fish needed to sustain a cormorant and his full-grown family, if I think of the clouds of birds I saw rising up from the rock, when the captain of the steamer fires a gun to afford his passengers the luxury of this interesting sight, it seems to me that a premium upon the head of the cormorant may prove a better protection to the salmon fry than suggestions toward the extirpation of the kingfisher, our lively, chattering, culiveneer denizen of the monotonous solitude of mountain streams. Perhaps Mr. Fred. Curtis of Boston, the widely renowned Walton of all notable salmon streams of the St. Lawrence, would endorse a trial of altered warfare, when reflecting upon the somewhat lessened amount of his royal private fishing grounds, the beautiful Dartmouth. L.

#### For Forest and Stream and Rod and Gun. REMINISCENCES OF THE TURF.

His ears up pricked, his braided standing mane  
Upon his compassed crest now stands on end;  
His nostrils drink the air, and forth again  
As from a furnace vapors doth he send.  
His eye, which scornfully glistens like fire,  
Shows his hot courage and his high desire.

Venus and Adonis.

THE most splendid of animals is not only great in his usefulness, but his nature and the link of love between him and his master have created the Centaur as an emblem of conquest, and established the typical man on horseback to represent advancement and civilization. There is poetry in him which inspires bards, while his beauty, is the study of the painter and the sculptor. From his proud crest to his delicate pastern he is a succession of interminable lines of beauty; the curve and the reverse curve repeated and varied until the critical eye is lost in wonder and admiration. And what a noble spirit animates the splendid creature. One of the gorgeous military champions of the age of chivalry in his enthusiastic love for his horse exclaims: "Ca ha! He bounds from the earth as if his entrails were air, le cheval volant, the Pegasus qui a les narines de feu. I soar, I am a hawk; he trots the air. The earth sings when he touches it. The basest horn of his hoof is more musical than the pipe of Hermes."

No wonder that aristocracy has made the horn a device in the blazonry of nobility, and appointed the gold spur in the badge of the highest knighthood; and that gambling with so noble a creature in the ancient chariot races and on the modern turf makes the "Olympic dust" a phrase of classic lore.

Those who love to trace the blood of the illustrious Diomed in America will find his noblest descendants foaled on the plains and hills that surround the once famous Rebel capital Timoleon, Florizel, Boston, Peacemaker, Revenue, Red Eye, and many another famous four-mile nag, raised in that seem-

ingly desolate land of Broomseedge and huckleberry, have left an undying fame in the history of the Metairie Course, the Charleston, the Broad Rock, the Fairfield and others.

The great racer, Wm. R. Johnson, was called "the Napoleon of the Turf" in the days when a road wagon or a sulky were unknown; when gentlemen went courting in a slow, stately tandem, with a negro groom following on horseback who carried the high portmanteau on *croupe*. I have before me a most amusing old colored print of the famous race for Lafayette's carriage, at Tree Hill, near Richmond, in 1825. It was a beautiful barouche, in which the illustrious Frenchman traveled when in America the last time, when he went along the rich valley of the James River, or rather "Jeems," as it is called in classic Virginia, and was escorted from one mansion to the next by a score of the best gentlemen of the Old Dominion until he arrived at Monticello. As Col. Tom Bolling, who was one of the gentlemen who had the distinguished honor to constitute the escort of outriders, has told me of it, the scene which was there enacted must have been impressive and almost solemn.

The mansion stands on the summit of the last outpost of the Blue Ridge Mountains, which bound the western horizon with lines of blue, whose graceful curves impart an idea of majestic calmness, while to the eastward the rich lowlands stretch away as smooth as the ocean beyond. The dreamy stillness of the autumn held all nature in a trance, and the light floating clouds stood still in the sky, so that when the gay cavalcade reached the height and felt the impressive spirit of the scene, the laughter which had resounded along the route all the morning suddenly ceased, and even the horses relaxed their speed into a slow and stately gait. These two celebrated men, the statesman and the warrior, had watched the birth of the young republic—its infancy swathed in battle-flags, and its youth heralded with the world's wonder and acclaim; and now they greeted each other with a mutual congratulation which was too full and great to find utterance in words. The gentlemen stood uncovered; the ladies, the servants, the very household dogs bent their eyes on the two men, as Mr. Jefferson, with the stately dignity that belonged to him, came down from the porch. "What will he say?" thought every spell-bound spectator. The fashion of France prescribed an embrace and a kiss for such an occasion, and the illustrious American, with the refined delicacy of a true gentleman, chose that ceremony as a compliment to the ally and an endearment to the friend; but the two could only regard each other with a look which spoke unutterable things that only they could understand. And it was only when the first toast was given at dinner, and the brimming glass drained that any of that historic party could speak clearly or see clearly, so affecting had been this meeting.

I did not mean, gentlest of readers, to go off so far in Lafayette's carriage, but to tell a very short story about the race. The gentlemen who figure in that old colored print are attired in the long blue frock-coats that reach nearly to the ankle, with voluminous neckties and aspiring collars that threaten the brims of the peaked beavers, the chins all smooth and the boots very pump-like. The older men wear the blue swallow-tail, buff or gray breeches, and Wellington boots. Occasional among both classes you may see that marvel of a fop's make up at that period, an "ark-in-seal waistcoat," i. e., a vest of such beautiful variety of color that the French tailor's genius called it a rainbow, (*arc en ciel*).

Jack Randolph, as he was always called in Virginia; Col. Wm. R. Johnson, "Old John Wickham," noted for Tinto Madeira; Jas. Harrison, politician and turfman; Col. Nat. Macon, Dr. Wych, Dr. Brownlow and Chief Gustner Marshall were among the characters who attracted the eyes of the immense crowd. It was a two-mile race for three-year-olds, six entries, and Captain Belcher won it in two straight heats on his horse, Lafayette, through Virginian and Sir Archie, a great grandson of Diomed.

Captain Belcher, afterward one of the famous turfmen of America and the owner of Red Eye, was then twenty-nine years old. To-day he seems to carry his eighty-one years with ease. His frame is wiry; his keen gray eyes are very expressive and intelligent, and his manner soft and gentle. Sitting before the great log fire in an old Virginia mansion of a winter night, it is a rare treat to hear him tell of the olden time—the racing, the cock fighting, the drinking, and also the fighting, for in those days the terrible "smooth bore" were the accepted arbiters in all disputes, business, politics, or society.

FLORIZEL AND PEACEMAKER, 1808.

The old Broad Rock course near Richmond was the scene of this remarkable race, which so excited the people generally that ladies staked bracelets and rings, boys bet their marbles, and the gentlemen planters their negroes. Many a pretty farm changed hands, and for many years afterwards "niggers" won on that race were called after the two horses. In those days the first ladies of society were always present in the "ladies' pavilion," as the stand allotted to the fair sex was called; and if descriptions of those scenes be true, they were as enthusiastic and noisy in their applause as the Roman ladies at the chariot races, as represented by Jerome and other painters. Both these horses were famous four-mile nags, and were accustomed to being held in at the first and let out at the last, which is the reverse of modern tactics generally. The finest horse would jump twenty-two feet at first and twenty-four at the finish. Old racers smile at the dash races of our time and deride the degeneracy of the stock; but it is likely that real speed is as well developed, and too great a strain on the horses avoided.

The famous Red Eye, in his race with Nina and Lawson, ran twelve miles in less than twenty-four minutes; and, though I have not the time made by Florizel, it is likely that it was a somewhat similar achievement. There is only a dim tradition now of Florizel and Peacemaker, but we may imagine the high scaffold which was erected for the negroes who were staked, and hear the excited voices of the betters: "I'll bet you Caesar on Peacemaker!" or, "I'll go you Dinah on Florizel!" "Two number one field hands and a good breeding woman on Florizel!" and other equally significant offers; for there were as many as five hundred slaves lost and won, and as many more hypothesized to the "traders" who were the great brokers of the slave oligarchy. The race was won by Florizel.

RED EYE AND NINA.

This famous race was run at Broad Rock in the fall of 1853. The famous son and daughter of Boston monopolized the public attention, though Lawson also ran. Red Eye won the first heat, Nina the second, and Red Eye the third. Politics, the Virginian's unvarying theme, and tobacco, the Richmond merchant's delight, were all forgotten in the excitement and betting, and a certain young lawyer was called the Virginia Sheridan for an excellent *bon mot*: "Id certum est quod certum reddi potest."

It was asserted that a certain well-known preacher was to

be hauled over the coals for being caught on the quarter stretch, but the bishop, who was doubtless deeply infected himself with the general excitement, charitably let the sporting parson off. Horse-racing, card-playing parsons were features of the colonial society, and the F. F. V.'s, so proud of their ancestry, could not consistently go back on the revival of a time-honored custom. More staid, dignified and proper burghers were drunk that day than ever were seen before, but the occasion was so great that it was a sufficient excuse for anything. Red Eye was a busy devil to be held in, so Con, his owner, very wisely told the boy to let him win the first heat, which, according to accepted ideas, was wrong, because Red Eye's great point was his bottom. So at the finish of that heat there was such a pandemonium as was never heard on a race-course before. When Red Eye came to the string the next his eyes were glaring diabolically and he reared and charged and seemed to jump forty feet at every stride. The third heat was between the horse and the mare only, and as I have said, the former, at the close of the race, had run twelve miles in 23:41.

The Washington course at Charleston in old times was the best in all its appointments in the country. The ladies' pavilion was a marvel of propriety and elegance, while the assemblage of gentlemen was unequalled in America for wealth and aristocracy. The Broad Rock and the Fairfield courses have not felt the hoof of a four mile nag for many a year, and are not likely for many another to see such a display as used twice a year to draw the Virginians there in crowds. Trotting stock is one reason, but the principal cause of decline is the fall of the old planter aristocracy of the Old Dominion.

In the further South there is a marvelous change even in the last few months from the desolation and chaos which characterized the last decade. The typical "old plantation" is reviving; the negroes turn to their former masters since the demise of the carpet-bagger, and the nature of cotton planting demands large farms. Already the system is so far changed into a co-operative one between land-owner and negro that it is safe to say that large plantations, as in the olden time, will be almost universal. When this is the case the aristocratic planter will patronize the turf, and the race-courses will be as grand as before—except the old Metairie, which a lottery man bought and made into a cemetery, because the Jockey Club blackballed him. For Forest and Stream.

#### AMONG THE PINES AND VIOLETS.

SOUTH CAROLINA is not remarkable either for the picturesque wildness of her scenery or her rural beauty—a flat, sandy country, covered mainly with extensive growths of pine forests, whose monotony is seldom broken, save by a log cabin in a clearing, or a plantation sometimes in a flourishing condition, but oftentimes decaying as it were, or long since deserted. Nowhere is found that rugged beauty of a northern wilderness, nor the charming pictures of our rural life, with its cosy farms nestling among the hills, with views of mountain, lake and stream, nor the pretty swampy woodlands, where the woodcock's treble is heard, and further up the hillside the whirring of the ruffed grouse. None of these has South Carolina.

But anon one will wander on a bit of stray picturesqueness, hidden away in the ever-present pine forest—a lonely hill, with its rock-strewn side, its lofty pines, its undergrowth of dogwood rhododendron and sparkleberry, the ground carpeted with fragrant wild flowers. Tiny streams springing from beneath rocks, almost enveloped in sweet-scented jessamine bushes, ripple down hill, over moss-covered stones, and are lost to view among the covert undergrowth. The blue sky is above us. At the foot of the hill the pine woods stretch away, and meet the horizon on all sides. Such places as this are sometimes stumbled upon in quail shooting, and agreeable is the change to him who has seen but pines, sand and sky for a couple of hours past.

"Shall we try the quail this afternoon," queried my friend, whom we will call Jack Herbert, as we sauntered up and down the length of a broad piazza, which composed part of a noted winter resort in the southern part of South Carolina, where I happened to "hold forth" last spring. "By all means" I assented, and after a few more preliminary arrangements we parted, to obey the summons of a nondescript looking son of Ham, with a gong, that forerunner of Southern dainties as only our old "aunties" knew how to prepare.

After a light dinner and still lighter cigarette of "Vanity Fair," I retire to the privacies of my room to don "Holabird," etc., and, taking my breech-lander, saunter to the stables, where I discover Jack to be already there, his fancy English check suit has been replaced by a velvet coat, corduroys and thigh gaiters, while Dick, his handsome, and still better fine working pointer is whining with excitement to be off. Jack swings lightly into saddle, I follow, the grizzled old negro lets go the hacks, and we are going at an easy lope through the town which is situated near the confines of the Hotel's grounds; this is soon passed, and we are bounding through a sandy road leading through the woods. But bounding even on a light dinner is not consistent of much profit, or in other words don't pay, and we sober down to a more easy gait.

Passing through the woods we come to a large open stretch of what we might call meadow-land with quite a pond a slight distance from us—for we have left the road, and are now riding "cross country"—the whistle of the winter "yellow leg" is heard from the high grasses that line the pond, and it is agreed that I shall dismount and attend to him. Dick the pointer is at down charge by his master's mare, and I proceed in the direction of this wily bay bird. The bunch of grass from whence the noise first proceeded is now within twenty yards, it is surprising that the leggy individual should lie so long—when I see a long billed head thrust through the reeds. A double whistle, and not one, but two winter yellow legs are on the thieving before me. A miss—it first barrel, the circles bring one tumbling down at the water's edge, his mate circles round, and soon alights at the side of her dead companion. Fresh cartridges are inserted in the smoking barrels, a step or two nearer to her is reached, and then the long wings are doing their best. Bang! a few eight shot go crashing through her, and down she drops at mid-distance across the pond. The gun reloaded, I signal Jack who is minding the horses, an excited and interested observer, to send Dick to retrieve, and at his master's "Heigh on" he comes bounding toward me. Picking up the bird which fell at the water's edge I send Dick after the other which is soon retrieved.

Walking down to the pond's lower edge where Jack is with the horses, Dick is at my heels; when to my left is a sort of rippling, rushing commotion among the water grasses and a teal duck rises. Bang! he falls to the water, but not dead, quick as thought I pour the other barrel into him before he can dive, and now he lies as lifeless as a wooden decoy, with the pointer's help he is soon in the game rack of my shooting coat. Joining Jack, who congratulates me on my little bit of unexpected luck, I find he is willing to hunt the other side of the pond, so I mount my horse gun in hand, and holding the bridle of Jack's mare with the other, I am all eyes for the field. Jack and his pointer have almost reached the limit of hunting ground on the off side of the pond, and my friend is looking about him the picture of comic despair; suddenly Dick points about twenty feet from a muddy spot covered with a few bog tufts. My companion walks up, "scaipe, scaipe," and an American snipe goes twisting up wind; a puff of smoke, a report again breaks upon the stillness of the soft spring air, and *Scolopax* makes his last dive to the ground.
